Men are created with equal and inalienable rights—all men everywhere. The chief purpose of any government is to secure these rights, and its just power comes only from the consent of the governed. Although this news took decades to spread and has yet to penetrate everywhere, all other theories of government were doomed by this Declaration and the American independence that followed it. Tom Paine did not exaggerate: "Despotism felt a shock, and man began to contemplate redress." The Declaration went round the Western World, adding an important stimulus to the revolution in France, the independence of Latin America, the national movements in Germany, Italy, Greece, and Eastern Europe, and eventually the political reformation of England itself.

Small wonder, then, that in America the Declaration became the focus of that sense of special destiny and vocation which most vocal Americans had long associated with their country. Just as the Puritans had felt akin to the Israelites, chosen by God for a holy experiment in rule by conscience on new soil, so George Washington's generation felt themselves to be the vanguard of a new political dispensation. They were a watershed in human history, agents of what John Adams had called "a grand scheme and design in Providence for the illumination and emancipation of the slavish part of mankind all over the earth."

Added Adams: "The institutions now made in America will not wholly wear out for thousands of years. It is therefore of the last importance that they should be right." In this self-conscious spirit was our Constitution written. It was to be the test of the basic question whether men, as Alexander Hamilton put it, can achieve good government by "reflection and choice," or whether they must always be governed by "accident and force."

The Constitution was not a universal document in the same sense as the Declaration. It was a working document for Americans, not for Laplanders or Chinese. It has nevertheless proved an adequate political franchise for Americans while they subdued a continent, added 37 new States, fought seven wars and changed from an agricultural Federal Republic into an industrialized democratic Nation. We have seen fit to amend the Constitution 22 times but not to change a word of the preamble, which is a summary statement of what the founders thought to be the true purposes of government—any government. Here are those purposes: "To form a more perfect Union, establish justice, insure domestic tranquillity, provide for the common defense, promote the general welfare, and secure the blessings of liberty."

Focus of patriotic reverence

These purposes, and the principle of strong but limited government under law which imbues it, have made the Constitution a focus of American patriotic reverence second only to the Declaration. It is a much stronger focus of loyalty, for example, than the American land, for all this land's purple majesty and beloved rocks and rills. An English visitor in 1837 remarked on the transient place-sense of this migratory people: "Give the American his institutions, and he cares little where you place him." Said Hawthorne, "We have so much country that we have really no country at all." The land has been an inestimable stimulus to effort and to wealth, but the system that enabled every man to take up his pursuit of wealth and happiness has been the most valued part of the whole. The American system has always been held to be far wider than American geography. As Walt Whitman said, "O America, because you build for mankind I build for you."

By Whitman's time the United States, like its great poet, was taking pride in the title of "democracy," a word the Founding Fathers had not much liked. Our 19th century legislation—from free schools and no-jail-for-debt to the Homestead Act, not to mention the emancipation of slaves—maintained an egalitarian bent. Its purpose and effect were to widen the suffrage and enlarge the opportunities of the average man. John Locke had made the amount of its emigration a test of whether a country is truly governed by consent or not. Waves of immigration, visibly assimilated, were evidence that America was the most consent-governed country in the world. As one not untypical immigrant wrote home: "Here a highway to honor, wealth, and renown is open to all." Our national mission was to exemplify the success of free self-government, to let our democratic light so shine before men that they could see its good works and become democrats too. Many did, including most of Europe.

The first internationally recognized American historian, George Bancroft, saw American democracy as the highest revelation of God's purpose in history and the consummation of all previous civilizations. "In the fulness of time," he wrote, "a Republic arose in the wilderness of America. Thousands of years had passed away before this child of the ages could be born * * * from her the human race drew hope." This viewpoint, which today sounds primitive or jingoistic, was as self-evident to many 19th century Americans as the rights of man were to those of the 18th. Both were vindicated by continuing success. Indeed, the American experiment was succeeding in so many directions that the sense of national purpose, though no less intense, became somewhat diffuse. Patriotism became identified with practically every virtue except patience. Thus Emerson: "I wish to see America a benefactor such as no country ever was * * * the office of America is to liberate, to abolish kingcraft, priestcraft, castle, monopoly, to pull down the gallows, to burn up the bloody statute book, to take in the immigrant, to open the doors of the sea and the fields of the earth." In the swelling tide of immigration and expansion he also foresaw the advent of "a new race, a new religion, a new state, a new literature."

By the end of the 19th century there were at least four great causes which America could be said to exemplify and which many Americans were eager to urge on the human race. These were:

1. Democracy: Bancroft called it practical Christianity and said: "The duty of America is to secure the culture and the happiness of the masses by their reliance on themselves." The people's voice was the voice of God, and of progress and of civilization as well.

2. Individual liberty: The wisdom of the Founding Fathers in making the free individual the cornerstone of our institutions was proved by his accomplishments. The individual was especially credited with our economic feats and therefore not begrudged his unequal rewards through the free enterprise system. He was the agent of that conquest of poverty which America had anticipated since colonial times.

3. "Pluralism": This became the scholar's word for our harmonious diversity of races, creeds, and conditions. Scientist-Author E. E. Slosson was to define America as "the finest of all the fine arts, the art of getting along peaceably with all sorts and conditions of men." Our pluralistic laboratory proved the beneficence of the Federal system, crowning our good with brotherhood from sea to shining sea. Since federalism had shown that it could govern and harmonize a continent, why not a world?

4. Morality: The universe is moral and civilization depends on morality, said Emerson. Our system was assumed to be in closer touch than others with what Seward called a higher law than the Constitution. The old Stephen Decatur formula, "our country, right or wrong," was offensive to intellectual patriots like Senator Carl Schurz, who amended it thus: "Our country * * * when right, to be kept right; when wrong, to be put right." Kept or set right by reliable methods, the vocal conscience of responsible citizens manifested itself through free institutions.

These four diverse national purposes could get somewhat out of alinement. Such was the case when Theodore Roosevelt came on the scene. Creative individualism had made it seem that America's dominant purpose—as it seems to many today—was merely to get rich. T. R., a great teacher as well as politician, used the White House as a pulpit to stir the national conscience to higher aims than the amassing of wealth. He preached the responsibility of the individual citizen, the social necessity of personal character, the central role of righteousness in democracy. He attacked that optimistic fatalism which assumed the country could always, in a contemporary's words, "slide down hill into the valley of fulfillment" and warned that the rights of men had to be freshly earned every day. He reasserted America's championship of popular rights. He told us that the history of America is now the central feature of the history of the world. He sought to put U.S. foreign policy in the central position in that history, a position it was soon to occupy in fact.

A defiant doctrine

American foreign policy before Teddy Roosevelt was sometimes summarized as the Monroe Doctrine and the Golden Rule. Both were thoroughly consistent with American beliefs. If the Monroe Doctrine seems too defensive today, it was for a century defiant of half the globe. It aimed to keep European autocracy out of Latin America as well as to allow the spread of democracy through our own territorial expansion. It was not just the manifest destiny of continental geography, but also democratic idealism that carried our flag to California, Hawaii, and the Philippines. It was George Bancroft himself who, as Acting Secretary of War, gave the order that sent U.S. troops into Texas in 1846—just as young T. R., as Assistant Secretary of the Navy, sent Commodore Dewey into Manila Bay in 1898.

Preoccupation with our own hemisphere did not always blind us to the cause of freedom and democracy elsewhere. National revolutionaries like Kossuth in Hungary, freely admitting American inspiration, could also count on at least unofficial American support. Commodore Perry in opening Japan, John Hay in proclaiming the Open Door against colonialism in China, Captain Mahan in his lectures at the Naval War College—all were prophets of the fact that American interests were becoming as global as the American cause.

In 1909 the Monroe Doctrine was reanalyzed by Herbert Croly, author of "The Promise of American Life," which greatly influenced T. R.'s thinking. Now that Europe was democratized, Croly argued, Europe's interests, and America's could no longer be considered "essentially incompatible," as some interpreters of the Doctrine had maintained. A time was coming when we would have to assume a wider and more active role. George Washington, in his Farewell Address, had enjoined us to avoid foreign entanglements and "give to mankind the magnanimous and too novel example of a people always guided by an exalted justice and benevolence." These words, said Croly, had been more honored in the letter than in the spirit. The time was coming when we should seek allies in order to build democracy into a world system. In such a system, peace would inevitably depend on the righteous use of superior force, and America's force would be needed on that righteous side.

Croly's contemporary patriots, however, were happier setting a no-longer-so-novel example than leading a magnanimous crusade. They responded more to the idea of a happy American destiny than to a clear American purpose. To Woodrow Wilson fell the sad task of proving the unreality of this distinction and of testing the American devotion to righteousness in a great European war. His war message of April 2, 1917 linked our destiny with that of democracy all over the world:

"The world must be made safe for democracy. Its peace must be planted upon the tested foundations of political liberty. * * * Civilization itself seeming to be in the balance. But the right is more precious than peace, and we shall fight for the things which we have always carried nearest our hearts—for democracy, for the right of those who submit to authority to have a voice in their own governments, for the rights and liberties of small nations, for a universal dominion of right by such a concert of free peoples as shall bring peace and safety to all nations and make the world itself at last free. * * * America is privileged to spend her blood and her might for the principles that gave her birth."

The concerts of free peoples eventually became the Wilson-inspired League of Nations. The League failed for various reasons, but one of them was surely the failure of follow-through in America's political will. Another and even greater war, another and even more pluralistic league called the United Nations, and the Wilson-era failure has at least been patched up. Said Franklin Roosevelt in 1945: "We have learned that we cannot live alone, at peace; that our own well-being is dependent upon the well-being of other nations far away."

The preamble and the stated purposes of the U.N. contain many statements in which Americans can take pride, since they could never have been written had not America long preached and exemplified them—most notably the declaration of equal rights of men and women and of nations large and small. Yet this declaration is made hypocritical by the nature of the U.N.'s membership, which includes Communist states and thus severs the cause of peace from its anchor in freedom and principle. The word "righteousness," which to Wilson as to T. R. was synonymous with the higher patriotism, was not popularized by F. D. R., is not used in the U.N. charter and is seldom heard in its debates.

Our greatest spokesman

Wilson's war message was in many ways the last great documentary link between modern America and the principles that gave her birth. Its echoes of the Declaration of Independence are not mere rhetoric. Those echoes had been enriched for Wilson's generation by the memory of our most profound national experience, the Civil War, and our greatest spokesman of national purpose, Abraham Lincoln.

Lincoln's first show of stubborn grandeur, said Carl Sandburg, was in the passionate seriousness with which he took the words of the Declaration. To him it was a charter of political truth for augmenting the happiness and value of life to all people of all colors everywhere. Because slavery was incompatible with the Declaration, the Declaration was the real issue of the Civil War. But this issue had been so long evaded and compromised that Lincoln could exploit it only within the larger cause of saving the Union. Thus political and military necessities robbed the words of his Emancipation Proclamation of great documentary lightning, but the deed was as fundamental and astounding as anything he said. Forced into the Constitution by war, by conscience, and by the Declaration, the proclamation was what Whitman called "by far the greatest revolutionary step in the history of the United States."

Lincoln's greatness was more than verbal. It lay in the resolution with which he preserved the idea of union through our most tragic crisis. Such resolution could be sustained only by faith in the proposition that all men are created equal. The national purpose that Lincoln stated for the Union was that free government of the people, by the people, and for the people should not perish from the earth.

Since Lincoln's time government by the people has been broadened step by step and deepened here and abroad with a cumulative effect scarcely less revolutionary than the Emancipation Proclamation itself. The abstraction for which Lincoln fought is now operative in more than half the world. Scores of new nations have been born since World War I because of the conviction that men should govern themselves, and the 1960 crop will be at least a half dozen more in Africa alone. Yet the popularity of Lincoln's abstraction has not made democracy any safer. On the contrary, some of the nations for whose freedom we fought under Wilson and Franklin Roosevelt, notably in eastern Europe and the Far East, have long since succumbed to ancient tyranny in its newest and most insidious guise, Communism. In all countries the new tyranny, like the old, is still abetted by ignorance and poverty, and in the poorer ones by a widespread belief that freedom and morality are luxuries—"first the grub, then the morals." Meanwhile in America, suffused in real luxuries, freedom and morality are taken for granted as casually as bread.

This does not mean that the United States has altogether forsaken its traditional purposes in foreign affairs. They have guided our reactions to many new and puzzling challenges, such generally creditable reactions as the Marshall Plan, the North Atlantic Treaty, the defense of Korea, the upholding of the U.N. in the Suez and other crises, the spending of billions for alliances and aid. At vast expense but with fair success, the United States has contained communism since 1949. We have defended the

chance of many nations to choose freedom and establish self-government, from Guatemala to Vietnam.

But at other times and places we have failed to defend this right. From Hungary in 1956 the appeal to American principles for American help was so direct and unmistakable that many Americans, in our Government's blank failure to respond, thought they heard the snapping of a great cord to the most precious part of our past. To others this sound was muffled by the very scope and complexity of the challenge, for tyranny is only one of the conditions of human life that wears a new, confusing and very non-18th century mask.

The whole order of organized power has changed. The once worthy title of "nation" may now denote either a monster or a pygmy state. Both weaponry and economics have made nonsense of long-established boundaries between nations. Strange new alinements seem to be forming, one perhaps being an alinement of races. The scientific and technical revolution, which has already overthrown the social structure of some very old nations, may have overnight changes in store for many others, either from within their own laboratories or from some point in outer space. As for what communism has done to international politics, in the words of a recent Rockefeller Brothers Fund report, "The chessboard itself may be said to have disappeared."

Nation states may no longer be the most meaningful integers of creative political thought. No existing state is or can be safe for democracy or freedom. Whatever may be hoped or feared from regional or racial alinements, any lasting political purpose must take the whole great globe for its arena. Nor is it just the Ghanaian, or the American, whose chance at happiness is threatened by technology. Human nature itself is threatened by dehumanization. A great political purpose today must have something to say about human nature, how to keep it as human and as rational as may be.

Such are the fantastic new conditions in which our old beliefs must find a home, a grave or a toehold. How can we best adapt our beliefs to the conditions? What purposes may rightfully be considered today?

Survival: Sensible patriots have proposed that our true cause today is sheer national survival. They say that this is important enough, and doubtful enough, to engage our full attention. Biology tells us that survival is a primary concern. Yet if survival by military means is meant, modern weapons are two-edged. Our present strategy of nuclear deterrence, if ever tested, could so reduce our population that its survivors, the bearers of our beliefs about liberty and self-government, might prefer to live elsewhere. On the other hand, since America is now the world's chief home and hope of freedom, a refusal to defend it could demoralize the cause of freedom for a thousand years. From this dilemma the only escape is to perceive that survival alone is not an adequate goal.

What is, then? No single goal, perhaps. A great power's foreign policy cannot be reduced to a phrase. The Council on Foreign Relations, analyzing our "basic aims" for the Senate Foreign Relations Committee, made a multiple recommendation: that while maintaining our negative policy of resisting and containing communism, we must at the same time do much more to anticipate "the world's other problems," and try to link the non-Communist nations more closely through more and better institutions of law and order, security, economic development, freedom and peace. A large order—but not necessarily an inspiring one. Although the United States has virtually unlimited responsibilities, can it respond to all alarms everywhere in the free world at once?

Self-government: The one principle that Americans have preached most consistently since their own founding is that men can govern themselves in freedom under law, and that all of them deserve a chance to try. Perhaps this simple message is too 18th century for the world's needs today, or America's complex relation to it. But the millions who have not yet had their chance seldom say so. Self-government is clearly a central purpose for many peoples of the world.

Moral law: Democracy, though we have treasured it, is not the highest value known to man. Indeed, it is only because enough Americans have had still higher allegiances that we have made democracy work.

America's public love affair with righteousness, for example, was not confined to the speeches of T. R. It began with the Mayflower compact, whose ultimate purpose was the quest of God's truth. The same quest underlies our insistence on religious freedom, and the assumption of a moral order in the universe underlies much of our constitutional law. Said John Marshall, the great interpreter of the Constitution: "There are principles of abstract justice which the Creator of all things has impressed on the mind of his creature man, and which are admitted to regulate in great degree the right of civilized nations." Our very right to self-government is derived from "the laws of nature and of nature's God," and to its harmony with these laws democracy owes its moral sanction.

If this moral order of the universe exists in fact—if there is such a thing as the natural law in which our Founding Fathers trusted—then it is surely the highest of man's political purposes to contrive his human institutions in conformity with this order, while realizing that all human institutions are subject to constant change. No more challenging task faces American leaders and intellectuals, if they believe in natural law, than to find its mundane applications in this revolutionary age. Certainly there resides in every human breast a natural instinct for justice, which experience has refined into the world's systems of law. A world that needs peace, which is the work of justice, needs clearer codifications of its sense of justice—i.e., more and better national and international law.

But those of us who make world law our national purpose must be sure the positive laws that we champion enjoy maximum consent. For example, by throwing its economic weight around, the United States can do much to promote free enterprise and freer trade in the non-Communist world. But it could do this better with less friction if Americans should produce a new definition of the right to property, which John Locke and our Founding Fathers considered basic to liberty. Such a definition would have to appear in harmony with natural justice to farmers and workers as well as to businessmen in all industrialized societies.

Private purposes: Many Americans will approve the above-mentioned purposes and still deny that they should be avowed by the Nation or its Government. A consensus of private purposes can give shape and direction to our national life without getting into formal policy at all. Yet in the fatness of these pursy times our private purposes do not add up to anything so firm. As one Air Force lieutenant wrote to Time, "What America stands for is making money, and as the society approaches affluence, its members are left to stew in their own ennui."

As monarchies were said to live by honor, so republics live by virtue. Yet republics have no public means of supplying a lack of virtue in the sovereign people. The public educational system can set and inculcate standards of the mind, and with this aim the Rockefeller Bros. Fund proposed to raise these standards, calling its report on our schools "The Pursuit of Excellence." Even the citizen who thinks that virtue is old fashioned, or that it is none of the State's business, can perhaps subscribe to excellence as a public purpose, and in a context of intellectual excellence, moral excellence (which must always be an individual purpose and achievement) may have a better chance. As T. R. used to say, a patriot will make the most of himself. If enough do, so will the Nation.

These are a few of the paths which thoughtful Americans can follow in their search for a new or renewed national purpose. There are undoubtedly others. But with the background for debate now sketched in, we can proceed in the individual views of Life's eminent contributors.

DESPERATE NEED FOR MEDICAL CARE FOR AMERICA'S AGED

Mr. PROXMIRE. Mr. President, we are pledged as a nation to the ideal of bringing to mankind the "four freedoms." But our own senior citizens can know no freedom from want, can know no freedom from fear, so long as the grim specter of sudden and costly illness hovers over them.

We in the Senate, faced with the realities of the international situation, acknowledge the need for economic aid to the peoples of other lands; but how can we expect the older people of our own land to understand why, in the same breath, we deny millions of them any real opportunity for medical care in their old age? This is especially shocking in view of the far greater sacrifice other countries of the free world make to assure adequate medical care for their elderly people.

This is the question posed in many of the letters we receive. I ask unanimous consent to have one letter of this sort printed in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

DEAR SIR: Was wondering if and when you fellows are going to do something about giving those on social security hospitalization and doctors care. Maybe you can tell me what we are supposed to do when we're sick. The hospitals charge from $15 to $25 a day and that's only for board and room and the doctors bills are extra. I had my wife in the hospital last year one afternoon and overnight and the hospital charged $49. Do something to get hospitalization added to our social security. They raise the taxes on gas and parcel post and everything else and give to the foreign countries but never anything here at home.

Sincerely,

——— ———.

EDGAR E. WITT, OF TEXAS, HAS OUTSTANDING RECORD OF DEVOTED PUBLIC SERVICE

Mr. YARBOROUGH. Mr. President, a dedicated, able, faithful public official is soon to leave the Washington scene.

Edgar E. Witt, of Waco, Tex., Chief of the Indian Claims Commission, has written a record of fairness, of diligence, and of successful service with that Commission which could serve as a model for any public official serving on any commission in Washington.

Governor Witt—as a former lieutenant Governor of Texas—he is called "Governor" in his native State—was a leading public official of the State of Texas before he came to Washington. After having served on other Government commissions, he became Chief of the Indian Claims Commission at the age of 68, an age at which most men have retired.

In the 13 years he has served as Chief of the Indian Claims Commission, he has written as many opinions as have all the other justices of the Commission combined. In every case in which he has dissented, his dissent has been upheld on appeal.

When Edgar E. Witt retires to Texas, he should take with him the thanks of officialdom of Washington and the appreciation of the citizenry of this Nation for a job well done.

In the Dallas Morning News for Monday, May 16, Mr. Walter C. Hornaday, the able chief of the Dallas News Washington Bureau, has written a very fine article entitled "Retirement Due for Claims Chief." As a long-time friend of Edgar E. Witt, I am glad to see him receive this recognition, and I ask unanimous consent that the article be printed in full in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Dallas Morning News, May 16, 1960]

RETIREMENT DUE FOR CLAIMS CHIEF

(By Walter C. Hornaday)

WASHINGTON.—When Edgar E. Witt of Waco was named Chief Commissioner of the Indian Claims Commission in 1947, he had reached an age when most men are taking it easy in retirement.

Witt, a former Lieutenant Governor of Texas and a learned and skilled lawyer, assumed his duties at the age of 68.

He has been the Commission's only head during its 13 years of existence. He and his two colleagues on the Commission have wrestled with some tough questions involving Indian tribes who claimed they were cheated and otherwise financially abused in years gone by.

Witt is retiring from his job on June 30 at the age of 81. It was time and the rules of bureaucracy, not ill health or lack of physical and mental vigor, that is causing him to step down.

Under the regulations, Chief Witt should have been moved out some years ago, but no one noticed his calendar age as the Commission continued to function as well, perhaps even better, than it ever had.

The Indian Claims Commission, under Witt's direction, charted new courses in the law as it handled the cases brought before the agency.

The act creating the Commission gave it authority to settle claims in law and equity and on other bases and then added: "Claims based upon fair and honorable dealings that are not recognized by any existing rule of law or equity."

"This means applying the yardstick of fair and honorable dealings by our Government with the Indians," Witt said. "No other act I know of writes that into law."

The Indian tribes had 5 years in which to file claims. The cutoff date was in August 1951. Through 1959, the Commission allowed claims involving 20,602,341 acres of former Indian land and final judgments of $17,655,606 out of claims amounting to $123,824,395.

Some of the cases go back more than 100 years and are steeped in history at the time the white man, frequently backed by the Federal Government, was seizing Indian lands and paying the tribes little, even threatening them with disaster if they refused to accept the offers.

Edgar Witt was born near Salado, Bell County. He received his academic and law education at the University of Texas and began practicing law in Waco in 1906. He served as a State senator 12 years and was elected Lieutenant Governor in 1930 and 1932, serving under Ross Sterling and Mrs. Miriam Ferguson. In seeking his second term without opposition, he received at that time what was the largest vote any person seeking State office had ever piled up.

Witt made an unsuccessful bid for Governor in 1934.

Shortly after leaving the Lieutenant Governor's office, Witt was employed by the Dallas Chamber of Commerce and other interests to work for a $3 million legislative appropriation to help finance the Texas Centennial. Witt's efforts were successful and Congress followed with a similar appropriation.

Witt's long-time friend, Senator Tom Connally, told then President Franklin D. Roosevelt about Witt, and the Waco man was named chairman of a special Mexican Claims Commission to distribute $5,500,000 the Mexican Government had offered to make available to settle claims resulting from destruction of American property during revolutions. The Commission finished its work ahead of time. When Witt asked Roosevelt to terminate the agency, a shocked President said:

"I never heard of a Democrat quitting office before his job terminated."

Witt returned to Waco to resume the practice of law but was recalled to Washington in 1943 as Chairman of the American-Mexican Claims Commission. This was another agency to settle claims of American citizens against Mexico due principally to expropriation of American-owned land. This job ended in 1947.

Senator Connally and President Truman decided Witt was the perfect man for the job of heading the Indian Claims Commission when it was cerated. Witt knew little if anything about Indians, and a mild objection was raised against his Senate confirmation on that score. One group thought an Indian should be picked but the Senate believed otherwise.

Connally, with a twinkle in his eye, told Witt at the time that he thought, when he had urged his appointment to the Mexican claims agencies, that he was lining him up with a job that didn't require any work.

"But a lot of lawyers who have seen you operate are urging me to recommend you for this new job," Connally added.

Lawyers and others having contact with Witt on the Indian Claims Commission during the last 13 years want him to remain in spite of his 81 years.

They have pointed out that during the last 2 years he has rendered almost as many opinions and findings of fact as have been rendered by his two colleagues. They also refer to the fact that when the Chief Commissioner dissented from his colleagues, the U.S. Court of Claims has agreed with Witt's viewpoint in every instance.

Chief Judge Marvin Jones of the Court of Claims, a Texan, has indicated he would tell President Eisenhower that Witt shouldn't be allowed to retire if the White House asked his opinion.

Witt and his wife, the former Gwyn Johnstone of San Antonio, plan to live in either Austin or Corpus Christi when they return to Texas. Witt said almost all of his friends in Waco are dead.

BREAKUP OF THE SUMMIT CONFERENCE

Mr. HART. Mr. President, many comments have been made about the breakup of the summit conference, and we can expect many more comments to be made. I doubt whether we can expect any more reasoned or more moving comment than that made in an editorial published on yesterday in the Detroit News. The title of the editorial is "Requiem for a Summit—Innocence Age Ended."

I hope the editorial will receive very wide reading, and I ask that it be printed at this point in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Detroit News, May 22, 1960]

REQUIEM FOR A SUMMIT—INNOCENCE AGE ENDED

Man must always look up, but today we look up to a summit that no longer is there. It is lost in a sky red with abuse. Yet the angry storm clouds that have made a mockery of our hopes do not have to be the shroud for our good intent.

The forecast is for more storms. But in the winter of our discontent and demolished hopes we cannot retreat to the foothills. We must go on, persevering for peace. We have failed, but we must still look upward.

We learn from failure. What have we learned this time?

We have learned something about ourselves.

We have learned that we have spy planes. We learned that we had violated another nation's aerial sovereignty and that because of equipment and men and luck we had been doing so unscathed for some time. We have been engaged in a dirty business which is made no more clean by the fact that neutrals who plan no war are engaged in it, too. Our age of innocence is past.

We were glad to think that the men who lead us had taken this elementary precaution to give us somewhere near an even break in a nuclear world where surprise attack and evil are concomitant. We were sorry we had been caught. But also we were dismayed by the Washington bungling that followed the denouement.

We had shot our U–2 arrow in the sky and when it fell we were not sly. We were just plain stupid. Never in the field of human handouts have so many owed so little to the few in authority who confused ourselves, our allies, and the uncommitted world by saying what they did not mean and meaning what they did not say.

We and the world have learned about Nikita Khrushchev and what he represents.

The last few yards to the summit for us were the toughest. Yet when we got there it was the bully boy who had baited the propaganda trap for us, who saved us from a fate worse than obloquy.

He who professed to want a world with no arms threatened to unleash his. He whose protestations of peace had given hope to the smaller NATO nations so near his frontier shattered his own loving cup. In fact, the only spirit of Camp David left in him was a raging hangover. He tore off his own mask. He was revealed as a Santa Claus with horns and an empty sleigh when the world had been led to expect from him the priceless gift of peace.

If we had bungled with a U–2, he fell flat on his face in exploiting our error. Some of our allies, nervous at being involved in our spying, were fortified in their will to maintain the Western alliance. We didn't get them back into line. Khrushchev clubbed them back.

He had won neutral good will by being a prime organizer of a meeting to reduce world tensions. He lost it by breaking up the meeting. He had nothing to offer but tears and blood.

Where do we stand now?

It is the tragedy of a generation that can split an atom that it cannot splice a divided world. We have created a nuclear terror and now are scared at living with it. And we know that if our ring finger was not on the pushbutton marked "retaliation" we might not even be living to be scared.

We and the Communists talk of uncommitted nations in the cold war, forgetting that in a hot one we commit all mankind because radioactive fallout knows no frontier of neutrality. We must, therefore, still press on to try to save ourselves, the neutrals and the Russian people themselves.

All this we know as the requiem for a summit begins. Yet it is not a time for morticians. We may beat our breasts, but we need not bury our hopes. Man never has, and that is why he can still look up even when no summit is there.

POLITICAL PARTICIPATION: THE 1960 SITUATION

Mr. HART. Mr. President, American political history reflects periods when the role of the trade-union movement in political action, and the role of business in political action, have been hotly debated. Because ours is a society which requires the broadest possible understanding and participation in developing the answers to our public questions, I have always felt that participation by both groups was proper and to be encouraged. In recent months, a great American corporation, the Ford Motor Co., has planned, and has now put into action, an imaginative and responsible program which will encourage political action and participation by all of its employees. It is my hope the program will prove most effective. The management of the Ford Motor Co. must have devoted much time and effort in the creation of this program, which is known as Ford effective citizenship program.

I ask that a speech which Thomas R. Reid, of the Ford Motor Co., gave at Detroit, Mich., on May 6, outlining the program be printed in the RECORD following my remarks. I ask this in the hope the speech may come to the attention of others who share the concern of Ford, and who may be moved to undertake a comparable effort. Since politics is the housekeeping job of a democracy, it is imperative that this free people pay close attention to this housekeeping job, lest we fail the test which is ours in this 20th century.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

POLITICAL PARTICIPATION: THE 1960 SITUATION—MANAGEMENT PROGRAMS TO ENCOURAGE PARTICIPATION

(Remarks of Thomas R. Reid, of Ford Motor Co., at Industrial Relations Research Association, Detroit, Mich., May 6, 1960)

The great game of politics in America has become a spectator sport. It is like baseball—everybody loves to read about it and talk about it, but only a few of our millions of people participate actively for the full season in the two major leagues of either politics or baseball.

I have no plea to offer today for more sandlot baseball players, desirable as that may be, but I do urge that factory workers, farmers, housewives, businessmen, and other citizens of whatever occupation play a more active role in public affairs and politics.

The encouragement of political participation is not a union-management matter. This is something which clearly should be outside the realm of labor-business controversy and just as clearly is a matter of transcendent importance to all of the American people.

Anyone who approaches this subject in the context of business versus labor reflects an attitude already far too prevalent in America that practically everything in the public domain, including even the American system of representative government itself, has a labor side and a management side.

I say these things so bluntly at the outset of my remarks because I have been concerned from the time I first was invited to appear on this program about the wisdom of scheduling separate treatments of the labor point of view and the management point of view on this subject. The format itself suggests a debate or a disagreement.

In spite of this concern, I wanted to accept the invitation to participate in your program today because:

1. The subject of encouraging political participation is of such vast importance to the American people that free and open discussion of it should take place wherever the opportunity is presented.

2. There is active participation of the academic profession in the association. The widespread influence of what professors and teachers will be saying on this subject in our schools and colleges is so vital to a clear understanding of the topic for years to come that every opportunity to present the facts to the academic world should be welcomed.

The course of public affairs customarily has been shaped by the professional politicians and a relatively few interested individuals. This has come about not only because they have had so much to say on the subject while others have remained apathetic and silent, but because the politicians and these individuals too, oftentimes, have taken the trouble to inform themselves and work at this business of government while others have not. I would be the last to criticize those who are active and articulate in public affairs. My contention is simply that there should be more activity, more participation, more voices raised from all segments of American society, if we are to retain government of, by, and for the people.

Government in this country cannot be the private preserve of the professional elite, the political elite, the financial elite, or the organized elite of any category. In this age of specialization, it is interesting that two of the most fundamental responsibilities we have in a democracy—parenthood and political participation—are largely entrusted to amateurs. Parents have no choice. Once the offspring arrives he has to be taken care of—and parents learn by doing. It is different with our political responsibilities, however. No one really is forced to assume them. We can always let George do it—let him and Sam and Bill make the decisions and run our town, or our country, for us.

It seems far less important to me who does the encouraging of citizenship participation than that there be a great deal of encouragement from all quarters. I don't think of this as a question at all of whether unions or business should encourage participation—I simply think that everybody who loves his country should encourage participation.

This movement toward greater interest in political affairs that we have seen just in the past year or so should not be confined to business people. Everybody belongs in the act. It is every bit as desirable that lawyers, doctors, housewives, bricklayers, and bankers be encouraged toward more active citizenship participation by the organized groups to which they belong.

In short, there is absolutely nothing wrong in any group in our society with organizational influence over any category of citizens encouraging more active participation by such citizens. There is everything right about it.

Now, I recognize full well that exhortation alone will not produce wholesale citizen participation in public affairs. We are not going to see the great mass of the American people battering down the doors of their political clubhouses seeking admission. Apathy will always be with us so long as men retain their human shortcomings.

But I am not too discouraged by this. I hold to the optimistic view that a meaningful measure of new participation can be achieved by:

1. Creating a climate of positive encouragement;

2. Repairing the unfavorable public image of politics and politicians; and

3. Making politics familiar, acceptable, and convenient for people.

Business, and in particular the public relations and advertising fraternity, likes to think it knows something about shaping public images. Probably no group in America is in a better position than business to do something to correct the unfavorable public image of politics. One reason is that business is itself partly responsible for creating and fostering that unfavorable image. And the aversion toward politics heretofore so typical of business has had far more serious implications than just undermining the effectiveness of business in its dealings with government. It is not too much to say that it has tended to undermine the vigor of our free democratic system.

Prof. Andrew Hacker, the Cornell University political scientist, made this point in his widely quoted study on "Politics and the Corporation," published by the Fund for the Republic in 1958. He holds that the American corporation has helped to remove a great body of the middle class from any real participation in our political processes. And he shows that historically we have depended heavily on middle-class participation in public affairs for the success of our democratic system.

His indictment of the corporation was not that it seeks to dictate the political behavior of its people, but rather that its net influence is to discourage any participation by them in political affairs.

It is interesting to reflect that the many business firms which have announced political participation programs have been in remarkable agreement as to their fundamental philosophy. Considering the diversity in size, interest and management personalities of these many business firms, it is amazing in a way that there has been so little difference in the underlying tenets of the programs announced in the last year or so.

The businessmen in politics movement really began to gain momentum in America when businessmen finally admitted to themselves that representative government in America could best be served by urging able people to become active in both political parties and abandoned the idea that the only hope for America was building up one party and tearing down the other.

I don't know exactly how this particular business philosophy came into being. Some say that a brief paper by Raymond Moley first enunciated the principle subsequently so widely accepted by business. Others say that it just grew, like Topsy, and suddenly emerged full-blown upon the American scene. I do know that the first time we ever saw it in writing or considered stating it for our own company occurred on January 7, 1959, when I prepared a memo as a

draft policy for a Ford Motor Co. public affairs program. I said in that memorandum: "The proper role of the corporation in government and politics is twofold:

"1. The corporation should express its position on public affairs issues and legislation at all levels of government in which it has interest, either favorable or opposed, because anything which affects its business becomes its business.

"2. The corporation has no business in politics as a corporation but it has a responsibility as a community of interest in modern society to encourage its members of management and its employees to voluntary participation as individual citizens in the political party of their choice.

"I have in mind on this that there has been a great deal of confusion in interpreting the reawakened interest of corporations in government and politics as a move on the part of corporations to use their power and their money to strengthen the Republican Party in the same way the big labor unions have used their power and their money to strengthen the Democratic Party. I do not believe this is right. I believe that corporations' direct participation in a single political party would only compound the error and eventually make a farce of our two-party system by lining up corporate power and money in support of another party. The preservation of the two-party system is integral to the American governmental system and the real objective should be to improve the interest and participation of all citizens in both political parties and in governmental affairs to keep government representative of all the people."

This was adopted and continues to be our program. It is essentially the program of all businesses with public affairs programs in America today. Although the same statement of fundamentals may have been expressed in a thousand different ways in as many articles and speeches since January 7, 1959, this remains the essence of the business position on this subject. It thus far has met every contingency which threatened it. I think it accurate to say that it has won the support of the press, the public, the politicians and the people generally. I am sure this political philosophy for the businessman is here to stay.

This, incidentally, points up a significant difference between the company and the union approaches to political participation. While the general business attitude is that it is not a proper function of the company to take sides in a partisan way, the unions do so as a common practice. The AFL–CIO nationally has endorsed candidates for President. Local labor bodies endorse candidates for local and State offices, and much of the weight of the union organization is thrown behind the favored candidates.

Organized labor can and should press its views on the issues affecting it with vigor and candor, and it can and should urge union members to participate in political affairs. But I want it understood that I do not condone the employment of the union organization or of union funds for partisan political purposes, wherever that occurs. It is not right for a company to do it. It is not right for a union to do it.

But espousing a philosophy is one thing and putting it into practice is quite another. For purposes of illustration, I would like to outline to you how Ford Motor Co. launched its public affairs program.

Essentially, we have done three things: we have declared our intention to speak out as a corporation on important public issues; we have encouraged our employees to participate in political and governmental activities within their party; and we have tried to do our part in encouraging the spread of this activity by suggesting programs that may prove useful to smaller businesses and other organizations.

When we started, we had several things in our favor. We had a management that was wholeheartedly in favor of such a program, and we had a civic affairs office of 10 years' standing to serve as a nucleus for our new organization. In 1959, our management authorized the following expanded public affairs program:

1. A top management civic and governmental affairs committee, whose members include the chairman of the board and the president, was created to review legislative and governmental issues that affect the company and was charged with formulating positions on these issues.

2. A staff of public affairs specialists was assembled to engage in public affairs research and to plan and carry out a civic and governmental affairs program.

3. Eight regional offices were established to provide field services throughout the country. These offices were staffed with men with special knowledge of their area. One of their functions is to give direct assistance to local company management in civic and governmental activities.

4. An information program in public affairs was established. Management is reached through public affairs bulletins, employees are reached through plant newspapers, and dealers are reached through regular dealer publications.

Of course, we have always done some of these things. We have made our views known to stockholders, employees, elected representatives, and the public generally. We have spoken out on issues, testified before congressional committees, and participated in any activity that was important to us. But we hadn't recognized the importance of these activities to the health of the corporation and to our political system. Furthermore, we hadn't placed the emphasis where it belonged—on the individual.

In an effort to stimulate bipartisan interest in governmental affairs, Ford Motor Co. recently announced a novel plan aimed at encouraging its employees to work for and financially support the political party of their choice.

Meetings have been held in company locations throughout the United States during April to explain the plan, known as the Ford effective citizenship program.

The new program provides employees an opportunity not only to learn the mechanics of this country's political system but also to volunteer for service with and to contribute financially to the party of their choice.

The political training course, consisting of eight 2-hour sessions, to be held after working hours, and the party activity plan will be offered initially to supervisory employees of the company.

Because of practical problems involved in reaching the company's 120,000 hourly employees in plant locations throughout the United States except by mail, the company has communicated information on the program to them by letter, and will later distribute to all employees printed informational material on political processes.

The political party participation plan provides employees with an opportunity to decide voluntarily whether they wish to engage in politics, and to what extent.

It is not a discussion of issues, nor is it propaganda for anybody's views about legislation. Rather it will provide an understanding of the processes and techniques of political party committees, conventions, and election procedures in all levels of government.

At the risk of some repetition in order to illustrate the spirit of our communications, let me read to you at this point the full text of a letter sent in the first week in May to Ford Motor Co. employees, signed by the appropriate executive of each plant or office:

"The company encourages all its employees to take an interest in political affairs in the party of their choice as a citizenship responsibility. Under our free system of government such participation should be truly representative. Each party depends on the voluntary participation of individual citizens to maintain its program. Each party also depends on the voluntary contributions of individual citizens to cover the cost of political party operations and campaign expenses. These costs are particularly high in an important presidential election year like 1960.

"In order to provide a convenient method for Ford employees to contribute to the party of their choice, a simple contribution plan has been developed. The plan is designed to safeguard completely the privacy of each employee's party choice and to assure the employee that the company will have no knowledge of the confidential voluntary action that he takes as a private citizen.

"Enclosed for your use are a contribution card; an inner envelope and an outer envelope.

"If you wish to make a contribution, simply place your check, or cash if you prefer, with the card properly filled in, in the inner envelope. Then seal it and check the party to which you are contributing on the front of that envelope. Then, place it in the outer envelope, seal that envelope and drop it in one of the collection boxes which will be placed at convenient locations throughout the plant beginning Monday.

"Do not write your name or otherwise identify yourself on either sealed envelope.

"For your information, checks intended for the major political parties should be made payable to the (Democratic State Central Committee, or to the Republican State Finance Committee.)

"The contribution envelopes will be turned over directly to the proper representatives of the political party you have checked on the inner envelope. The collection boxes will be kept in the plants throughout the week beginning May 9.

"Which party you contribute to and in what amount you contribute is entirely up to you. Any support you give to the political party of your choice will help to strengthen our American political system.

"Signed by plant manager or appropriate local executive."

The contributions plan has the endorsement of the UAW–CIO. Following discussion of the proposed procedure with company officials, Ken Bannon, director, national Ford department, UAW, addressed a letter to presidents of all Ford local unions encouraging cooperation.

The initial indications of response to our new Ford effective citizenship course have been most encouraging. To date, with returns in covering over half of our supervisors throughout the country, we find that 31 percent of those attending the presentation sessions are enrolling in the course.

We know, naturally, that no such 8-week course will transform a neophyte into a skilled politician, or anything near it. What we do hope is that we will whet the appetite of at least some of the participants for more direct involvement in political affairs.

In one of our first courses, one of the men was asked to find out who his party precinct chairman was. He called the county committee, was informed that the post was vacant, and was asked to take it himself. He did, and he is now up to his elbows in local politics. And I'll bet he is having the time of his life. This little occurrence undoubtedly is being repeated time and again all over the country where business people are taking this type of course.

It is not our purpose to develop candidates for office, incidentally. However, if experience to date is any guide, some of our employees will certainly run for office and be elected. Hundreds already have served, or are serving, in some public office, normally a part-time one.

We firmly believe in helping to strengthen government in this way, and we give such employees all the recognition we can. We note their election or appointment in our employee publications, and often Mr. Ford writes them a personal letter of congratulations.

In addition, we have extended nationwide our practice of publicly presenting Community Service Awards to those employees, hourly and salaried, who have achieved success in any type of public service. And we have recently announced a leave-of-absence policy for those elected to full-time public office. This policy safeguards certain rights and benefits while the employee is away from the company. He is provided in effect somewhat the same assurances that are given to employees inducted into military service.

This brings me to the final activity I want to discuss this afternoon. Our civic and governmental activities are tailored to Ford Motor Co., one of the country's largest corporations. Many organizations, whether business concerns, professional associations, or other groups would find such a program beyond their scope. At the same time, they have an interest in political participation and we are looking for program guidance.

While a number of the larger companies have taken the lead in combating apathy and encouraging activity, they cannot do the job singlehanded.

Companies with less than 1,000 employees have 62 percent of all business employment. Even if all the larger corporations adopted and carried out effective participation programs, their efforts would have limited effect.

Recently, we suggested this nine-point program as suitable for adoption by most American business firms:

1. Study the problem of impact of governmental and political affairs at all levels of government on the individual business firm and determine the extent to which public affairs matters directly affect its business operations.

2. Consider the social responsibility of the company to the community, State, and Nation in advancement of the public interest.

3. Establish a written policy on company statements pertaining to public issues and legislative action on issues directly affecting it, and on encouragement of employees to express their individual convictions and participate in the political party of their choice.

4. Inform and educate employees on the importance of citizen participation in public affairs and political activity through discussion meetings or political training courses.

5. Take inventory of employees active in civic, governmental, or political affairs and give them suitable recognition.

6. Arrange for elected representatives in city governments and State legislatures to visit the company plants and offices and for key company executives to become acquainted with their Congressmen and Senators.

7. Devote a reasonable percentage of the total content of house organs, management bulletins, and other communications with employees, to the subject of public affairs and political participation.

8. Designate an executive within the company with functional responsibility for civic and governmental affairs, with the portion of his time allotted to it depending on the size of the company and the scope of the program undertaken.

9. Regard the public affairs program as a continuing added dimension of company activity; as a positive, affirmative program that must help meet community and national needs as well as needs within the company.

This is a course of practical, positive political action that may be adopted by any company in America.

Before I close, I would like to say that people sometimes ask us what motivates the businessman to enter politics. I have given you most of the reasons already, but let me answer one or two specific questions that often arise.

We are sometimes asked if we are not trying to create a big business party in this country, to build a massive business lobby, or to out-politic organized labor.

We do not consider our program an effort to do any of these things.

We have no intention of trying to create a big business party. A corporation, as such, has no business dealing in party politics. Should business align itself with either political party, it would be the surest way of creating a labor party.

As for creating a business lobby, let me make it clear that, acting as a corporation, we intend to articulate a business point of view on the public questions that concern us. We feel it is part of the democratic expression of all interested parties to make known the stand of the company on such matters, and we do not intend to be bashful.

At the same time, we realize that we must formulate a point of view that serves the public interest. It is often difficult to resist narrow, self-interested objectives. We realize that. But we are convinced that we must apply ourselves to public problems and attempt to offer truly constructive solutions.

Finally, we are not trying to outbid organized labor's interest in the political field. Mr. Henry Ford II said recently: "Despite the growing political power of labor unions, I think it would be a great mistake for businessmen to regard political activity in negative, stop-union terms. Business and unions could well be together on issues more often than they are apart."

The real issue in citizenship participation is not management versus labor but pressure groupism versus total democracy. There is nothing wrong with our Government or political system that participation by more people won't cure.

THE SUMMIT CONFERENCE—PARTISAN ATTACKS

Mr. MONRONEY. Mr. President, unfortunately the spirit of Camp David, which both the Republican Party and the Democratic Party hoped would offer an avenue for peace, is dead. But here in the Senate Chamber, in the course of debate by many Members of the Senate, including the minority leader, we find that the spirit of the Republican campaigns of 1952, 1954, and 1956 is very much alive. We have been given a "flashback" to the 1952 speech by Vice President Nixon, at Texarkana, when he said that President Truman, Secretary Acheson, and Mr. Stevenson "are traitors to the high principles in which many of the Nation's Democrats believe. Real Democrats are outraged by the Truman-Acheson-Stevenson gang's toleration and defense of communism in high places"; and to his statement on television, in 1954, "Isn't it wonderful that we finally have a Secretary of State who isn't taken in by the Communists, who stands up to them?"

Today, we have had the rather peculiar spectacle of Republicans trying to document a defense of the administration with an English translation of a repudiated interview by a Frenchman with a leading American, the titular head of the Democratc Party.

It was also said that Senator KENNEDY, one of our most distinguished candidates for the Presidency, had stated that President Eisenhower should apologize to Premier Khrushchev. It was attributed to the junior Senator from Massachusetts [Mr. KENNEDY]; but it never has been shown that such a statement definitely was made by him.

Mr. President, once I was a newspaperman; and I know something of the errors and confusions which come from discussing in two languages vitally important matter of State. I certainly am ready to take the word of Governor Stevenson that he did not say what he was quoted as saying in regard to pulling out of Berlin; and I believe that extreme attempts to stretch the truth, in order to give a wrong impression, have been made by Republican Members of the Senate today in the quotations which have been bandied about. They referred to statements made by the Senator from Massachusetts [Mr. KENNEDY] when he was being interviewed. Obviously the interview by the Portland Oregonian was an extemporaneous matter, probably between speeches or between television appearances. He was asked about the Summit. What Senator KENNEDY finally said—and I do not believe this has been denied—was that he felt the President should express regrets over what had occurred. To determine what went on before that statement is like trying to read the minds of Members of the Senate as they search for words with which to express their meaning properly.

As Senators scraped the bottom of the barrel, to "document" these two alleged statements it is reminiscent of another Senator who once waved papers and shouted "I hold in my hand * * *." We are tired of that sort of procedure.

Mr. President, Americans are tired of the attacks which are made strictly for the purpose of diversion, in an attempt to light another fire, to try to direct attention somewhere else. If the members of the Republican Party here today are serious about bipartisanship, why did not all of them support—as some of them did—the proposed investigation of these matters which was advocated by the respected chairman of the Foreign Relations Committee, the Senator from Arkansas [Mr. FULBRIGHT], whose remarks were echoed by the acting majority leader? They said it was going to be a factfinding inquiry, not a witch-hunting expedition. They said the inquiry would be made in as intelligent and as sane and as quiet a manner as the facts and the situation would possibly permit. Instead of supporting that approach, the Republicans seem to want to turn this into a sort of mock trial to try to discredit one of the leading candidates and the man who is the titular head of the Democratic Party.

I think if they had wanted to make a constructive speech—and one for which I would respect them—they could have

defended one of the seven fatal presummit blunders that led to the summit collapse, and gave to Mr. Khrushchev a tailormade excuse for breaking up the summit conference. None of them did so.

I heard no Republican speaker defend any of the seven tragic steps so clearly outlined by Governor Stevenson in his speech in Chicago last week. I do not know why they are trying to duck defending these steps, or how they can duck defending them, unless they are willing that someone should investigate them.

Certainly, Governor Stevenson was not the first person to point out these tragic errors. One of the great institutions of our country is the American press. The American press, no matter what their political orientation, universally reported this tragedy step by step. This was not just true of Democratic newspapers. Many of them which are extremely hostile to the Democratic Party published documentation of every single instance cited by Governor Stevenson in his speech in Chicago. If that be true, and considering the Governor's speech in this context, why do not the Republicans defend the administration against the charges of the press throughout the United States, rather than placing all their emphasis on Governor Stevenson's speech, and defend the tragic blunders that prejudiced our position to our great disadvantage at the summit? It would be far more valid for them to do that. I have never seen a time when the press of the United States so universally printed the cold, hard facts, regardless of the impact they may have had. Many writers have done a great job. I regret that I cannot place all the stories in the CONGRESSIONAL RECORD.

I do ask to have printed in the body of the CONGRESSIONAL RECORD a number of columns which have appeared in the Nation's finest newspapers within the last few days. They are columns entitled "The Spy Business," by Walter Lippmann, "The U–2 in Paris," by Walter Lippmann, "First of All," by Walter Lippmann, "The Summit Tragedy," by James Reston, "Paris, How To Turn Defeat Into Victory," by James Reston, "The Democrats' Message to Eisenhower," by Arthur Krock, and "The Grim Outlook After the Summit," by Marquis Childs.

There are times of desperate national need when the American press redeems, in burst of greatness, the debt of all the sensationalism which it tolerates. This is such a time. Here, then, are the beacons of American journalism—Lippmann, Reston, Krock, Childs—burning with a light they only achieve when fueled by national necessity.

There being no objection, the columns were ordered to be printed in the RECORD, as follows:

[From the Washington Post]

THE SPY BUSINESS

(By Walter Lippmann)

In the whirl of incidents following the capture of the spy plane the administration has ventured, perhaps the right word for it would be stumbled, into an untenable policy which is entirely unprecedented in international affairs. Our position now seems to be that because it is so difficult to collect information inside the Soviet Union, it will henceforth be our avowed policy to fly over Soviet territory, using the territory of our Allies as bases.

Although the intention here is to be candid and honest and also to make the best of a piece of very bad luck, the new policy—which seems to have been improvised between Saturday and Monday—is quite unworkable.

To avow that we intend to violate Soviet sovereignty is to put everybody on the spot. It makes it impossible for the Soviet government to play down this particular incident because now it is challenged openly in the face of the whole world. It is compelled to react because no nation can remain passive when it is the avowed policy of another nation to intrude upon its territory. The avowal of such a policy is an open invitation to the Soviet government to take the case to the United Nations, where our best friends will be grievously embarrassed. The avowal is also a challenge to the Soviet Union to put pressure on Pakistan, Turkey, Norway, Japan, and any other country which has usable bases. Our Allies are put on the spot because they must either violate international law or disavow the United States.

Because the challenge has been made openly, it is almost impossible to deal with this particular incident by quiet diplomacy.

The reader will, I hope, have noticed that my criticism is that we have made these overflights an avowed policy. What is unprecedented about the avowal is not the spying as such but the claim that spying, when we do it, should be accepted by the world as righteous. This is an amateurish and naive view of the nature of spying.

Spying between nations is, of course, the universal practice. Everybody does it as best he can. But it is illegal in all countries, and the spy if caught is subject to the severest punishment. When the spying involves intrusion across frontiers by military aircraft, it is also against international law. Because spying is illegal, its methods are often immoral and criminal. Its methods include bribery, blackmail, perjury, forgery, murder, and suicide.

The spy business cannot be conducted without illegal, immoral, and criminal activities. But all great powers are engaged in the spy business, and as long as the world is as warlike as it has been in all recorded history there is no way of doing without spying.

All the powers know this and all have accepted the situation as one of the hard facts of life. Around this situation there has developed over many generations a code of behavior. The spying is never avowed and therefore the government never acknowledges responsibility for its own clandestine activities. If its agent is caught, the agent is expected to kill himself. In any event, he is abandoned to the mercies of the government that he has spied upon.

The spying is never admitted. If it can be covered successfully by a lie, the lie is told.

All this is not a pretty business, and there is no way of prettifying it or transforming it into something highly moral and wonderful. The cardinal rule, which makes spying tolerable in international relations, is that it is never avowed. For that reason it is never defended, and therefore the aggrieved country makes only as much of a fuss about a particular incident as it can make or as it chooses to make.

We should have abided by that rule. When Mr. K. made his first announcement about the plane, no lies should have been told. The administration should have said that it was investigating the charge and would then take suitable action. We should then have maintained a cool silence.

This would have left us, of course, with the unpleasant fact that our spy plane had been caught. What really compounded our trouble, and was such a humiliation to us, is that before we knew how much Mr. K. knew we published the official lie about its being a weather plane. Then finding ourselves trapped in this blatant and gratuitous lie, we have tried to extricate ourselves by rushing into the declaration of a new and unprecedented policy.

[From the Washington Post]

THE U–2 IN PARIS

(By Walter Lippmann)

As of Monday, afternoon, eastern time, there is only the faintest chance that the summit meeting will not break up. It is certain that the President will not go to Russia, the invitation having been withdrawn. Thus the attempt to arrive at a truce in the cold war and to relax the tensions has, unless there is a diplomatic miracle, ended in a tragic fiasco.

The issue on which the conference has been disrupted is the flight of the U–2, or more precisely the position taken by the President and his administration. We must remember that when the plane was captured, Mr. Khrushchev opened the door to the President for a diplomatic exit from his quandary; he did not believe, said Mr. K., that Mr. Eisenhower was responsible for ordering the flight.

Undoubtedly Mr. K. knew that Mr. Eisenhower must have authorized the general plan of the flights but he preferred to let the President say what in fact was a sorry kind of truth, that he did not authorize this particular flight. The diplomatic answer would have been to say nothing at the time or at the most to promise an adequate investigation of the whole affair. Instead, Mr. Eisenhower replied that he was responsible, that such flights were necessary, and then he let the world think even if he did not say so in exact words that the flights would continue. This locked the door which Mr. Khrushchev had opened. It transformed the embarrassment of being caught in a spying operation into a direct challenge to the sovereignty of the Soviet Union.

This avowal, this refusal to use the convention of diplomacy was a fatal mistake. For it made it impossible for Mr. Khrushchev to bypass the affair. Had he done that, he would have been in a position of acknowledging to the world, to the Soviet people, to his critics within the Soviet Union, and to his Communist allies, that he had surrendered to the United States the right to violate Soviet territory. No statesman can live in any country after making such an admission.

The news from Paris on Monday shows that Mr. Eisenhower had already realized that his making an avowed policy of the flights was a crucial mistake which had to be corrected. On Saturday there was, it appears, a briefing of the correspondents to tell them that we had never meant to say that the flights would continue. On Sunday in a broadcast in this country Mr. George V. Allen said the same thing. And on Monday the President told Mr. Khrushchev that the flights over Russia have been suspended "and are not to be resumed." A week ago this might have sufficed to quiet down the affair.

The withdrawal was, however, late, and it may prove to have been too little. For during the past week the flight and the way it was handled have given the Soviet Government a rich opportunity to weaken the ring of America's allies around Russia. Those who say that Mr. K. has seized upon the opportunity solely in order to make propaganda have not, I think, realized the gravity

of the disaster which has befallen us. For the Soviet Union there is in this much more than propaganda. There is an instrument for disturbing if not disrupting the encircling alliance.

It would be wishful thinking to suppose that the Soviet Government will not seize this opportunity to push countries like Norway, Iran, Pakistan, Turkey and Japan into pledges and into measures which in some considerable degree neutralize them as American air bases. Morally and legally these allies of ours are defenseless against these Soviet demands.

The Soviet Government is at least as interested in neutralizing our allies around her borders as she is in neutralizing West Berlin. We dare not hope that the Soviet Government will not make the most of the opportunity which has so unexpectedly and so unnecessarily been opened up to her.

Before the affair of the plane, there had been, as Mr. Reston wrote on Monday from Paris, a strong indication that Mr. Khrushchev was very uneasy about the prospects of the summit meeting. I myself was one of those who talked to his personal emissary, Mr. Zhukov, when he came to Washington in April. The burden of Mr. Zhukov's complaint was that about March 15 American policy had suddenly hardened against a negotiation about the status of West Berlin, and that this was a reversal of the understanding given to Mr. K. by the President at Camp David.

Almost certainly, therefore, the affair of the plane offered Mr. K. an opportunity to make a diplomatic gain against the small encircling allies from Norway to Japan. If he was stymied in Berlin, he had the chance to recoup elsewhere. We have not heard the last of the troubles of the encircling allies.

There is not much comfort for us in this. For our own blunders provided Mr. K. with his opportunity.

At this writing it is still conceivable that a way will be found to carry on in Paris. Let us hope so.

[From the Washington Post, May 19, 1960]

FIRST OF ALL

(By Walter Lippmann)

Amid the wreckage, and as we recover from the shock, the long work of rebuilding will have to begin. Where must it begin? It must begin at the point where the most critical damage has been done. Where is that point? It is not in what Mr. Khrushchev said or did to us. It is in what we did to ourselves. It is that we "first did help to wound ourselves."

The wound has been made by the series of blunders on the gravest matters in the highest quarters. These blunders have not only angered the Russians and wrecked the summit conference but, much worse than all that, they have cast doubt among our allies and among our own people on our competence to lead the Western alliance on the issues of peace and war. Mr. Khrushchev's harsh and intemperate language has produced a reaction and evoked sympathy for the plight of the President. But we must have no illusions about the depth and the extent of the loss of confidence in American leadership, in the judgment, sagacity, and political competence of the Government in Washington.

This is the damage to which we must address ourselves. We are a free people, and one of the blessings of a free society is that, unlike an unfree society, it provides a way to deal with error and correct mistakes. This is to investigate, to criticize, to debate, and then to demonstrate to the people and to the world that the lessons of the fiasco have been learned and will be applied.

In a situation like ours the damage to our prestige would be irreparable if we all rallied around the President and pretended to think that there was nothing seriously wrong. For that would prove to the world that the blunders will not be corrected but will be continued, and that our whole people are satisfied with bad government. It is the dissenters and the critics and the opposition who can restore the world's respect for American competence. We cannot do this by pretending that the incompetence does not exist.

These are harsh words. But in what other words shall we describe the performance on Sunday night when the Secretary of Defense, who is in Paris as one of the President's advisers, ordered a worldwide alert of American combat forces? On Sunday night Mr. Macmillan and General de Gaulle were still struggling to find some way out of the affair of the spy plane. Yet this was the time chosen by the Secretary of Defense to stage a worldwide readiness exercise which, though not the last stage before actual war, is one of the preliminary stages to it.

Why Sunday of all days? This blunder was not the work of some forgotten colonel on a Turkish airfield. This was the work of the Secretary of Defense and of the President. The timing of the exercise was just a shade worse than sending off the U–2 on its perilous mission 2 weeks before the summit. The timing of the so-called exercise makes no sense whatever. For if the alert was concerned with a possible surprise attack, when in the name of common sense could there be less danger of a surprise attack on the Western World than when Mr. K. in person was in Paris?

Unhappily, too, Secretary Gates exercise was just about as incompetently administered at the top as was the affair of the spy plane. This time, it appears, the top people forgot to say anything about the exercise to their press officers who did not know what to say, and were not even in their offices, when the public was being frightened by the exercise.

A great government faced with a most formidable adversary, itself the leader, champion and mainstay of the non-Communist world cannot be conducted in such a reckless and haphazard way. That is the damage that first must be repaired before we can begin to deal with the general international wreckage, and to regain our confidence in ourselves.

[From the New York Times, May 19, 1960]

THE SUMMIT TRAGEDY—BREAKDOWN OF PARLEY SHAKES WORLD'S FAITH IN WISDOM OF TOP LEADERS

(By James Reston)

PARIS, MAY 18.—The tragedy of the Paris Conference, which ended tonight, is that it shook the confidence of the world in the wisdom and judgment of the two nations that hold the key to war and peace.

What troubled Paris tonight was not primarily what President Eisenhower and Premier Khrushchev would do now—which nobody knows—but the realization that the two most powerful nations in the world are also the least experienced of the great powers: both subject to the element of accident, to the ingrained habits of the past and to the whims of personal pride and caprice.

This was the conference that everyone lost. It did something no one thought possible: It outfailed the Paris Conference of 1919. After 41 years President Eisenhower, Premier Khrushchev, Prime Minister Macmillan and President de Gaulle made Wilson, Clemenceau, Lloyd George and Orlando look good.

It was this sense of uncertainty about the giants of the world that dominated the atmosphere in Paris today. Here was Mr. Khrushchev this afternoon in the great hall of the Palais de Chaillot shouting at the West, paying deference to the glowering Marshal Rodion Y. Malinovsky on his left and threatening to smash American planes like an impudent cat against a wall.

EISENHOWER SILENT AND ANGRY

Here, too, was the President of the United States, angry and silent, visiting cathedrals while his allies praised his dignity and sympathized with the failure of his last great chance for an East-West accommodation, but condemned in private his absent-minded behavior on the reconnaissance flights over the Soviet Union.

Everyone was trying to be very considerate and hopeful about the mess, but all had to admit it was a mess, brought on by the unplanned blunders of Washington and the savage, planned reaction of Moscow.

The general reaction to the two men was quite different. One was restrained, the other was violent; one was silent and defensive today, the other loud and offensive.

One was trying to remove misunderstandings, the other was exploiting them. But the main point was that both were shaking the world, one by accident and the other by design.

The nub of the whole thing seemed to be that both President Eisenhower and Premier Khrushchev, for different reasons, had lost control over the direction of the immense power they are supposed to govern.

The fact that the President came here and announced that he had grounded all flights over the Soviet Union for the rest of his term in office is clear enough proof that, if he had been aware of the fact of these flights at this sensitive moment, he would not have approved the flight of the U–2 that was downed in Soviet territory on May 1.

CONFIDENCE IN UNITED STATES SHAKEN

The President has conceded this here in his private talks with Mr. Macmillan and General de Gaulle. They do not condemn his objective or his personal motives: in fact, he is so obviously disappointed by the melancholy turn of events since the sky-spy case that the British and French leaders are more sympathetic to him now than ever before.

Nevertheless, the lack of control and discipline over the Central Intelligence Agency by General Eisenhower, and the failure of the State Department to retain civil authority over the administration's intelligence-gathering activities have inevitably shaken the confidence of the allies in the judgment of the Nation that is their primary line of defense.

Mr. Khrushchev lost control too, apparently for different reasons. General Eisenhower led his party out of isolationism, but Mr. Khrushchev has been engaged in the even more delicate operation of fraternizing with the "capitalist enemy."

By doing so, he was going against the militant Communist philosophy that nothing matters except the class struggle. Many of his own powerful associates in the Communist party's Central Committee apparently did not approve of the manner in which he was hobnobbing with the capitalists, and the Chinese Communists felt that this whole process of itinerant good fellowship was bound to create what they called "ideological confusion" within the Communist world.

So long as it appeared that Mr. Krushchev might sweet-talk the Russians into West Berlin, his jaunts were tolerated. But when this dream began to fail, and particularly when it was discovered that President Eisenhower was responsible for sending the U–2's over Soviet territory, the other leaders of the Soviet Union, it is felt here, demanded a change—with or without Mr. Khrushchev's approval.

Western leaders who were present at the Monday meeting at the Elysée Palace with Mr. Khrushchev got the impression that the Premier was nervous and perhaps even a little unhappy in his about-face role. But by this afternoon, he was as hard as Vyacheslav M. Molotov and as vivid and vituperative as Andrei Y. Vishinsky.

The last time Mr. Khrushchev saw Paris he was the benign and jovial "Mr. K". He made a special point then with President de Gaulle that their conversations should be held without anyone present except the interpreters.

JOVIALITY IS PUT ASIDE

This week all was changed. The "jovial Mr. K." became the arm-waving "naughty Nik," and Marshal Malinovsky was there as a witness of his every word and move, even when Mr. Khrushchev said goodby to President de Gaulle.

None of this was missed by the press of the world or the diplomatic corps of Paris, and the inevitable reaction was not only that the giants were quarreling—which always terrifies the world—but that they were blundering in a most extraordinary way.

This was particularly true of Mr. Khrushchev after he got well into his new role. He overplayed every card he had. He was rude and primitive. He was not only a boor, but what is worse in Paris, he was a bore. And instead of splitting the Allies, he even drove the press of London and Paris to the President's support, which is not easy to do.

There are the things that have spread the feeling of uneasiness about the leadership of the great powers. The two men who started out to reduce tensions ended up by increasing them here in Paris, and the question now is how far the present "dukes-up" attitude will go.

About this, no one really knows, probably not even Mr. Khrushchev. For until he gets back to Moscow and reports to the Central Committee, there is no way of knowing what will happen to Berlin, or for that matter, what will happen to Mr. Khrushchev.

[From the New York Times, May 20, 1960]

PARIS—HOW TO TURN DEFEAT INTO VICTORY

(By James Reston)

PARIS.—The official line of the U.S. Government on the summit conference is almost as surprising as the conference itself. For the White House theme, put out nightly by James C. Hagerty and his aids at official briefings, is that U.S. officials won a victory here over Nikita Khrushchev and solidified the Western alliance.

Even when allowances are made for the difficulties of any U.S. spokesman at the summit, this is an extraordinary claim, and it is all the more astonishing and even disturbing because some of the American officials actually believe it.

They justify their conclusion very simply. They merely leave out the U–2 spy incident and the contradictory explanations which followed it in Washington. All that, they say, is old stuff, whereas what happened in Paris, rather than Sverdlovsk, was pretty good.

On this sharply limited ground, there is something to be said for the argument. Nobody could have been worse than Khrushchev in Paris. It is not only that he was badmannered and inaccurate, but there were times in yesterday's press conference when he seemed almost out of control.

In the face of this obvious determination to try to humiliate and intimidate President Eisenhower, it is also true that President de Gaulle and Prime Minister Macmillan rallied to the President, and De Gaulle in particular handled a difficult situation with serenity and skill.

CATALOG OF DEFEAT

There is another gain: Unlike the summit conference of 1955, which concealed the hard realities of the East-West struggle (again with the aid of Mr. Hagerty's press-agentry), this one at least dispelled the rose-colored fog of the last few years and exposed the unpleasant truth.

Nobody is against expressions of sympathy for the sad conclusion of the President's efforts at accommodation, but the truth is unpleasant and dangerous, and it is not going to be handled by adding jingoism to sloppy staff work and absentminded administration in the White House.

This whole thing is not a victory for anybody. It is a serious defeat for Secretary of State Herter and his aids who did not alert the President to the dangers of these flights before the summit. It is a serious defeat for Allen Dulles and the Central Intelligence Agency for not coordinating the timing of the May 1 flight with the State Department's summit plans.

It is a serious defeat for the President and his whole system of delegating presidential power to subordinates at critical moments in the history of the Nation. It is a serious defeat for Prime Minister Macmillan, who defied 300 years of British diplomatic experience and pressed relentlessly for summit diplomacy. And it is a serious defeat for Khrushchev and his policy of coexistence.

There would be no point in going over this tiresome catalog of gloomy facts if there was any evidence that the President was now prepared to put his official house in order, but there is no evidence of this. On the contrary, we are now told officially that the relationships between the White House and the CIA, the State Department and the CIA remain the same.

SELF-PITY, SELF-DECEPTION

The events of the last few weeks have not only exposed the weaknesses of the National Security Council system within the U.S. Government but dramatized the failure of the alliance members to plan together in their common interest.

There has seldom been better paper preparation for any conference since the war than for this summit. Literally hundreds of thousands of words were written and exchanged among officials in Washington, Paris, and London. But the British and French knew nothing about the U–2 flight on May 1, and neither did the Turks, Pakistanis and Norwegians, who are now under threat of rocket retaliation from Moscow as a result.

Everybody in the top rungs of the U.S. delegation here agrees that the test of the alliance now lies ahead on Berlin. It is not going to be possible to coast and wait for the next administration. The pressure is starting now at a time when the confidence of the alliance in Washington's judgment has been badly shaken.

This is inevitably going to call for better administration in the United States and better coordination within the alliance, and these things are not likely to occur in a mood of self-pity or self-deception.

[From the New York Times, May 19, 1960]

THE DEMOCRATS' MESSAGE TO EISENHOWER

(By Arthur Krock)

WASHINGTON, May 18.—The Democratic leadership policy toward the international crisis produced by Premier Khrushchev's sabotage of the summit conference is implicit in the telegram sent to President Eisenhower yesterday by four principal party spokesmen, and in a speech made to the Senate today by Majority Leader JOHNSON.

This policy is to keep the Nation united in the aftermath of the U–2 espionage episode, including the collapse of the summit conference, and to make certain the Soviet Premier realizes he cannot look to a Democratic administration for concessions on matters of principle he could not force upon the current Republican administration. The policy, furthermore, is to make sure Mr. Khrushchev fully understands that he cannot count on the Democratic leadership in Congress to make a partisan political issue of the astonishing series of recent Government stumblings in an operation area full of the explosives which could set off a nuclear war.

To understand the purposes of the telegram sent to President Eisenhower and signed by Speaker Rayburn, Senators Johnson and Fulbright, and Adlai E. Stevenson it is necessary first to know that it was sent yesterday before the summit conference had collapsed, not today after this had happened. The message was written and dispatched on information that there was to be another attempt to convoke the meeting with Mr. Khrushchev as a participant.

Noting that the Soviet Premier had mentioned "6 or 8 months" as a waiting period before a summit conference he would find any reason for attending, which, of course, meant after President Eisenhower's successor had been chosen, Senator JOHNSON drew two conclusions: One, that the Soviet Premier thought he could do more profitable business for his side with the Democrats in power; and, two, that it was in the paramount interest of the United States to inform him that assumption was unfounded.

In consultation with the other signers it was agreed that the President was the proper channel of views "to be conveyed" to the Premier (by any means the President might choose); also that this procedure furnished direct assurance to the President from responsible opposition leaders of their full support of him as the representative of the American Government and people. For a time today it was not made clear that the message was sent yesterday in the belief the summit conference might still convene. But when the timing became known, an impression died away that the Democratic leaders were suggesting the impossible, knowing it was, as a pretty hollow campaign gesture.

The same leadership attitude was inherent in a statement by JOHNSON to the Senate concerning means whereby Congress and the American people could learn the facts behind the U–2 episode. "We shall treat errors," he said, "as mistakes to be corrected, not as a leverage to separate our Nation." There will be "a cool and objective assessment of whatever mistakes have been made," but "under conditions and circumstances * * * to contribute to the information of the American people and the strengthening of the country * * * not as a search for scapegoats."

These words could be taken to forecast a formal congressional inquiry into the sorry executive U–2 record of quickly exposed denials and amateurish confessions, culminating in impression possibly left by the President's announcement at Paris, in an atmosphere of compulsion created by Premier Khrushchev, that the State Department was bluffing again when it left open the implication that the U–2 overflights would continue.

It appears, however, that the majority leader will not lend his influence to establish this kind of inquiry. Apparently he confidently expects the President to give the full facts in the U–2 record to the key congressional leaders and as much of these to the public as his estimate of security permits. It remains to be seen whether either account will furnish the answer to these prevalent questions:

Did the U–2 espionage overflights become so much of a "milk route" that nobody in the security complex gave a thought to the special hazard if an expedition were inter-

cepted at the time Powers' was? If nobody did, was this the consequence of poor judgment, entrenched bureaucracy or a mechanical lack of the coordination between act and policy that the National Security Council and the "secret subcommittee" of the Operations Coordinating Board were established to provide?

[From the New York Times, May 20, 1960]

THE DEMOCRATS' MESSAGE TO EISENHOWER—II

(By Arthur Krock)

WASHINGTON, May 19.—There are occasions when a political party's interest and that of the Nation coincide and the result is an act of constructive statesmanship. The latest instance was the telegram of support which four Democratic leaders sent to President Eisenhower Tuesday afternoon when Western efforts were continuing in Paris to persuade Soviet Premier Khrushchev not to sabotage the summit conference.

The service of the telegram to the national interest was plain on its face. It demonstrated to Premier Khrushchev and to the American people that the opposition political party in the United States stands solidly with the party of the administration behind the President in this crisis. It also notified Mr. Khrushchev that, if his suggested postponement of 6 or 8 months implied belief that a Democratic President would yield to demands President Eisenhower had firmly rejected, he was very badly mistaken. And this statement of the Democratic position by four of its principal spokesmen—Speaker Rayburn, Senators Johnson and Fulbright, and Adlai E. Stevenson—further promoted the national interest by the precept of unity it commended to the American people.

The service of the telegram to the special interest of the Democratic Party in this presidential election year was not visible on the surface. But the signers were fully aware that the message to President Eisenhower and its contents would have this effect. They were also fully aware that this step needed to be taken promptly to protect the Democratic Party and its national ticket from the curse of preference by the Soviet Premier that he had indicated in his 6 or 8 months delay proposal and in his violent attacks on President Eisenhower and Vice President Nixon.

These threaten to create a psychology of interference by Mr. Khrushchev in the American electoral process. History has shown that this tactic by the representative of a foreign government can be fatal to the American political party for which it indicates a preference. The hazard unquestionably would be greater for the Democrats if they permitted a public impression to take root that the Soviet Premier has reason to hope for substantial concessions from a Democratic regime.

TWO-EDGED POLICY

Thus he supplied one of those occasions when essential political party strategy is indivisible from an act of the highest national statecraft. And Senator JOHNSON, in proposing the message to the President that was made authoritative by the identity of the signers, put his party in the happy position where it could achieve both objectives by a single stroke of policy. Though there is dissatisfaction in the ranks of the majority leader's veto of a formal congressional inquiry into the official sources of the incredible series of administration errors in the U–2 episode and the veto may be overridden in some committee, Democratic approval of the Paris message has been virtually unanimous.

But behind the nonpartisan front it presented to Premier Khrushchev there is a tumult of speculation in the political community over the effects of what happened this week in Paris on the prospects of the Presidential candidates. The questions being deeply debated are: Which Democratic aspirants for the nomination did Mr. Khrushchev's violent performance at Paris help or hurt? Will the collapse of the summit conference and its causes make Vice President NIXON a stronger or a weaker Republican nominee? Will party estimates of this bring any change in the prospective mood at Chicago?

It is far too early even to guess at answers that new developments in international tensions could alter fundamentally. But the following is a composite of the speculations heard among politicians here:

The new critical aspects of the world situation have raised the Democratic convention stock of JOHNSON and Stevenson. They also have given Senator SYMINGTON a better opportunity to exploit his pioneer criticisms of the Eisenhower military defense programs. They tend to accent unfavorably Senator KENNEDY'S youth and administrative inexperience. NIXON will be hurt in the campaign by his obligatory defense of Executive handling of the U–2 episode, but Khrushchev's attacks will make his nomination even more certain and help his electoral prospect.

Currently all this is only dope. But American politicians and people are incurably addicted to its use.

[From the Washington Post, May 20, 1960]

THE GRIM OUTLOOK AFTER THE SUMMIT

(By Marquis Childs)

PARIS.—With the end of negotiation between East and West—the ruin of the summit conference means scarcely less than that—the cold war warriors will try to take over both in the Soviet Union and the United States. The extent to which they succeed will be the measure of the danger in which the world now stands.

Of that peril there cannot be the least doubt. In a fall from the summit, where the Western powers had until quite recently talked themselves into a strange and unreal complacency, it is hard to stop at a halfway point.

The faction in Washington that has consistently opposed any understanding with Soviet Russia, however limited, is well identified. It consists, on the one hand, of the hard-core anti-Communists who are convinced that the Communist system is so immoral, wicked, and menacing to Western civilization that a policy that sanctions its existence is not acceptable. Somewhat less emotional but no less implacable are the men in the Atomic Energy Commisison and the Pentagon who are convinced that America's policy must be one of strength pushed to a point at which in one way or another it will overwhelm the Soviet Union.

The danger inherent in these attitudes is evident enough. At its furthest limit are the Pentagon planners who prepare detailed papers to prove that the United States can absorb 40 million casualties in a nuclear war and yet emerge the eventual victor. They will now be pushing for more ready alerts, greater defense appropriations, and an end to all contacts with the enemy to the east.

In the Communist bloc the faction convinced of the inevitability of the cold war is harder to define but it may be equally important in the equation of uncertainty and fear that we now confront. It is on the opposition of these elements that the best explanation of Prime Minister Khrushchev's violent and intractable behavior here in Paris may be found.

Little noticed outside the Communist bloc, a drumfire of attack on Khrushchev has grown louder in recent months. Coming in its purest form from Red China, the attack has centered in Khrushchev's heresy in the weird subterranean world of the Marxist-Leninist doctrine.

When President Eisenhower at his press conference last week not only accepted responsibility for the U–2 plane incident but seemed to be saying that he approved the continuance of such flights, Khrushchev was put in an extremely embarrassing position.

Whether, as satellite observers here insist and some Westerners agree, Khrushchev waited until Sunday night for a sign that Eisenhower would voluntarily disavow the flights is perhaps now irrelevant. What is important is that Khrushchev was compelled to react with a violence that would prove to his critics that he had discovered the error of his ways.

After all, as the American Ambassador to Moscow, Llewellyn Thompson, confirmed in reports to Washington, the Soviet Premier was preparing for Eisenhower's visit to Russia in June such a welcome as rarely has been accorded a citizen, to say nothing of a foreigner. This was being done for a hero of peace whose halo had been fastened on under Khrushchev's direction. With the unmasking of this hero Khrushchev was driven to react in violence.

But propaganda and violence to one side, there is a large element of genuine fear in the Soviet reaction to the U–2 episode. To ignore this, to assume that the cold, calculating Soviets have made every move at Paris out of cold calculation, is to indulge in a kind of ostrichism especially dangerous for this moment.

The Russians seem to have been anxious up until now to deny nuclear weapons to the Red Chinese. But what if Peiping, against the background of their rightness in the doctrinal dispute over communism versus capitalism, demands such weapons?

Once such weapons have spread throughout the two blocs, the chances of averting nuclear war are narrowed to a vanishing point. The boastful planners in Red China have proclaimed that they can absorb 200 million casualties in nuclear war and with their vast territory and vaster population they will be the only real survivor.

[From the Washington Post, May 19, 1960]

BOTH SIDES LOSE IN U–2 FRACAS

(By Robert Hotz)

The whole truth of Francis Gary Powers' 1,400-mile penetration of the Soviet Union in a Lockheed U–2 on a Central Intelligence Agency mission of photo and electronic reconnaissance has not yet been told.

Mr. Khrushchev's most blatant lie is his statement that the U–2 was hit by a Red Army antiaircraft missile at an altitude of 65,000 feet near Sverdlovsk after it had penetrated the air defenses of the Soviet Union for some 1,400 miles. This lie was necessary because the citizens of the U.S.S.R. could understandably grow uneasy over the admitted ability of the U–2 and other specialized aircraft to penetrate Soviet airspace consistently with impunity.

The fact is, and Mr. Khrushchev undoubtedly knows it, that Powers' U–2 had an engine flameout at the altitude that it and other U–2 aircraft cruised safely beyond the reach of the Soviet air defense system. The flameout forced Powers to descend below 40,000 feet where the denser atmosphere made an attempt to restart his jet engine feasible. Either Powers failed to restart his engine or his plane was damaged at this relatively low altitude.

Another obvious lie was used to bolster this originally false claim for the Soviet air defense system. A picture of some badly battered scrap from an Aeroflot TU–104 crash near Sverdlovsk last February was officially released by the Soviets labeled as the U–2 wreckage to convey an impression of terrible damage wrought by the antiaircraft missile. When this fake was exposed by

Lockheed's U–2 designer, C. L. (Kelly) Johnson, the remains of the genuine U–2 were finally produced for an exhibition in Moscow's Gorki Park.

Further contradiction of the missile hit scored at 65,000 feet was the Soviets' own claim that they recovered most of the U–2 photo and electronic reconnaissance equipment in good condition, were able to examine the cockpit ejection system in detail and to retrieve miscellaneous gear from the cockpit intact.

Nor is Mr. Khrushchev telling the truth when he announces that the Soviets have switched completely from bombers to ballistic missiles and that they no longer are producing or developing or exercising bombers because they are obsolete for modern warfare. The U.S.S.R. is still producing long-range jet bombers, although at far from maximum possible rates.

When we turn to the record of our own Government agencies involved in the U–2 adventure the record of deliberate falsification is equally bad. The series of interagency bungles give us a quesy feeling over what might happen in a real emergency with survival or defeat hinging on the speed and acumen of the official reaction.

First, there are the ivory tower researchers of the old NACA now with NASA who had their hard-won reputation for scientific integrity shredded overnight by the exposure of their role as unwitting dupes of the Central Intelligence Agency.

This damage to NASA's scientific integrity may count for little in the calloused calculations of CIA supersleuths, but it will do irreparable harm in the international scientific community where this country has many of its stanchest friends.

The official U.S. policy as finally stated by President Eisenhower some 10 days after Powers' U–2 hit the Siberian earth also carries some future forebodings.

It officially commits the United States to a continuous and deliberate policy of violating the Soviet airspace and formally makes espionage an integral part of U.S. policy. Although virtually every American citizen can see the need for continuous surveillance of the Soviet Union by whatever effective methods are available and will tacitly support these efforts, it is quite another matter to publicly announce that espionage and violation of another country's territory have become an official policy.

Third, of course, comes the Central Intelligence Agency, in this incident stripped of all its protective secrecy, and standing nakedly exposed in an incredibly amateurish performance compounded from inadequate training, faulty execution and rather transparent cover operations. Apparently, all that was adequately provided in this operation was the $30,000-a-year salaries for the pilots. Whatever reasons impelled Francis Powers to decline to carry out the traditional self-destruction orders of the espionage agent apprehended redhanded by the enemy may never be known. Suffice to say his embarrassing survival was not in the best tradition of either USAF, the agency that originally trained him, or CIA, the Agency that hired him without training him properly in its specialized requirement.

Mr. MONRONEY. Mr. President, I could put into the RECORD dozens of editorials from papers like the Chicago Sun-Times, papers that have never supported the Democratic Party during the Eisenhower epoch, in which they concede the blunders.

Mr. President, I ask unanimous consent to include in the RECORD a full-page article from the Chicago Sun-Times of yesterday, outlining what these are. No one in his right mind would think the Chicago Sun-Times represents a position hostile to President Eisenhower.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Chicago Sun-Times, May 22, 1960]

POLITICKING ON THE U–2

(By Milburn P. Akers)

The gift of 20–20 hindsight possessed by so many is now being demonstrated anew by some of the political opposition to President Eisenhower.

Few persons would contend the entire U–2 incident was conducted without fault. It wasn't. Nonetheless there is no assurance that the critics would have done any better, if as well, or that, had they been at the helm, the summit conference would have convened and solved any of the world's tensions even partially.

By this time it is obvious to most persons that Soviet Prime Minister Nikita S. Khrushchev went to Paris with the intention of aborting the conference as quickly as possible. It is equally obvious that he used the U–2 incident merely as an excuse for doing so.

Why he wrecked the conference which he himself had long sought is undetermined except by some of the theorists, many of whom will have a new theory in another week or less. His reasons, if any, will be clear some day. When they are, the U–2 and matters related to it will not be numbered among them.

To consider errors in the handling of the U–2 incident calmly, as mistakes to be corrected, not as a leverage to separate our Nation, as has been suggested by Senator LYNDON B. JOHNSON, Democrat, of Texas, is statesmanship.

To treat them otherwise is politics.

Men's motivations are difficult to determine. So whatever motivations Adlai E. Stevenson may have had in his Thursday speech to Illinois Democrats can be left to his own conscience to determine. But the speech itself raises a lot of questions which Stevenson himself did not answer.

The occasion was political.

It is difficult to imagine anything more political than the manner in which Stevenson marshaled the various events in the U–2 incident and commented upon them. At no time did he concede that it is essential for the United States to obtain military intelligence. At no time did he concede that the Soviets have and are engaged in widespread espionage intended to obtain similar information. Everything done by the administration subsequent to the U–2 disclosure was a mistake, according to Stevenson.

He asserted that, as a consequence of the U–2, and events subsequent to it, Russia would no longer negotiate with the present administration.

To suggest, as Stevenson did, that only a Democratic President can negotiate with Khrushchev is politics, simple but not pure.

True, Stevenson did not say that in so many words. But no other construction can be placed on his statements.

He did say "they [the administration] have helped make successful negotiations with the Russians—negotiations that are vital to our survival—impossible so long as they are in power."

Vice President NIXON is an integral part of the administration. He is the likely Republican nominee for President. Unless Stevenson specifically excludes NIXON from the administration, which he didn't, and which he cannot, he was saying that negotiations with the Russians can be resumed only if the Democratic nominee is elected in November.

Stevenson said Democrats must "help the American people understand the nature of the crisis, to see how we got into this predicament, how we can get out of it, and how we can get on with the business of improving relations and mutual confidence and building a safer, saner world in the nuclear age."

Stevenson's speech didn't accomplish this result; didn't answer the questions he himself raised.

He merely said, in effect, that a Republican President had gotten us into a mess and suggested that only a Democratic President could get us out of it.

It's impossible to read any other interpretation into his verbiage.

Supposedly, Stevenson will amplify his indication that the Democrats have the solution for the "building of a safer, saner world in the nuclear age."

That's what every one wants, of course. But some persons must be forgiven if they have reservations that all this can be accomplished merely by a change of administration.

Unfortunately, Khrushchev, his colleagues, and their successors will have something to say about it, too.

Will Mr. K. and company recede from their position on West Berlin, merely to cite one example, as a consequence of the election of a Democratic President?

Stevenson's somewhat partisan speech may have served a partisan purpose.

It will not rank among the greatest.

[From the Chicago Sun-Times, May 22, 1960]

ADLAI GAINS GROUND

(By John Dreiske)

Ofttimes accused of being a bit of a starry-eyed amateur at practical politics by the professionals of his own Democratic Party, Adlai E. Stevenson has shown them he can be very practical indeed.

In fact, many of them privately but enthusiastically applauded Stevenson's apparent recognition of the fact that "bungling at the summit" currently is the biggest issue the Democrats have in the 1960 elections.

The former Illinois Governor showed himself to be not only a practical politician but a canny one as well. He was the first prominent Democrat to put into words the wonderment of many ordinary folks over the handling of the spy plane incident.

Stevenson now has an issue and he isn't likely to let go of it. He seemed to be appropriating the role of loyal opposition leader who has respect for the Presidency but sheds all hypocrisy in bringing out that the specific incumbent is not infallible and that there is evidence to indicate that he is not.

It is likely that Stevenson helped himself toward the Democratic presidential nomination at the July 11 Democratic convention in Los Angeles.

The opportunity to make himself an issue which, in a sense, was ready-made and to exploit it came at a most opportune time. Stevenson's principal competition for the nomination, Senator JOHN F. KENNEDY Democrat, of Massachusetts, was embroiled in a crucial Oregon primary on the eve of the voting when caution probably dictated no chance-taking.

But Stevenson, with little to lose and much to gain, could take the chance he did take that he would not be denounced by the general public for being a bit of a traitor by not adhering to charitable sweetness and light treatment of the President.

Stevenson said he thought it "unfortunate" that the spy plane fuss and the summit collapse should have occurred in a campaign year. He must be credited with the realistic knowledge that, as they clamor for "unity" to support the President right or wrong, the Republicans are playing politics right to the hilt.

Whether he has hurt his own cause or not, Stevenson probably has done his party a service whichever nominee it selects at Los

Angeles. Vice President RICHARD M. NIXON is the most likely GOP presidential nominee at the moment; failure at the summit is now highlighted as Republican failure and NIXON is a Republican, an important part of the Eisenhower administration.

Republican efforts to disassociate NIXON from Ike's handling of the spy plane matter leading to the summit collapse probably will be difficult to say the least. Such efforts must include a sort of public shelving of Mr. Eisenhower himself. In such a circumstance, a party split is something to be looked for and then maybe Gov. Nelson A. Rockefeller, of New York, can run through this hole in the line. At any rate, any possible GOP split is, of course, to the Democrats' advantage. And Stevenson has spectacularly set the stage for such a division.

Mayor Daley's withholding of approval of Stevenson's sentiments expressed at Thursday night's $100-a-plate fund-raiser at the Conrad Hilton Hotel was notable and probably will chill those Illinois convention delegates who look to Daley for their national convention cue.

The mayor's reluctance might be traced to his reported loyalty to KENNEDY'S candidacy. It could logically be presumed, perhaps, that Daley would not want to seem to be switching to Stevenson at a time when even the flick of a facial expression is interpreted by eager pundits as an expression of partiality toward this candidate or that.

It should also be noted that, with his 7-minute speech, Stevenson ran the official star of the evening, CHESTER BOWLES, right out of the spotlight.

[From the Chicago Sun-Times, May 22, 1960]

FACTS NEED FACING

(By Joseph Alsop)

PARIS.—After the ugly scenes of the aborted summit meeting, it is wise to make up a sort of balance sheet of facts to be faced.

The first fact that needs facing, alas, is the grave loss of prestige and confidence that President Eisenhower has suffered. As Walter Lippmann has written, it is right that men of all parties should rally to the President, but it is also wrong to be self-deluding. The affair of the U–2 has caused America's greatest friends in the Western alliance to conclude that America's present leadership is bumbling and maladroit.

The second fact to be faced is less painful to American self-esteem but decidedly more alarming. The leadership of the other great world bloc is even more dangerous and implacable than all but the worst of pessimists had imagined in their gloomiest moments.

After seeing Nikita S. Khrushchev do everything but froth at the mouth and chew the carpet at his incredible press conference, a great many observers in Paris began to use the grim adjective "Hitlerian." But those who know the man best believe that he was doing this from calculation.

But even if Khrushchev is not semilunatic, as Adolf Hitler was, the consolation is trifling.

As for the third and final fact to be faced, it flows directly from the second. A major effort to strengthen the military defenses of the West is now a matter of great urgency.

There are two reasons why a strengthened defense effort is now urgent. No one doubts Khrushchev is capable of striking at the United States and the West with every bomb in his arsenal.

The main things that need doing are the same things that were discussed during the debate on national defense at the beginning of the year. Appropriations are needed to inaugurate a maximum airborne alert of the Strategic Air Command's entire force of B–52 bombers. The airborne alert ought to begin now, and continue at full strength until the U.S. striking power in long-range guided missiles has been massively augmented.

Similarly the buildup of the long-range missiles ought to be increased in every way possible, and every dollar should be appropriated that can be used to speed the two reconnaissance satellite projects, Midas and Semos. In addition, the affair of the U–2 plainly proves the shortsightedness of the policymakers who have cut back production of the B–52H bomber almost to zero.

Here is a bomber with the range, speed, and altitude characteristics that will allow it to imitate the U–2's performance. It can go almost where it will in the skies above the Soviet Union, just as the U–2 did for so long. It is not menaced, so far as is known, by improvements in the Soviet air defense system, whereas the B–52, flying at lower speeds and at somewhat lower altitudes, may well be menaced later on.

It is hard to understand how any policymaker can have all but stopped production of the B–52H bomber, with the example of the U–2 before his eyes. But this is what was done. And this is what should now be undone as far as possible.

More costly defense programs; still deeper distrust of the Kremlin; apologies needed for our own leadership's performance—they make an unpleasant list, but we have now been warned. It can be very dangerous indeed if the warning is ignored.

Mr. MONRONEY. We have before us today this documentation by an almost unanimous American press, and yet we find the minority leader going to a French correspondent, to a story carried in a French newspaper, translated back into English and printed here, and denied by the man who was allegedly quoted, and saying "I hold in my hand the documentation."

Then we have this example, and this is only an example, of turning the word "turncoat" into "turn quote," or vice versa. Now "turn-quote" is an interesting word, but in Webster's giant dictionary, where there appear the words "turn back," "turn out," "turn over," "turn tail," and all the other "turns," I cannot find "turn quote."

It seems to me it might be an afterthought. I do not blame anyone for wishing to change that word of opprobrium against a respected American.

It seems to me, in times like these, we ought to do what the press itself is doing, and ask the questions, "Who? What? When? Why? Where?" What happened to so diminish America's world stature on the eve of the summit conference? Was this flight necessary? Why the original handling of it and the blunder of calling it a weather plane? Why give to the National Aeronautics and Space Administration—one agency of government which, if we are to reach an understanding on science with the other nations, should be above suspicion—the handicap of being used to cover intelligence operations? Why, after the denials, and counterdenials, and reasons that were manufactured, then admit that this was done, and admit it had been done for 4 years? That factor was not in question at all.

Then why did we leave in question for so many days whether these flights would be continued? The world's press interpreted official statements to mean that they would be continued, on the eve of the conference. Then, when that position was changed, apparently someone forgot to notify the information officer. When it was possible to have those facts go to the world and the Paris Conference, the message somehow did not get out.

But the worldwide alert did receive publicity attention. Mr. President, out West people did not reach for their guns at a poker table, unless they saw some danger of shooting. Certainly I would not have thought the alert to be necessary with Khrushchev in France, so that a catastrophic thermonuclear war would result in losing the Russian Chief of State.

It seems to me the best way to go about this matter is to have an investigation, which I think the Foreign Relations Committee can make, into the pre-summit position. There was much complaint about it. The distinguished Senator from Tennessee and many others complained before the Senate that there not much preparation was being made. Little did we know that the preparations some people, somewhere, somehow, were making were dangerous, more dangerous than the lack of programs for the success of the summit.

Mr. SYMINGTON. Mr. President, will the Senator yield?

Mr. MONRONEY. I am happy to yield to the Senator from Missouri.

Mr. SYMINGTON. First, I wish to congratulate the Senator from Oklahoma for one of his typically clear presentations to the Senate. Every Member of this body knows he speaks only with the facts. In my opinion, this morning he has made a great contribution to the security of our country.

I ask the Senator: Is it not the function of the legislative branch to look into matters of this character in order to find out how they happened, and make recommendations on a constructive basis so as to prevent their happening in the future?

Mr. MONRONEY. I agree completely with the Senator. Democracy can only purify, correct, and eliminate future error by constructive criticism. The only ones who can properly do this—I think the only ones who should do this—are the opposition. It is the duty of the opposition at least to point the finger at the need. This we have done. Our leading Democrats are criticized in the most intemperate language for pointing the finger at some things which the newspapers in the United States have universally decried as blunders.

As Governor Stevenson said:

> We cannot sweep this whole sorry mess under the rug in the name of national unity. We cannot and must not. Too much is at stake. Rather we must try to help the American people understand the nature of the crisis, to see how we got into this predicament, how we can get out of it, and how we get on with the business of improving relations and mutual confidence and building a safer, saner world in the nuclear age.

This is the day of loyal opposition.

Mr. SYMINGTON. Mr. President, will the Senator yield?

Mr. MONRONEY. I yield.

Mr. SYMINGTON. Mr. President, I ask unanimous consent that chronological statement of the facts with respect to the U–2 incident be printed in the RECORD, in support very completely of the position taken by the distinguished Senator from Oklahoma on the floor of the Senate.

Mr. MONRONEY. Does the Senator have that information prepared?

Mr. SYMINGTON. I have the information.

Mr. MONRONEY. I am delighted to have it printed in the RECORD.

Mr. President, I welcome this information, because it is very important if we are going to face this program like men instead of like children. We should not try to say, in the name of national unity, that we must continue to tolerate great, tragic errors which go on uncorrected.

Mr. SYMINGTON. Mr. President, will the Senator yield further?

Mr. MONRONEY. I yield.

Mr. SYMINGTON. The article to which I refer was written by the Associated Press, and was published May 17, 1960. The headline is "Chronological Account of U.S. Reports on U–2."

Mr. MONRONEY. The Senator says it is an Associated Press article?

Mr. SYMINGTON. Yes.

Mr. MONRONEY. I think we can all trust the Associated Press not to editorialize on behalf of the Democratic Party.

Mr. SYMINGTON. I thank the Senator. I again congratulate the Senator.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CHRONOLOGICAL ACCOUNT OF U.S. REPORTS ON U–2

Following is a chronological account of conflicting statements and comments about the spy plane incident as made by administration spokesmen and agencies.

May 6 (5 days after the flight), an announcement by the National Aeronautics and Space Administration:

"One of NASA's U–2 research airplanes, in use since 1956 in a continuing program to study gust-meterological conditions found at high altitudes, has been missing since about 9 o'clock Sunday morning, when its pilot reported he was having oxygen difficulties over the Lake Van, Turkey, area.

"If the pilot continued to suffer lack of oxygen, the path of the airplane from the last reported position would be impossible to determine. If the airplane was on automatic pilot, it is likely it would have continued along its northeasterly course.

"The pilot, as are all pilots used on NASA's program of upper atmosphere research with the U–2 airplane, is a civilian employed by the Lockheed Aircraft Corp., builders of the airplane.

May 6: Comment by State Department Spokesman Lincoln White at a news conference:

QUESTION. "Has there been any change in the orders under which the planes continue to operate in the vicinity of the Soviet border?"

Mr. White: "There is no change to be made. This gentleman (the pilot) informed us that he was having difficulty with his oxygen equipment. Now our assumption is that the man blacked out. There was absolutely no—n-o—deliberate attempt to violate the Soviet airspace."

May 7: Statement by the State Department:

"As previously announced, it was known that a U–2 plane was missing. As a result of the inquiry ordered by the President it has been established that insofar as the authorities in Washington are concerned there was no authorization for any such flight as described by Mr. Khrushchev.

"Nevertheless it appears that in endeavoring to obtain information now concealed behind the Iron Curtain a flight over Soviet territory was probably undertaken by an unarmed civilian U–2 plane.

The "necessity for such activities as measures for legitimate national defense is enhanced by the excessive secrecy practiced by the Soviet Union in contrast to the free world."

"It is in relation to the danger of surprise attack that planes of the type of unarmed civilian U–2 aircraft have made flights along the frontiers of the free world for the past 4 years.

May 7: Comment by White House Press Secretary James C. Hagerty when asked about a report that Mr. Eisenhower has ordered a halt to all further spy fights over Russia:

"I know of no such order."

May 7: Statement by Secretary of State Herter:

"In accordance with the National Security Act of 1947, the President has put into effect since the beginning of his administration directives to gather by every possible means the information required to protect the United States and the free world against surprise attack and to enable them to make effective preparations for their defense.

"Under these directives programs have been developed and put into operation which have included extensive aerial surveillance by unarmed civilian aircraft, normally of a peripheral nature but on occasion by penetration.

"Specific missions of these unarmed civilian aircraft have not been subject to Presidential authorization."

May 9: Comment by Mr. White at second news conference:

Mr. White: "As this statement says, it is incumbent upon us to take any measures we can to guard against surprise attack."

Question: "You realize that a normal interpretation of this would be that we intend to continue?"

White: "Well, I will leave it to your interpretation."

May 12: President Eisenhower said at his news conference:

"No one wants another Pearl Harbor. This means that we must have knowledge of military forces and preparations around the world, especially those capable of massive surprise attack. The safety of the whole free world demands this."

"We do not use our Army, Navy, or Air Force for this purpose, first to avoid any possibility of the use of force in connection with these activities, and second because our military forces, for obvious reasons, cannot be given latitude under broad directives but must be kept under strict control in every detail.

"The normal agencies of our Government are unaware of these specific activities or of the special efforts to conceal them.

"How should we view all this activity? It is a distasteful but vital necessity."

May 12: U.S. note replying to Russia's protest:

"In its note, the Soviet Government has stated that the collection of intelligence about the Soviet Union by American aircraft is a 'calculated policy' of the United States.

"The U.S. Government does not deny that it has pursued such a policy for purely defensive purposes. What it emphatically does deny is that this policy has any aggressive intent, or that the unarmed U–2 flight of May 1 was undertaken in an effort to prejudice the success of the forthcoming meeting of the heads of government in Paris or to return the state of American-Soviet relations to the worst times of the cold war.

"Indeed, it is the Soviet Government's treatment of this case which, if anything, may raise questions about its intention in respect to these matters."

May 15: Comments by George V. Allen, Director of the U.S. Information Agency, in replying to questions on a television panel show (ABC's "College News Conference"):

Mr. Allen: "I will say that I know that the spokesman of the State Department who gave out the information was acting in entirely good faith when he said that it was a weather plane.

"There has been a great misunderstanding that I would like to correct today. Mr. Herter, the Secretary of State, has not said that we are going to continue to fly. He has said that there is an obligation and a responsibility on the part of the Government of the United States and of the free world to try to obtain information to guard against surprise attack but he has not said that we are going to continue to fly. He hasn't said one way or another."

May 15: Vice President NIXON, answering questions on the television program "Open End":

"There is never a right time to make one of these flights if you're going to get caught.

"The plus is this. You realize that this flight clearly demonstrates the feasibility of the 'open skies' proposal of the President.

"This flight demonstrates that unarmed planes can take photographs without causing any damage, any harm at all to commercial aviation or the national security of the country over which the flights are made."

May 16: Mr. Eisenhower's remarks at summit meeting in Paris:

"We pointed out that these activities (plane flights) had no aggressive intent but rather were to assure the safety of the United States and the free world against surprise attack by a power which boasts of its ability to devastate the United States and other countries by missiles armed with atomic warheads.

"There is in the Soviet statement an evident misapprehension on one key point. It alleges that the United States has, through official statements, threatened continued overflights. In point of fact, these flights were suspended after the recent incident and are not to be resumed."

Mr. CLARK. Mr. President, will the Senator yield briefly?

Mr. MONRONEY. I am happy to yield.

Mr. CLARK. It occurs to me—and I ask my friend from Oklahoma if he agrees with me—that this would be a good place to ask unanimous consent to have printed in the RECORD a series of eight questions concerning the chronology of events about which the Senator from Missouri has spoken. These questions were asked by a number of Members of the House of Representatives of President Eisenhower. In my judgment, these eight questions go to the heart of this situation. I commend my friends in the other body for taking this action. I ask the Senator to request that the questions be printed.

Mr. MONRONEY. I wish we could have the names of all those asking the questions. I think already some 35 or 40 brilliant young Members of the other

body have signed the statement. Does the Senator know the names of those who have signed?

Mr. CLARK. I know that Representative CHESTER BOWLES and Representative JAMES ROOSEVELT are among the ones who have signed, but I do not have the names of the others.

Mr. MONRONEY. Representative METCALF is another.

Mr. President, I ask unanimous consent that the questions be printed in the RECORD.

There being no objection, the questions were ordered to be printed in the RECORD, as follows:

COPY OF QUESTIONS ASKED BY GROUP OF HOUSE LIBERAL MEMBERS IN LETTER TO PRESIDENT EISENHOWER ON MAY 20, 1960

We are distressed over the collapse of the summit meeting and the damage to our prestige and leadership in the world. The cause of world peace has been endangered. We believe that Congress and the people must ask the following questions. We believe it is the administration's responsibility to answer these questions:

1. Why was the U–2 flight over the Soviet Union ordered just prior to the summit meeting?

2. When the U–2 incident became public, why was a series of contradictory and false statements issued by administration officials—and who was responsible?

3. Why did the administration order a worldwide military alert from Paris on the eve of the summit?

4. Why did the administration first indicate that as a matter of national policy it would continue manned flights over Russia, and then reverse itself and say that it had ordered them discontinued?

5. Was it necessary to compromise the announced peaceful role of the National Aeronautics and Space Administration (NASA) by using it as a cover for an espionage operation?

6. Why was there no coordination between the agency responsible for the U–2 flight and the agency responsible for our diplomatic functions?

7. Why did the President announce in advance that as our Chief of State he might return to Washington before the conference ended?

8. Has the traditional American policy of civilian supremacy over the military been impaired?

Mr. YARBOROUGH. Mr. President, will the Senator yield?

Mr. MONRONEY. I yield to the Senator from Texas.

Mr. YARBOROUGH. I desire to associate myself with the remarks of the distinguished Senator from Oklahoma and to congratulate the Senator upon the clarity of his remarks, and his service to this body and to the American people by answering the scurrilous attack made within these walls today upon two great Americans. The very party which calls for unity is doing everything it can, by this type of scurrilous attack, to assure there will not be any unity.

The attack made upon these two great Americans was a typical example of partisan Republican so-called bipartisanship.

The distinguished Senator from Oklahoma has clearly exposed the fallacy of the attack.

Mr. MONRONEY. I thank my distinguished colleague.

Mr. MUSKIE. Mr. President, will the Senator yield?

Mr. MONRONEY. I am happy to yield to the Senator from Maine.

Mr. MUSKIE. Mr. President, I cannot resist suggesting some additional documentation for the points the distinguished Senator has been making.

Mr. MONRONEY. I would welcome the information.

Mr. MUSKIE. On this past Sunday I happened to be in Des Moines, Iowa. I purchased a copy of the Des Moines Sunday Register, for May 22, 1960. The lead editorial had the following to say with respect to one of the distinguished Democrats who has been referred to so vehemently this morning:

But the President knows also that a period of harsh questioning and some political maneuvering is ahead in this election year. The speeches made Thursday night by Adlai E. Stevenson, the titular head of the Democratic Party, and by U.S. Representative CHESTER BOWLES, an adviser on foreign policy to presidential candidate JOHN KENNEDY, make this very evident.

The views and criticism of such responsible and well-informed leaders as Stevenson and BOWLES are welcome. The administration's handling of foreign policy is a proper matter for discussion at any time, and especially during a presidential campaign. Restraint, of course, is called for.

Mr. Stevenson did exercise restraint in his talk. It was made after he had earlier signed a telegram, along with Senators Johnson and Fulbright and House Speaker Rayburn, sent to Mr. Eisenhower in Paris. This telegram was intended to make it clear to Soviet Premier Khrushchev that he could not expect concessions from a Democratic administration that would not be made by a Republican administration.

Mr. President, I ask unanimous consent that the editorial be printed in the RECORD in its entirety at this point.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Des Moines Sunday Register, May 22, 1960]

IKE'S SAD HOMECOMING

It was a sad, not a triumphal, homecoming for President Eisenhower when he returned to Washington Friday. His primary goal in his last year in office has been to bring about some easing of tensions between the Soviet Union and the United States, some tangible progress toward agreements that would end the cold war and make a war of annihilation impossible. These hopes are now crushed by what happened at the summit conference in Paris.

The sympathy of all Americans, Republicans and Democrats alike, is extended to Mr. Eisenhower at this time. This is the meaning of the big reception he received in Washington and of such heart-warming events as a "Welcome Home Eisenhower" day in far-off Oelwein, Iowa. It is not, of course, rejoicing over the failure of the summit conference.

The President can be assured, we feel certain, that there is unity in the United States on basic goals, of resistance to Communist aggression and of a desire, as Mr. Eisenhower said in Portugal, to work with other members of the United Nations and our partners in NATO "in the common cause of peace and justice for all men."

But the President knows also that a period of harsh questioning and some political maneuvering is ahead in this election year. The speeches made Thursday night by Adlai E. Stevenson, the titular head of the Democratic Party, and by U.S. Representative Chester Bowles, an adviser on foreign policy to Presidential Candidate John Kennedy, make this very evident.

The views and criticism of such responsible and well informed leaders as Stevenson and BOWLES are welcome. The administration's handling of foreign policy is a proper matter for discussion at any time, and especially during a presidential campaign. Restraint, of course, is called for.

Mr. Stevenson did exercise restraint in his talk. It was made after he had earlier signed a telegram, along with Senators Johnson and Fulbright and House Speaker Rayburn, sent to Mr. Eisenhower in Paris. This telegram was intended to make it clear to Soviet Premier Khrushchev that he could not expect concessions from a Democratic administration that would not be made by a Republican administration.

Mr. Stevenson did not express the view, as had Senator Kennedy, that the President of the United States should have apologized to Khrushchev about the U–2 spy incident. He said Khrushchev had made an "impossible" demand on Mr. Eisenhower. He also pinned the blame for the wrecking of the summit conference on Khrushchev—but contended that the administration by its "carelessness and mistakes" had made it very easy for the Soviet Premier to wreck the conference. Mr. BOWLES took a similar view: he called for "constructive" debate and a reexamination of the administration's record on foreign relations.

There is very good reason to believe that Khrushchev would have wrecked the summit conference if there had been no U–2 incident and its aftermath of diplomatic blundering. Just why, when he had worked so strenuously to get a conference, is uncertain. The most likely theory is that Khrushchev had finally realized that he couldn't get concessions he wanted from the West on the Berlin and Germany issues. Pressures from Red China and from Communist rivals in Russia are other possible explanations.

But mistakes were made by the administration in its handling of the U–2 affair. The explanation for these mistakes, which may or may not be made in the near future, may clarify the situation somewhat. The mistakes indicate the need, as James Reston points out in his article on today's editorial page, for studying the relationship between the White House and the CIA, whether the National Security Council system is functioning properly and whether there is a failure to coordinate our activities with those of our NATO allies.

A presidential campaign is not the ideal time for studying these problems. But they can't be entirely ignored just because there is a campaign. So foreign policy, and the administration of it, will be an issue.

We can only hope that the discussion and debate will be kept on a high level which will make it clear, to the Communists and to our allies, that there is national unity on our goals and aspirations.

Mr. MUSKIE. Mr. President, would the Senator from Oklahoma appreciate having some additional documentation?

Mr. MONRONEY. I would appreciate it. I think we are making a pretty good record. Certainly it is a physical impossibility to print the hundreds upon hundreds of stories, all in the same vein, with regard to the error, the blunder, and the need for correction, which the Senator is documenting from these papers published far away from Washington, D.C. I am sure these are not Democratic newspapers.

Mr. MUSKIE. No. The documentation which I now offer the Senate is from the grassroots—from the Maine grassroots. I suggest to the distinguished Senator from Oklahoma that the Maine voters are restrained people. They are not inclined to write inflammatory letters.

I picked up these three letters on my way to the floor, simply as an illustration of the kind of mail I am receiving these days on this subject. I read to the Senator a part of one of the letters:

DEAR SENATOR MUSKIE: I wish to express my opinion of the recent "summit conference."

The Russians never got a chance to sabotage the conference, we did it first.

I read another selection from the same letter:

Mr. Eisenhower had no right to so disgrace the United States. I am furiously resentful of the whole performance as well as embarrassed by it. This is my country, too. We had better start electing Presidents who are young enough to keep their wits until they finish their terms.

I read from a letter from another constituent:

Reluctantly, I feel obliged to express to you my bewilderment and horror at the manner in which our Government is handling its foreign policy. I resent having to appear, out of loyalty, to condone behavior which I consider to be both disgraceful and inept.

The same constituent also writes:

Could it be that the President, with his apparent distaste for work, has left too much control to undesirable underlings? We have a right to know what is being done in our name since the contradictions and the propaganda of the Government have rendered their policy and their methods entirely unintelligible.

I quote from one further letter from a constituent:

DEAR SENATOR MUSKIE: This letter is written as a protest at the inept handling, by the administration, of the U–2 incident. But, more particularly, at the series of blunders perpetrated after the incident.

This constituent further says:

I have been a registered Republican in the State of Maine for 25 years. I shall vote Democratic in the presidential election.

I offer these few excerpts from letters by constituents for the RECORD, to indicate there is a cry which I have heard from all over the country for answers to questions which are deeply troubling people. I may say I traveled this past weekend into Minnesota and Iowa. These are people at the grassroots, people who have no political axes to grind whatsoever.

I think the distinguished Senator from Oklahoma is rendering a distinct service to the country by asking these questions.

Mr. MONRONEY. I thank my distinguished colleague for the great contribution he has made by adding to the RECORD, particularly the sage comments of his constituency. We know Maine people are not generally as explosive in their character or as quick to make judgments as are people from some other parts of the country.

Mr. SYMINGTON. Mr. President, will the Senator yield?

Mr. MONRONEY. I yield to my distinguished colleague.

Mr. SYMINGTON. Mr. President, I ask my friend from Oklahoma [Mr. MONRONEY] if he does not agree that one of the sad characteristics of this recent episode is the fact that it shows a lack of coordinated organization between vitally important departments of our Government.

Mr. MONRONEY. I quite agree. The distinguished Senator from Missouri has labored for days on end and for years back to point out from his own vast experience where there are gaps in communication resulting in lost motion and misunderstanding, and the failure to coordinate with others who are vitally concerned. The Senator has repeatedly done this, and I think the Nation should be grateful.

Mr. SYMINGTON. I thank the able Senator for his kind remarks.

I have pointed out for years that in my opinion the present organization is not only unnecessarily costing the taxpayers many billions of dollars annually, but also is not giving the Nation that type and character of security so necessary in this nuclear space age. If we do not reorganize our defenses and our whole diplomacy around the world on the basis of progress instead of continuing to let them drift in tradition, not only will we continue to waste money, but also we do not have adequate security.

Does not the Senator agree with me that the latest incident verifies the fact we must coordinate our entire governmental structure on a more modern basis if we are to bring peace to the world?

Mr. MONRONEY. I certainly agree with the Senator completely and praise him for the work he has done in trying to push toward that direction from the seat he occupies on the Armed Services Committee.

Mr. SYMINGTON. I thank the Senator.

Mr. MONRONEY. Mr. President, what is so terrible about the speech of Adlai Stevenson? Let me read the first three paragraphs, which have not received wide press coverage:

It appears that this year's campaign will be waged under the darkest shadows that ever hovered over the world, the mushroom clouds of a nuclear war that no one wants. This terrible danger, and how to overcome it, will and should overshadow every other issue.

For the chances of a more stable world, which seemed to be brightening, have been rudely reversed by the breakdown of the summit conference in this historic week.

Premier Khrushchev wrecked this conference. Let there be no mistake about that. When he demanded that President Eisenhower apologize and punish those responsible for the spy plane flight, he was, in effect, asking the President to punish himself. This was an impossible request, and he knew it.

SERIES OF BLUNDERS

But we handed Khrushchev the crowbar and the sledge hammer to wreck the meeting. Without our series of blunders, Mr. Khrushchev would not have had a pretext for making his impossible demand and wild charges. Let there be no mistake about that either.

Then the Governor details the well known point with which we all agree about what happened in the sending of the U–2 plane over Russia. He goes on:

We Democrats know how clumsy this administration can be.

That is not an unusual statement for a Democrat to make. I expect that we shall be making it continually as long as Republicans are in power, and when they go out of power the Republicans will reverse the process upon us. So there is no slanderous misstatement of fact in Mr. Stevenson's speech; it is a restrained statement of a Democratic observation.

We are not likely to forget the fumbles that preceded the Suez crisis on the eve of the 1956 election.

But nothing, of course, can justify Mr. Khrushchev's contemptuous conduct, especially after President Eisenhower had announced that our espionage flights had been called off. But his anger was predictable, if not his violence. How would we feel if Soviet spy planes based in Cuba were flying over Cape Canaveral and Oak Ridge. And also we could predict with certainty his efforts to use the situation to split the Western Alliance and intimidate the countries where our bases are situated.

I do not think there is much debate about that.

Republican leaders are now saying that in this grave crisis we must all rally round the President in the name of national unity. Our respect for the Presidency will find us joined in salute to President Eisenhower upon his return. We resent deeply and bitterly the gross affront to the President and his office.

NO QUESTION ABOUT UNITY

There is no question about national unity in a time of crisis. But errors must be corrected, and must not forget that the opposition party also has an obligation to our country and to our allies whose security is also involved. It is the duty of responsible opposition in a democracy to expose and criticize carelessness and mistakes, especially in a case of such national and world importance as this. We must see to it that we profit from such grave mistakes and misfortunes.

It is particularly regretable that this happened in an election year. And we can already predict what the Republicans will tell the people in the months ahead.

They will say that President Eisenhower's patience and dignity in Paris scored a diplomatic triumph by exposing Khrushchev's insincerity.

They will say that the Russians are hoping that a "softer" Democratic President will be elected in November. They will tell the people that a vote for the candidate the Russians distrust is a vote against appeasement.

I think we have had a sample today of what the line will be. We will hear again that the Democrats are soft on communism and that an effort to negotiate for peace and to avert thermonuclear war is a selling out of this Nation. We apparently must not discuss the realities of our situation with anyone.

Mr. President, I can find no quarrel with this speech. I believe it is an excellent speech. I believe it is a statesmanlike speech. Instead of general condemnation of the scathing attack which Adlai Stevenson is supposed to have made, let us find out where the attack is in error. Let us discuss the facts.

Mr. President, in closing I wish to say I have seen a sample of the reaction from Des Moines and other parts of the country. Let me say in behalf of a grateful Nation, thank God for a free press. This was an hour which required courage, and it found the press of all political faiths not willing to sweep any of the hard, critical facts under the rug.

Let me say also, Mr. President, that in times of crisis our political system, so much maligned, inevitably produces a leader adequate to the task; and that if the situation is sufficiently desperate, the American people have yet to fail to recognize and welcome his leadership.

Mr. President, I ask unanimous consent that there be printed in the RECORD at this point in my remarks the complete statement from the wisest voice in the Democratic Party and the most influential voice in the Western World, Adlai Stevenson, of Illinois.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

[From the Washington Post, May 20, 1960]

TEXT OF STEVENSON'S SPEECH ON SUMMIT CRISIS

It appears that this year's campaign will be waged under the darkest shadows that ever hovered over the world—the mushroom clouds of a nuclear war that no one wants. This terrible danger—and how to avert it—will and should overshadow every other issue.

For the chances of a more stable world, which seemed to be brightening, have been rudely reversed by the breakdown of the summit conference in this historic week.

Premier Khrushchev wrecked this conference. Let there be no mistake about that. When he demanded that President Eisenhower apologize and punish those responsible for the spy-plane fight, he was in effect asking the President to punish himself. This was an impossible request, and he knew it.

SERIES OF BLUNDERS

But we handed Khrushchev the crowbar and the sledgehammer to wreck the meeting. Without our series of blunders, Mr. Khrushchev would not have had a pretext for making his impossible demand and wild charges. Let there be no mistake about that either.

We sent an espionage plane deep into the Soviet Union just before the summit meeting. Then we denied it. Then we admitted it. And when Mr. Khrushchev gave the President an out by suggesting that he was not responsible for ordering the flight, the President proudly asserted that he was responsible. On top of that we intimated that such espionage flights over Russia would continue. (At this point if Khrushchev did not protest he would be condoning our right to spy—and how long could be keep his job that way?) Next we evidently reconsidered and called off the espionage flights. But to compound the incredible, we postponed the announcement that the flights were terminated—just long enough to make it seem we were yielding to pressure, but too long to prevent Mr. Khrushchev from reaching the boiling point.

ALERT CARD NOTED

And, as if that wasn't enough, on Sunday night when there was still a chance that De Gaulle and Macmillan could save the situation, we ordered a worldwide alert of our combat forces. Is it unreasonable for suspicious Russians to think such a series of mistakes could only be a deliberate effort to break up a conference we never wanted anyway?

We Democrats know how clumsy this administration can be. We are not likely to forget the fumbles that preceded the Suez crisis on the eve of the 1956 election.

But nothing, of course, can justify Mr. Khrushchev's contemptuous conduct, especially after President Eisenhower had announced that our espionage flights had been called off. But his anger was predictable, if not his violence. How would we feel if Soviet spy planes based in Cuba were flying over Cape Canaveral and Oak Ridge? And also we could predict with certainty his efforts to use the situation to split the Western alliance and intimidate the countries where our bases are situated.

Republican leaders are now saying that in this grave crisis we must all rally round the President in the name of national unity. Our respect for the Presidency will find us joined in salute to President Eisenhower upon his return. We resent deeply and bitterly the gross affront to the President and his office.

NO QUESTION ABOUT UNITY

There is no question about national unity in a time of crisis. But errors must be corrected, and must not forget that the opposition party also has an obligation to our country and to our allies whose security is also involved. It is the duty of responsible opposition in a democracy to expose and criticize carelessness and mistakes, especially in a case of such national and world importance as this. We must see to it that we profit from such grave mistakes and misfortunes.

It is particularly regrettable that this happened in an election year. And we can already predict what the Republicans will tell the people in the months ahead.

They will say that President Eisenhower's patience and dignity in Paris scored a diplomatic triumph by exposing Khrushchev's insincerity.

They will say that the Russians are hoping that a "softer" Democratic President will be elected in November. They will tell the people that a vote for the candidate the Russians distrust is a vote against appeasement.

It will be our duty, it will be the duty of all thoughtful, concerned citizens to help the situation and to face the hard inescapable facts; that this Administration played into Khrushchev's hands; that if Khrushchev wanted to wreck the conference our Government made it possible; that the administration has acutely embarrassed our allies and endangered our bases; that they have helped make successful negotiations with the Russians—negotiations that are vital to our survival—impossible so long as they are in power.

MUST SEEK UNDERSTANDING

We cannot sweep this whole sorry mess under the rug in the name of national unity. We cannot and must not. Too much is at stake. Rather we must try to help the American people understand the nature of the crisis, to see how we got into this predicament, how we can get out of it, and how we get on with the business of improving relations and mutual confidence and building a safer, saner world in the nuclear age.

For in this age, unprecedented in human history, all of us, Americans and Russians alike, have one common enemy. The enemy is the danger of war. We must defeat the enemy together. Despite his hysterics last night, Mr. Khrushchev says he still believes in peaceful progress by negotiation. Let us hope he proves it, and let the United States come into the United Nations not content with the ordinary speeches, not content with the usual anti-Russian majority votes, but with constructive, positive, affirmative proposals to restore the hope of peace.

To those who will see nothing but Russian vice and American virtue, to those who will cry "appeasement" to any acknowledgement of our mistakes I say that this is the toughest kind of common sense. For there is no future for any of us in a spiraling arms race propelled by mounting suspicion and distrust on both sides. The fact that Khrushchev seems to have lost his temper in Paris makes it all the more important that we not lose ours—or our heads.

Mr. MUSKIE. Mr. President, I again wish to congratulate the Senator for his statement. I think it might well be capped by this quotation from Murrey Marder which appeared in the Washington Post for Sunday, May 22, 1960, entitled "The American in Paris Practically Squirmed." I would like to read a section of the story. The writer refers to the time of agony in Paris:

During that time, searing words echoed around the world to the gross embarrassment of the United States; words like "aggressor," "bandit," "treacherous," "apologize," "punish," "guilty." The American on the scene who was only an observer and not a participant subconsciously squirmed under the indignity being heaped on his Nation and President, no matter what his political affiliation.

He squirmed, too, over the bumbling stumbling record of U.S. actions in the U–2 affair, which caused headshaking in the corridors, bars, and hotel lobbies here by the nationals of every American ally. He squirmed most while Khrushchev, like a master showman, was "milking" every minute of the greatest East-West propaganda battle in recent years. The United States, feebly and fumblingly, was drawing its only effective defense from the fact that it was being pushed too far.

Mr. President, I ask unanimous consent that there be printed at this point in the RECORD in my remarks the entire text of the story by Murrey Marder.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Post, May 22, 1960]

THE AMERICAN IN PARIS PRACTICALLY SQUIRMED

(By Murrey Marder)

PARIS.—It was like watching a sad, old-fashioned film where the movements are too fast and jerky and you don't quite know whether to laugh or cry. This was high drama at the pinnacle of world affairs, but low comedy and satire and melodrama kept intruding, and the stage revolved so rapidly that it mixed them all up together.

The American knew before he came that a global storm was probably in the making at the summit, but the speed and fury with which it broke was not anticipated. Suddenly it was over, in the erratic, contradictory rush of events which often merge to form a major moment of history; the world's two leading powers had collided head on, and their relationship to each other and to the rest of the world was altered.

What the American present felt most deeply was not that Soviet Premier Khrushchev had turned more menacing about West Berlin, or disarmament, or nuclear test suspension—or even that the summit had ended before it began: underneath these facts was something more profound, the Soviet Union, second to the United States in industrial power and world influence, had "told off" the United States in some of the most insulting language ever used against a major world power—and had gotten away with it.

A DIFFERENT CHALLENGE

Perhaps, as American officials claim, the United States did come out of the encounter with a net gain in weight of world public opinion. Perhaps Khrushchev overplayed his threats and warnings and the Soviet Union will have to back off later. A final answer awaits future events.

But at the moment, the American on the scene is struck by the fact that while the Soviet sputniks, Lunik and space satellite demonstrated physical power, the collapsed summit meeting recorded a new kind of direct, blunt challenge to America's influence, prestige, and honor.

Short, squat Nikita Khrushchev, the son of a peasant, who schemed and elbowed his way to the leadership of a still rough, raw nation, was telling the proud President of the leading nation on the globe to get down on his knees and humble himself before the world. Unless he did, the momentous conference which the President came here to attend could not start.

The fact that the President did not do so, and turned away in disgust, only partially dims Khrushchev's triumph. For the President went as far as the strained dignity of the United States would permit without groveling before the Soviet leader, over the admitted transgression of Russian territory by an American plane on a spying mission.

HOPELESS MEDIATION

For 3 days, from Sunday to Tuesday, when it was formally admitted that the conference had failed, attempts were made to mediate the differences between the Soviet and American leaders, although there was never any doubt that the original demands were repugnant and uncompromisable for President Eisenhower.

During that time, searing words echoed around the world to the gross embarrassment of the United States; words like "aggressor," "bandit," "treacherous," "apologize," "punish," "guilty." The American on the scene who was only an observer and not a participant subconsciously squirmed under the indignity being heaped on his Nation and President, no matter what his political affiliation.

He squirmed, too, over the bumbling, stumbling record of U.S. actions in the U–2 affair, which caused headshaking in the corridors, bars, and hotel lobbies here by the nationals of every American ally. He squirmed most while Khrushchev, like a master showman, was "milking" every minute of the greatest East-West propaganda battle in recent years. The United States, feebly and fumblingly, was drawing its only effective defense from the fact that it was being pushed too far.

CONTROLLED ANGER

In the spectacular windup Khrushchev press conference of Wednesday, the description of the Soviet Premier in some news reports as "raging" or "almost incoherent with anger" were hardly fitting. Khrushchev indeed worked himself into several outward furies. He gestured violently. He used coarse language. He was undoubtedly really angry over embarrassing holes in Soviet defenses disclosed by public revelation that for years American reconnaissance planes have penetrated Soviet territory.

As a citizen of any country, and particularly Russia, would be, he was affronted and insulted by foreign violation of his nation's borders. But there is a great difference between a Khrushchev and a shrill, reckless, fanatic Hitler.

The Soviet Premier by no means allows his emotions to go beyond his control. He measures every reaction purposefully. Specifically, he allots his time for anger, for mirth, for scorn, for mockery.

Much more than marking his heights of anger, Khrushchev's performance here marked his heights of triumph. He toyed publicly with the United States, undoubtedly enjoying himself hugely. No one ever before has mocked the power of the United States in such terms of derision and scorn.

Khrushchev's famous remark, "We will bury you," was a boast which the United States could scoff at, but this time he had the United States on the defensive, its morality tarnished, its dignity sullied, its righteousness pinched.

"Look what self-assurance," he baited President Eisenhower, "what generosity. Even children are told, if you have made mischief, admit it and say, I shall not do it again."

Physical power lacking can be gained; missile or satellite gaps conceivably can be closed. But honor wounded, nose punched, "face" lost cannot be measured precisely. To the American in Paris they seemed at least equally damaging to a great nation.

Mr. CLARK. Mr. President, will the Senator yield?

Mr. MONRONEY. I yield.

Mr. CLARK. I commend my friend from Oklahoma for the splendid address he has just concluded. I am particularly grateful that he inserted the entire text of Governor Stevenson's speech in the RECORD.

I should like to read the last few sentences to my friends across the aisle, because they seem to me to be sentences which every patriotic American can agree upon.

Let us hope he proves it and let the United States come into the United Nations not content with ordinary speeches, not content with the usual anti-Russian majority votes, but with constructive, positive, affirmative proposals to restore the hope of peace.

To those who will see nothing but Russian vice and American virtue, to those who will cry appeasement to any acknowledgment of our mistakes I say that this is the toughest kind of common sense. For there is no future for any of us in a spiralling arms race propelled by mounting suspicion and distrust on both sides. The fact that Khrushchev seems to have lost his temper in Paris makes it all the more important that we not lose ours—or our heads.

I commend this sound advice to my colleagues across the aisle.

Mr. President, I should like to ask the Senator from Oklahoma if he has had occasion to read and perhaps put into the RECORD the text of the statement issued by the Democratic Advisory Council, which appears in the press this morning.

Mr. MONRONEY. I think it would be appropriate to put it in the RECORD. I have not had a chance to clip it.

Mr. CLARK. Mr. President, I ask unanimous consent that the statement issued by the Democratic Advisory Council be printed in the RECORD at this point in our remarks. I read, for the benefit of my friends across the aisle the final two paragraphs of the statement:

The Democratic Party stands solidly behind the President in any sound efforts he may undertake to salvage, from the wreckage of the Paris meeting, the means whereby the peace of the world can be assured.

Above all, the United States must be ready, along with its allies, to take part in the earliest possible renewal of meaningful negotiations at the United Nations and elsewhere for agreement on disarmament and the settlement of outstanding questions.

I am sure my friend from Oklahoma agrees with me that what we want is some benefit from the mistakes which have been made, and that we will come forward with a positive policy, and not cry over spilled milk, although we must find out what the facts are. Our only obligation is to continue to try to create a climate in this body in which this can be set up successfully with the cooperation of the Senate on both sides of the aisle, instead of getting into *political* strictures, which I regret very much our friends on the other side of the aisle saw fit to start this morning.

There being no objection, the text of the statement was ordered to be printed in the RECORD, as follows:

[From the New York Times, May 23, 1960]

TEXT OF STATEMENT BY DEMOCRATIC COUNCIL

All Americans resent the manner in which Mr. Khrushchev treated the President of the United States in Paris. Mr. Khrushchev killed the summit meeting. He thereby did incalculable harm to the cause of peace. But the Eisenhower-Nixon administration handed him the opportunity to do so by embarking on a policy which it knew and had declared to be unsound, and by handling the incident of the American U–2 plane in a manner for which there is no precedent.

President Eisenhower had declared repeatedly that he would attend a summit conference only if preliminary negotiations had shown substantial progress toward a settlement. In this he was right. Yet he went to Paris in the full knowledge that no progress had been made toward the settlement of the issues which most threaten the peace of the world: Berlin and the arms race. In this he was wrong, and disaster followed.

The foreign policy of the Eisenhower-Nixon administration is in shambles. It has become obvious that the operations of the Government of the United States in its most important areas are chaotic. The integrity of the word of the United States has been put into doubt. The danger of an all-destructive nuclear war has been increased.

Citizens of our country have not only a right but a duty to speak out on these important matters. If the Democratic advisory council were to keep silent in this grave hour and with regard to issues of such historic importance, it would fail to meet its responsibilities. Constructive criticism is the very lifeblood of mature representative government. Only thus do we correct past errors and avoid future mistakes.

RESPONSIBLE CRITICISM

The need now is for responsible criticism and for constructive proposals to lay the groundwork for the creative actions which are required if we are to get on with the all-important task of building peace.

During the first 2 weeks of May 1960, the foreign policy of the Eisenhower-Nixon administration collapsed. After the Soviet Government announced that the U–2 plane had crashed on Russian territory, the Eisenhower-Nixon administration floundered in a series of contradictory statements put out by a number of different agencies. First, it was said that a weather observation plane whose pilot had oxygen trouble had strayed into Soviet territory. Then it was said that this was a reconnaissance flight but that it had been undertaken without authorization from Washington. Then it was said that similar flights had been undertaken before and it was implied that they would continue. Then the President assumed responsibility for this particular flight and declared such flights to be vital to the security of the United States. Vice President NIXON took the same line. Finally, and in spite of his earlier declaration that they are vital to the Nation's security, President Eisenhower declared that he had suspended all such flights for the duration of his administration. As the head of the Washington bureau of the

New York Times wrote yesterday: "President Eisenhower was responsible, directly or indirectly, for the greatest series of humiliating blunders suffered by the United States in a decade."

These events were not just an isolated series of blunders. They were the result of deep-seated deficiencies in our foreign and domestic policies and in the management of our Government. Our foreign policy has failed not because of the recent blunders related to the summit meeting but because of its fundamental lack of purpose and integrity. We failed in May 1960, because we had been failing before.

COMPETENCE QUESTIONED

The fiasco in Paris raises again the whole issue of the lack of competence of the present administration. Our disarmament policies provide a typical exemple of the chaotic condition of the executive branch of the Government. The executive branch is deeply divided on the issues of disarmament and, more particularly, on the cessation of atomic tests. Yet the conflicts dividing the Government have never been resolved definitely by the President. They have been glossed over by meaningless formulas, or else they have been referred back to the respective agencies to gloss them over by similarly meaningless formulas.

The first lesson which we must learn from the recent debacle is, therefore, the urgent need for the restoration of the President's authority within his own house.

The contemptuous and insulting fashion in which Mr. Khrushchev dared to deal with the President of the United States in Paris was intolerable. We must, however, recognize that Mr. Khrushchev's conduct was a direct reflection of his confidence in Russian power and his lack of respect for our strength and prestige. The events in Paris have made it clear that the inadequacies of the United States in building economic growth in developing science and education, and in strengthening its defenses are contributing to the dangers to world peace.

Moreover, these same shortcomings which tempt the Soviets to excesses tend to weaken the confidence of our allies not only in our strength but also in the wisdom and competence of our Government.

NO ROOM FOR DESPAIR

The reverses which have befallen us can well be turned to good advantage if we learn the lessons which the events of recent weeks teach us. We must not allow dismay at these recent events to turn into despair. We must see to it that out of the wreckage of the Paris meeting we build new strength in our own country and in all the world, and a new drive for a world at peace.

If there ever was a time for national debate, that time is now. We urge that this debate be carried on without rancor and without motivation of mere partisan advantage. Regardless of our differences we are all Americans. We are facing an unprecedented danger. Unless America is able to restore her damaged prestige, the principles to which we are so deeply committed will be increasingly in retreat in all parts of the world.

We hope that out of the present confusion may be born new policies, new understandings, and new attitudes which will lay the foundation for peace among nations and dignity for all men.

While we are considering and debating these issues and policies, elementary prudence and common sense demand immediate action.

We must tighten up the processes by which our national security policies are formulated and executed.

We must expand our economic growth for security here and abroad.

We must step up our defense program.

We must increase the effectiveness of our aid to the underdeveloped countries of the free world.

These things ought to be done at once—vigorously and in full cooperation with the NATO countries and with our friends and allies in this hemisphere, in Asia, and in Africa.

The Democratic Party stands solidly behind the President in any sound efforts he may undertake to salvage, from the wreckage of the Paris meeting, the means whereby the peace of the world can be assured.

Above all, the United States must be ready, along with its allies, to take part in the earliest possible renewal of meaningful negotiations at the United Nations and elsewhere for agreement on disarmament and the settlement of outstanding questions.

Senator KENNEDY, in approving the statement by telephone, took exception to one paragraph. His position as the leading prospect for the Democratic nomination made his comment significant.

The paragraph criticized President Eisenhower for going to the summit conference despite the fact that "no progress had been made toward the settlement of the issues which most threaten the peace of the world: Berlin and the arms race."

DEFENDS PRESIDENT

Senator KENNEDY said:

"While summit meetings should be preceded by meaningful negotiations, given the state of world opinion and that of our allies, the President, under then existing circumstances, could not have avoided attending the conference without harm to the prestige of the United States."

Mr. MONRONEY. I thank the distinguished Senator from Pennsylvania for his helpful remarks; also for putting in the resolutions of the Democratic Advisory Council.

CALL OF THE CALENDAR

Mr. HAYDEN. Mr. President, at pages 11 to 13 of the legislative calendar, there appear 31 resolutions reported from the Committee on Rules and Administration, which relate to authorizing the printing of committee reports and payments of gratuities to relatives of deceased employees of the Senate.

I ask unanimous consent that the Senate proceed with the call of the calendar for the passage of measures and resolutions to which there is no objection, beginning with Calendar No. 1377 and concluding with Calendar No. 1407.

The PRESIDING OFFICER. Without objection, it is so ordered.

DISTRIBUTION OF CONGRESSIONAL RECORD TO FORMER MEMBERS OF CONGRESS

The bill (S. 3036) to authorize the distribution of copies of the CONGRESSIONAL RECORD to former Members of Congress requesting such copies was considered, ordered to be engrossed for a third reading, read the third time, and passed, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 73 of the Printing Act, approved January 12, 1895, as amended (44 U.S.C. 183), is amended by inserting after the paragraph relating to ex-Presidents and ex-Vice Presidents a new paragraph as follows:

"To each former Senator, Representative in Congress, Delegate from a territory, or Commissioner from Puerto Rico, upon request to the Public Printer, one copy of the daily."

MEMORIAL TO MARY McLEOD BETHUNE

The joint resolution (H.J. Res. 502) authorizing in the District of Columbia a memorial to Mary McLeod Bethune was announced as next in order.

The PRESIDING OFFICER. Is there objection to the present consideration of the resolution?

There being no objection, the Senate proceeded to consider the resolution.

Mr. KEATING. Mr. President, I trust the Senate will give its stamp of approval to this measure, which authorizes the erection in the District of Columbia of a memorial to the incomparable Mary McLeod Bethune. This memento in stone will immortalize the life of a wonderful woman whose life was dedicated to the quest for knowledge.

It will stand as a lasting tribute to a great woman who has walked among us and left her mark in so many hearts. The career of this woman is a lesson in perseverence and accomplishment. She served her Nation and her people well, both in filling important positions in the Federal Government and in founding institutions of learning.

Hers was a life devoted to the development of knowledge to be used for good works. It was a life devoted to the search for knowledge, not merely for its own sake, but as a source of service, as the handmaiden of understanding, as the key that would open doors and lead her people toward the self-fulfillment that is the hunger—the spiritual hunger—of each and every one of us.

Mary McLeod Bethune has earned her monument. It is in the hearts of all who have been touched by her love, by her genius, by her devotion to the cause of giving meaning and substance and nobility to the lives of those privileged to dwell in the wide circle of her influence.

It was my privilege just last weekend to participate in an important activity of another of Mary McLeod Bethune's lasting monuments, the National Council of Negro Women, of which she was the founder and organizer. This outstanding conference demonstrated well the outstanding manner in which the national council is carrying on the work and promoting the ideals of its founder.

It is significant that the memorial honoring Mrs. Bethune will also commemorate the 100th anniversary of the signing of the Emancipation Proclamation. In her life and works she exemplified the great fruits of that historic pronouncement and it is therefore doubly appropriate that they be linked in this lasting tribute.

The PRESIDING OFFICER. The question is on the third reading of the joint resolution.

The joint resolution was ordered to a third reading, was read the third time, and passed.

PRESENTATION OF OFFICIAL FLAG OF THE UNTED STATES TO SENATORS AND REPRESENTATIVES FROM THE STATE OF HAWAII

The resolution (H.J. Res. 546) authorizing the Architect of the Capitol to present to the Senators and Representatives in the Congress from the State of Hawaii the official flag of the United States bearing 50 stars which is first flown over the west front of the U.S. Capitol was considered, ordered to a third reading, read the third time, and passed.

PRINTING OF ADDITIONAL COPIES OF PANEL DISCUSSIONS ENTITLED "INCOME TAX RESCISSION"

The concurrent resolution (H. Con. Res. 558) providing for printing additional copies of the panel discussions entitled "Income Tax Rescission" was considered and agreed to.

PRINTING OF ADDITIONAL COPIES OF VETERANS' BENEFITS CALCULATOR

The concurrent resolution (H. Con. Res. 579) authorizing the printing of additional copies of a Veterans' Benefits Calculator was considered and agreed to.

PRINTING OF ADDITIONAL COPIES OF HEARINGS ON CIVIL RIGHTS

The concurrent resolution (H. Con. Res. 586) authorizing the printing of additional copies of the hearings on civil rights was considered and agreed to.

PRINTING OF A HOUSE DOCUMENT

The concurrent resolution (H. Con. Res. 607) authorizing the printing of a House document of the pamphlet entitled "Our American Government, What Is It? How Does It Function?" was considered and agreed to.

PRINTING OF ADDITIONAL COPIES OF FINAL REPORT OF SELECT COMMITTEE ON IMPROPER ACTIVITIES IN THE LABOR OR MANAGEMENT FIELD

The Senate proceeded to consider the concurrent resolution (S. Con. Res. 90) authorizing the printing of additional copies of the final report and indexes to hearings and reports of the Select Committee on Improper Activities in the Labor or Management Field, which had been reported from the Committee on Rules and Administration with an amendment to strike out all after the resolving clause and insert:

That there be printed for the use of the Committee on Government Operations not to exceed three thousand additional copies each of parts 2 and 3 of the final report of the Select Committee on Improper Activities in the Labor or Management Field (S. Rept. 1139, Eighty-sixth Congress, second session), pursuant to S. Res. 44 and S. Res. 249, Eighty-sixth Congress.

The amendment was agreed to.

The concurrent resolution, as amended, was agreed to.

PRINTING OF ADDITIONAL COPIES OF HEARINGS PERTAINING TO JOINT COMMITTEE ON ATOMIC ENERGY

The concurrent resolution (S. Con. Res. 91) authorizing the printing of additional copies of hearings before the Subcommittee on Agreements for Cooperation of the Joint Committee on Atomic Energy on amending the Atomic Energy Act of 1954 with respect to exchange of military information and material with allies during the 2d session of the 85th Congress was considered and agreed to, as follows:

Resolved by the Senate (the House of Representatives concurring), That there be reprinted for the use of the Joint Committee on Atomic Energy two thousand additional copies of the hearings before the Subcommittee on Agreements for Cooperation of the Joint Committee on Atomic Energy on Amending the Atomic Energy Act of 1954 with respect to exchange of military information and material with allies during the second session of the Eighty-fifth Congress.

PRINTING OF ADDITIONAL COPIES OF COMMITTEE PRINT PERTAINING TO NATIONAL WATER RESOURCES

The concurrent resolution (S. Con. Res. 94) authorizing the printing of additional copies of a committee print containing the reports of the States to the Senate Select Committee on National Water Resources was considered and agreed to, as follows:

Resolved by the Senate (the House of Representatives concurring), That there be printed for the use of the Senate Select Committee on National Water Resources four thousand additional copies of the committee print, prepared by that committee, containing the reports of the States to the committee on their water resources and problems.

PRINTING AS SENATE DOCUMENT REVISED EDITION OF INTERNAL SECURITY MANUAL

The concurrent resolution (S. Con. Res. 96) authorizing the printing of a revised edition of the Internal Security Manual as a Senate document; and providing for additional copies was considered and agreed to, as follows:

Resolved, by the Senate (the House of Representatives concurring), That there be printed as a Senate document a revised edition of the Internal Security Manual; and that five thousand additional copies be printed for the use of the Committee on the Judiciary.

PRINTING AS SENATE DOCUMENT COMPILATION OF STUDIES ON UNITED STATES-LATIN AMERICAN RELATIONS

The concurrent resolution (S. Con. Res. 99) to print as a Senate document a compilation of studies on United States-Latin American relations was considered and agreed to, as follows:

Resolved by the Senate (the House of Representatives concurring), That there shall be printed as a Senate document a compilation of the studies on United States-Latin American relations prepared under the direction of the Subcommittee on American Republics Affairs of the Committee on Foreign Relations, pursuant to S. Res. 330, agreed to July 31, 1958, as amended by S. Res. 31, agreed to February 2, 1959, and S. Res. 250, agreed to February 9, 1960.

SEC. 2. There shall be printed ten thousand additional copies of such Senate document. Such additional copies shall be for the use of the Committee on Foreign Relations and the Subcommittee on American Republics Affairs.

PRINT AS SENATE DOCUMENT STUDIES ON U.S. FOREIGN POLICY

The concurrent resolution (S. Con. Res. 100) to print as Senate document a compilation of studies on U.S. foreign policy was considered and agreed to, as follows:

Resolved by the Senate (the House of Representatives concurring), That there shall be printed as a Senate document a compilation of the studies on United States foreign policy prepared under the direction of the Committee on Foreign Relations, pursuant to S. Res. 336, agreed to July 31, 1958, as amended by S. Res. 31, agreed to February 2, 1959, and S. Res. 250, agreed to February 9, 1960.

SEC. 2. There shall be printed ten thousand additional copies of such Senate document. Such additional copies shall be for the use of the Committee on Foreign Relations.

PRINTING OF ADDITIONAL COPIES OF REPORT OF SELECT COMMITTEE ON SMALL BUSINESS

The resolution (S. Res. 277) to print for the use of the Select Committee on Small Business additional copies of its 10th annual report was considered and agreed to, as follows:

Resolved, That there be printed for the use of the Select Committee on Small Business of the Senate, three thousand additional copies of Senate Report Numbered 1044, Eighty-sixth Congress, second session, entitled "Tenth Annual Report."

PRINTING OF ADDITIONAL COPIES OF REPORT ON PROBLEMS OF THE AGED AND AGING

The resolution (S. Res. 278) to print additional copies of the report on the problem of the aged and aging was considered and agreed to, as follows:

Resolved, That there be printed for the use of the Committee on Labor and Public Welfare three thousand additional copies of its report to the Senate pursuant to S. Res. 65, Eighty-sixth Congress, first session, entitled "The Aged and Aging in the United States: A National Problem".

PRINTING OF ADDITIONAL COPIES OF SENATE REPORT NO. 807 ENTITLED "FEDERAL DISASTER RELIEF MANUAL"

The resolution (S. Res. 281) authorizing the printing of additional copies of

Senate Report No. 807, 86th Congress, entitled "Federal Disaster Relief Manual," was announced as next in order.

The PRESIDING OFFICER. Is there objection to the present consideration of the resolution?

Mr. MANSFIELD. Over, by request.

The PRESIDING OFFICER. The resolution will be passed over.

PRINTING OF ADDITIONAL COPIES OF QUESTION-AND-ANSWER REVIEW OF ST. LAWRENCE SEAWAY

The resolution (S. Res. 299) authorizing the printing of additional copies of the question-and-answer review of the St. Lawrence Seaway was considered and agreed to, as follows:

Resolved, That there be printed for the use of the Committee on Foreign Relations eighty thousand additional copies of a question-and-answer review of the Saint Lawrence Seaway.

PRINTING OF STAFF REPORT ON LABOR-MANAGEMENT RELATIONS ON FEDERAL PROJECTS

The Senate proceeded to consider the resolution (S. Res. 302) to print for the Committee on Labor and Public Welfare a staff report on labor-management relations on certain Federal projects, which had been reported from the Committee on Rules and Administration, with an amendment, in line 2, after the word "Welfare," to insert "three thousand," so as to make the resolution read:

Resolved, That there be printed for the use of the Committee on Labor and Public Welfare three thousand additional copies of the committee print of the Eighty-second Congress, second session, entitled "Labor-Management Relations in Federal Projects Involving the Davis-Bacon Act", a staff report to the Committee on Labor and Public Welfare.

The amendment was agreed to.

The resolution, as amended, was agreed to.

PRINTING OF ADDITIONAL COPIES OF FINAL REPORT OF SPECIAL COMMITTEE ON UNEMPLOYMENT PROBLEMS

The resolution (S. Res. 303) to print for the use of the Special Committee on Unemployment Problems additional copies of its final report was considered and agreed to, as follows:

Resolved, That there be printed for the use of the Special Committee on Unemployment Problems three thousand nine hundred additional copies of its final report to the Senate pursuant to Senate Resolution 196, Eighty-sixth Congress (S. Rept. 1206, Eighty-sixth Congress).

PRINTING OF ADDITIONAL COPIES OF HEARINGS ON "ORGANIZING FOR NATIONAL SECURITY"

The resolution (S. Res. 306) to print additional copies of hearings on "Organizing for National Security" was considered and agreed to, as follows:

Resolved, That there be printed for the use of the Committee on Government Operations one thousand five hundred additional copies of the hearing entitled "Organizing for National Security", which was held by that committee during the second session of the Eighty-sixth Congress.

PRINTING OF STUDY ENTITLED "EXPORTS, IMPORTS, AND THE U.S. BALANCE OF INTERNATIONAL PAYMENTS"

The resolution (S. Res. 307) to print, with illustrations, a study entitled "Exports, Imports, and the U.S. Balance of International Payments" was considered and agreed to, as follows:

Resolved, That the study entitled "Exports, Imports, and the United States Balance of International Payments" prepared by Doctor Howard S. Piquet, Senior Specialist in International Economics of the Legislative Reference Service, Library of Congress, be printed as a Senate document, with illustrations.

PRINTING OF 61ST ANNUAL REPORT OF THE NATIONAL SOCIETY OF THE DAUGHTERS OF THE AMERICAN REVOLUTION AS A SENATE DOCUMENT

The resolution (S. Res. 318) to print the 61st Annual Report of the National Society of the Daughters of the American Revolution as a Senate document was considered and agreed to, as follows:

Resolved, That the Sixty-first Annual Report of the National Society of the Daughters of the American Revolution for the year ended April 1, 1958, be printed, with an illustration, as a Senate document.

PRINTING OF 62D ANNUAL REPORT OF THE NATIONAL SOCIETY OF THE DAUGHTERS OF THE AMERICAN REVOLUTION AS A SENATE DOCUMENT

The resolution (S. Res. 319) to print the 62d Annual Report of the National Society of the Daughters of the American Revolution, as a Senate document, was considered and agreed to, as follows:

Resolved, That the Sixty-second Annual Report of the National Society of the Daughters of the American Revolution for the year ended April 1, 1959, be printed, with an illustration, as a Senate document.

PRINTING OF REVISED EDITION OF "ELECTION LAW GUIDEBOOK"

The resolution (S. Res. 320) to authorize the printing of a revised edition of the "Election Law Guidebook" was considered and agreed to, as follows:

Resolved, That a revised edition of Senate Document Numbered 97 of the Eighty-fifth Congress, entitled "Election Law Guidebook," be printed as a Senate document.

MARY A. RUESCH

The resolution (S. Res. 314) to pay a gratuity to Mary A. Ruesch was considered and agreed to, as follows:

Resolved, That the Secretary of the Senate hereby is authorized and directed to pay, from the contingent fund of the Senate, to Mary A. Ruesch, sister of Belva M. Ratchford, an employee of the Senate at the time of her death, a sum equal to seven months' compensation at the rate she was receiving by law at the time of her death, said sum to be considered inclusive of funeral expenses and all other allowances.

ILLYENE MARDEN AND OTHERS

The resolution (S. Res. 313) to pay a gratuity to Illyene Marden, Vera Davis, Roy McGuigan, and Art McGuigan was considered and agreed to, as follows:

Resolved, That the Secretary of the Senate hereby is authorized and directed to pay, from the contingent fund of the Senate, to Illyene Marden and Vera Davis, nieces of John J. Kenney, and Ray McGuigan and Art McGuigan, nephews of John J. Kenney, an employee of the Senate at the time of his death, a sum to each equal to two months' compensation at the rate he was receiving by law at the time of his death, said sum to be considered inclusive of funeral expenses and other allowances.

ELIZABETH M. HICKEY AND OTHERS

The resolution (S. Res. 312) to pay a gratuity to Elizabeth M. Hickey, Edward D. Murphy, and Walter D. Murphy was considered and agreed to, as follows:

Resolved, That the Secretary of the Senate hereby is authorized and directed to pay, from the contingent fund of the Senate, to Elizabeth M. Hickey, daughter of James W. Murphy, and Edward D. Murphy and Walter D. Murphy, sons of James W. Murphy, an Official Reporter of Debates and Proceedings of the United States Senate at the time of his death, a sum to each equal to four months' compensation at the rate he was receiving by law at the time of his death, said sum to be considered inclusive of funeral expenses and all other allowances.

ELLA JOHNSON

The resolution (S. Res. 315) to pay a gratuity to Ella Johnson was considered and agreed to, as follows:

Resolved, That the Secretary of the Senate hereby is authorized and directed to pay, from the contingent fund of the Senate, to Ella Johnson, widow of Robert Johnson, an employee of the Architect of the Capitol assigned to duty in the Senate Office Buildings at the time of his death, a sum equal to six months' compensation at the rate he was receiving by law at the time of his death, said sum to be considered inclusive of funeral expenses and all other allowances.

CONNIE YOUNG

The resolution (S. Res. 316) to pay a gratuity to Connie Young was considered and agreed to, as follows:

Resolved, That the Secretary of the Senate hereby is authorized and directed to pay, from the contingent fund of the Senate, to Connie Young, widow of Charlie A. Young, an employee of the Architect of the Capitol assigned to duty in the Senate Office Buildings at the time of his death, a sum equal to six months' compensation at the rate he was receiving by law at the time of his death, said sum to be considered inclusive of funeral expenses and all other allowances.

MARY NELL SISSON

The resolution (S. Res. 317) to pay a gratuity to Mary Nell Sisson was considered and agreed to, as follows:

Resolved, That the Secretary of the Senate hereby is authorized and directed to pay, from the contingent fund of the Senate, to

Mary Nell Sisson, widow of W. D. Sisson, an employee of the Senate at the time of his death, a sum equal to three months' compensation at the rate he was receiving by law at the time of his death, said sum to be considered inclusive of funeral expenses and all other allowances.

REPRINTING OF JOINT COMMITTEE PRINT ENTITLED "SUMMARY-ANALYSIS OF HEARINGS ON BIOLOGICAL AND ENVIRONMENTAL EFFECTS OF NUCLEAR WAR"

The concurrent resolution (S. Con. Res. 97) authorizing the reprinting of the Joint Committee print entitled "Summary-Analysis of Hearings, June 22–26, 1959, on Biological and Environmental Effects of Nuclear War" was considered and agreed to, as follows:

Resolved by the Senate (the House of Representatives concurring), That there be reprinted for the use of the Joint Committee on Atomic Energy six thousand additional copies of the Joint Committee print entitled "Summary-Analysis of Hearings, June 22–26, 1959, on Biological and Environmental Effects of Nuclear War" printed for the use of the Joint Committee on Atomic Energy during the Eighty-sixth Congress, first session.

AGRICULTURAL AND FARM CREDIT ADMINISTRATION APPROPRIATION BILL, 1961

Mr. MANSFIELD. Mr. President, is the Agricultural Appropriation bill before the Senate at the present time?

The PRESIDING OFFICER. It is not before the Senate.

Mr. MANSFIELD. Is it on the calendar?

The PRESIDING OFFICER. It is on the calendar, but not before the Senate.

Mr. MANSFIELD. Mr. President, I move that it be laid down and made the pending business.

The PRESIDING OFFICER. The clerk will state the bill by title for the information of the Senate.

The LEGISLATIVE CLERK. Calendar No. 1467, H.R. 12117, making appropriations for the Department of Agriculture and Farm Credit Administration for the fiscal year ending June 30, 1961, and for other purposes.

The PRESIDING OFFICER. The question is on agreeing to the motion of the Senator from Montana.

Mr. MANSFIELD. I merely wish to have the bill laid down as the pending or unfinished business. If it is possible during the day, we shall try to debate the measure and, if we can, reach the third reading of the bill. There will be no votes on the bill today if we reach it, but if we do get to third reading, there will be a yea-and-nay vote on the appropriation bill tomorrow.

Mr. KUCHEL. I am not familiar with the position which the members of the Committee on Appropriations on this side of the aisle may take with respect to the bill. I ask the Senator from Montana whether, if any investigation on our part determines that they desire to offer amendments, he will be a little flexible with respect to the time element.

Mr. MANSFIELD. Oh, yes, indeed. I may say that I discussed this subject this morning with the minority leader, the distinguished Senator from Illinois [Mr. DIRKSEN], the distinguished Senator from Vermont [Mr. AIKEN], and with other Senators. All things being agreeable, they would just as soon have the bill taken up this afternoon.

Mr. KUCHEL. I thank the Senator from Montana.

The PRESIDING OFFICER. The question is on agreeing to the motion of the Senator from Montana.

The motion was agreed to; and the Senate proceeded to consider the bill, which had been reported from the Committee on Appropriations, with amendments.

THE IMPACT OF THE SHIPBUILDING INDUSTRY UPON THE NATIONAL ECONOMY

Mr. BUTLER. Mr. President, yesterday, May 22, was officially designated as Maritime Day by Presidential proclamation. This affords me a timely opportunity to make certain remarks and comments on the merchant marine and maritime industry of this Nation. I have always felt that this vital segment of our national defense and our national economy has not received a sufficiently vigorous emphasis and attention commensurate with its status of importance.

INTRODUCTION AND HISTORY

Prior to World War I, the United States had virtually no maritime industry. Our foreign trade was conducted by ships of other nations. It became necessary for us to construct vessels in order to maintain our trading position during the period of neutrality between 1914 and 1917 when British, French, and German vessels were denied to us.

In 1916, the Congress enacted a Shipping Act "to establish a U.S. Shipping Board for the purpose of encouraging, developing, and creating a naval auxiliary and naval reserve and a merchant marine to meet the requirements of the commerce of the United States with its Territories and possessions and with foreign countries; to regulate carriers by water engaged in the foreign and interstate commerce of the United States; and for other purposes."[1] We found it difficult and expensive to become a maritime power in a very short period of time.

After the outbreak of hostilities in the spring of 1917, an intensive program was instituted to build ships to transport troops and supplies to the European battlefront and to act as auxiliaries to our growing Navy.

At the end of World War I, many of these costly shipbuilding facilities were abandoned, the vessels were sold, scrapped, or laid up, and within a very few years most of our international trade was again transported by ships flying foreign flags.

The Merchant Marine Act of 1920 ostensibly provided "for the promotion and maintenance of the American merchant marine," but it repealed "certain emergency legislation" and provided "for the disposition, regulation, and use of property acquired thereunder, and for other purposes."[2]

In 1928, the Congress enacted a Merchant Marine Act "to further develop an American merchant marine, to assure its permanence in the transportation of the foreign trade of the United States, and for other purposes."[3]

On March 4, 1935, President Franklin D. Roosevelt presented to the Congress a report which had been prepared by an interdepartmental committee known as the "Committee on Shipping Policy," appointed June 18, 1934, by the Secretary of Commerce, together with another report from the Postmaster General on ocean mail contracts prepared pursuant to an Executive order of July 11, 1934.[4]

In his message to the Congress, President Roosevelt said:

> I present to the Congress the question of whether or not the United States should have an adequate merchant marine.
>
> To me there are three reasons for answering this question in the affirmative. The first is that in time of peace, subsidies granted by other nations, shipping combines, and other restrictive or relating methods may well be used to the detriment of American shippers. The maintenance of fair competition alone calls for American-flag ships of sufficient tonnage to carry a reasonable portion of our foreign commerce.
>
> Second. In the event of a major war in which the United States is not involved, our commerce, in the absence of an adequate American merchant marine, might find itself seriously crippled because of its inability to secure bottoms for neutral peaceful foreign trade.
>
> Third. In the event of a war in which the United States itself might be engaged, American-flag ships are obviously needed not only for naval auxiliaries, but also for the maintenance of reasonable and necessary commercial intercourse with other nations. We should remember lessons learned in the last war.
>
> In many instances in our history the Congress has provided for various kinds of disguised subsidies to American shipping. In recent years the Congress has provided this aid in the form of lending money at low rates of interest to American shipping companies for the purpose of building new ships for foreign trade. It has, in addition, appropriated large annual sums under the guise of payments for ocean mail contracts.
>
> This lending of money for shipbuilding has in practice been a failure. Few ships have been built and many difficulties have arisen over the repayment of the loans. Similar difficulties have attended the granting of ocean mail contracts. The Government today is paying annually about $30 million for the carrying of mails which would cost, under normal ocean rates, only $3 million. The difference, $27 million, is a subsidy, and nothing but a subsidy. But given under this disguised form it is an unsatisfactory and not an honest way of providing the aid that Government ought to give to shipping.
>
> I propose that we end this subterfuge. If the Congress decides that it will maintain a reasonably adequate American merchant marine I believe that it can well afford honestly to call a subsidy by its right name.

[1] The Merchant Marine Act, 1936, the Merchant Ship Sales Act of 1946, the Merchant Marine Act, 1920, the Shipping Act, 1916, and the Merchant Marine Act, 1928 (as amended through the 84th Cong.), 85th Cong., 1st sess., report by the Senate Committee on Interstate and Foreign Commerce, p. 139.

[2] Op. cit., p. 112.

[4] CONGRESSIONAL RECORD, vol. 79, pt. 3, 74th Cong., 1st sess., Mar. 4, 1935, pp. 28, 59–60.

Approached in this way a subsidy amounts to a comparatively simple thing. It must be based upon providing for American shipping Government aid to make up the differential between American and foreign shipping costs. It should cover, first, the difference in the cost of building ships; second, the difference in the cost of operating ships; and finally, it should take into consideration the liberal subsidies that many foreign governments provide for their shipping. Only by meeting this threefold differential can we expect to maintain a reasonable place in ocean commerce for ships flying the American flag, and at the same time maintain American standards.[5]

On April 15, 1935, Senator Royal S. Copeland, of New York, introduced a bill, S. 2582, 74th Congress, to implement this program.[6] It ultimately became the Merchant Marine Act of 1936. This basic legislation established as a declaration of policy that:

SEC. 101. It is necessary for the national defense and development of its foreign and domestic commerce that the United States shall have a merchant marine (a) sufficient to carry its domestic water-borne commerce and a substantial portion of the water-borne export and import foreign commerce of the United States and to provide shipping service on all routes essential for maintaining the flow of such domestic and foreign water-borne commerce at all times, (b) capable of serving as a naval and military auxiliary in time of war or national emergency, (c) owned and operated under the U.S. flag by citizens of the United States insofar as may be practicable, and (d) composed of the best-equipped, safest, and most suitable types of vessels, constructed in the United States and manned with a trained and efficient citizen personnel. It is hereby declared to be the policy of the United States to foster the development and encourage the maintenance of such a merchant marine.[7]

This act also created an independent agency known as the U.S. Maritime Commission.[8] Later it was abolished by Reorganization Plan No. 21 of 1950, and its functions were transferred to the Department of Commerce.[9]

The wisdom of this act was quickly justified by the situation which confronted the United States as we approached World War II. Once again, foreign shipping was unavailable and it became imperative for us to construct vessels on an emergency basis to handle our cargoes during the period of so-called neutrality, prior to Pearl Harbor. Lend-lease shipments as well as normal commercial trade were completely dependent on American shipping, since German submarines and British cruisers made it virtually impossible for other nations to carry our cargoes with any degree of safety.

After the United States became a belligerent, American shipbuilding of all types was expanded, since we had the task of feeding our Allies and supplying our troops in every theater of action during World War II. At the conclusion of this conflict, the United States once again had a large surplus of ships, and the fleets of other maritime powers were depleted due to enemy action.

This relative advantage did not continue for any lengthy period because American vessels had been hastily constructed. Many of them had inadequate engines, had a low speed capacity, and could not compete with the newer and more modern ships which other maritime nations rapidly started to build. One of the final acts of President Truman was to send a message to the Congress concerning the maritime subsidy programs. On January 16, 1953, he advised Congress as follows:

I believe that the one compelling justification which now exists for subsidizing an American-flag merchant fleet is the national defense requirement. For this purpose, we cannot reasonably expect to keep in active peacetime operation the number of ships that would be needed in the event of war. We must instead concentrate upon maintaining a modern and efficient nucleus fleet, capable of rapid expansion in the event of mobilization. We must supplement this active nucleus with a well-maintained reserve fleet of inactive vessels, and with an effective shipbuilding industry.[10]

It should be noted that an effective shipbuilding industry was an essential element of our program of maintaining our defense posture without accumulating all of the vessels that would be needed during a period of hostilities. President Truman continued:

If we satisfy fully such defense requirements for an active fleet, we could at the same time satisfy, in large measure, whatever requirements may exist for an American merchant marine for national economic and national prestige reasons.

Since the cost of supporting even the presently subsidized fleet has grown substantially in recent years, the Government should, I believe, be most hesitant to undertake commitments for even broader subsidies, unless a compelling national defense need is established.

Since most of the ships now in operation are adequate in size and speed to meet existing competition, the shipping lines have little incentive to incur the higher capital costs of postwar replacements until their present ships reach a normal retirement age of 20 years. This problem could be overcome by a temporary amendment to the 1936 act, authorizing the Maritime Board to provide liberal trade-in allowances as a special incentive for advance replacement of a portion of the present fleets.[11]

In May 1954, the Under Secretary of Commerce for Transportation, Mr. Robert Murray, presented a report which had been prepared by the Maritime Administration, in cooperation with the Defense Department, to the Commerce Subcommittee of the Senate Committee on Interstate and Foreign Commerce. This report recommended the construction of 60 new commercial vessels a year which would provide the nucleus of a wartime merchant fleet while avoiding the problem of block obsolescence.

In addition, it concluded that the United States needs approximately 36,000 shipyard workers as a peacetime nucleus on which to base a future wartime building program. In 1953 there were only 23,000 workers employed in our large coastal shipyards. Secretary Murray believed that during 1954 this force would decline to about 10,800 workers, and to 1,200 workers by 1955, unless a 60-ship annual building program was instituted.[12]

The Murray report made nine specific recommendations. Among them were the following:

1. Appropriations for pending applications for construction-differential subsidy: The Department of Commerce should request appropriations to cover the Government's share of the cost of construction of ships for which construction-differential subsidy applications are pending. New ship construction should be financed privately to the greatest extent possible. However, if Government financing is required requested appropriations should exclude the purchaser's down payment.

2. Construction revolving fund: The revolving fund authorized under section 206 of the Merchant Marine Act, 1936, as amended, should be made available for use in connection with ship construction, conversion, betterments, research and development. There should be authorized for deposit in this fund: (1) appropriations for ship construction; (2) receipts from sale of ship mortgages; (3) interest and principal payments on ship mortgages owned by the Government; and (4) sale and charter receipts. Reports on the activities with respect to the source and application of such funds should be made periodically to Congress.

3. Procedure for the determination of construction subsidy: The Department of Commerce should request legislation to facilitate the determination of construction-differential subsidy rates. Provisions required are: (1) The Board should be authorized to determine construction-differential subsidy rates for major types of vessels, i.e., cargo, combination, and tanker, to be effective for a certain period of time; (2) language in existing law that has given rise to controversy should be clarified; and (3) the Comptroller General should be required to audit the construction subsidy rate as determined by the Federal Maritime Board within a period of 30 days.

4. Accelerated depreciation for new vessels: The Department of Commerce should request legislation to provide that any vessel contracted for after July 1, 1954, and delivered prior to January 1, 1962, may be depreciated on a 20-year basis. In addition, the owner should be authorized to take additional depreciation on a sliding scale basis as follows: (1) an amount not to exceed 3 percent each year if the ship is delivered before January 1, 1962; and (2) if in connection with such construction a vessel of less than 20 years is traded in pursuant to section 510 of the Act, an additional one-half of 1 percent per year depreciation should be allowed for each year the vessel is less than 20 years old. Such depreciation should be used in the year taken to reduce the unpaid balance of any mortgage outstanding against the vessel and subsidized operators should be required to deposit such depreciation in their statutory reserve fund.

5. Trade-in-and-build tanker program: The Department of Commerce should urge

enactment of legislation dealing with the trade-in-and-build tanker program similar to that sponsored by the Department during the 1st session of the 83d Congress. This legislation authorized the Maritime Administration to acquire tankers which are at least 10 years old under the terms of section 510 of the Merchant Marine Act, 1936, as amended, for the purposes of creating a national defense reserve of tanker vessels and of encouraging the construction of modern tankers in U.S. shipyards. Under section 510, the Government is authorized to acquire an old vessel and grant an allowance against the purchase price of a new vessel. Consideration should be given to the use of a statutory formula for establishing trade-in values in lieu of the present method of section 510 of the 1936 Act.[13]

As has already been indicated, the American merchant marine was then already approaching an advanced state of obsolescence. The Murray report said:

Eighty-one percent of the 1,297 ships in the commercially-operated U.S. fleet were built during World War II, and will become 20 years old during the 1961–65 period. Thus, if the fleet is replaced only as ships become obsolete, a total of 936 keels will have to be laid during the 1961–63 period. This would require 174 shipways, while only 63 are available.[14]

NATIONAL DEFENSE

Following the passage of the Merchant Marine Act of 1936, there was a general acceptance of the concept that our national security required not only American-flag ships on the high seas, but shipbuilding and repair facilities within the continental United States.

This approach was consistent with the Buy-American Act which provided that the Federal Government should show a preference to American firms in purchasing goods and services for its own needs so as to preserve those industries and skills which would be necessary in time of war.

At that time, our war mobilization plans were based on the view that any war in which we might become engaged would undoubtedly be a protracted conflict. Under such conditions, many vessels would be lost. In order to maintain a continuous flow of supplies and personnel to distant theaters of action, it would be necessary to replace those ships destroyed by enemy action and to construct many additional ones to meet the added burdens of war mobilization. Furthermore, we would have to meet the deficiencies in our available supply of shipping due to the fact that foreign ships formerly carrying our cargoes would no longer be in a position to do so.

Within the past 18 months, the Joint Chiefs of Staff and the Office of Civil Defense and War Mobilization have reappraised our defense needs based on the concept that a probable future war would be of very short duration because of the use of nuclear weapons and ballistic missiles.

Accordingly, they recommended a complete reevaluation of our strategic and critical stockpile requirements as well as a review of the shipbuilding program. Under this premise, only vessels already in service could play a substantial role in achieving a victory.

It would be difficult to challenge the thesis that a war involving nuclear weapons on a worldwide scale would be of short duration. However, there is a serious question as to whether any major powers, aware of the fact that other belligerents also possess such weapons, would be willing to be the first to authorize their use. In World War II the troops of all belligerents as well as the civilian populations in many European countries were supplied with gas masks and every possible precaution was taken against the hazards of gas warfare. While every participating country had its own noxious gases, they were never used because each of the warring nations was unwilling to face the retaliation which would ensue if such a method of warfare were adopted.

Although the United States during the Korean conflict had exclusive possession of the atomic bomb it, too, was not used. During the past 10 years, in addition to the fighting in Korea, there have been armed conflicts in French Indochina, in Algeria, in Egypt during the Suez crisis, in Lebanon, and in many other parts of the world. Yet, military operations were conducted entirely with conventional weapons.

There is every reason to believe that if a minor war should occur, we would make every effort to avoid extending its dimensions by using these new modern weapons. Accordingly, under such conditions, we might expect that our forces would be deployed overseas, and it would be necessary to maintain once again a supply of ships and shipbuilding facilities as we have done in our past military conflicts.

In recent months, there has been a further reappraisal of the military and strategic stockpile requirements on the premise that if major producing facilities are destroyed in a nuclear war, vast amounts of material will be required in order to reconstruct our economy. A factor for this contingency has now been included in the computation of stockpile requirements. The maintenance of shipyards also is essential to provide for the reestablishment of our normal way of life after a nuclear conflict is ended, should such an eventuality develop.

Inasmuch as our privately owned shipyards are spread along the Atlantic, Gulf, and Pacific coasts, and the Great Lakes it is unlikely that they all would be destroyed in any type of war. If this ultimate tragedy should befall our Nation, we certainly would require a shipbuilding industry as a part of the necessary base to restore once again civilization for those fortunate few who may have survived the holocaust of a nuclear war.

Everyone is concerned with government economy, and no program should be accepted without question or challenge. In comparison with the farm subsidy program which accumulates quantities of unneeded food and fiber, however, the Federal assistance to the shipbuilding industry represents a very small outlay. In fact, the Federal Budget provides roughly $150 million to assist in ship construction.[15] This includes the construction-differential subsidy, the development of new ships, the construction and design of nuclear-powered vessels, and other similar projects. In a way, these expenditures may be regarded in the same context as those for civil defense. Perhaps they are not productive in the sense that in a peaceful world we could secure more needed goods and services from these expenditures. It would be possible to acquire necessary shipping from foreign yards, but if such a course were adopted, we would soon lose the facilities and the skills to maintain our maritime position should an emergency arise.

In appraising this program, it might be well to compare it with civil defense which, also, is a burden on the taxpayer and contributes nothing to our economic advancement. The 1960 budget recommended allocating $25 million for Federal contributions to the States to be matched equally with State funds for civil defense programs.[16] It also included provisions for $14 million to purchase emergency supplies and equipment,[17] $12 million to finance, on a consolidated basis, the civil and defense mobilization functions of other Federal agencies under clarified and expanded assignments of responsibility,[18] and $7 million for research and development on measures and plans for evacuation shelters and the protection of life and property.[19] These activities would cost the Federal Government $58 million.

Even though our citizens derive no immediate satisfaction from these expenditures, the Federal Government would be derelict in discharging its proper responsibilities if it made no provision for a civil defense program.

There have been frequent criticisms that the program recommended by the President is inadequate, and Governor Rockefeller has long advocated the construction of shelters which would ultimately cost billions of dollars. In this context, the small amount of Federal funds necessary to maintain essential shipbuilding facilities becomes a relatively insignificant item in the total Federal Budget.

While some contend that we might purchase our ships abroad for less money, it must be remembered that in many cases our bottoms are more costly because features have been incorporated in their design to facilitate their immediate conversion for military use. In many cases, the plans and specifications demand fireproof construction, special bulkheads, advanced hull designs of a secret nature to insure maximum speed, and other special devices which are classified. It would be impossible to maintain military security and yet disclose the essential technical information to a foreign builder so that these engi-

neering concepts could be incorporated in the construction of a ship destined ultimately to fly the American flag.

The steamship *United States* provides a perfect example of this advanced construction. It is completely fireproof and has held the speed record on the Atlantic crossing ever since it was commissioned. Probably no one outside of the naval service and the Maritime Administration really knows the maximum speed that the steamship *United States* is capable of attaining.

Facilities to construct new ships are not sufficient since in a protracted conflict there will be many opportunities to repair damaged vessels and restore them to active service. If they incorporate these classified military features, then it becomes essential that all repair work be performed under the American flag.

FREE ENTERPRISE AND SUBSIDIES

Many Americans who believe in a system of free competitive enterprise abhor subsidies of any kind. They believe that the elimination of trade barriers, monopolies, and Government interference with a free market will best promote the economic welfare of everyone. In fact, this is the doctrine which was enunciated so clearly by Adam Smith in "The Wealth of Nations."

While Adam Smith showed that free trade would maximize the opulence of every country, it is significant that he recognized that opulence must give way in a world beset by animosities. One of the impediments to free trade in the England of Adam Smith's time was the act of navigation. This act placed a heavy burden (tariffs and other restrictions) on foreign trade. Adam Smith, however, stated:

> The act of navigation is not favorable to foreign commerce, or to the growth of that opulence which can arise from it. * * * As defence, however, is of much more importance than opulence, the act of navigation is, perhaps, the wisest of all the commercial regulations of England.[20]

The full text of Adam Smith's views taken from "The Wealth of Nations" provides ample justification in a world beset with existing tensions for subsidizing our ship construction industry. Book 4, Chapter II, of "The Wealth of Nations" states:

> The first is, when some particular sort of industry is necessary for the defense of the country. The defense of Great Britain, for example, depends very much upon the number of its sailors and shipping. The act of navigation, therefore, very properly endeavors to give the sailors and shipping of Great Britain the monopoly of the trade of their own country, in some cases, by absolute prohibitions, and in others by heavy burdens upon the shipping of foreign countries.
>
> When the act of navigation was made, though England and Holland were not actually at war, the most violent animosity subsisted between the two nations. It had begun during the government of the long parliament, which first framed this act, and it broke out soon after in the Dutch wars during that of the Protector and of Charles II. It is not impossible, therefore, that some of the regulations of this famous act may have proceeded from national animosity. They are as wise, however, as if they had all been dictated by the most deliberate wisdom. National animosity at that particular time aimed at the very same object which the most deliberate wisdom would have recommended, the diminution of the naval power of Holland, the only naval power which could endanger the security of England.
>
> The act of navigation is not favorable to foreign commerce, or to the growth of that opulence which can arise from it. The interest of a nation in its commercial relations to foreign nations is, like that of a merchant with regard to the different people with whom he deals, to buy as cheap and to sell as dear as possible. But it will be most likely to buy cheap, when by the most perfect freedom of trade it encourages all nations to bring to it the goods which it has occasion to purchase; and, for the same reason, it will be most likely to sell dear, when its markets are thus filled with the greatest number of buyers. The act of navigation, it is true, lays no burden upon foreign ships that come to export the produce of British industry. Even the ancient aliens duty, which used to be paid upon all goods exported as well as imported, has, by several subsequent acts, been taken off from the greater part of the articles of exportation. But if foreigners, either by prohibitions or high duties, are hindered from coming to sell, they cannot always afford to come to buy; because coming without a cargo, they must lose the freight from their own country to Great Britain. By diminishing the number of sellers, therefore, we necessarily diminish that of buyers, and are thus likely not only to buy foreign goods dearer, but to sell our own cheaper, than if there was a more perfect freedom of trade. As defense, however, is of much more importance than opulence, the act of navigation is, perhaps, the wisest of all the commercial regulations of England.[21]

America has endeavored to follow the advice of Adam Smith, and in keeping with this philosophy, we have lowered our tariffs. Except for a few agricultural commodities, we do not employ import quotas, and there are no currency or monetary controls on our foreign trade.

We have never advocated providing a merchant marine that could handle our entire foreign trade as the Congress has always accepted the fact that many maritime nations through the sale of shipping services secure needed dollar exchange to purchase products produced here in the United States where we have a comparative advantage over other nations.

WHY DOES IT COST MORE TO BUILD VESSELS IN AMERICA?

American costs, unless offset by great comparative advantage, will be higher than those in other countries in almost every instance. This is demonstrated by our loss of gold, which has paid for the imports of goods and services we have purchased from abroad.

In 1949, U.S. gold stocks reached a postwar high of $24.6 billion. At the end of 1958, they stood at $20.6 billion, a decline of $4 billion. The reduction in the year 1958 alone totaled $2.3 billion.[22] The final data for 1959 will show a further reduction in our gold reserves. In fact, the monthly figures show a falling gold stock for every month since January 1958. While a $20 billion gold stock provides an adequate base for our currency, it must be self-evident that a decline of about 10 percent a year can no longer continue without completely destroying our own economic system. This, perhaps, is the best way for us to fully appreciate the impact of imports on our economy, since an excess of demands for dollar payments abroad over purchases from us will sooner or later be reflected in our monetary reserves. These terms are used broadly as they include goods, services, and capital investment.

President Eisenhower, in his State of the Union message delivered to the Congress on January 7, estimated that expenditures would total $79.8 billion in the 1961 fiscal year.[23] Based on previous budgets, major national security expenditures included for the Department of Defense, the atomic energy program, and military assistance aspects of the mutual security program, as well as stockpiling and other activities authorized by the Defense Production Act will total more than $45 billion, or in excess of 55 percent of the total budget request.[24] There is only one way that these costs can be met, namely through taxation which ultimately must be reflected in the price of every product as well as in the wages and salaries of all our employees. Insofar as the United States is forced to assume a disproportionate share of the effort to preserve the free world, its prices are less competitive than they otherwise might be.

Until recently Western Germany has had no sizable military budget, and this has been an important factor in enabling her producers to operate with lower costs and hence quote lower prices in the world's competitive markets.

While the President has proposed an $80 billion budget, total payments to the public by the Federal Government in the 1960 fiscal year, including the operations of the many trust funds, will represent a total of almost $95 billion.[25] The total gross national product in 1958 was $437 billion so that actually 21.7 percent of our total production is channeled through the Federal Government.[26] To this must be added the vast sums for the maintenance of State and local governments. Taxes on American wages and salaries provide a large portion of the funds to maintain this structure in one form or another, and many of our labor unions in formulating their demands at the bargaining table have begun to think

exclusively in terms of take-home pay. Hence, increasing costs of government will eventually be reflected in less competitive world prices.

It is apparent to any observer of the Washington scene that it will be a miracle if the President's proposed budget for the 1961 fiscal year, which starts July 1, will survive the onslaughts of those who are determined to authorize new public works programs, public housing, and many other desirable projects, without any consideration as to how we are to pay for them without destroying our economic base.

For years to come, it will be necessary for American producers to be far more productive than their foreign competitors, merely in order to maintain their share of our own market, while we undertake the many tasks to which we are committed in the world struggle against communism. This will result in situations in which we shall have to resort temporarily to various devices, in order to relieve pressures which could be destructive.

In many fields of activity, American products, even though our wage rates are far higher than those prevailing in other countries, have no difficulty in competing for a large share of the world market. An examination of these products invariably shows that they are manufactured by industries in which the productivity of labor is high because the efforts of each worker are supplemented by a large capital investment. In most instances there must be some relationship between the wage rates paid within any given community for jobs requiring comparable skills. A large segment of American industry can afford to pay relatively high wages and still compete in world markets, because of our mass-production techniques. These industries determine the general level of wages. Products can be mass produced, so that individuals with relatively little skill can perform most of the manufacturing operations. This is made possible by extensive expenditures on special tools, dies, and fixtures; and these expenditures can be recovered only if many identical units are produced.

In shipbuilding, as in the construction industry, higher skills are needed, as compared to the needs in most of the mass-production industries. However, mass-production techniques cannot be used in shipbuilding or in the erection of most buildings, as each building or each ship is a unique, tailormade product.

In the case of construction, foreign competition is impossible, since a building or a highway must be developed on the site; and the wages for those employed on a project, although linked to the wages paid those in the mass-production industries, presents no competitive problem. This premise is not valid in the case of ship construction, because foreign yards will always be able to furnish vessels at lower costs. Unlike buildings, ships can be sailed into an American port.

The following table contrasts the average straight time and hourly earnings for a number of basic industries, including all manufacturing. It should be noted that domestic shipyard and construction wage rates compare favorably with the highest found in American industry:

AVERAGE STRAIGHT-TIME HOURLY EARNINGS [1]

[September 1959]

All manufacturing industries	$2.14
Durable goods industries	2.28
Primary metal industries	2.66
Blast furnaces, steelworks, and rolling mills	3.10
Machinery (except electrical)	2.51
Transportation equipment	2.71
Motor vehicles and equipment	2.78
Aircraft and parts	2.65
Ship and boat-building and repairs	2.60
Nondurable goods industries	1.95
Products of petroleum and coal	2.91
Petroleum refining	3.03
Rubber products	2.47
Nonmanufacturing industries:	
Contract construction	3.16
Nonbuilding construction	2.85
Building construction	3.26

[1] Survey of Current Business, U.S. Department of Commerce, Office of Business Economics, December 1959, Washington, D.C., pp. S–14, S–15.

A similar problem prevails with respect to operating subsidies. Americans will not become seamen unless their prospective earnings compare favorably with those in other available occupations here in the United States. Although immigration is restricted, our treaties of navigation make it possible for foreign seamen to enter our ports and to carry our cargoes. All of the enactments described in the introductory section of these remarks clearly show that the Congress and the Administration, under both Democratic and Republican control, agree that a subsidy program is the only available and practical means to maintain a naval auxiliary. It also insures that our ships are constructed in American yards, thus providing a margin to meet the demands of a protracted military conflict.

The funds provided by the Congress to further American ship construction do not represent a net outlay. They are a gross cost. While no accurate data on the taxes paid by shipbuilding employees are available, in December 1959, there were 123,500 shipbuilding employees [27] in the United States, and they were making an average weekly salary of $102.18.[28] Depending on the individual's personal circumstances, the Federal Government derives a substantial revenue from the personal income taxes paid by these workers. In addition, it receives corporate income taxes paid not only by shipbuilding industries, but also by the countless supplying firms, as well as by their employees and stockholders. Hence, the net subsidy, after the payment of all the taxes on the income generated by this activity, is a very small sum.

SHALL WE BUILD SHIPS OR SUPPORT DEPRESSED AREAS?

When the United States entered World War I, there were virtually no American-flag ships. Although American shipyards built only 24 vessels of 2,000 tons and over in 1914, by 1919 this number had been increased to 680 vessels.[29] Construction from then on decreased steadily, until in 1935 only two steel, self-propelled merchant ships were constructed in private shipyards.[30]

In 1936, the newly formed Maritime Commission again expanded the shipbuilding program. While in that year only eight ships were built, the number increased year by year; and by 1943, because of the need that World War II had created, American ship construction reached an all-time peak. Federal subsidies to maintain and promote the merchant marine at a time of maximum war effort in 1943 cost $3,576 million.[31] In order to build 1,661 ships under such conditions, 1,655,500 people were employed in our shipyards and related industries.[32] Needless to say, there was unnecessary waste and inefficiency in a program which required an expansion of this magnitude, because many workers needed extensive training, and were ill-suited to the requirements of the tasks before them. In addition, absenteeism was high; and acute problems, including those because of the needs for additional housing, schools, police and fire protection, developed because of the migration of workers to coastal areas. Vessels built under these conditions were not only costly; in many cases, they were inefficient and uneconomic for normal commercial use when the war ended.

As the war drew to a close, ships were no longer needed for defense purposes, and we were plagued with a surplus of bottoms. Yet, the United States could not adopt a policy of allowing all of our existing yards to discontinue operations. By 1954, there were only 355 shipbuilding and repairing establishments.[33] As of April 1959, they employed only 149,700 persons.[34]

Ship construction, of necessity, must be performed where there is ready access to the high seas. As a result, many of our shipyards are located in towns which are dependent upon them for their economic well-being. In such a situation, the abandonment of an active operation represents a loss of income for the entire area, for usually no other industries in which the employees will readily be able to find work are close at hand.

Although there have been frequent proposals to assist so-called chronically

depressed areas, the elimination of ship-construction subsidies would create numerous new ones. Those who advocate Federal programs to relieve this condition describe depressed areas as those which have "lost certain historic locational advantages, where local enterprise and initiative have usually been smothered and repressed by the existence of persistent and chronic unemployment" and which have "low financial resources" and are, therefore, "least capable of raising the capital required for long-term bold programs for rehabilitation." [35]

Chronic unemployment necessitates an expensive burden which absorbs vast sums in unemployment compensation and relief payments. Because the citizens of such areas have little purchasing power, they do not contribute a proportionate share to the Nation's output or to local, State, and Federal tax revenues.

It would be ironic for the Federal Government to attempt to reduce budgetary expenditures by abandoning a tried and proven program of ship-construction subsidies, and then later be confronted with additional appropriations for Federal aid to depressed areas which will produce no return whatsoever. Furthermore, the efficacy of any such program, in terms of restoring such an area to a healthy economic condition, is still to be proven.

As an example of what might happen if the ship-construction subsidy program were discontinued, an examination of the conditions prevailing in Newport News, Va., is illustrative. Of the city's 120,418 people, 12,500 are employed in ship construction.[36] This represents more than 10 percent of the community's total population, including children, retired persons, and housewives. At an average weekly salary of $90, these employees earn about $58 million a year.[37] A discontinuance of shipbuilding activities at the Newport News Shipbuilding & Dry Dock Co. not only would represent a temporary loss of jobs for those employed; but, because within the immediate area there are no other industries which could absorb these workers, it would constitute almost a permanent loss of their incomes. Unless their families were able to relocate themselves in other communities, the present employees would be forced first to accept unemployment compensation, which, based on their normal earnings, would represent a cost to the State of Virginia of approximately $20 million. Ultimately, they would be forced to accept relief or public assistance; and, in many cases, this, again, would involve Federal funds to match State funds. In addition, the Federal Government would no longer receive the revenues derived from either the corporate or personal taxes which formerly were produced from this economic activity.

While data has been assembled respecting Newport News, this approach would apply to other yards on the east coast, such as the Bath Iron Works, at Bath, Maine; to yards on the Gulf coast, such as the Ingalls Shipbuilding Corp., at Pascagoula, Miss.; and to yards on the west coast, such as the National Steel & Shipbuilding Corp., at San Diego. Other yards are located in major metropolitan areas, such as New York, Boston, Philadelphia, and Baltimore. If their workers were displaced, they might find employment, but they would probably receive lower wages in another occupation, where their skills could not be used to their maximum effectiveness.

If unemployment were more than 10 percent of the entire population, which implies a much higher percent of the civilian labor force, the community would be classified as a depressed area, which, by definition in the Area Redevelopment Act, S. 722, of the 86th Congress, is one where unemployment is at a level of 6 percent or more in a period when the economy as a whole is in a healthy condition.[38]

The political and budgetary implications of measures to assist depressed areas are indicated by the fact that both major parties proposed, in their 1956 platforms, Federal aid to meet this problem. Within the past 5 years, four congressional committees have considered legislation on this subject.

In 1958, S. 3683, of the 85th Congress, was passed by both Houses of the Congress, but was pocket-vetoed by the President on September 6, 1958.[39] This bill provided for an Area Redevelopment Administration under a Commissioner. The proposed responsibilities for this new Federal bureaucrat were defined as follows:

> The Commissioner would designate as industrial redevelopment areas, those areas suffering from substantial and persistent unemployment, and as rural redevelopment areas, those areas with a large number and percentage of low-income families and substantial and persistent unemployment and underemployment. An overall program for the economic development of each area would then be prepared and approved by the Commissioner. This program would be prepared by the leaders of the area with the advice and assistance of the appropriate State and local authorities and the Area Redevelopment Administration.
>
> The Commissioner could make loans for industrial projects in industrial redevelopment areas out of a revolving fund of $100 million. He could make loans for industrial projects in rural redevelopment areas out of another $100 million revolving fund. These funds would be obtained by borrowing from the Treasury. The Commissioner could also make grants for public facilities from appropriated funds of $75 million a year.
>
> The Commissioner could give information and technical assistance to redevelopment areas. Financial assistance under the urban redevelopment program under the Housing Act of 1949 could be given in redevelopment areas. The Secretary of Labor and the Secretary of Health, Education, and Welfare could provide information and financial assistance in connection with vocational training programs and the Secretary of Labor would be authorized to arrange for subsistence payments up to 13 weeks to persons receiving such vocational training, but not then receiving unemployment compensation.[40]

If American shipyards are abandoned, the dislocations will extend beyond the coastal areas. Once again, employees working for suppliers to the maritime industry are, in many cases, primarily dependent upon it for employment. Accordingly, if we adopt a policy of eliminating ship-construction subsidies, based on the premise that it is cheaper to build American ships abroad, it will have far-flung consequences. As an example, there are approximately 33 companies which manufacture structural shapes or sheared and universal plates.[41] These are important in the construction of vessels. Over one-third of the facilities devoted to the production of these finished steel products are situated in areas which might well become depressed if the level of economic activity slackens, and if shipbuilding there is discontinued.

The Area Redevelopment Act, S. 722, introduced by the Senator from Illinois [Mr. DOUGLAS], was passed by the Senate, by a vote of 49 to 46, on March 23, 1959,[42] and was passed by the House on May 4, 1960, by a vote of 201 to 184. It provides for total authorizations of $251 million, distributed as follows: $75 million for the purpose of loans to establish new plants in industrial areas, $75 million for loans to establish plants in rural areas, $50 million in loans to construct needed public facilities, $35 million for grants to public facilities, $10 million for subsistence payments for retraining, $1.5 million for vocational training grants, and $4.5 million for technical assistance.[43]

The bill provides the following criteria in order to define eligibility for depressed-area aid:

1. Unemployment of 12 percent of the civilian labor force persisting for 12 months;

2. Unemployment of 9 percent of this group for 15 out of 18 months;

3. Unemployment of 6 percent of this group for 18 out of 24 months.[44]

The proponents of this measure define their objectives in the preamble of the bill, as follows:

> The Congress declares that the maintenance of the national economy at a high

[44] Op. cit., Area Redevelopment Act. H. Rept. 360, p. 31.

level is vital to the best interests of the United States, but that some of our communities are suffering substantial and persistent unemployment and underemployment; that such unemployment and underemployment cause hardship to many individuals and their families and detracts from the national welfare by wasting vital human resources; that to overcome this problem the Federal Government, in cooperation with the States, should help areas of substantial and persistent unemployment and underemployment to take effective steps in planning and financing their economic redevelopment; that Federal assistance to communities, industries, enterprises, and individuals in areas needing redevelopment should enable such areas to achieve lasting improvement and enhance the domestic prosperity by the establishment of stable and diversified local economies; and that under the provisions of this act new employment opportunities should be created by developing and expanding new and existing facilities and resources without substantially reducing employment in other areas of the United States.[45]

The Department of Labor makes regular reports on 149 communities, in terms of the percentage of unemployment prevailing among the civilian labor force. Based on these studies, early in 1959, approximately 20 of these areas would meet one of the criteria set forth in S. 722 for depressed-area aid.[46] The Administration, the Republican and Democratic congressional leadership, as well as the supporters of the more liberal bill referred to above, are in agreement that depressed areas constitute a serious problem, which justifies some Federal assistance. At the present time, most existing depressed areas fall into one of the following categories:

Coal-mining towns in Pennsylvania, West Virginia, eastern Kentucky, and sections of adjoining States; particularly hard hit are anthracite mining areas such as the Wyoming Valley of Pennsylvania—for example, Scranton, Pa.

New England towns in which textile employment has materially declined; for example, Lawrence, Mass.

Areas where employment in railroad shops was reduced as a result of dieselization of the railroad industry; for example, Altoona, Pa.

Resort and other areas which have never established a solid industrial base sufficient to support full-time employment of the community's labor force; for example, Asheville, N.C.

Towns in which the economy depended on a natural resource which has been largely exhausted—northern Michigan, Minnesota, and Wisconsin towns formerly dependent on copper or iron mining or lumber; for example, Iron Mountain, Mich.[47]

One-industry towns are characteristic of many shipbuilding industries. Before discarding existing programs which enable us to maintain necessary facilities, careful consideration must be given to the ultimate cost to all taxpayers of creating additional depressed areas. These costs include not only possible Federal grants, but, in addition, the loss of existing tax revenues. Most important is the loss of personal dignity for the individual directly concerned, and, for the community, the loss of the skills he possesses.

Inasmuch as shipbuilding subsidies are admittedly the only means of meeting the urgent problems of national defense under a series of probable conditions in a future emergency, it is foolhardy to attempt to save less than $150 million in gross outlays and thereby destroy an essential industry. Furthermore, these savings are ephemeral. The ultimate cost includes a loss of revenues as well as expenditures to support new nonproductive Federal programs.

Ships or any other necessary element in our national defense are preferable to make-work projects which are implied in all of the depressed area legislation which has been before the Congress. Under existing world tensions, and with rapid technological progress on so many different fronts, we cannot afford to become dependent on other nations to provide advanced designs for our merchant marine and naval auxiliaries.

FOREIGN POLICY PROBLEMS

Mr. MORSE. Mr. President, I wish to make a few comments on some of the foreign policy problems which confront the Republic. I am not surprised at the Republican attack which has been made today on the floor of the Senate on Adlai Stevenson, because the Republicans very well know that if Adlai Stevenson should be nominated at the Democratic National Convention in Los Angeles, he would be overwhelmingly elected President of the United States in November 1960.

This is a typical Republican downgrading strategy which we on this side of the aisle must expect in the months ahead. In fact, we must expect it regardless of which Democrat is nominated.

Adlai Stevenson is one of the greatest minds in American public life, and the White House calls for a great mind. We have sorely needed one in the White House for almost 8 years.

As Democrats we have the responsibility in the campaign ahead to discuss openly and frankly with the American people the issues of American foreign policy.

I want the RECORD to show this afternoon that I stand behind every word Adlai Stevenson spoke in his Chicago speech which has been referred to. I am glad the Senator from Pennsylvania [Mr. CLARK] has already put it in the RECORD. It was a typical, statesmanlike speech from Adlai Stevenson.

It is my opinion and judgment that if the American people had elected him as President of the United States in 1952, we would not be as close to war today as we are. I wish to say to my Democratic colleagues I think they ought to stop the practice of sneezing every time President Eisenhower coughs about a foreign policy matter. The Democrats have themselves to blame, in large measure, for the plight in which our party finds itself in regard to the matter of foreign policy, because we have had too many Democratic leaders who have been rubber-stamping a wrong foreign policy.

The Democratic Party owes it to the American people to take the foreign policy issue to the people and give them a choice on foreign policy.

It is my opinion that if we continue to follow the Republican foreign policy for many more years, we shall be in the midst of a nuclear war, out of which no one will be victorious, because, in my judgment, the evidence is abundantly clear that neither side can win a nuclear war.

Therefore, because this issue has been raised on the floor of the Senate today, I wish to make a few statements about it for the RECORD.

AMERICAN PEOPLE UNINFORMED ON FOREIGN POLICY

The United States and Russia are equally feared and jointly feared, and rightly so, in many parts of the globe, as the two great threats to the peace of the world. I know the American people want peace; we, the people, are dedicated to peace; but the sad fact is our Government is following a foreign policy that is bound inevitably to end in a nuclear war, unless the American people make it very clear to the leadership of the country that they want that policy changed. How can they make it clear? The American people are uninformed on American foreign policy due to the fact that the Eisenhower administration, during the last 8 years, has taken the people a long way down the road to Government by secrecy. Government by secrecy does not end up in freedom. Government by secrecy frequently ends up in war. And we are on the way.

The time has come, in my judgment, when the Democratic Party should offer to lead the American people back to the Wilsonian doctrine of open covenants openly arrived at, and make clear to the American people, in the historic campaign ahead, that we are through with secret diplomacy, that we are going to stop rubberstamping the secret diplomacy of the Eisenhower administration. Therefore, it is time we make clear to the American people that, as the Democratic Party, we are through with undercutting and undermining the United Nations, and that we propose to return to a sound democratic policy of seeking to follow the doctrine of international decisions based upon law, and take our case to an international organization, such as the United Nations, with such reforms in the United Nations as are sorely needed.

We are, in my judgment, in an immoral nuclear armaments race, an armaments race that cannot be reconciled by a single moral principle to which we bow our heads on Sunday. Those principles of morality ought to be practiced the other 6 days of the week, as well as revered on Sunday.

We are in danger of writing a sordid chapter in world history by a continuation of an immoral nuclear armaments race along with a nation the leadership of which we know to be amoral. Is it

not an historic commentary that the great, moral Nation of the United States is permitting itself to be drawn into an immoral nuclear armaments race, without paying attention to the other part of the paradox in which we live?

MILITARY SPOKESMEN ON FOREIGN POLICY

We live in a paradox, Mr. President. We live in a paradox in which we have to keep ourselves so militarily strong that Russia will understand she will have everything to lose and nothing to gain by an aggressive action against the free world. But, Mr. President, if that is the end of our goal, if that is the sum and substance of our procedures with regard to foreign policy, then the end result is bound to be war.

I listened to testimony of an expert, not very many weeks ago, who was talking about what would happen in a moderate nuclear war. He made very clear that there is not such a thing, of course, as the possibility of a moderate nuclear war, because the probabilities are that if a nuclear war should start it would be a total war, and all the bombs would be dropped in a relatively short period of time.

Speaking hypothetically about a moderate nuclear war, this expert said such a war would result, in the first 10 days, in the loss of 50 million lives in the United States and more lives in Russia and Europe. Let us try to reconcile that, Mr. President, with moral principles. We simply cannot forget that history goes on and on. Nations rise and fall.

Mr. President, it happens to be our patriotic duty, as I see our patriotic duty, to do what we can to give the greatest guarantee of an ever-rising America for centuries to come, rather than to follow a foreign policy which, in my judgment, increases the risks of war month by month.

We only have to sit and to listen to the top military brass testify, Mr. President, to know how dangerous is the period in which we live.

There is one thing the Democratic Party ought to make perfectly clear. It is that if the Democrats are elected to power in November 1960 the military will stop issuing foreign policy statements. The military under a Democratic administration, will learn once more a lesson which it seems to have forgotten, that the job of the American military group is to administer a foreign policy determined by a civilian government and not in any way to interrupt it or usurp it.

Periodically, Mr. President, we listen to statements by Admiral Burke as to what is going to happen in the Formosa Straits or in the Caribbean, and we listen to statements by the Chairman of the Joint Chiefs of Staff in regard to foreign policy. If we had a President who thoroughly understood the meaning of a civilian government, Mr. President, that top brass would have been removed from control immediately after it violated its constitutional duty to stay out of foreign policy determinations.

BIPARTISANSHIP DEAD

Mr. President, I point out to my Democratic colleagues that under this administration there has been no bipartisan foreign policy at any time, from the time the present President of the United States took his oath of office after his election in 1952 to date. Oh, there have been some conferences with leaders now and then at the White House. I am afraid some of my Democratic colleagues have permitted a little window dressing to go a long way with them. The honor of being briefed has taken the place of real consultation.

The Democratic Party has had no voice in helping to determine American foreign policy under the Eisenhower administration. There has been, in fact, no bipartisan foreign policy. That is why I am always surprised when I pick up the newspapers and read statements by Democratic leaders rubber stamping a foreign policy, after the fact, of the Eisenhower administration.

Mr. President, of course, in an hour of crisis we can always be counted upon to close ranks behind any President of the United States, Republican or Democrat. But I am one Senator who is not going to close ranks behind a President in connection with a wrong foreign policy prior to our getting into a situation where we are at war and before we have exhausted every possibility of correcting a wrong foreign policy by a wrong President. Mr. President, this President of the United States has been wrong many times on foreign policy since he has been in office.

I offer no apology to the American people. I am proud to let my descendants read my record of dissent with this President in regard to foreign policy time and time again.

Well I remember my refusal in 1955 to go along with the Formosa resolution and the warning which the Senator from New York and the Senator from Oregon gave the Senate on that historic occasion—that the Formosa resolution would settle nothing, that the Formosa resolution would increase the danger of war. So it has, Mr. President, and that danger is increasing year by year.

DEMOCRATS FAILED TO SUPPORT UNITED NATIONS

Mr. President, I think it is well understood that within the next few years Red China will have nuclear weapons. Can we think that the Formosa resolution, at that time, is going to be a contribution to peace? If the Democrats had not followed Eisenhower on the Formosa resolution in 1955, if they had supported the Senator from New York and the Senator from Oregon, as we pleaded on the floor of the Senate, taking a position of seeking to get the United Nations to accept a trusteeship over the Formosa Straits, with the United States guaranteeing to the United Nations that it would militarily defend Formosa and the Pescadores, we would be nearer to peace in the Formosa Straits than we are today.

But the Democrats rubberstamped what I consider to be that wrong foreign policy of this administration, which was a foreign policy, again, outside of the United Nations, and which represented once again the record of the Eisenhower administration for unilateral action outside the United Nations rather than through it.

History will record that the Eisenhower administration has bypassed the United Nations time and time again on the major issues which have threatened the peace of the world. The Middle East doctrine is another example. Once again the majority of the Democrats rubberstamped it. More of them stood with us on that than in regard to the Formosa Straits, Mr. President, but even in that instance we heard the pleas for unity. We heard the plea, "You cannot let the President down." We heard the plea, "The President, right or wrong."

That is dangerous doctrine, Mr. President. We have a duty, as Senators—at least, as I see my obligation, I do—to try to correct a wrong Presidential policy. I say, most respectfully, that we Democrats have done a rather poor job of that under this administration. I am glad to see that eyes are, at long last, opening, and at least the Democratic voters of this country—and I will also say, many fine independent and Republican voters of this country—are beginning to recognize that the Eisenhower administration foreign policy, if long continued, is going to lead us into war.

That policy has to be stopped, Mr. President. We have to stop it by stopping our support of the President of the United States every time he circumvents the United Nations, every time he resorts to secret diplomacy, and every time he keeps from the American people the facts about our foreign policy which endanger the people.

DEMOCRATS MUST OFFER ALTERNATIVES

Mr. President, it is one thing to criticize the Republican foreign policy but it is another thing to tell the American people a constructive program which ought to take its place. That is the responsibility of the Democratic Party, in my judgment. We must come forward with a constructive program, rather than constantly be sneezing as Eisenhower coughs, on foreign policy, rather than constantly standing up in the Congress of the United States to plead for unity behind the President on a wrong foreign policy. We have, first, a duty to lay out what is wrong with the administration's foreign policy; and then to offer a constructive program to replace it.

Mr. President, I like the way Adlai Stevenson talks. I like the way Adlai Stevenson thinks.

I like the programs which Adlai Stevenson has presented to the American people for a number of years. I remember the courage of Adlai Stevenson in 1956 in regard to nuclear testing. That was the act of a great man; and we all know the smear job that was done against him by the Republicans in 1956. They were talking then as NIXON has been talking in the past few days—"You are an appeaser if you criticize American foreign policy."

Let me point out that if we do not start criticizing the Eisenhower administration foreign policy, if we do not bring some reforms in regard to it, and if the Democratic Party does not begin in the Congress by offering constructive suggestions to replace the Eisenhower foreign policy, I repeat that within a few

years we shall be at war; and out of that war there will be no victory for the United States and the Western Powers, or for Russia. It will not be the end of civilization; it will merely be the end of American civilization and Russian civilization. There will be much civilization left, but it will be in Asia, Africa, and Latin America, because I am satisfied that a nuclear war would be bound to result in the simultaneous destruction of the civilizations in Europe, the United States, and Russia. I do not think there is any way of stopping it once the trigger is pulled on the first hydrogen bomb. There would be such a chain reaction of the pulling of triggers that it would be merely a matter of days until we had only a remnant of Western civilization and Russian civilization.

So I say to the Democratic Party that the time has come for it to come forward with a constructive program to meet the threat of war, because if we continue the program of the Eisenhower administration, in my judgment our country will end up with war in a very few years. I have said before, and I say again, that if we get into a critical war in which aggression is committed against us, of course we will stand united behind whoever is the President of the United States for the duration of that war, if we have any chance at all of surviving, which I think is highly remote.

Mr. President, I do not share the Democratic talk that we must not even whisper and criticize the Eisenhower policies with regard to foreign policy. In my judgment President Eisenhower and his administration have gotten us into the precarious position we occupy in this dark hour in American and world history.

MANY BELIEVE WE SHOULD FIGHT RUSSIA SOON

If my major thesis is correct—and I am satisfied it is—that this nuclear armament race is immoral, that this nuclear armament race will never stand the moral judgment of history which follows us, then we ought to be at work trying to win the peace, rather than giving aid and comfort to those within our country who are trying to sell the sinister propaganda across America, "We must fight Russia some time anyway; we are probably in a better position to fight her now: So let us get on with fighting her."

My heart is heavy when I reflect on how widespread that sinister propaganda already is. We call it the preventive war theory, an expression which I have heard from the lips of the high brass in this country. In 1955 I argued against the Formosa resolution because I knew the testimony before us had disclosed that we were considering a preventive war resolution. I again raise my voice in opposition to preventive war propaganda in the United States.

If we continue to follow the policy of the Eisenhower administration we shall end with a preventive war, but I do not think it is too late to win the peace. It will call for some courage. It will call for the raising of horizons. It will call for the return to and the putting into practice of a great American ideal.

I know that when I raise my voice lustily and make a plea for implementing a system of international justice through law my critics are heard to say, "That is what happens when you put a professor in politics. He becomes impractical."

I have many answers to the criticism, but I will give only one at this moment in the form of a rhetorical question: I would have these critics tell the American people what is practical about a nuclear war. What is practical about a nuclear war? I can think of no greater impracticality.

Even when the war would be over such civilization as would survive for centuries would live in chaos, because if we stop to reflect for a moment on the chaotic conditions of this globe following a nuclear war, the sad thing is that all the problems which confronted us before the war would have to be solved by the world that remained after the war. The war would solve nothing.

We are told that it would get Russia out of the way. I am satisfied it would get Russia out of the way—and the United States, too; and I do not wish to see the United States put out of the way. I think we have the system of government, and a system of ideals which come nearest to making it practically possible to implement the great spiritual beliefs and teachings to which we are all dedicated as religious men and women in this country. What concerns me so much is that the course of action which we are following cannot be reconciled with those spiritual principles.

CONSTRUCTIVE ALTERNATIVES NEEDED

So once again I plead this afternoon for an effort to implement a system of international justice through law; and I make these suggestions, which I hope will be considered constructive.

First let me say, before I submit such a list, that no one can hold any brief for the course of action the United States took in regard to the spy plane, and no one can hold any brief for the course of action that Khrushchev took, either.

I am a member of the Foreign Relations Committee of the Senate; and as a member of that committee I know the huge sums of money within our authorizations which are going into so-called intelligence work, which is but a polite name for spy work. Everyone else ought to know, and I presume does know, that, of course, we spend great sums of money for espionage, and so does every other powerful nation. Of course, we have spies in many parts of the world and we know that other countries do, too, including some of our friends in our own country.

We certainly have no doubt about the fact that Russia has spies. But I was highly amused to hear the alibi given by the Vice President of the United States, Mr. NIXON, in talking about the spy plane incident. He sought to attract attention to the fact that there had been a couple Russian spies detected in Massachusetts some months ago.

That is no surprise to anybody. But if I have ever listened to a non sequitur argument, that is one, and I am accustomed to hear such arguments from the Vice President of the United States. What does the detection of intelligence personnel have to do with a course of action followed by the United States in regard to what is interpreted around the world as a form of constructive aggression? That is exactly what the sending of the spy plane over Russia was. It was a form of constructive aggression. We can alibi it and rationalize it all we want to, and we can wave the American flag into tatters over it, but the fact remains that our friends and enemies alike around the world are going to decree that we cannot justify our course of action in the spy plane incident under international comity well recognized in the field of espionage.

At no time, as I sat in the Committee on Foreign Relations or on the floor, and as I voted for the use of funds for intelligence work, was there even a whisper from anyone within the administration, military or civilian, that any of that money would be used for the sending of an instrumentality of war over a foreign sovereign power.

I am satisfied that if any such suggestion had been made, the result with respect to the request for authorization would have been a great deal different, both in committee and on the floor of the Senate. The administration did great damage to the standing and prestige of the United States by following a policy which has shocked our friends around the world in sending an instrumentality of war in the form of a spy plane over Russia.

Let us not forget, in these days of high hysteria, bordering almost on panic, in the thinking of many people, one never knows when such an incident will cause some misguided, uninformed, emotionally aroused person in some foreign country to make a false deduction as to the purpose of such a plane, and a nuclear war will be started thereby.

It was a risk that the administration had no moral right to ever run. They ran it. The plane was shot down. I do not know what the facts are. We hope to get the facts after a thorough investigation. I do not know yet how the plane was shot down.

I am not convinced by any statement coming out of this administration that it was not shot down by a land-to-air missile. There are reasons to doubt the statement. I am satisfied that this administration would like to save face, if it can, with regard to this unfortunate and stupid mistake it made. I do know that one of the pleas made to us for a long time in the Senate for crash programs in connection with the development of land-to-air missiles was that, we were told—and I violate no secrecy by saying this, because this has appeared in periodicals and press reports throughout the country—that the Russians were ahead of us in land-to-air missiles.

The result was that huge sums of money were appropriated for Bomarc—over $3 billion. On the basis of the latest findings, the record of Bomarc is not so good. Of course we know, when we appropriate huge sums of money for these programs, that some of them are not going to be the success we hoped they would be, and that some of them

are going to be failures. I am not greatly concerned about the fact that we appropriated that money. The program apparently resulted in failure. I would vote to do it again. I will do it tomorrow if the administration can come forward with a program that shows an appropriation may help us speed up a crash program on land-to-air missiles. I say that because I have voted in the past and will continue to vote in the future for those appropriations which are necessary to let the Russians at all times know that they have everything to lose and nothing to gain by an aggressive course of action against the free world.

WEAPONS ARE NOT ENOUGH

What I am trying to bring before my country is that merely an arms race will not win the peace. An armaments race will not do that but, in my judgment, will surely assure a nuclear war in our time. That we cannot justify, unless we know that we have done everything that possibly can be done by moral people to try to set up a system of international justice through law which can enforce a total disarmament program.

Khrushchev shot the plane down. One would expect it from an amoral people. International comity and recognized principles of international morality dictated that he not follow that course of action. He has one of the best jet fighter armadas in the world. There are some people who think that they are better than our own. I am not expert enough to testify on that.

However, I raise the point that it is good enough so that there is great concern on the part of our experts as to the comparison between our jet fighter armada and Russia's. All he needed to do was to send three or four of his jet fighters to that plane and surround it and give it orders to ground itself. If it violated that request, then and only then, in my judgment, under the rules of international law, in such a situation, would he have been justified in shooting it down.

He did not follow that course. I have a hunch that he saw a great opportunity. He knew as well as we did that Bomarc has been no great success, and he seized the opportunity to make a demonstration to the world in regard to land-to-air missiles. I think that is a great probability. Be that as it may, he did get a great propaganda advantage over us. Then, having followed that course of action, he went to the summit undoubtedly with a determination to humiliate not only the President of the United States, not only the Presidency of the United States, but also the American people. He wanted to bring into disrepute the President as a man, the position, and the American people.

PRESIDENT DID WELL AT PARIS

Although I have been highly critical of President Eisenhower's foreign policy on many issues, I wish to say that the President went as far in the Paris conference as he could go with honor. He deserves credit for announcing at the very beginning that it was the plan of this Government to suspend any further use of spy planes. That should have been said, and that is all that the President needed to say, if Khrushchev really wanted to have the summit conference be a vehicle and a forum for negotiation and agreement on peace.

Obviously, he did not want that. Therefore, I wish to say that in my judgment the President of the United States conducted himself at the Paris conference within the proprieties, and Khrushchev did not.

I listened to Khrushchev's press interview. I could close my eyes at times during that interview and almost come to the conclusion that I was listening to Hitler, because there were sections of the interview which had many of the characteristics and overtones and undertones of the type of totalitarian propaganda that Hitler preached at his height.

Be that as it may, Khrushchev is a reality. Be that as it may, Khrushchev is at the head of a government that obviously is our potential enemy. Therefore, I believe that, with honor and within procedures that will protect the security of our country, we must proceed now to find out what we can do and to answer the question, "Where do we go from here?"

I am not one to cry over spilled milk. It is better to survey the facts that get us into a position in which we find ourselves at any given time.

But after I have surveyed that position, then I always ask myself the question: Where do we go from here? The Russians apparently thought that they might get more propaganda value by having this matter referred to the Security Council. I think we all know that the Security Council cannot solve it, and undoubtedly will not solve it.

There is not much hope that the Security Council can solve the great problem which confronts us, the problem of winning the peace, by bringing about a sure-proof, enforceable, total disarmament program in our time. I am not an "overnighter." I recognize that such a peace will not be won overnight. It will not be won in 2, 3, or 5 years.

In fact, to secure such a peace probably will consume many years. However, I want to stress that we ought to be taking forward steps toward winning the peace, rather than marching in reverse, as we are at present. I am satisfied we are marching toward war not toward peace. So I wish to make a few suggestions this afternoon which I think we ought to try to implement in the years immediately ahead.

If we do the negotiating within the framework that I suggest this afternoon; if we have the nations of the world negotiating for peace; then, interestingly enough, we will have a form of moratorium on war at the same time, because if the nations of the world are negotiating for peace, the probability will be increased that they will not proceed to fight one another in a war.

ROLE OF RED CHINA NEEDS TO BE UNDERSTOOD

So there are a few reforms which I think we ought to stand for in the field of foreign policy as it affects all nations. Let me stress the word "all" for a moment, because no longer can we divide the world into those nations with whom we will converse, and those nations against whom we will drop an American iron curtain.

Of course, I refer specifically to Red China. No one in this body hates the form of government of Red China more than does the senior Senator from Oregon. Nevertheless, we are following a blind, myopic policy with respect to Red China, because I am satisfied that Red China will be a nuclear power within 10 years. We cannot possibly start negotiating for peace leading toward a total disarmament program, and not include Red China.

This does not mean that the senior Senator from Oregon advocates the immediate recognition of Red China. I do not; although I point out to the American people that Red China has never asked to be recognized. Red China has never made a request for diplomatic recognition on the part of the United States.

However, I hope the time will come when we can recognize Red China with honor to ourselves. We cannot do that now. We cannot do it until we get some very definite proof that we can rely on the commitments of Red China which will show that we can count upon Red China to keep her international commitments.

There are two such commitments which we have the right and also the duty, it seems to me, to ask of her, in order to demonstrate to the world that the United States stands upon its principles of recognition. One of those criteria is the criterion that a nation must demonstrate to us or satisfy us that we can count upon it to keep its international commitments.

So I refer to the allegations which we have made, over and over again, and which I think were merited, that Red China has violated the Korean truce time and time again. The second allegation is that Red China has not followed the recognized procedure of civilized nations in respect to the treatment of our captured nationals. We must ascertain the facts.

Therefore, I suggest that as a condition precedent to any proposal that the United States recognize Red China diplomatically, the United States, through the United Nations, ought to ask Red China to permit a survey or an investigation to be made by an appropriate team of the United Nations concerning the extent, if any, to which Red China has kept to her international commitments in respect to the Korean truce, and in respect to her treatment of American nationals whom she has allegedly tried in her courts and sentenced to various types of punishment in Red China.

Does anyone think for a moment that the United States would object to a similar survey to be made by the United Nations in the United States, in case any sovereign power alleged that we were violating the well established principles of civilized nations in the matter of handling prisoners, or in the living up to our treaty or truce obligations? Of course we would not.

The point I am making is something different from that of diplomatic recognition. I am simply asking for recognition of the fact that if an attempt is made to work out a disarmament program, a part of the world cannot be left out of that disarmament program. It does not follow that because we recognize the right of Red China to a voice in negotiations with respect to worldwide disarmament, we are, in effect, thereby diplomatically recognizing her.

U.N. VETO POWER SHOULD BE ELIMINATED

So if we expect to establish a system of international justice through law, which will promote and attain total nuclear disarmament, then we must look to the existing procedures available to us. When we do that, we see that many of those procedures will have to be changed. We ought to be exercising leadership in making proposals for a change in the international rules which already exist in those organizations of which we are already members.

Thus I refer to the veto power of the United Nations. Certainly, that power must be eliminated. We know the history of the veto power. There are those who have written authoritatively and spoken authoritatively of the San Francisco Conference and have pointed out that when the American delegation at that Conference split over the veto issue, then the veto became a certainty, because the Russians were insistent upon the veto power.

Many persons at the San Francisco Conference were against the veto power. But when the American ranks broke over the issue, then there was no question, from that time on, that the veto power would go into the charter, and it did. It finally became a part of the charter, as the record shows, and with the vote of the American delegation, too. That was a great mistake.

There were only a few of us on the floor of the Senate at the time the San Francisco charter came before this body for ratification, and who spoke against the veto power in the charter. It was obvious at that time that that particular section of the charter was bound to rise to plague us, and it has risen to plague us many, many times.

It will not be possible to have the veto power removed immediately, but I believe it can be removed. As we marshal the leaders of the world behind a request for a modification of the veto power, in due course of time the Russian leaders themselves will come to recognize that they will have to assume the responsibility for losing the peace, if they are unwilling to make a concession in a matter which makes so much commonsense as the elimination of the veto power. I do not know how many years it will take, but I believe that the very discussion of it, that the making of it the subject of one or more special sessions of the General Assembly of the United Nations for world debate, discussion, and resolution, if possible, will have an effect on the exercise of the veto during the period of time the discussion is taking place.

The discussion of these problems, in and of itself, will further the cause of peace in the international councils of the world as they are carried on through the procedures of the United Nations.

U.N. MUST BE CORNERSTONE OF U.S. POLICY

Third, I suggest that the time has long passed—is long overdue—when the United States also will serve notice on the world that we are going to stop our end runs around the United Nations; that we are going to stop circumventing the United Nations, that we are perfectly willing to lay our cases on their merits before the procedures of the United Nations, before the tribunals of the United Nations, before the General Assembly of the United Nations, for open world surveillance.

Therefore, Mr. President, I think public opinion in this country should give heed to the need of the United States to notify the world that we are going to help strengthen the United Nations, instead of continue to weaken it.

INTERNATIONAL LAW MUST BE STRENGTHENED

Fourth, I wish to point out that there is no existing body of international law sufficient in depth to be applied to all the international issues which arise to endanger the peace. International law, as it now exists, is, after all, very limited in scope. Therefore, if we are to set up a system of international justice through law, we must expand the existing body of international law, so that as each threat to the peace arises, as each dispute between and among nations occur, there will be a set of principles which can be applied for the adjudication of those disputes, thus eliminating the kind of policy the United States has been following, namely, one of threatening massive retaliation, of proposing to keep 25 percent of our bombers in the air at all times, loaded with nuclear bombs.

What a shocking bit of news that was when it went around the world. How shocking it was to make such a statement, and then profess that we are seeking peace, when people in other parts of the world know that the nuclear weapons on any one of those bombers could go off by accident or by design or by disobedience of orders, and could start a holocaust. We have to start to square our actions with our talk for peace; and such a proposal as that is not a proposal of peace, but threatens war. Instead, we must have something to supplant the American policy of military threats.

The sad thing is that around the world we have the reputation—and with cause—of being threateners, just as Khrushchev has the reputation of rattling the saber. One of the sorriest things in the history of this administration was the proposal for mass retaliation; and the sad thing is that the Democrats as a body did not oppose it. Too many Democrats went along with that proposal, and, in my judgment, aided and abetted the Eisenhower administration in following the wrong policy for some 8 years.

If we are to expand international law, so there will be a body of law to which we can turn before international tribunals, if rule and reason are to be applied to international disputes, we must be willing to submit disputes which are subject to adjudication under existing international law to the tribunals of the United Nations which are provided for the handling of such cases. But we do not do so in regard to any matter of consequence. We may do so in regard to some little fishing dispute or some minor dispute in regard to a vessel or in regard to a question about harbor damages. But when there is a major issue, such as that over the Formosa Straits or that in regard to the Middle East or a good many issues which have arisen in connection with our mutual security program, we simply lean back and proclaim our sovereign rights, wave the flag, and say we are going to decide this for ourselves. But whenever we do that, we lose more and more prestige around the world.

So I suggest that we begin to apply the judicial articles of the United Nations Charter, and that we carry a peace offensive against Russia whenever we have a chance to do so, by calling upon Russia to join us in submitting disputes not only to the World Court, but, under the articles of the United Nations, also to other tribunals which can be set up by agreement under the judicial article of the United Nations Charter, for the settlement of such disputes.

That will start expanding international law with a body of precedents, much in the same way that the great common law was built up. The common law is a body of judicial precedents; and we should now be engaged in the process of building up a body of precedential law for international-law tribunals to apply to disputes which threaten the peace of the world, as they arise from year to year.

But more than that must be done. We also must expand international law by "a statutory process or procedure." I suggest that we can do so by calling a series of extraordinary sessions of the General Assembly of the United Nations from time to time, with the agenda limited to specific questions for debate and negotiation, the purpose being to arrive at the adoption of resolutions, with the understanding that they will have the force and effect of international law until they are repealed. Is that idealistic? Yes, it is. Is it theoretical? Yes, it is. Is it practical? It is highly practical, because, as I have said before, the only thing that is practical happens to be to put to work an ideal in the field of foreign policy and also in the field of governmental domestic policy.

But the sad thing is that the Eisenhower record on this matter is practically nil; and the sad thing is that too many Democrats have rubber stamped the Eisenhower position on that issue.

It is time for the Democratic Party either to fish or to cut bait on the matter of foreign policy, and in the months ahead to come forward with a constructive foreign program which will lead to peace, instead of the Republican program which rapidly is taking us down the road toward war.

A series of such conferences over the years—and let it be remembered that earlier in this speech I pointed out that I am discussing a program which, in my

judgment, may take as long as 20 years but, nevertheless, we should get on with the work, and should have conferences of the sort I have suggested through special sessions of the General Assembly—will, in my judgment, promote the cause of peace and strengthen the chances for peace, and will bring us closer to a total nuclear disarmament program, without which, in my judgment, in our time we shall wind up with a nuclear war.

PEACE OFFENSIVE NEEDED

But for the immediate future—and I close with this suggestion—I believe we have a right to look to our allies around the world to rise to their obligations at this hour. I believe the heads of great governments, such as those of Great Britain, Canada, France, Italy, and India—those of all the free nations of the world—ought right now be joining in focusing attention on the need for the adoption of a system of international justice through law for the settlement of these disputes, leading to a total disarmament program.

If ever there was a time when the United States needed the moral support and backing of her allies, that time is now; and I am speaking of the need to take to Khrushchev a peace offensive within and through the United Nations.

But we are not doing so, because time and time again we have demonstrated that we are not willing to submit specific questions to the processes of the United Nations for final determination. So I make the plea that our allies join in asking for an extraordinary session of the United Nations in the immediate future, because, in my judgment, it has got to be done through the General Assembly, not through the Security Council. In the first place the Security Council cannot speak for all the nations in the world, and only a few nations are on the Security Council. But every nation, large and small, has a stake in peace. Every nation, large and small, has a stake in what the United States, Great Britain, France, and Russia do.

SUMMIT MEETING SHOULD BE HELD AT U.N.

That is why I have been heard to say before, as I protested the kind of summit conference that was called in Paris, that, in my judgment, we should not proceed in that kind of summit conference. I think it was a mistake from the beginning.

Any summit conference in which we participate, as I have said for a long, long time, should be conducted under the jurisdiction of the United Nations, with the Secretary General of the United Nations sitting as permanent chairman of that conference, and with any arrangements or agreements reached in that summit conference going to the United Nations for approval.

Why? Because if that is not done, in my judgment we shall return to international power politics. International power politics will not produce peace. It never has. The use of international power politics, throughout the history of mankind, has produced only intervals between wars, because always the nonparticipants resent the fact that a few powerful nations decide the fate of the rest of the world.

I make it a point of getting myself briefed on broadcasts coming from southeast Asia, Latin America, and Africa. I say to Members of the Senate they had better get themselves briefed on what is coming out of southeast Asia, Africa, and Latin America these days. Those radio broadcasts indicated to me that loud dissents were already beginning to arise among the nonparticipants at the summit conference, and questions were being asked.

One can call it any kind of propaganda he desires; nevertheless, it is a reality. One cannot deny that it is being beaten into the eardrums of millions and millions of people in that part of the world, people who in numbers greatly exceed our population, and people who have to be won over to freedom if freedom is to survive. In my opinion, freedom will not survive if it is limited to the United States and the Western nations. It will survive in the decades ahead only if we win over to freedom the people in those parts of the world to which I have referred.

Mr. President, we will not sell international politics to them. They want none of it. Why should they? Would we?

I heard it said earlier this afternoon by the Senator from Pennsylvania or the Senator from Oklahoma—I think it was the Senator from Pennsylvania—when he quoted extensively from the Stevenson Chicago speech, from which I quoted a few minutes ago, what the reaction would be in our country in case a Russian spy plane was over our country. We know what the reaction would be. Can we not hear the clamor? There would be those who would want to break off diplomatic relations immediately. There would even be those who would want us to go to war.

In regard to the matter of international power politics, there are millions of people who want none of it; but they can be brought along, and they will cooperate if we give them a voice. That is why I made the suggestion, in which I hope our friends around the world will join us, and I hope our country will exercise leadership in proposing, that we start, in the immediate future, in the United Nations building in New York City, a series of conferences open to the world, to which will be invited the head of every state in the world, large and small, for the purpose of laying down the blueprint for peace, of telling the world the concessions he is willing to make in behalf of his country, for the cause of setting up a system of international justice under law, with the immediate goal of total disarmament, to be enforced by a police system agreed upon by the United Nations to enforce such a disarmament program.

I know there are those who will say, "Too idealistic. Too theoretical and impractical." But again I ask the question, What is practical about a nuclear war?

Mr. CLARK. Mr. President, will the Senator yield?

Mr. MORSE. In just a second.

I think the world is up against it, and I think the world has no choice but either to go to war in our generation or to give the world a system of permanent peace, which can be attained only by bringing to an end this immoral nuclear armaments race.

I yield for a moment to the Senator from Pennsylvania.

Mr. CLARK. I wish to commend the Senator from Oregon for the fine speech he is making in support of a peaceful solution of the world's difficulties. I thank him for joining me and the Senator from Oklahoma and a number of other Senators earlier today, who made the specific point that our job is to continue that search for peace, regardless of the calamities and blunders which resulted in the breakup of the summit conference. While it is important to establish what went wrong in the summit conference, and who made the mistakes, and why, the more important matter is not to be turned aside from the one great goal of this generation, which is peace, and cessation of nuclear testing, and surrender of nuclear weapons, and international agreement to bring about world peace through world law.

Our zeal in that cause should not be abated one iota by reason of anything that has happened in the world in the last 6 weeks.

I ask the Senator from Oregon if that is not the great task which lies before America as the leader of the free world, and whether we do not have to create in the Senate a climate in which that task can be pursued assiduously, and in which those who do pursue it get the plaudits of this body, and not one in which there is a feeling that they are doing something unpatriotic or being soft on communism?

Mr. MORSE. I could not agree more with the Senator from Pennsylvania. That is the burden of my whole speech this afternoon.

NATIONS SHOULD PUT BLUEPRINT FOR PEACE BEFORE U.N.

This is not the first time the Senator from Pennsylvania and the senior Senator from Oregon have stood shoulder to shoulder on the floor of the Senate in the interest of permanent peace. But I want to stress the fact that we have got to come forward with what I consider to be constructive, practical proposals for establishing that procedure. I have made specific references to those goals. The one point I was on—and I reiterate it—when I gladly yielded to the Senator from Pennsylvania, who has been so helpful on this speech, was that we should invite, and others must join us, the heads of all States, large and small, to participate in an extraordinary session of the United Nations, which has nothing to do with membership in the United Nations at all. I would like the head of every nation, large and small, whether that nation is a member of the United Nations or not, to have an opportunity to take a world platform in the United Nations Building in New York City and lay down his nation's blueprint for peace, and the concessions that nation is willing to make in order to establish what the Senator from Pennsylvania, I, and others in the Senate have been urging for many, many years in the

Senate, namely, the establishment of a system of international justice through law for the purpose of enforcing peace.

Mr. President, that is going to take weeks and perhaps months. I am all in favor of taking as much time as we need, because, I repeat, if we have the heads of state around the world devoting themselves to the consideration of programs for peace, in my judgment, we shall have an unwritten moratorium on war. These nations are not going to be fighting each other so long as they are seeking to work out a peace program. I think we need that time, Mr. President.

I happen to think a tremendous amount of good can come from such a program as I am outlining, because I am satisfied there is not a spot on the world today in which the people are not greatly concerned about the danger of a nuclear war. The hearts of mankind, generally speaking—including, I am satisfied, the overwhelming majority of the rank and file people of the Soviet Union of Russia—want peace.

We know we are dealing with some irresponsible leaders in various parts of the world, but they happen to be a reality. We must stop, it seems to me, trying to escape from reality in this field of working for peace. We have to recognize that at least those leaders whom we consider to be irresponsible have to be drawn out into the open. We have to carry to them and to the world, through the United Nations, the great ideals of the United States for peace.

I happen to think that even at the head of state level we might be in for some very pleasant surprises as to the amount of progress which could be made in developing a program for peace. People would have to come and go at the conference. I recognize that, in many instances, about all we could expect would be to have the head of state come to lay out his program. If a head of state did not want to come in person but wanted to send a foreign minister to speak on his behalf, that should be his right. I think most heads of state, however, would come themselves.

After the heads of state had laid out their programs, Mr. President, it would be necessary for them to go back to attend to administrative and executive duties at the heads of their governments. After the heads of state program had been laid out before the world I think the next step should be negotiations and diplomatic exchanges among the foreign ministers.

It is at that point, Mr. President, I think months could be spent, and very profitable negotiations could be had, again under the auspices of the United Nations, in trying to see what agreements and understandings the foreign ministers could reach.

Third, Mr. President, I propose, after the foreign ministers have done the best they can in regard to trying to reach an agreement upon the program for the various phases of this very important problem of peace, to which I have alluded this afternoon, that the recommendations and proposals go back once more to the General Assembly of the United Nations for the purpose of a determination of what agreements can be made within the United Nations, among the members thereof, at least with respect to a disarmament program.

Mr. President, highly theoretical as it may be dubbed, I happen to think this has a terrific amount of commonsense, because if the leaders of the world really want peace the road I offer them is the road they should travel, toward the citadel and the cathedral of world peace, rather that the road which I think they may travel if we do not take spiritual leadership in the world, before it is too late—the road toward nuclear war. I do not think we have much time left. We have only our generation, at the most.

Franklin Roosevelt never spoke a greater truth than the truth he spoke in the depths of the depression, when he uttered the words which are more applicable today than they were in the depths of the depression, that our generation has a rendezvous with destiny. I think our generation, Mr. President, has a rendezvous with a great decision, war or peace. If the decision is war, America will be no more. If the decision is peace, then mankind will have the opportunity to rise to those great heights of civilization which still are high for us to climb, the great heights which I believe God intended for us. But God also intended that we do our share, and that share calls at this historic hour, in my judgment, for our trying to lead the world into putting into implementation and practice the great, divine teachings which I think God intended us to follow.

Mr. CARROLL. Mr. President, will the Senator yield?

Mr. MORSE. I yield to the Senator from Colorado.

Mr. CARROLL. Mr. President, I heard quite by accident a statement by the distinguished senior Senator from Oregon on television during the Oregon primary campaign, which I assume originated from Oregon. This was long before the collapse of the summit. I thought the distinguished senior Senator from Oregon in 2 minutes made more sense than any other statement I had heard on television. At that time the Senator spoke of the necessity for moving into the United Nations with this terribly important problem.

Would not the Senator from Oregon agree that after some 3½ years of trying to ease the tensions in the world, of trying to eliminate fear and suspicion, we are in a worse situation than we were in 3 years ago?

Mr. MORSE. There is no doubt about it. That is part of the burden of my speech this afternoon.

Mr. CARROLL. Would not the Senator from Oregon agree with the junior Senator from Colorado that we went into the so-called summit conference under the most adverse conditions? We had to have as our bargaining agent Mr. Macmillan of Great Britain or President de Gaulle of France. We were not there on equal terms. How much better would it have been if we had gone to the United Nations. Would not the Senator agree with that?

Mr. MORSE. I do not know what the record will show, but, as the Senator knows, I think the record will show that probably as many as four to six times, at the very beginning of the talk about having a summit conference 2 or 3 years ago, the Senator from Oregon spoke on the floor of the Senate against a summit conference held outside the United Nations.

From the very beginning, I have urged that all summit conferences be held under the United Nations, with the Secretary General serving as permanent chairman of the conference and with the understanding that the deliberations of such a conference and any proposed agreements reached would come to the General Assembly of the United Nations for approval.

I have said that for some years now because I think the United States is repeating a great mistake of history. We are participating in international power politics, in the kind of summit conference which was proposed. I think those are always bound to end in historic failure.

Mr. CARROLL. Mr. President, will the Senator yield further?

Mr. MORSE. I yield.

Mr. CARROLL. Would not the Senator agree that at one time, in June of 1950, I think, when a serious crisis confronted the world, we met it through collective action through the United Nations in Korea? It was an unhappy event. We had to go to Korea. The results did not satisfy anyone, but at least we avoided world war III.

Would not the Senator agree that when we had the second great international crisis, in the Middle East, we again functioned through the United Nations?

I am no special champion of a theoretical United Nations, but I agree with the Senator from Oregon when he says that we must use the machinery of the United Nations when we are in a critical situation such as this. The United Nations should be used because not only big nations are concerned, but all the nations of the whole world will be affected in event of an atomic war. I should think all nations should be given a chance to find out what are the facts in this case.

May I say to the distinguished Senator from Oregon [Mr. MORSE] that I read the wire service reports on some of the violent attacks that were made today upon Adlai Stevenson and the Senator from Massachusetts [Mr. KENNEDY]. I was not on the floor at the time the remarks were made. I cannot understand the motivation. Have we reached the point in America where American citizens are not entitled to know whether the leadership of their Government has its fingers on the control of the military? Have we reached the point in our history when we cannot determine whether civilian authorities are supreme over the military?

I was not on the floor of the Senate at the beginning of the debate, but I heard the able Senator from Montana [Mr. MANSFIELD]. I have withheld any criticism of the failure at the summit until the President came back to Ameri-

can soil, because I did not want to embarrass him while he was on foreign soil. However, I think we now have held our fire long enough. I think we are now entitled to know the answer to this one question: Who initiated the U–2 flight on May Day? Why was it done on May Day? Who did it? Did the President of the United States know the flight was in motion?

Mr. MORSE. May Day is one of the great Russian holidays.

Mr. CARROLL. Exactly. Why did this flight take place virtually on the eve of the conference? Over 10 years ago when I was in the Congress I knew that there were forces within this Nation which believed in preventive war. I ask today whether there might be persons in the military who wished to torpedo the summit conference. Was there someone in the Central Intelligence Agency who wished to torpedo the conference? Perhaps there are people within these departments who do not desire to ease the tensions and have peace in the world.

These are the questions to which we are entitled to have answers, and as representatives of the people we are entitled to have our committees investigate and determine the answers. The Senator from Oregon sits on the important Foreign Relations Committee. I hope that if the Committee on Foreign Relations conducts hearings, as the Senator from Arkansas [Mr. FULBRIGHT] is reported in the press to have predicted, these questions will be asked. I know the Senator from Oregon [Mr. MORSE] will be at every one of those hearings and he will attempt with all his might, power, and eloquence to determine this basic question: Why was this spy plane permitted to make its flight on May Day and just preceding the conference? Who was responsible?

Mr. MORSE. I thank the Senator from Colorado.

Mr. CARROLL. If the Senator will permit me to make a further observation, I am frightened when I think of the possibilities of trouble arising from one of our outlying bases. We have delegated enormous power and authority to the military. The military are composed of human beings, and therefore are not perfect. Some military man could make an error in judgment and an atomic bomb might be released. That military man might set in motion a chain of events that could bring on the greatest man-made disaster in the history of the world.

We are living in a new age, in a new era, and Adlai Stevenson, the Senator from Massachusetts [Mr. KENNEDY], and the Senator from Oregon [Mr. MORSE] are among those who are saying the people are entitled to know our weaknesses and where the imperfections are in our society.

Who initiated the May Day flight? Was it done out of stupidity? Did our President know it?

It is not enough for the President to say, "I am responsible." Of course he is responsible because under the Constitution he formulates foreign policy. It is not a question of responsibility. The question is, Who did it? Who killed cock robin? Who did this monstrous thing? The American public are entitled to know the answer.

What I have said is not in criticism of the President of the United States. I wish to make that point perfectly clear. Such criticism on this issue at this time would be premature. Why? We need the facts, and that is why I commend the able Senator from Montana [Mr. MANSFIELD], I commend the Senator from Arkansas [Mr. FULBRIGHT], the Senator from Washington [Mr. JACKSON] and others who say, "We are going to have a hearing." But let us not wait too long.

Following up the statement of the able Senator from Oregon [Mr. MORSE], I suggest that only a fool today would believe that in 6 or 8 months all damage which has been done will be restored. All the fear and the suspicion that existed during the Stalin regime has now been greatly accelerated. It will not be 6 months, 8 months, a year or 2 years.

I can see only one course ahead and that is working together in the General Assembly of the United Nations. We cannot rely on the action of the Security Council because of its veto power. The General Assembly in discussing these issues can discuss surveillance of planes, disarmament, and perhaps through this medium we can again remove some of the fear and suspicion. If we do not do so history will record that if this great Nation and the other leaders of the world among our allies do not get together to settle this question, there will not be much history left.

Mr. MORSE. Those who write will not be American historians. Perhaps some in Asia may write the history.

Mr. CARROLL. The Senator is exactly correct.

If the Senator will yield for one further observation, I have just had placed before me a news ticker dispatch which comes from Denver. This is a UPI dispatch.

DENVER.—The Denver Post said editorially today that Adlai Stevenson had a perfect right to criticize the administration's ineptness before the summit meeting and that "it is a proper subject for the political campaign."

The Post, which has supported the Republican candidate in the past two presidential elections, also said that former Democratic National Chairman James Farley "should know better about the proper role of the opposition in a democracy."

After Stevenson had criticized the administration's presummit activities Farley in turn criticized Stevenson for making the matter a political issue.

Stevenson had said the administration gave Khrushchev a crowbar with which to wreck the summit meeting through the U–2 plane incident.

The Post said in an editorial headed "Come Off It, Mr. Farley," that Stevenson "neither implied that the administration deliberately helped wreck the summit, nor did he hint that Americans were anything but united behind the President in his humilitating trials."

"But Stevenson did say that GOP tactics were very inept before the summit, which is true, and he did say that this is a proper subject for the political campaign, which is also true," the Post said.

Mr. President, the Denver Post is a Republican independent newspaper. The Denver Post twice gave its wholehearted support to President Eisenhower. It extolled his virtues day in and day out. But the editors also have courage. They have had the courage to point out the President's weaknesses time after time, whether they dealt with western reclamation, water pollution, or the depressed area problems which affect the State of the Senator from Pennsylvania [Mr. CLARK] so vitally.

The Denver Post has provided outstanding leadership in the Western States against the manner in which this administration has run the Federal Power Commission. The Denver Post has charged the FPC with failure to protect the public interest.

This newspaper then is one of the outstanding independent Republican newspapers in the Nation, standing most of the time, in my opinion, in the public interest. The reason I cannot give it a 100-percent rating is that it did not support me all the time. But it is a very fine newspaper, even though it did not support me in the last election.

Mr. MORSE. It even opposed me in Oregon before the last election.

Mr. CARROLL. I am not under any political obligations to the Denver Post, but I am pleased to tell my colleagues in the Senate that once again it puts its finger right on the issue. The issue is not an attack upon President Eisenhower. The issue is not an attack upon the President of the United States. The issue is crystal clear. The issue is whether the American people are entitled to know who is running their Government. If the President is running the Government, then who has sabotaged the cause of peace? We are not concerned especially with Khrushchev. We will take care of Khrushchev in our own time, but I agree with the Senator from Oregon that we ought to take care of Khrushchev and all his cronies in the forum of the United Nations and let the people of the world participate.

We do not have to give up our sovereignty. We have only one short opportunity left. The main point is that I am in support of the able Senator from Oregon. As I say, we have only one short opportunity left before some fool launches us into atomic war. I thank the Senator for yielding to me.

Mr. MORSE. I thank the Senator from Colorado very much for his wonderful contribution to my discussion on the floor of the Senate this afternoon.

I agree with almost everything he said. I certainly agree with his thesis. I am not at all surprised to find that there is opposition to Stevenson by the Republicans and the Farleys. We have opposition to Stevenson within our own party, as well as opposition by the Republicans.

There are those who are very anxious to see that he be not nominated at the Democratic convention. They recognize that, if nominated, unquestionably he will come out the victor. They have the right to oppose any nominee they wish to oppose. I am not at all surprised by Mr. Farley's criticism of Mr. Stevenson,

because I am well satisfied as to where he stands in the fight within our party so far as the Democratic nomination is concerned.

The second thing I wish to say is that I reserve only one dissent from the observations the Senator from Colorado has made, and that was with respect to the course of action we followed with relation to the Middle East doctrine. In my judgment we did not make use of the United Nations procedure, as we should have. I made pleas at the time that we ought to take to the United Nations certain proposals for commitments from countries of the Middle East prior to exercising our right—and we have the right—to enter into agreements with those countries.

I felt at the time that we would have greatly strengthened the cause of peace if we had required or sought to require an agreement through the United Nations with respect to certain conditions before the fact, before we made the agreement under the doctrine.

But other than that the Senator from Colorado has expressed the thesis of the Senator from Oregon. Our difference is that I would have made greater use of the United Nations in that instance than we did. I am grateful indeed to the Senator from Colorado for strengthening my record this afternoon as history will read it on the subject which I rose to discuss.

Mr. CARROLL. Mr. President, will the Senator yield?

Mr. MORSE. I yield.

Mr. CARROLL. I ought to say, to keep the record clear, that Jim Farley is my friend. We must remember that there are some political differences in the State of New York. For example, Mrs. Eleanor Roosevelt and former Senator Herbert Lehman support Stevenson. In 1956 Jim Farley was a strong Stevenson supporter. Now he may have another candidate. However, that is no reason for him to speak as harshly as he has about Adlai Stevenson. My able friend from Oregon, who is on the floor today, if he does not read it tonight, will probably read tomorrow morning, that another friend of mine, former President Harry Truman, is on the news wires today. He wrote an article for Look magazine, on Adlai Stevenson. This current article has nothing to do with the statement on the summit by Stevenson. However, he is not speaking in any commendatory terms about Adlai Stevenson. It is obvious that he has a candidate too. He has a right to have one. Therefore, I believe that people must look at these statements——

Mr. MORSE. I had one until last week.

Mr. CARROLL. Yes. The Senator from Oregon had a very good candidate. Many times good horses do not run strong for a short stretch. The junior Senator from Colorado has been that type of candidate. I have to have a longwinded campaign, sometimes lasting 6 or 8 years before I am successful. Some runners are not sprinters. I wish to say to the Senator from Oregon in conclusion, if I may, with respect to these statements, that I am absolutely convinced that Stevenson has a deep-seated feeling that this issue affects the survival of this Nation, and that he feels that we must raise this issue with the people of the Nation. I am confident that Stevenson did not raise this issue as a partisan political issue, but because he believes we must discuss these matters.

For more than 2 years the junior Senator from Colorado has been trying to stir up interest in Stevenson as a candidate. I do not know Governor Stevenson well. He is more an acquaintance of mine. I have met him only a few times. However, I look upon him as a great political and philosophical leader. He represents a new era in politics. I believe that is also true of JOHN KENNEDY. I think it is true of the new group that is emerging in the Democratic Party. I think it is true of other candidates. It is true of the distinguished Senator from Oregon. And that is nothing new about him. He has been ahead of the field for years. That is true of Senator SYMINGTON and Senator JOHNSON. I look about the Chamber to see if there are any other candidates. [Laughter.]

We are moving into a new era. My friend the able Senator from Montana has advocated—and I supported his resolution in 1957, when only a few of us stood here with him on the floor of the Senate—some supervision over the Central Intelligence Agency. I do not like the idea of voting money for an Agency and not knowing a little about what it is going to be used for. Only a selected few Members of the body know what CIA is doing. I do not like that. I represent a million and a half people, and I am entitled to be able to go home and say to the people a little something about what the CIA is doing.

Mr. MORSE. Let me correct the Senator's statement on that point. There is not any select group in the Senate that knows what CIA is doing. I am a member of the Committee on Foreign Relations. There are many things I cannot find out about what they are doing. They use the top secret label against us, too.

Mr. CARROLL. I can understand that some things ought to be kept secret. But we ought to have general knowledge about the guidelines and about the controls and about who gives orders and who makes reports.

Mr. MORSE. I should like to make this comment at this point. I do not think anything should be kept top secret without a check, under our system of government. It cannot be spread out worldwide, but at the same time I do not believe in vesting any branch of our Government with police-state power and top secret power, where there can be no check upon its administration.

That is a step in the direction of police-state powers. I have always opposed it. I happen to think that the elected representatives of the people can be trusted with the type of top secrets that any President or any head of the CIA can be trusted with. Most of the people who do have access to top secrets have never been elected to political office in their lives. So I do not buy the argument that we should not have a check on the President of the United States in respect to this matter of top secrets.

We can have a check on it without having it known throughout the country and known throughout the world. I am not going to give any man, even the President of the United States, unchecked power, because that is what brings about tyranny in times of crisis.

Mr. CARROLL. Mr. President, of course I agree with that. The Constitution provides for that. I wish to make this personal reference. I had personal knowledge at one time that President Truman, when he was President, would get every morning at 9 o'clock a report from his intelligence liaison, so that he might know what was going on. He got those reports every morning. I assume that this is being done with President Eisenhower.

Mr. MORSE. Let us hope so.

Mr. CARROLL. There may be some things withheld from him. I reiterate this because I think it is very important. I think that all Americans are entitled to know, of course, who gave the order for the May Day flight. Why was it done on May Day? What was its purpose? Was it done stupidly, blindly; was it merely a colossal blunder, or was it some force working even against Eisenhower and against the administration, to blow up this conference? I think we are entitled to know what the facts are.

I thank the Senator for yielding.

Mr. MORSE. I should like to say to the acting majority leader that I am about to yield the floor. Would he like to have me suggest the absence of a quorum?

Mr. MANSFIELD. Not at this time.

Mr. MORSE. I yield the floor.

YI YOUNG AN

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the pending business be temporarily laid aside and that the Senate proceed to the consideration of Calendar No. 1289, S. 2681.

The PRESIDING OFFICER. The bill will be stated by title.

The LEGISLATIVE CLERK. A bill (S. 2681) for the relief of Yi Young An.

The PRESIDING OFFICER. Is there objection to the present consideration of the bill?

There being no objection, the Senate proceeded to consider the bill, which had been reported from the Committee on the Judiciary, with an amendment, in line 8, after the word "said", to strike out "Yin" and insert "Yi", so as to make the bill read:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of sections 101(a)(27)(A) and 205 of the Immigration and Nationality Act, the minor child, Yi Young An, shall be held and considered to be the natural-born alien child of Staff Sergeant and Mrs. John L. Brown, citizens of the United States: *Provided,* That the natural parents of the said Yi Young An shall not, by virtue of such parentage, be accorded any right, privilege, or status under the Immigration and Nationality Act.

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed at this point in the RECORD the pertinent parts of the report as they relate to the desirability of this measure.

There being no objection, the excerpt from the report (Rept. No. 1252) was ordered to be printed in the RECORD, as follows:

PURPOSE OF THE BILL

The purpose of the bill, as amended, is to grant to the minor child adopted by citizens of the United States the status of a nonquota immigrant which is the status normally enjoyed by alien minor children of U.S. citizens. The bill has been amended to correct the spelling of the beneficiary's name.

STATEMENT OF FACTS

The beneficiary of the bill is a 19-year-old native of Korea, presently residing there, who was adopted in Korea on February 22, 1960 by citizens of the United States. He receives his full support from them. His adoptive father has served continuously with the Air Force since 1943 as a chaplain. After attaining the rank of lieutenent colonel he was retired under a reduction-in-forces program, and thereafter enlisted and is presenly serving a tour of duty in Korea which terminates in June 1960. After retirement in 1963 he plans to resume his ministry in the Southwest Texas Conference of the Methodist Church. The adoptive parents of the beneficiary were married in 1938 and have a 13-year-old daughter. Information is to the effect that they are financially able to care for him.

A letter, with attached memorandum, dated December 16, 1959, to the chairman of the Senate Committee on the Judiciary from the Commissioner of Immigration and Naturalization with reference to the bill reads as follows:

DEPARTMENT OF JUSTICE,
IMMIGRATION AND NATURALIZATION SERVICE,
Washington, D.C., December 16, 1959.

Hon. JAMES O. EASTLAND,
Chairman, Committee on the Judiciary,
U.S. Senate, Washington, D.C.

DEAR SENATOR: In response to your request for a report relative to the bill (S. 2681) for the relief of Yi Young An, there is attached a memorandum of information concerning the beneficiary. This memorandum has been prepared from the Immigration and Naturalization Service files relating to the beneficiary by the Houston, Tex., office of this Service, which has custody of those files.

The bill would confer nonquota status upon the 19-year-old alien to be adopted by U.S. citizens. It also would provide that the natural parents of the beneficiary shall not, by virtue of such parentage, be accorded any right, privilege, or status under the Immigration and Nationality Act. It is noted that there is a difference in the spelling of the beneficiary's name in lines 5 and 8 of the private bill. According to the records of this Service the correct spelling is Yi Young An.

As a quota immigrant the beneficiary would be chargeable to the quota for Korea.

Sincerely,

J. M. SWING,
Commissioner.

MEMORANDUM OF INFORMATION FROM IMMIGRATION AND NATURALIZATION SERVICE FILES RE YI YOUNG AN, BENEFICIARY OF S. 2681

Information concerning this case was obtained from Mr. and Mrs. John L. Brown, foster parents of the beneficiary.

Yi Young An, a native of Korea, was born on July 18, 1940. He has never been in the United States. He presently resides in Korea with Mr. Brown and is fully supported by him. The foster parents intend to adopt the beneficiary under the laws of the State of Texas when he arrives in the United States. The beneficiary is the son of Yi Man Sok and his wife, Pak Pun Sik, both residents of Korea. They have agreed to his adoption.

Mr. and Mrs. John L. Brown are U.S. citizens by virtue of birth in Athens, Tex., on Otcober 30, 1912, and Calcasieu Parish, La., on February 28, 1910, respectively. They maintain their principal residence in Nome, Tex. Mr. and Mrs. Brown were married in Georgetown, Tex., on August 6, 1938, and have testified that this is their only marriage. They have a 13-year-old daughter, Doris Kay Brown. Mr. Brown has served continuously in the U.S. Air Force since March 3, 1943, and he plans to make the Armed Forces his career. His present rating is staff sergeant, and his annual income is $4,200. Mrs. Brown is employed as a teacher in the public-school system at Nome, Tex., with an annual income of $4,250. Their joint assets consist of $14,200 in U.S. savings bonds, insurance with a face value of $17,000 a checking account of $6,000, and other real and personal property valued at $5,000.

Senator RALPH YARBOROUGH, the author of the bill, has submitted the following information in connection with the case:

21ST FINANCE DISBURSING SECTION,
APO 381, San Francisco, Calif.,
August 22, 1959.

Hon. RALPH W. YARBOROUGH,
Senator from the State of Texas,
Senate Office Building, Washington, D.C.

HONORABLE DEAR SIR: I am writing to inquire whether it would be possible for you to give me assistance in securing a special bill for the admission to the United States of a Korean national whom I plan to adopt in order that I might give him an education and other opportunities for development which I feel that I am in position to offer. For your preliminary consideration, I submit the following information:

I am 48 years of age, married (22 years), wife 49 years old. Both are in excellent health. We have one child 13 years old. Unfortunately after the birth of our daughter, we found that we could have no other children. I am a Methodist minister, of the Southwest Texas Conference; I served as a chaplain in the Air Force from March 1943 to February 1958, at which time I became a victim of the reduction-in-forces program. I still hold my Reserve commission in the grade of lieutenant colonel. After the reduction-in-forces, I enlisted in the Air Force in order to qualify for retirement. Upon retirement (1963) I will again resume my place in the conference as a pastor or missionary. I feel that I am financially able to undertake this project (if one can call an act of love for another a project) without any strain on either my financial or physical well-being.

The young man, whom I plan to adopt (or sponsor), is 18 years old. He has lived with or worked for Americans since the age of 10. He is the third son in the Korean family. Although both his parents are living, they are agreeable to both the adoption and his emigration from Korea. This boy has worked for me during my tour in Korea, and from observation—and closely at that—I can honestly say that I have never met a young man with a higher character quality than this lad. In spite of the many temptations which have presented themselves to him while in his status as houseboy to the GI's, he has never adopted the profanity or loose moral habits so common to many of the other "boys" who find it profitable to cater to the wishes of the man they work for. His habits and character bespeak the excellent family background from which he comes. Both his mother and father are practicing Christians—Methodists. His older brother, who is now in the Republic of Korea Air Force, hopes to become a Methodist minister, if the opportunity could be found to further his education in that direction—which assistance I may be able to secure through the help of some local church which may sponsor his training. As for my boy, I plan to place him first in a special school or private tutor to prepare him for entrance into Lon Morris Junior College, Jacksonville, Tex., and then to Southern Methodist University. Because of the extreme poverty of the family all the sons, except the youngest, have had to stop school at the end of the free-school period, which roughly is equivalent to our grammar school. I have checked his school record and find that he stood sixth in the class of almost a hundred children. He has a ready and eager mind, and I feel that he will have no difficulty in pursuing his studies.

I shall appreciate you advising me of the proper steps I should take in this matter. I am due to return to the United States in March of 1960, and I should like very much to be able to take the boy with me as I go. If I have to await the normal quota for Korean immigration the time would be a minimum of 5 to 6 years, since he does not qualify for a student visa or passport. By that time he would be too old to undertake the training contemplated for him.

With best wishes, I remain

Sincerely yours,

JOHN L. BROWN,
Staff Sergeant, USAF, AF18553644.

P.S.—Sir, I failed to mention that my home address is Nome, Tex.

21ST FINANCE DISBURSING SECTION,
APO 301, San Francisco, Calif.,
February 6, 1960.

Hon. RALPH YARBOROUGH,
Senator from the State of Texas,
Senate Office Building, Washington, D.C.

DEAR SENATOR YARBOROUGH: I am writing in reference to a bill for the relief of Yi Yong An, S. 2681, 86th Congress, 1st session, which you so kindly introduced in my behalf and that of my adopted son. I wish to report that I have been informed that the adoption has been approved by the district court of Seoul, Korea, and that as soon as the matter has been recorded in the Myon Office (similar to the county court in the States), I shall receive the certificate of adoption.

I am most happy with the progress of events. I have extended my tour of duty in Korea in order to secure concurrent travel with the boy upon my return to the States. I am now due to return on or about June 1, 1960. However I read an article in the January issue of the Coronet magazine which has filled me with some uncertainties and anxieties. The article is entitled "When Uncle Sam Gets Sentimental," by Al Toffler. One particular paragraph in the article appeared to be significant as far as this case is concerned:

"Not every private bill is passed. In fact, the majority are shelved. Only the most meritorious are acted upon. For they require passage by both Houses of Congress and signature by the President."

Since so many of my plans and hopes hang on the outcome of this particular piece of legislation, as far as school for the boy and other plans for his welfare are concerned, I wonder if you could give me any idea of its status in the committee and if any additional information is needed. I have heard nothing since supplying the Immigration and Naturalization Service at Houston, Tex., with all the information they requested. I realize that I may be acting like a new father, but if you've never had a son in the family and had just acquired one, I think you could understand my concern.

Thank you for your special interest in this matter, I remain,

Sincerely yours,

JOHN L. BROWN,
Staff Sergeant, USAF, AF18553644.

21ST FINANCE DISBURSING SECTION,
APO 301,
San Francisco, Calif., February 29, 1960.

Re S. 2681, a bill for the relief of Yi Yong An.

SENATE JUDICIARY COMMITTEE,
U.S. Senate, Washington, D.C.

HONORABLE DEAR SIRS: I enclose herewith a photographic copy of the certificate of adoption of the Kimchon district court, Kimchon, Republic of Korea, of Yi (the Korean symbol 01 being variously rendered in English as Lee, Rhee, or Yi) Yong An, for whom Senator YARBOROUGH, of Texas, has introduced a bill of relief, S. 2681, September 11, 1959.

Is it possible for you to advise me of the progress the bill is making. I am due to return to the United States about the 1st of June and would like very much to have the boy accompany me on the journey.

Sincerely yours,
JOHN L. BROWN,
AF18553644, Lieutenant Colonel,
USAF Reserve.

SEOUL DISTRICT COURT, REPUBLIC OF KOREA,
CERTIFICATION OF ADOPTION

1. Adopting father:
(a) Name: John Larkin Brown.
(b) Domicile: Jefferson County, Tex., United States of America.
(c) Date of birth: October 30, 1912.
(d) Occupation: U.S. Air Force.
(e) Nationality: American.
2. Adopting mother:
(a) Name: Doris Bean Brown.
(b) Domicile: Jefferson County, Tex., United States of America.
(c) Date of birth: February 28, 1910.
(d) Occupation: Housewife.
(e) Nationality: American.
3. Adopted child:
(a) Name: Yong An Lee.
(b) Domicile: 499 Kaikwang-Dong, Kenyung-Myun, Keumneung-Kun, Kyungsang-Bukdo, Korea.
(c) Date of birth: April 28, 1943.
(d) Occupation: None.
(e) Nationality: Korean.

I hereby certify that in the matter of the adoption of the above-named child adopted by the above-named adopting father and mother, concerned laws of the Republic of Korea have been complied with and that said adoption is legal and valid as of

Date 22d day of February 1960.

———— ————,
Judge, District Court of Kimchon, Republic of Korea.

The committee, after consideration of all the facts in the case, is of the opinion that the bill (S. 2681), as amended, should be enacted.

The PRESIDING OFFICER. The question is on agreeing to the committee amendment.

The amendment was agreed to.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

CONVEYANCE OF CERTAIN REAL PROPERTY TO THE STATE OF FLORIDA

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of Calendar No. 1370, H.R. 9818.

The PRESIDING OFFICER. The bill will be stated by title.

The LEGISLATIVE CLERK. A bill (H.R. 9818) to provide for the conveyance of certain real property of the United States to the State of Florida.

The PRESIDING OFFICER. Is there objection to the present consideration of the bill?

There being no objection, the Senate proceeded to consider the bill.

Mr. MORSE. Mr. President, I wish to commend very highly the Senator from Florida [Mr. HOLLAND] upon the wonderful cooperation he extends to me in respect of the long-established, 1946 Morse formula principle in connection with the disposal of Federal property.

The bill under consideration provides that the fair market value, as determined by the Secretary of Agriculture, shall be paid for the property. This is completely in conformity with the Morse formula. I am delighted with and appreciative of the action of the Senator from Florida.

Mr. HOLLAND. Mr. President, I appreciate the kind comment of the Senator from Oregon. So that the RECORD may show, briefly, what is involved, there was a tract much larger than the 500 acres to which the bill relates.

An old resettlement project was conveyed, or allowed to be conveyed, from the Federal Government to the State for an average price of some $54 an acre, provided it be used for forestry purposes. It now appears that the State needs 500 acres of this larger tract for the building of a new penitentiary.

The bill provides, as the Senator from Oregon has already stated, that the State of Florida must pay, if it secures this land, the market value of such land as determined by the Secretary of Agriculture. I know of no possible objection to such a provision.

The PRESIDING OFFICER. The bill is open to amendment. If there be no amendment to be proposed, the question is on the third reading of the bill.

The bill was ordered to a third reading, read the third time, and passed.

MEDICAL INSURANCE FOR RETIRED OLDER PERSONS

Mr. CLARK. Mr. President, on Thursday, May 19, I discussed in the Senate the bill introduced by the Senator from Michigan [Mr. MCNAMARA], S. 3503, to provide medical insurance for retired older persons. I placed in the RECORD an analysis of the McNamara bill, but now I find that this memorandum was an earlier draft, later revised to provide for 2 days of skilled nursing care for each day of unused hospital care, instead of 1½; and 2⅔ days of home health services for each day of unused hospital care instead of 2 days. Cost estimates also were revised to include these changes. I ask unanimous consent to have printed in the RECORD the revised analysis of the McNamara retired persons medical insurance bill.

There being no objection, the revised analysis was ordered to be printed in the RECORD, as follows:

MEMORANDUM BY SENATOR PAT MCNAMARA, CHAIRMAN, SENATE SUBCOMMITTEE ON PROBLEMS OF THE AGED AND AGING

ANALYSIS: RETIRED PERSONS MEDICAL INSURANCE ACT

Major provisions:

1. Cover under a system of prepaid health insurance all retired aged (men over 65 and women over 62 who are not employed).

2. Provide for 90 days of hospital care per year, or

3. One hundred and eighty days of care in a skilled nursing home, or

4. Two hundred and forty days of care at home in a supervised home health program.

5. Provide diagnostic outpatient services for such items as laboratory tests and X-rays.

6. Pay for a portion of the cost of very expensive drugs.

7. Provide for research and demonstration programs to improve quality and efficiency of health care.

Relevant data bearing on the above provisions follow:

1. We estimate that this bill will cover 14.8 million men and women as follows: 11.3 million OASI beneficiaries; 1.7 million who are receiving old age assistance and no OASI; 1.8 million other retired aged—men over 65 and women over 62.

The act would exclude from its coverage all men and women and their spouses who are working full time. In the ordinary case, these men and women will be covered by a group health insurance policy. The bill is thus limited to the retired aged.

2. Estimates of cost for the above provisions: Total cost, computed as conservatively as possible, is estimated at $1,578 million or $106 per capita (that is, per retired person): 11.3 million OASI beneficiaries would be financed by a one-quarter percent increase in the social security tax on the employee and employer; 1.7 million old age assistance recipients would cost $180 million to come from general revenue fund; 1.8 million other persons would cost $190 million, to come from the general revenue fund.

3. Hospitalization:

This bill provides for 90 days' hospitalization for the aged but aims at reducing excessive use of hospitals through the following features:

Provision is made for diagnostic services as a preventive program.

An incentive is provided to use nursing homes and home health services instead of hospitals when not needed.

4. Skilled nursing home care:

For each day of unused hospital care, the bill provides 2 days of care in a skilled nursing home following a physician's certification.

Total days authorized, 180.

5. Home health services:

For each day of unused hospital care, the bill provides 2⅔ days of home health services by a community-sponsored agency.

Total days authorized, 240.

6. Outpatient diagnostic services:

The bill provides for preventive services through early diagnosis of incipient illness by means of X-ray and other laboratory tests.

7. Very expensive drugs.

A portion of the cost of very expensive drugs prescribed by a physician using generic names is included in the insurance program. The amount and kind of coverage is to be determined by the Secretary after a year's study.

8. Effective date:

The bill would provide for phasing the effective dates of the various benefits so as to provide an opportunity to build up the financing fund, conduct adequate planning and develop the necessary facilities:

Hospitalization effective July 1, 1961, and not later than January 1, 1962.

Nursing homes, January 1, 1963, and not later than July 1, 1963.

Home health services, January 1, 1962, and not later than July 1, 1962.

Diagnostic outpatient services, July 1, 1961, and not later than January 1, 1962.

Very expensive medicines, July 1, 1962, and not later than January 1, 1963.

The Secretary of HEW would be authorized to designate the dates within these periods when the act would be effective.

9. Summary of costs:

The one-fourth percent increase on the OASDI tax on employer and employee and

three-eighths percent on the self-employed would be sufficient to finance the medical benefits for the retired OASI beneficiaries.

Three hundred and seventy million dollars from the general fund would finance the medical benefits for those not eligible for OASI benefits.

Partially offsetting this $370 million appropriation are current Federal expenditures for:

Medical care under old-age assistance, $153 million.

Medical care for other groups who would be covered, $85 million.

Thus, it is estimated that net additional costs to the Federal Government would be approximately $132 million.

10. Research and demonstration:

The bill would direct the Secretary of HEW to conduct research on the health care of older persons and on improvements in the quality and efficiency of health services.

The Secretary is also authorized to conduct appropriate demonstration programs on how to meet the health needs of older persons as effectively and efficiently as possible in their communities.

11. Other important provisions:

Persons receiving social security benefits or old-age assistance payments are automatically eligible for benefits. Other individuals who have not earned in the preceding month more than the amount set in the retirement test under OASI will be covered.

The Secretary is to publish annually a listing of hospitals, nursing homes, and home health agencies which are included for payments under the act. It is expected that for hospitals, the Secretary may use the AHA accrediting service; and that for nursing homes, only those will be included which meet adequate standards for care and rehabilitation.

State health agencies can be given authority to inspect whether standards are being met and whether professional services are adequate.

The bill authorizes the Secretary of HEW to administer the act with a national health service advisory council.

The Secretary may use the services of private nonprofit organizations in administering the program.

Railroad retirement and Federal employee pensioners could come under the program at any time such legislation is enacted.

MANDATORY IMPORT PROGRAM

Mr. SCHOEPPEL. Mr. President, I learned only a few days ago of a very disturbing development in my State of Kansas concerning one of our most important industries—petroleum production. I refer to the price reduction of 20 cents a barrel instituted on Monday of this last week covering more than 15,000 barrels daily of oil produced in Kansas. This action, coming as it does on top of several other price reductions over the past few months, points up the serious need to take a second look at some of the factors which are causing this continual deterioration in the petroleum industry in my State of Kansas as well as in the Nation as a whole. These price reductions are already having a serious impact on the ability of petroleum producers to continue to find and develop the necessary reserves that are absolutely essential to us for national security.

In my State of Kansas, crude oil production averaged about 310,000 barrels daily during the first 4 months of this year, compared with 337,000 the same period last year, a drop of 27,000 barrels daily, or 8 percent. In May, the Kansas production allowable is cut another 25,000 barrels per day and actual production during the first week in May was down almost 50,000 barrels per day or 15 percent from the same week last year. As things now stand, no improvement in this situation is now in sight.

The combination of depressed prices and reduced markets for Kansas crude has caused severe curtailment of exploratory and development activity. Exploratory crews active during the first quarter of 1960 are down 15 percent from a year ago level. The average number of rotary rigs active this year is down 18 percent and the total number of wells drilled to date is down 24 percent.

I understand that for the Nation, during the first 4 months of this year, there have been more than 22 specific price cuts ranging from 4 cents to 20 cents per barrel. Product prices of the four principal products have dropped 23 cents per barrel in the past year. These various factors spell out only one thing—the petroleum producing industry is in a serious condition which if not remedied could become chaotic.

Mr. President, this situation in light of recent worldwide developments only serves to point up the urgent need for our Government to take a real cold hard look at the situation to determine if its policies on petroleum imports are adequate to assure this Nation of a strong and healthy domestic petroleum producing industry.

Mr. President, I would be the first to emphasize that there are many causes other than oil imports which are contributing to the sad state of affairs we now find in our domestic petroleum industry. We must recognize that the inroads being made into crude oil markets by natural gas liquids, natural gas, which is priced at the wellhead at artificially low prices due to Federal regulation, and many other factors are serving to depress domestic crude oil production as well as crude oil prices. However, on analysis, it can be seen that the biggest adverse factor in the picture is that of petroleum imports. Just because there are other adverse factors, it does not mean that we can ignore the biggest one—imports.

As is quite well known, a little over a year ago, President Eisenhower instituted what is commonly known as the mandatory oil import program. This action was taken in line with policies laid down by Congress in which we declared that the President shall act to curb imports of a commodity whenever they are found to be a threat to national security.

Following the institution of this firm governmental program, the people in my State took heart and set about increasing their search for and development of new oil reserves in line with the announced goal behind the program. However, this was a short-lived situation. It was not long before evidence began to develop that although the mandatory import program had stemmed the tide somewhat the actual level of imports was too high. The latest statistics show that even with the mandatory import program, imports are now running at a rate higher than at any time in our history. Back in 1954, the Cabinet Committee on Fuels established by the President declared that imports in excess of the 1954 ratio would be a threat to national defense. At that time, the ratio of imports to domestic crude production was 16.6 percent. Today, total imports are running at a ratio of 25.4 percent, the highest ever. It must be noted that these totals include residual fuel oil which we do not produce in sufficient quantities in this country to meet our needs. However, excluding residual fuel oil, the facts show that the other oil imports are running far in excess of the total which the Cabinet Committee in 1954 declared must not be exceeded if our national security position is to be preserved.

Mr. President, as I mentioned earlier, imports are only one factor but a big factor. I, therefore, urgently call upon the President and the responsible officials in Government concerned with oil import policies to immediately take a cold, hard look at this situation and see if the goals they laid down when import controls were established are being met. This situation calls for immediate action as I understand the administrator of the program is now in the process of establishing the allowable imports for the second half of 1960. Once these are established, it would be very difficult to change them. Therefore, I urgently suggest that a reevaluation be made right now of the total level of imports to the end that sufficient reductions can be made to assure that our national security goals will be met.

DEPARTMENT OF AGRICULTURE AND FARM CREDIT ADMINISTRATION APPROPRIATIONS, 1961

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of Calendar No. 1467, House bill 12117, so that the bill will become the pending business.

The PRESIDING OFFICER (Mr. ENGLE in the chair). Is there objection?

There being no objection, the Senate proceeded to consider the bill (H.R. 12117) making appropriations for the Department of Agriculture and Farm Credit Administration for the fiscal year ending June 30, 1961, and for other purposes, which had been reported from the Committee on Appropriations with amendments.

Mr. RUSSELL obtained the floor.

Mr. MANSFIELD. Mr. President, will the Senator from Georgia yield?

Mr. RUSSELL. I am glad to yield to the distinguished Senator from Montana.

Mr. MANSFIELD. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. RUSSELL obtained the floor.

Mr. MANSFIELD. Mr. President, will the Senator yield?

Mr. RUSSELL. I am very glad to yield to the acting majority leader.

ORDER FOR ADJOURNMENT TO 10 O'CLOCK A.M. TOMORROW

Mr. MANSFIELD. Mr. President, I should like to make a request which may, in the end, turn out to be tentative.

I ask unanimous consent that when the Senate adjourns tonight, it adjourn to meet at 10 o'clock tomorrow morning.

The PRESIDING OFFICER. Without objection, it is so ordered.

LIMITATION OF DEBATE ON VETO BY THE PRESIDENT OF THE AREA REDEVELOPMENT BILL

Mr. MANSFIELD. Mr. President, I ask unanimous consent that at 2 o'clock tomorrow, a yea-and-nay vote be taken on the proposal to override the President's veto of the depressed areas bill, with the time to be divided equally between the proponents and opponents of the measure.

The PRESIDING OFFICER. Is there objection?

Mr. DIRKSEN. Mr. President, by that statement, I assume the acting majority leader means the time is to be controlled by the leadership.

Mr. MANSFIELD. Yes; by the majority leader and by the minority leader.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and the unanimous-consent request is agreed to.

ORDER FOR LIMITATION OF MORNING HOUR TOMORROW

Mr. DIRKSEN. Mr. President, I should like to ask the acting majority leader if it is contemplated that there be a morning hour tomorrow.

Mr. MANSFIELD. I presume there will be a morning hour, which I hope will not take up too much time; but, in order to overcome that particular aspect of the problem, I ask unanimous consent that there be a morning hour tomorrow, and that the morning hour be concluded by 11 o'clock a.m.

The PRESIDING OFFICER. Without objection, the unanimous consent request is agreed to.

The unanimous-consent agreements subsequently reduced to writing, are as follows:

UNANIMOUS CONSENT AGREEMENTS

Ordered, That when the Senate concludes its business today it adjourn until 10 o'clock a.m. tomorrow (Tuesday, May 24, 1960); that morning business be in order, and that at 11 o'clock a.m. the Senate proceed to the consideration of the question of overriding the veto of the President of S. 722, the Area Development Act; that at the hour of 2 o'clock p.m., the Senate proceed to vote by yeas and nays on said question, and that the intervening time be equally divided between the proponents and the opponents, and controlled, respectively, by the majority leader and the minority leader. (May 23, 1960.)

RESEARCH ON CONVERSION OF SALINE WATER TO FRESH WATER

Mr. MOSS. Mr. President, I rise to announce my cosponsorship of the bill (S. 3557) introduced by the distinguished majority leader [Mr. JOHNSON of Texas], together with the Senator from New Mexico [Mr. ANDERSON], and others, to provide for accelerated research and development of practical means for converting saline water to fresh water suitable for consumptive use.

The bill removes present restrictions of time and money on the desalinization program, and provides loans to communities to build developmental conversion plants.

While desalinization of seawater is not expected to provide a direct supply for interior States like mine, at least, not very soon, we in Utah have a real interest in seeing our sister States, and California in particular, develop adequate water supplies from seawater.

Today, Utah and southern California both look to the same source—the Colorado River—for much of the water to support a rapid growth of population and industry. California has just received a blow in the recommendation of a special master of the U.S. Supreme Court for division of the water of the lower Colorado.

We in Utah have long been at odds with California over the division of the Colorado waters between the lower and the upper basin States. The real solution to the problem, however, is for us to work together to develop an alternative means of providing California with the water she needs. This would then relieve pressure to claim for California a larger portion of the Colorado streamflow. The upper basin States would be safe in their use of the water.

Since all of the Nation's present supplies of water that are inexpensive and readily accessible are already in use, we look to a means of making available the enormous resources of the sea.

The Office of Saline Water has done a creditable job with the funds and personnel it has. Three experimental plants will soon be under construction, and plans are going forward for the establishment of the two more that have been authorized by Congress.

I agree with the Senator from Texas [Mr. JOHNSON], however, that, despite real efforts, we are losing this water race. Our progress on desalinization is too slow, and present storage and conservation efforts are not keeping pace with increased water demand.

Our society has reached the place where the necessities and uses of water are so tremendous that they stagger the imagination. It has taken us 352 years to build up our population of 180 million Americans. Yet the Census Bureau assures that the number will double in the next 40 years.

This means that the Nation as a whole will require 2½ times as much municipal water in 1980 as was used 5 years ago. And the statistics on the coming water needs of agriculture, manufacturing, metal fabricating, and the new synthetics industries, which have been previously cited in the Senate and with which the Members are familiar, tell the same story.

Mr. President, there is another aspect to America's water problem that has particular significance in view of the tragic international developments of the past week.

As the Senate is aware, I had the opportunity of visiting Soviet Russia last fall as head of a subcommittee representing the Committee on Interior and Insular Affairs and the Committee on Public Works. Our task was to study comparative water and power resource development. One of the points made by the subcommittee report is this—that the Soviet Union possesses the largest water resources in the world. Russia has about 10 percent of our earth's supply of fresh water, compared to our 3 percent.

It is true that a portion of the water in Siberia is difficult to develop because it flows northward into the icebound Arctic Ocean, it is true that much of Russia's water is great distances from the centers of population; but this still leaves Russia with vastly greater water resources than we enjoy.

And, Mr. President, it must be said that the Eisenhower-Nixon administration has failed to recognize the vital character of our water problem, and has refused to follow policies calculated to develop supplies fast enough to keep up with demand. In some cases, our attempts to solve the problem have been ridiculed.

I refer to the vote of Congress to override the President's veto of the public works appropriation bill last session, which Press Secretary James Hagerty was allowed to call the "lure of the pork barrel." Yet these projects were for flood control—to prevent wasting of water; or for small water projects—to use water supplies more efficiently.

And the "no new starts" policy has unreasonably slowed the development of water storage and development projects. Incidentally, this policy was quietly dropped for this election year.

The President even vetoed the bill to use adequate amounts of Federal funds to assist and encourage States and localities to control water pollution. Yet the fact is that we are losing this race also—we are contaminating our water at a faster rate every year.

The leadership in providing adequate water supplies has therefore had to come from Congress. And this leadership is welcomed by the States and municipalities which are daily struggling with this problem.

One forward-looking step taken by the Senate is the appointment of the Select Committee on National Water Resources, which is making a study of the Nation's future water needs and supplies. We have held public hearings in all sections of the country, and are issuing a series of comprehensive reports covering all phases of our water problems. Our report will be made to the Senate next year.

In the meantime, I am pleased to support this move to step up all phases of our saline water program. This bill

provides for improved research, for process development in both pilot and full-scale plants, and for establishment of a needed central testing laboratory. Economic studies will be undertaken to provide communities with the cost figures they need to make intelligent decisions on the possibility of using desalinization for municipal water supply.

In addition, the bill provides for loans to communities to aid plant construction. Many communities could now provide their water supplies more cheaply through commercial desalinization. They hesitate to do so because of uncertainty, the expense involved, and the general lack of knowledge in this field.

In many places in this Nation, we already have a water shortage. The Geological Survey tells us that there were 1,000 communities in 47 States that had to restrict water use in 1957. The Department of Commerce estimates that the cities and towns of America must invest $80 billion in the next 20 years to keep abreast of their requirements for municipal and industrial water. A reasonable expenditure now to provide the research and development to make our greatest potential source of water—the sea—available for human use is one of the wisest investments we can make in the future of America.

AGRICULTURAL AND FARM CREDIT ADMINISTRATION APPROPRIATIONS, 1961

The Senate resumed the consideration of the bill (H.R. 12117) making appropriations for the Department of Agriculture and Farm Credit Administration for the fiscal year ending June 30, 1961, and for other purposes.

Mr. RUSSELL. Mr. President, do I correctly understand that H.R. 12117, the annual appropriation bill for the Department of Agriculture, has been made the unfinished business?

The PRESIDING OFFICER. That is correct.

Mr. RUSSELL. Mr. President, I ask unanimous consent that the committee amendments be agreed to en bloc, that the bill as thus amended be considered as original test for the purpose of amendment, and that no point of order be waived.

The PRESIDING OFFICER. Without objection, the unanimous-consent request is agreed to.

The committee amendments agreed to en bloc are as follows:

On page 3, line 7, after the word "stations", to strike out "$67,934,000" and insert "$70,247,600", and in line 10, after "(21 U.S.C. 113a)", to strike out the comma and "or to not to exceed $1,000,000 to remain available until expended for the construction and alteration of buildings."

On page 4, at the beginning of line 1, to strike out "$52,011,000" and insert "$52,236,000", and in line 5, after the word "conditions", to insert a colon and *"Provided,* That no funds shall be used to formulate or administer a brucellosis eradication program for fiscal year 1962 that does not require minimum matching by any State of at least 40 per centum."

On page 4, line 14, after the word "employed", to strike out "under contracts and cooperative agreements".

At the top of page 6, to insert:

"CONSTRUCTION OF FACILITIES

"For construction of facilities and acquisition of the necessary land therefor by donation or exchange, $3,700,000, to remain available until expended: *Provided,* That $300,000 of the amount appropriated herein shall be available for payment of expenses for construction of a headquarters-laboratory building at the National Arboretum, which is hereby authorized to be constructed under contract authorization in an amount not to exceed $1,500,000."

On page 6, line 16, after the word "Agriculture", to strike out "$31,053,000" and insert "$32,053,708," and in line 19, after the word "all", to strike out "$31,553,000" and insert "$32,553,708".

On page 7, line 24, after "(7 U.S.C. 347a)", to strike out "$54,220,000" and insert "$56,220,000"; on page 8, line 2, after the word "all", to strike out "$55,715,000" and insert "$57,715,000", and in line 7, after the word "year", to strike out the colon and *"Provided further,* That all of the additional funds provided herein shall be used to meet expenses at the county level."

On page 8, line 12, after the word "employees", to strike out "$5,875,000" and insert "$5,961,000".

On page 8, line 22, after the word "possessions", to strike out "$2,255,000" and insert "$2,275,000".

On page 17, line 2, after the word "estimates", to strike out "$16,315,000" and insert "$16,605,000".

On page 17, after line 9, to insert:

"Marketing services: For services relating to agricultural marketing and distribution, for carrying out regulatory acts connected therewith, and for administration and coordination of payments to States, $26,579,900, including not to exceed $25,000 for employment at rates not to exceed $50 per diem, except for employment in rate cases at not to exceed $100 per diem pursuant to the second sentence of section 706(a) of the Organic Act of 1944 (5 U.S.C. 574), as amended by section 15 of the Act of August 2, 1946 (5 U.S.C. 55a), in carrying out section 201(a) to 201(d), inclusive, of title II of the Agricultural Adjustment Act of 1938 (7 U.S.C. 1291) and section 203(j) of the Agricultural Marketing Act of 1946."

On page 18, line 25, after "(7 U.S.C. 1766)", to strike out "$4,447,000" and insert "$4,487,000", and on page 19, at the beginning of line 7, to strike out "$2,493,000" and insert "$2,539,000".

On page 19, line 21, after the word "expended", to insert "of which amounts not less than $4,400,000 shall be available to purchase currencies which the Treasury Department shall determine to be excess to normal requirements of the United States: *Provided,* That this appropriation shall not be used for the purchase of currencies available in the Treasury for the purposes of section 104(f) of such Act unless such currencies are excess to the normal requirements of the United States".

On page 20, line 21, after "(7 U.S.C. 1-17a)", to strike out "$930,000" and insert "$941,325".

On page 21, line 18, after the word "expended", to strike out "$310,000,000" and insert "$335,000,000".

On page 22, at the beginning of line 18, to strike out "$50,000,000" and insert "$60,000,000".

On page 25, at the beginning of line 19, to strike out "$30,500,000" and insert "$31,467,650", and in line 20, after the word "exceed", to strike out "$1,000,000" and insert "$1,100,000".

On page 27, line 1, after the word "Department", to strike out "$1,478,000" and insert "$1,523,000"; in line 8, after the word "than", to strike out "one hundred and fifty-one thousand" and insert "two hundred and thirty-three thousand and fifty"; in line 16, after the word "of", where it occurs the second time, to strike out "one hundred and sixteen thousand five hundred and twenty-five" and insert "fifty-eight thousand two hundred", and at the beginning of line 19, to strike out "$90,000" and insert "$45,000".

On page 30, line 8, after the word "exceed", to strike out "$44,726,000" and insert "$45,726,000", and on page 32, line 12, after the word "provision", to strike out the semicolon and *"Provided further,* That none of the funds herein appropriated shall be used to formulate or administer any program which does not provide for maximum use of Government-owned facilities for storing surplus commodities, consistent with the economical operation of the Corporation."

The PRESIDING OFFICER. The bill is open to further amendment.

Mr. RUSSELL. Mr. President, I have a brief statement to make regarding some of the items in the agricultural appropriation bill.

As reported to the Senate, the bill carries direct appropriations in the amount of $4,000,222,683. This bill is $135 million under the budget estimates, and $62.3 million over the figure as passed by the other body. For the regular activities of the Department, $1.3 billion is recommended, which is $11.4 million under the budget requests.

COMMODITY CREDIT CORPORATION

An appropriation of $1,226,500,000 is carried in the bill to restore capital impairment. This includes $632 million for the balance of losses incurred in fiscal 1959, and $594,500,000 of the estimated losses for fiscal 1960. The difference of $98,500,000 between the estimate and the amount proposed in the bill will have to be restored in some future appropriation bill.

An appropriation of $1,443,634,000 is recommended to reimburse the Commodity Credit Corporation for the estimated cost in fiscal 1960 of carrying out several authorized programs.

The principal committee changes from the bill as it passed the other body are as follows:

MARKETING SERVICES

First. The restoration to the bill of the "Marketing services" item of $26,579,900. This item was stricken in the House on a point of order.

Mr. President, in this item there is included the sum of $10,296,000 for poultry inspection, as requested in the budget, together with funds requested for several marketing service programs.

The administration has proposed legislation, which is pending before the standing committee on Agriculture and Forestry, dealing with continuation of authority to exempt poultry-food-processing food plants from mandatory inspection.

Unless the Congress enacts the proposed legislation before next July 1, the Department will be required, under the poultry products inspection law, to provide federally supervised inspection to further processing plants which the Secretary is now permitted by law to exempt from inspection. In that event, the Department will be obliged to submit a

supplemental budget request to cover the additional cost of inspection in the poultry-food-processing plants. Included in that category are a wide variety of mixed foods, such as chicken pies, chicken with vegetables of one kind and another, and canned chicken.

CONSERVATION RESERVE PROGRAM

Second. The other major increase recommended by the committee is a restoration of $25 million to make the mandatory rental payments, and for other costs under the conservation reserve program. The program authorization to enter into new contracts has expired, but this appropriation item will be required for several years for the contracts in force. The amount of $335 million is recommended, the same amount as for 1960, which, together with balances carried forward of about $20 million, should provide the funds required for fiscal 1961.

RESEARCH AND EXTENSION

The committee recommends an appropriation of $70,247,600 for the Agricultural Research Service. This amount is $1,265,900 over the budget request and is $2,313,600 over the amount provided in the other body.

The bill includes the full increase in the budget estimate of $1,502,800 for accelerating research to avoid pesticide residues, and an increase of $1,200,000 for utilization research.

The committee recommends several increases outside the budget which, it believes, are urgently needed, totaling $1.5 million over the House bill. It also recommends that $3.7 million be appropriated for the construction of new research facilities for pesticide residues, poultry disease, and management for the National Arboretum, and for plans and specifications for soil and water research facilities.

The committee recommends a $1 million increase for payments to State experiment stations. This is the increase requested in the budget and it was denied by the other body.

For payments to the States for cooperative extension work, an increase of $4 million over fiscal 1960 is recommended. This is $1,135,000 over the budget request.

A provision in the other body restricting the use of increased funds to the county offices has been stricken from the bill.

SOIL CONSERVATION ACTIVITIES

The committee concurs in the action taken in the other body to restore to $250 million the advance authorization for the 1961 ACP program. This is the third successive year that the President's budget has requested a reduction of either $125 or $150 million in the advance authorization for the ACP program.

For programs administered by the Soil Conservation Service, the committee recommends an appropriation of $143,132,000, which is $7.5 million over the estimates and almost $10 million over fiscal 1960.

SCHOOL LUNCH AND SCHOOL MILK

The bill carries a total of $155 million of Federal financing for the school lunch program, of which $45 million is from section 32 funds. This is a $5 million increase over the budget for section 32 funds.

In addition to the $155 million of Federal funds provided in this bill, an estimated $90 million of funds will be available under the special milk program. In addition, surplus foods acquired through CCC operations and surplus removal programs will be available for donation to the school lunch program. In fiscal 1960 these donations of food commodities are estimated to have a value of $73 million.

LOAN AUTHORIZATIONS

The bill provides $280 million authorization for electrification loans. This is comprised of $110 million regular authorization, requested in the budget, a carryover into 1961 of $110 million, and a contingency authorization of $60 million.

For telephone loans, a total available authorization of $141 million is provided. This is comprised of a carryover of $1 million, regular authorization of $80 million, and a $60 million contingency authorization.

The committee recommends regular authorization of $227 million for lending programs administered by the Farmers Home Administration. This compares with $226 million used this fiscal year. This is $50 million over the budget estimate. In addition, a contingency authorization of $40 million is provided.

Mr. President, on tomorrow I can discuss these and any of the other items in the bill, and I shall undertake to answer any questions which may be propounded.

Mr. CARLSON. Mr. President, will the Senator yield?

Mr. RUSSELL. I am delighted to yield to the distinguished Senator from Kansas.

Mr. CARLSON. I should like to ask the distinguished Senator, the chairman of the subcommittee, a question in regard to an appropriation we have had in Kansas for many years with respect to research funds for a study of electricity in our State, through the Kansas State College. We have, I think, the finest relations between the private power companies in Kansas and the Rural Electrification Administration, working together. Excellent progress has been made. These groups have cooperated by contributing funds, to be used with Federal funds, for the study of uses of electricity.

I have a telegram from the dean of agriculture and the head of the Department of Agricultural Engineering of the Kansas State College, which I should like to have printed as a part of the RECORD, and I should like to ask the Senator if he has any comment in this regard.

Mr. RUSSELL. Mr. President, as the Senator has correctly stated, research as to the uses of electricity on the farm has been carried on in various forms for some years. This year, for some reason, the Bureau of the Budget recommended that that project be discontinued, but due to a revision of terms in the appropriation bill, for which the subcommittee can claim no direct credit—we merely approved what came from the other body—the same amount of money has been made available for the work at Manhattan as was expended during the present fiscal year.

Mr. CARLSON. Mr. President, we in Kansas appreciate that very much. We know the money is not wasted. It serves a very useful purpose. I am delighted to learn that the work will be continued.

I ask unanimous consent, Mr. President, that the telegram to which I have referred be printed in the RECORD at this point.

There being no objection, the telegram was ordered to be printed in the RECORD, as follows:

MANHATTAN, KANS.

Hon. FRANK CARLSON,
U.S. Senate Building,
Washington, D.C.:

The Kansas Agricultural Experimental Station assisted by funds from Kansas electric power suppliers and cooperating with the Farm Electrification Branch, ARS, USDA, has developed a program of constructive research directed at the betterment of farm living and the improvement of farm production efficiency.

Current research efforts are concerned primarily with utilization of electric equipment and controls to provide comfort conditions for the farm home, to modify and control environment for livestock and poultry, to dry crops and to utilize solar energy as a source of supplemental heat in agriculture.

We understand that USDA research funds may be diverted from this program. Loss of these funds would seriously disrupt the continuity and orderly progress of research that has received wholehearted support from experiment station and industry personnel the past 12 years.

A. W. WEBER,
Dean of Agriculture.
G. H. LARSON,
Head of Department of Agricultural Engineering.

Mr. RUSSELL. Mr. President, the rural electric cooperatives have requested substantial increases in the item for research.

Mr. CARLSON. Mr. President, will the Senator yield further in regard to the research program?

Mr. RUSSELL. I am not inviting any amendments, but I wish to support the Senator's statement as to the importance of the work.

Mr. CARLSON. I assure the Senator that I shall not offer any amendments. I desired to make a short comment as to research.

I am delighted to note from the report that the committee has increased the appropriations for research. I notice the committee added several additional research items. I am not going to discuss those, but they are to be found beginning on page 2 of the report. The committee is recommending different establishments in different areas and in different fields.

Mr. President, those of us interested in wheat realize it is a major farm problem and one of the problems in dealing with this subject is the surplus.

Congress has approved legislation which restricts production through acreage controls and votes substantial sums of money for the export of the commodity.

It is my opinion that one place that we are lacking is in research. This appropriation bill recommends $70,247,600 for

research. This research is for all farm research programs and is used directly and cooperatively with State institutions.

It is not my intention to offer an amendment to the pending bill for establishment of a modern grain research laboratory on or near the campus of the State university at Manhattan.

I mention it at this time because in the next session of Congress, I expect to introduce legislation and urge its approval, which would give our Nation a sound, adequately staffed, well-rounded research organization which would be housed in facilities that would be in keeping with the needs for research on wheat.

Our present program of research is handicapped and limited in scope and is progressing more slowly than is necessary or desirable because of the absence of the following types of modern research equipment and facilities:

First. A battery of small controlled temperature-humidity rooms for use on grain storage and grain insect and micro-organism activity as related to conditions of temperature and humidity. Facilities for exploring sealed grain storage would be needed to determine the effect of air composition on grain quality and insect activity.

Second. Modern equipment and instruments for grain quality evaluation research including the latest scientific instruments and small milling and baking equipment for rounding out work on wheat quality particularly in relation to grade standards and to milling and baking performance.

Third. Facilities for employing radioactive tracers for determining airflow patterns, the movement of fumigants, and insect activity through stored grains.

Fourth. Facilities for exploring irradiation treatment for control of insects in stored grains.

Fifth. Pilot plant space in which temporary experimental equipment can be erected for the purpose of testing out new research developments in the area of grain quality maintenance.

Sixth. A small engineering and instrumentation shop.

Seventh. Modern offices and chemical, entomological, and engineering laboratories.

To accomplish the above-mentioned research objectives, a team approach of engineers, chemists, entomologists and other scientists is required. The work of the research team housed in the proposed facilities should be directed toward solution of problems in three broad areas. They are:

First. Quality identification and measurement; in other words, developing a better basic understanding of the inherently useful quality characteristics of wheat and other grains. With this information develop more meaningful grain standards and more objective instruments and methods of measuring wheat quality in the market.

Second. Prevention of damage to wheat quality during drying, conditioning, handling, storage, and transportation would come in for major research attention. New methods and equipment for use in the above operations would be explored. Basic studies of optimum storage environment, moisture equilibrium, micro-organism activity during storage and transportation and basic changes in wheat composition during storage and their effect on milling and baking quality would be analyzed.

Third. Research having to do with the control of insect damage to grain in storage, milling, and transportation channels should be strengthened. A small unit with responsibility for stored grain insect research is now located in Manhattan, Kans., in a wholly inadequate, rented private dwelling and temporary structures in the backyard. Because of the recent problems in the field of pesticide residues, added attention should be given to new chemical treatments and methods of applying chemicals that would control insect infestation and reduce or eliminate residues in grain and grain products.

The Great Plains Wheat Market Development Association, which is an organization representing wheatgrowers in the Midwest, is supporting this program and in the next session of Congress, we hope to come up with some definite figures and will recommend an appropriation for the construction of this wheat research laboratory.

I informed the distinguished chairman of the subcommittee that I shall not offer any amendments at this time, but I serve notice that in the next session of Congress I am going to see if we can provide funds for the establishment of a research laboratory which will go into this subject thoroughly.

I merely bring up this subject at this time because I feel keenly the importance of research in the field of wheat, not only with respect to the type of wheat we export but also with respect to the uses of wheat. I am pleased to see that the committee recognizes the value of research generally.

Mr. RUSSELL. I thank the Senator.

If the Senator will look into the subject, I think he will find that the appropriations for research, particularly as to the diseases which affect wheat, have certainly not been neglected by the committee over the past several years. Those appropriations have been increased by several hundred percent.

The distinguished Senator from North Dakota [Mr. YOUNG], who is the ranking minority member of the subcommittee, has urged increases over and above the budget request, to deal with such problems as rust and other diseases or plagues which afflict wheat.

I certainly agree with the distinguished Senator as to the importance of research. Some of our friends from the cities say it is a rather anomalous situation to be appropriating money for research at a time when the granaries are full, when we are plagued with surpluses, and when we are reducing farm acreage, but if it had not been for the research which brought down the per unit cost of production for the American farmers, they would be practically out of business. If the cost to produce were as much per unit today as it was many years ago, before some of these new and startling developments in the field of research came about, very few farmers would still be in business in this country.

Research has served a very useful purpose in reducing the losses the farmer has incurred by lowering his per unit cost of production.

I believe in research. We have increased the appropriation every year not only above the figure which came to us from the other body, but also above the budget estimates. We increased the appropriation over $3 million above the budget estimates in this field. We intend to move forward, and we would be delighted to receive the suggestions of the distinguished Senator from Kansas and will give very careful consideration to any suggestions from him as to further progress we may make in this field. It is one of the few areas in which we have been able to do anything for the American farmer.

Mr. CARLSON. Mr. President, I rise to pay my respects to the distinguished chairman of the committee, the senior Senator from Georgia [Mr. RUSSELL], and the committee for what I believe is a foresighted and a proper program for not only dealing in research of questions relating to wheat but also all agricultural commodities, because, as the distinguished chairman of the committee well knows, all of them are under pressure, and we need not only to provide the proper type of market for products but to find new uses for the products.

Mr. RUSSELL. I did not wish to go into the field of utilization research. We endeavored to increase the appropriation in that area, but despite the advances in the past several years we still have a long way to go in the study of soils, the conservation of water, and other related studies which not only assist in the production of crops, but which will also help in the preservation of the fertility of our soils for generations unborn.

Mr. SCHOEPPEL. Mr. President, will the Senator yield?

Mr. RUSSELL. I yield.

Mr. SCHOEPPEL. I am very glad to join with my colleague in his commendation of what the committee has done with reference not only to research but also the matter about which Dean Weber of Kansas State University consulted us, which was a research fund with reference to a study that was made. Did I correctly understand the distinguished senior Senator from Georgia [Mr. RUSSELL] to say that that research program will be continued and that funds will be made available for it?

Mr. RUSSELL. Yes. The Senator's colleague asked about the item which has to do with rural electrification research, which the budget recommended be discontinued.

Mr. SCHOEPPEL. The Senator is correct.

Mr. RUSSELL. Through the reapplication of funds, as the bill now stands and comes before the Senate, it provides for that work to be done for another year at Manhattan, Kans.

Mr. SCHOEPPEL. I thank the distinguished Senator and the members of the committee for that consideration

because, as I understood from the reports that we had, that was in its completion stage, and provision should be made for completing it.

Mr. YOUNG of North Dakota. Mr. President, will the Senator yield?

Mr. RUSSELL. I am glad to yield to the fighting friend of agriculture, the distinguished Senator from North Dakota.

Mr. YOUNG of North Dakota. I thank my friend from Georgia for those kind comments. The bill as approved by the Senate Appropriations Committee I believe represents a reasonable approach to the many involved agricultural problems. I wish to commend the Senator from Georgia for his usual good job in the handling of the bill. Not all farm organizations and other groups got all they wanted, but I think the adjustments made in the bill were necessary ones and the ones which will please the great majority of the Members of Congress as well as people generally.

As the Senator pointed out, there were only two sizable increases in the appropriation bill, and those were necessary ones which had to be made because a point of order was raised on the House floor on the ground that contracts had been entered into regarding the conservation reserve program. The remainder of the increases made by the Senate committee were very worthy ones involving, for example, increases in loan authorizations for REA and RTA, some research items, and some other adjustments. On the whole, as I said previously, I think it is now a very good bill and one which should provoke very little debate on the Senate floor.

Mr. RUSSELL. I thank the Senator. I think the bill is as well balanced as we can make it in these times.

Mr. AIKEN. Mr. President, will the Senator yield?

Mr. RUSSELL. I yield.

Mr. AIKEN. I wish merely to take time enough to commend both the chairman of the Agricultural Appropriations Subcommittee and the ranking member of the committee and the Senator from North Dakota [Mr. YOUNG] on the excellent job they did in respect to the agricultural appropriation bill, not only this year but for several years last passed, and ever since I have had the privilege of being a member of the subcommittee. I believe the fact that American agriculture is now the best in the whole world is due largely to the foresight and the attention which these two men on the subcommittee, composed of able Senators, in particular have given to our requirements.

I become a little tired when I hear people complain because we have enough to eat and wear in this country and a little besides. We can imagine what the situation would be today if we did not have a good supply of wheat, feed grains, and other farm commodities on hand. What happened at the summit conference would have been almost a minor matter compared with what would happen if we became a deficit agricultural country. We could not stand up. The attention given to the preservation of our soil and water resources by the committee headed by the Senator from Georgia [Mr. RUSSELL] has been outstanding. If we do not take care of our soil and water resources in this country, it will not make a bit of difference how many missiles we have, or how far they will shoot, because we shall be the underdog in any international controversy which may arise.

I am glad to take this opportunity to thank these leaders of American agriculture who have done such outstanding work.

Mr. RUSSELL. I wish to express to the distinguished Senator from Vermont, for myself, and for the distinguished Senator from North Dakota [Mr. YOUNG] our deep appreciation for his complimentary references. It was a very happy and fortuitous day for the Appropriations Subcommittee when the distinguished Senator from Vermont came to be an ex officio member and brought to the committee the results of his years of experience on the standing Committee on Agriculture and Forestry, as well as his sympathetic interest in the problems of American agriculture, the future of our soils, and in the preservation of our resources.

Mr. JOHNSON of Texas. Mr. President, the livestock producers in Texas suffer tremendous losses each year from screwworm infestation, and there is a tremendous need for an eradication program in the Southwest similar to that which has so effectively brought the screwworm under control in the southeastern part of the country. The distinguished chairman of the subcommittee will remember that I brought this situation to his attention last year, and I was pleased to see that on page 3 of the committee report the committee took cognizance of the menace facing the livestock producers in the Southwest and requested the Department to investigate the feasibility of developing an eradication program and to report to the committee on the feasibility and requirements for such a program.

I have explained to my constituents that the committee would expect the Department to act on this request in the near future, and in any event in time for the report to be considered by the committee during the next session of the Congress, when it considers the appropriation for the Department of Agriculture for the fiscal year 1962.

I inquire of the distinguished Senator from Georgia if that is his understanding of what the committee had in mind when it included this language in the committee report on page 3?

Mr. RUSSELL. Yes. The distinguished Senator from Texas urged the committee last year and again this year to consider the interest of the livestock producers of Texas and the Southwest in the eradication program. We know as a matter of common knowledge that the screwworm has caused heavy losses to those livestock producers.

A number of producers wrote to members of the committee. Judge Montague, who headed the Livestock Producers Association for many years, discussed the matter with me. I have canvassed the subject informally with the Department and they have advised me there are a number of problems which would require intensive research and planning before they would undertake to start an eradication program such as was applied in the Southeast.

The committee has directed the Department to investigate this matter fully and we certainly expect to have a report on this subject not later than the time the Department of Agriculture budget is submitted for fiscal year 1962.

Mr. JOHNSON of Texas. I thank the Senator for his complete response to my inquiry. I am very grateful for the interest he always shows to the solution of problems in our section of the country.

FOREIGN POLICY

Mr. KENNEDY. Mr. President, I note that the Senator from Pennsylvania [Mr. SCOTT] and the Senator from Illinois are in the Chamber. This afternoon the Senator from Pennsylvania made some statements on the floor of the Senate with regard to some statements of mine, as follows:

I might also add, in connection with the statement of the distinguished Senator from Massachusetts, Mr. KENNEDY, as reported in the Portland Oregonian, that the Senator himself said:

"Khrushchev laid down two conditions to President Eisenhower for going on with the summit meeting. One was to apologize. I think that might have been possible to do."

Then the quotation goes on to other matters.

The report in that Oregonian is that:

"Later KENNEDY modified the word 'apologize,' and said the President might 'express regret.'"

It is my hope—

The Senator from Pennsylvania went on to say—

that neither the distinguished Senator from Massachusetts nor that other candidate for the Presidency, Governor Stevenson, will—either one of them—brand himself as a "turnquote." It is my hope that they will relieve themselves of the curse of suspicion of appeasement, and it is my hope that the unity, which started out so well in support of the President and in support of the administration, may somehow be found again.

Now let me quote from an Associated Press dispatch headed "Summit," which I have just taken from the news ticker, as follows:

SCOTT replied heatedly that he had not called them appeasers. But he said quotations attributed to them indicated to him they wanted to follow a soft line in dealing with the Russians. He said they should be called before an investigating committee to testify on their views.

Mr. President, is the Senator from Pennsylvania suggesting that I be called before an investigating committee?

Mr. SCOTT. Mr. President, will the Senator yield?

Mr. KENNEDY. I yield.

Mr. SCOTT. If the Senator will continue to read my notes and other notes which other Senators made, he will note that I did not suggest that he be called before an investigating committee. I suggested that Mr. Boulay, the author of the French newspaper article, be called to testify if the committee saw fit, with

respect to the interview which he allegedly had with Governor Stevenson, and that Governor Stevenson be invited to appear to give his version of the interview.

At another point I said that I see no objection to an investigation of all the facts involving American foreign policy if the Committee on Foreign Relations wished to make such an investigation, and that it might call all the witnesses it wanted to call, including Mr. Boulay and Mr. Stevenson.

I have reread my own notes, and I do not recall at any point ever suggesting that the distinguished Senator from Massachusetts, for whom I have a very high regard, as he knows, be asked to appear before any investigating committee. To that extent the Associated Press statement, as read by the Senator from Massachusetts, does not seem to follow the RECORD in the Senate.

Mr. KENNEDY. Mr. President, I will ask the Senator if he believes that I am under suspicion of appeasement?

Mr. SCOTT. On the contrary; I suggested that the Senator from Massachusetts may relieve himself—and I made the suggestion in good will—of the suspicion of appeasement.

I made reference to a newspaper article printed in the Portland Oregonian, written by Mr. Marvin Shoemaker, which quotes the Senator as saying:

Khrushchev laid down two conditions to President Eisenhower for going on with the summit meeting. One was to apologize.

Then the report in the Oregonian stated:

Later KENNEDY modified the word "apologize," and said the President might "express regret."

I may say that if the Senator from Massachusetts feels that President Eisenhower should apologize to Khrushchev, as first reported in the paper, that he now has an opportunity—and I am very hopeful indeed that he will use it—to relieve himself of any suspicion of appeasement, because in my opinion it would be appeasement to have the President apologize. If, however, the Senator's later explanation, with respect to expressing regrets, which he made in Oregon, is correct, and he was misquoted—then, in my mind, it does not qualify him in accordance with my previous remarks.

Mr. KENNEDY. Has the Senator from Pennsylvania any other source, besides the newspaper in Oregon, of the statement which he later said was a misquotation?

Mr. SCOTT. My only source is the newspaper publication itself, and that the byline is by Mr. Marvin Shoemaker, the political writer of the Portland Oregonian. If the Senator is prepared to say that he made none of these statements, and that the newspaper writer is incorrect or made an error in having attributed it to the Senator, I will be very glad indeed to take note of what the Senator says.

Mr. KENNEDY. And from what paper did the Senator get the statement that I had been misquoted?

Mr. SCOTT. I believe the context states that the Senator from Massachusetts made the statement:

"Khrushchev laid down two conditions to President Eisenhower for going on with the summit meeting. One was to apologize."

Later KENNEDY modified the word "apologize," and said the President might "express regret."

The newspaper article indicates that the Senator himself modified the earlier remark. To be entirely fair, I repeat that, if he did not make the first remark or if he did not make the second remark, I am very happy that those remarks were not made.

Mr. KENNEDY. Does not the Senator think it would have been more in keeping with Senate rule XIX if he had informed me that he was going to make an attack on me?

Mr. SCOTT. I may say to the Senator that it is not always possible to know when the Senator from Massachusetts is available, and that because of the Senator's other obligations, this is probably more true of him than of many other Members of the Senate, and we fully understand it and are in accord with the reasons for the Senator's absences. Further, my remarks were made subsequent to the remarks made by the distinguished minority leader. At the time I rose I had not fully made up my mind as to what references I might make to the material which had already been inserted in the RECORD by the minority leader, including the news item to which I have referred. It occurred at the convening of the Senate today. Certainly I did not intend any discourtesy to the Senator from Massachusetts. However, it is virtually impossible to know when the name of the Senator from Massachusetts will be mentioned in the Senate. That is not the fault of the Senator from Pennsylvania.

Mr. KENNEDY. I consider it to be completely the fault of the Senator from Pennsylvania. This is not just another mention of my name. It is a unique situation. I do not recall that any other Senator has ever made the suggestion that I come before the Senate or before an investigating committee to purge myself of the suspicion of appeasement. Certainly the courtesy of advance notice should have been extended to the Senator from Massachusetts by the Senator from Pennsylvania, especially when his remarks were coming close to being a violation of rule XIX, part 2, which states:

No Senator in debate shall, directly or indirectly, by any form of words impute to another Senator or to other Senators any conduct or motive unworthy or unbecoming a Senator.

The actual record of the Official Reporter uses the word "turncoat." I am aware of the fact that the Senator from Pennsylvania may well have coined an original phrase on later consideration, or he may have made it at that time. But his accentuation was not distinct, and the Official Reporter took down the word "turncoat."

Mr. SCOTT. Mr. President, will the Senator yield for a correction, because the Senator is proceeding on a line which is not in accordance with what actually happened? Will the Senator yield?

Mr. KENNEDY. I yield.

Mr. SCOTT. I call the Senator's attention to the fact that I had written down on a newspaper at the time, on one of the desks here, the word "turnquote" before I spoke it. It was clearly understood in the gallery and was so recorded on the first teletype report of my original remarks; that when someone, on the other side of the aisle, used the "turncoat," I immediately rose to correct him; and the third time I rose to correct him, I used the word "turnquote." I enunciated it quite clearly.

So, although the Senator will have to forgive me if my accent failed at the time, I am certain the press clearly understood the word "turnquote."

It is not a word coined by me; it is not a word in the dictionary, because I have since looked it up; but it is a word commonly used. I have seen it in the newspapers and magazines. It is well known to the press. I may say, too, that the Senator has had many sad experiences with the use of the word.

Mr. KENNEDY. Let me read what I actually did say in Oregon, so that the Senator will be clear about it. This afternoon, after I had heard about the Senator's attack on me—and I would have been glad to discuss his accusations and my statement in Oregon with him, and even with the Senator from Illinois—I called the school in Oregon where I spoke and talked with Mr. Monroe, who is the principal of that school.

A recording of my remarks had been made. I will read what I said, because I think it throws some light on what my thoughts were. I made these statements in answer to questions asked by the students.

There was a series of questions from the students, dealing with the summit, and finally, although Mr. Monroe has only the answer and not the question on his tape—came the question to which I gave the answer which is being discussed here today.

But first let me read the two questions of the students which led to this question:

First, "Do you think the U–2 incident was handled properly by the Government?"

I do not think that the timing of the U–2 incident is defensible. I think it was obviously the wrong time. Engine failure is always a possibility. Every time we go up in a plane we have to realize that it may come down sooner than we thought. That being true, it seems to me that you always have to consider what the results of that failure will be, and therefore, you would have to consider that there is 1 chance in 5, and 1 in 10, and 1 in 100 chances that a flight a week before the summit would fail and, therefore, it was a risk you would not want to take at that particular time.

Then the next question evidently was whether I thought Mr. Khrushchev would have broken up the summit meeting if there had not been the U–2 flight.

I said:

No, I don't think that it would have been abandoned. Except for the U–2 incident it would not have had a psychological argument for breaking up. Then the burden

would have been his alone and while the summit may never have been a success, he never would have taken all the responsibility unless he had what he felt was an adequate provocation to justify his position before world opinion. He never would have taken on the burden himself.

Then, while as I have said, the next question is not recorded, Mr. Monroe's recollection was—and the answer which I gave would seem to be responsive to it—that it was:

What would you have done if you had been Mr. Eisenhower?

My response was:

Once the summit had broken up and once Mr. Khrushchev indicated his refusal to continue I don't think that the United States could—but—he said there were two conditions for continuing. One, that we apologize. I think that that might have been possible to do and that second, we try those responsible for the flight. We could not do that. It would be highly unfair because the flight had been authorized and therefore that was a condition Mr. Khrushchev knew we couldn't meet and therefore it indicated that he wanted to break (it) up. If he had merely asked that the United States should express regret then that would have been a reasonable term. To say we should try those involved—quite obviously that meant that he wanted to break it up and we had no alternative but to let him do so.

This statement is quite clear to me, at least, when taken in its context, and particularly taken in the context of the AP story of the same statement—which I have here. I have AP story as carried in the Des Moines Register. It says:

PORTLAND, OREG.—JOHN F. KENNEDY said * * * he would have expressed regret.

Then it says:

KENNEDY, campaigning here for votes in Oregon's presidential preference primary, said: "I certainly would express regret at the timing and give assurance that it would not happen again." He said, "I would express regret that the flight did take place."

Let me be a bit specific about this. It seems to me that my answer should be taken in its entirety and in its context. Among all the newspapermen who were present, including the representative of the Associated Press, no one deduced from my answer that I wanted the President to apologize to Khrushchev. And I did not say that the President should apologize. But I did state that, if necessary to keep the summit going, I would have been willing to express regret at the timing of the U–2 incident. And I do regret the timing because it helped lead to the question of the chances of a successful summit. It certainly lessened the prestige of the United States in the eyes of the world. It has helped destroy the prestige of the President in the eyes of the Russian people which was one of our greatest national assets. And it has given the impression that the President does not completely control some of the military or some of his intelligence officers.

So I would have expressed regret if such an expression would have kept the summit going. That does not make me in any way a party to appeasement. I do not have to come before any investigating committee to rid myself of the suspicion of appeasement. I am not a "turnquote." That statement is wholly inaccurate, because the total explanation of my entire position was in the one answer given to the schoolchildren, and was carried by the Associated Press.

I think this is a difficult time in the life of the United States. I think that quite obviously we on the Democratic side who have a responsibility to suggest alternative courses of action to conduct an examination of our policies so that we may learn from past mistakes. After all, that is a function which the party of the Senator from Pennsylvania [Mr. SCOTT] has assumed on many occasions in the past.

I have never abused the President personally. I do not now advocate a policy which I think would weaken the United States—nor have I ever advocated such a policy. Instead, year after year, I have stood on the floor of this Senate and voted for the appropriations and programs which would have made America stronger—defense appropriations and programs to build up the strength of our education, our economy, and our health. It is these things which are the real test of a desire for a strong America.

I say to the Senator from Pennsylvania, who has been a colleague of mine in both the House and the Senate, and to the Senator from Illinois [Mr. DIRKSEN], that if the Senator had informed me in advance of his projected attack, I would have given him my entire statement, so that he might know my entire point of view.

Second, I am sure the Senator from Pennsylvania cannot justify his calling me an appeaser or cast a suspicion of appeasement on me. Once we begin to make that sort of charge—and I have already been attacked along a similar line by the Governor of New Hampshire—the great debate of the 1960 campaign will be doomed to become abusive rather than a fruitful discussion of the great problems which confront this Nation.

Mr. DIRKSEN. Mr. President, will the Senator yield?

Mr. KENNEDY. I yield.

Mr. DIRKSEN. Does the Senator from Massachusetts regard the Oregonian as a substantial, solid newspaper?

Mr. KENNEDY. I do.

Mr. DIRKSEN. Does the Senator know Mr. Shoemaker?

Mr. KENNEDY. I do.

Mr. DIRKSEN. What is the Senator's estimate of Mr. Shoemaker?

Mr. KENNEDY. He is a good newspaperman.

Mr. DIRKSEN. Does the Senator believe he is a careful newspaperman?

Mr. KENNEDY. I do.

Mr. DIRKSEN. Does the Senator deny that Mr. Shoemaker, in the article which he read, and which I placed in the RECORD, said there was one thing which the Senator from Massachusetts said could be done, namely, that the President could apologize? Does the Senator deny that he used the word "apologize"? Does the Senator deny that statement, if Mr. Shoemaker is a good, competent newspaperman?

Mr. KENNEDY. I am attempting to present my entire answer. I had hoped that when I had presented the entire answer, the Senator from Illinois, with his customary judicious, fair nature, would recognize that any implication that I had said the President should apologize—that I was an appeaser—was a breach of the rules of the Senate.

Mr. DIRKSEN. That is the point I am getting at—whether I have treated the Senator from Massachusetts unfairly or not. Did I treat the Senator unfairly?

Mr. KENNEDY. I should say that the Senator from Illinois did not treat me unfairly. The Senator from Pennsylvania [Mr. SCOTT] did.

Mr. SCOTT. Mr. President, will the Senator from Massachusetts yield?

Mr. KENNEDY. I yield.

Mr. SCOTT. I regret that the Senator from Massachusetts has resorted to what might be called guilt by association by bracketing me with some remark, with which I am not familiar, alleged to have been made by the Governor of New Hampshire. I hope he will not further follow those tactics.

Mr. KENNEDY. Bracketed only by party membership.

Mr. SCOTT. I regret it if I have at any time seemed to be unfair. If I have been unfair, the Senator from Massachusetts has my apology. I do not believe, myself, that I have been unfair.

The Senator's comment seems to be based upon the fact that while many Members of the Senate were in attendance in the Senate when it was called to order, and an item was put into the RECORD by the Senator from Illinois [Mr. DIRKSEN], I made comments upon a matter already inserted in the RECORD.

If the Senator thinks that was unfair, I am sorry; and, first, I should like the Senator to be sure that he is quite fair, as I am certain he wishes to be. Following my statement to the Senator from Massachusetts—I refer to my statement that I did not suggest that he be investigated by anyone—he said the Senator from Pennsylvania demanded an investigation of the Senator from Massachusetts.

I say to the Senator from Massachusetts that is not a correct quotation of what I said; and I told him that that was not a correct quotation of what I said. However, even after I told him that that was not a correct quotation of what I said, he continued to advert to it.

Further, he admits that the exact words which appear in the article published in the Portland Oregonian were stated by him:

One was to apologize. I—

That is, the Senator from Massachusetts—

think that might have been possible to do.

If the Senator from Massachusetts thinks it might have been possible for President Eisenhower to apologize, how can the Senator from Massachusetts now say the phrase is taken out of context?

Mr. KENNEDY. In the first place, those words are not the precise words that came off the recorder this afternoon.

Mr. SCOTT. The Senator read the same words himself, as coming from his own remarks.

Mr. KENNEDY. The Senator should judge the statement in the context in which the answer was given, and that context was accepted by every member of the press who was there.

Let me read my answer again:

He said there were two conditions for continuing: One, that we apologize. I think that that might have been possible to do; and that, second, we try those responsible for the flight.

The Senator from Pennsylvania stops his version with the words "might have been possible to do," and leaves the clear implication that, therefore, I said we should apologize.

What I said was that if Mr. Khrushchev had proposed the first condition alone—the apology—it was possible that Khrushchev and the President of the United States might have had a meeting of the minds—it was possible that some sort of an agreement might have been reached.

However, my answer went on that the second condition was obviously unacceptable because the flight was authorized by the Government and it was inconceivable that we would punish the men involved. Therefore Mr. Khrushchev knew it was a condition we could not meet, and by making it a condition of resuming the talks he clearly demonstrated that he intended to break off the summit conference. If he merely had asked that the United States express regret, that might have been a reasonable term, and would have indicated a willingness on his part to proceed.

It seems to me that I expressed this view quite clearly in what I said; and the Associated Press, the United Press, and other press agencies took that view. Furthermore, I stated my clarification of it, not at some later time, but in the same paragraph.

Therefore, I merely say that the record will speak for itself, and that I do not have to purge myself of any suspicion of appeasement.

Mr. SCOTT. Mr. President, will the Senator from Massachusetts yield to me, so that I may, in fairness, make a statement?

Mr. KENNEDY. I yield.

Mr. SCOTT. I have not said the Senator from Massachusetts was an appeaser. I said—as nearly as I can remember the words I used; the Senator from Massachusetts now has my notes—that I hoped he would take an opportunity to resist the suspicion of appeasement, which turns on the suggestion that Eisenhower should have apologized to Khrushchev.

The Senator from Massachusetts feels that that statement was taken out of context. I am perfectly willing to abide by the statement of the Senator from Massachusetts and by his own interpretation; and I make it quite clear to this body that I have not said, and I do not now say, the Senator from Massachusetts was an appeaser. I hope that will satisfy the sensitivity of the Senator from Massachusetts.

Mr. KENNEDY. Does the Senator from Pennsylvania still feel there is a suspicion of appeasement about me?

Mr. SCOTT. If the Senator from Massachusetts feels that he had no intention to appease by making the statement, I will accept the Senator's version as my own.

Mr. KENNEDY. I appreciate the Senator's somewhat grudging response.

Mr. SCOTT. It is not grudging at all. I like the Senator from Massachusetts very much.

Mr. KENNEDY. I never thought the day would come when I would say Harold Stassen's judgment was not completely inaccurate. But I must say perhaps he was wiser than we knew, when he spoke the other day in Pennsylvania.

I think it comes with poor grace for Senators to refer to each other in derogatory terms.

Neither do I think Governor Stevenson has to appear before an investigating committee in order to purge himself of the Senator from Pennsylvania's suspicions.

Mr. CARROLL. Mr. President, will the Senator from Massachusetts yield?

The PRESIDING OFFICER (Mr. Moss in the chair). Does the Senator from Massachusetts yield to the Senator from Colorado?

Mr. KENNEDY. I yield.

Mr. CARROLL. The able Senator from Massachusetts [Mr. KENNEDY], the able Senator from Pennsylvania [Mr. SCOTT], the minority leader, the able Senator from Illinois [Mr. DIRKSEN], and the junior Senator from Colorado all served together in the House of Representatives. The Senator from Pennsylvania was at one time national chairman of the Republican Party. The minority leader, the distinguished Senator from Illinois, has a responsibility to support his President, no matter how fumbling the action taken may have been.

But to accuse the junior Senator from Massachusetts of appeasement, under the evidence I have heard here tonight, is not only unfair, it is ridiculous.

All that needs to be done is to analyze carefully what has been said, and then look at the political partisanship in back of it. It is clearly an attempt to strike down one of the foremost young political leaders in America today, in an attempt to give the impression that he is asking the President of the United States to apologize to Khrushchev, when implicit in every sentence of the statement the Senator from Massachusetts made was that the President might have expressed his regrets. What is wrong with that?

Mr. DIRKSEN. Oh, Mr. President——

Mr. CARROLL. I ask the Senator to let me finish, please.

All America would agree that that might have brought success to the summit—which the President and his minority leader wanted, I am sure. There would have been nothing wrong with expressing regrets.

But Senators try to misinterpret the text of the statement the Senator made to make it appear as a request by the junior Senator from Massachusetts that an apology be made. What is this situation, Mr. President? It is a raw, partisan, political effort to put the Senator from Massachusetts at disadvantage, because they are afraid of the strength he is manifesting throughout the Nation today. That is the sole purpose—a raw, partisan, political effort, which the American public will see through and quickly understand.

Mr. DIRKSEN. Mr. President, will the Senator from Massachusetts yield to me?

Mr. KENNEDY. I yield, to permit the Senator from Illinois to make a response.

Mr. DIRKSEN. I wish to say to my distinguished friend, the Senator from Colorado, that I am not afraid of anybody or anything. I started out with a very mild expository statement on the subject of crowbars. That is where I started, and that it where I tried to wind up.

Mr. CARROLL. Mr. President, will the Senator from Massachusetts yield?

Mr. KENNEDY. I yield.

Mr. CARROLL. The Senator from Illinois started with a crowbar and a sledge hammer, but he tried to put the junior Senator from Massachusetts between the hammer and the anvil—a raw, partisan, political piece of chicanery. But the Senator from Illinois will not succeed; the American people will not permit him to do that.

Mr. DIRKSEN. But I love the Senator from Massachusetts too much to do that under any circumstances.

Mr. CARROLL. Then why did not the Senator from Illinois abide by the Senate rules?

Mr. DIRKSEN. Because I was talking about Adlai.

Mr. CARROLL. If the minority leader was talking about Adlai, the Senator from Illinois, who is one of the most skilled politicians in the business——

Mr. DIRKSEN. I thank the Senator.

Mr. CARROLL. I mean that sincerely; and the able junior Senator from Pennsylvania [Mr. SCOTT], formerly national chairman of the Republican Party, is another skilled politician. Are they now asking us to believe that they were not trying to "put the tag" on the junior Senator from Massachusetts? I warn you, the American people will not believe it.

Mr. DIRKSEN. Mr. President, I can only say to my good friend that his party has not yet had its convention. What we are interested in is what we are going to do to his party in November. We do not know what member of his party will receive the nomination of his party. We have our candidate, and we are going to win in November.

So we are not playing favorites as between all the candidates his party has. We simply want to make sure that the record is clear, and that any "anvils" are kept out of it—because I did not refer to any "anvil"; I referred only to sledge hammers and crowbars.

So I wish to be sure, always, that when they talk about sledge hammers and crowbars, they are talking about a fellow who lived on the land, and knows what a crowbar is, and knows what a sledge hammer is, and knows what they are

used for, and how they are used, and has used both of those instrumentalities a great many times.

Mr. KENNEDY. Let me say that the Senator from Illinois seems to suggest that this type of campaign technique—of suggesting that Senators are guilty of a suspicion of appeasement, and are "turnquotes," and so forth——

Mr. DIRKSEN. Oh, Mr. President, will the Senator from Massachusetts yield?

Mr. KENNEDY. Does not the Senator feel that this type of debate will not make a great contribution to the discussion of the issues?

Mr. DIRKSEN. Let me say this never would have happened if Governor Stevenson had left one phrase or one clause out of the statement he made to the $100 dinner in Cook County, last Thursday night. There, he said, after the recital of unity and then the responsibility of his party to inform the country, this administration could not carry on these negotiations with the Russians, involving the survival of the country, and had to be taken out of power. And if that is not politics, then I do not know the meaning of the word.

Mr. KENNEDY. It is disloyal. That is what it is; is it not?

Mr. DIRKSEN. What?

Mr. KENNEDY. Would you not be inclined to say that it is disloyal? Would that be the appropriate charge?

Mr. DIRKSEN. No; it is just plain politics, spelled with a capital "P." Having lived in this atmosphere for about 30 years, I think I know a political sentiment when I see it; and when it is in cold print, the English language does have a meaning.

Mr. KENNEDY. Let me ask the Senator from Illinois, who is quite precise, does the Senator see anything inappropriate or in contravention of the rules of the Senate in anything the Senator from Pennsylvania said?

Mr. DIRKSEN. I do not pass on that. I am not sitting up there in the chair. I am not the Parliamentarian.

Mr. KENNEDY. Does the Senator care to make a judgment on it?

Mr. DIRKSEN. I know of no reason why I should, particularly.

Mr. KENNEDY. The Senator is the "leader of the army."

Mr. DIRKSEN. I have high regard for the delicacy of the situation.

Mr. KENNEDY. I, myself, have the same reticence about commenting on it as the Senator from Illinois has.

Mr. DIRKSEN. I know the Senator from Massachusetts never would have made the statement Adlai made in Chicago. He certainly would have made a consistent appeal for unity, even as the majority leader and the acting majority leader have from time to time made on the floor of the Senate, and in which I have always been delighted to concur.

Mr. KENNEDY. Is it proper, then, to say the Senator from Illinois never would have used the words the Senator from Pennsylvania used?

Mr. DIRKSEN. I do not pass on that question. I can never pass on words I have not uttered or with which I have no particular connection. But I know what Adlai said, and I have to get back to crowbars. Someone made the crack about "eating crowbars." I thought that was a nifty expression and that we will hear more about it. But this was nothing more than a visitation on the subject of crowbars and sledge hammers, and I tried to remain within it pretty much.

Mr. CARROLL. Mr. President, will the Senator yield?

Mr. KENNEDY. I yield.

Mr. CARROLL. I can understand the sensitiveness of the Senator from Illinois——

Mr. DIRKSEN. Oh, I am not sensitive. I am the least sensitive man in this body.

Mr. CARROLL. I can understand how he may have been wounded deeply, because here is a Member of the United States Senate who happens to be the brightest star that has been blazing across the political horizon. The implication is made that he is a turncoat through applying an invented phrase "turnquote" in connection with whether Senator KENNEDY asked for an apology or an expression of regret.

I want to ask the minority leader, who is a very experienced statesman and politician, was it an accident that the Senator from Illinois and the Senator from Pennsylvania got together on this subject, or was it for the purpose of cutting down the junior Senator from Massachusetts?

Mr. DIRKSEN. Mr. President, will the Senator yield?

Mr. KENNEDY. Yes.

Mr. DIRKSEN. I had no idea who was going to be on the floor this noon. I did not know that the majority leader was not going to be here. I did not care. I do my own thinking, when I have a little time, and then I get all the material together, because I have no ghostwriters. I have no staff to get this material together for me. I do it myself.

Mr. CARROLL. The Senator from Illinois does not need ghostwriters.

Mr. DIRKSEN. I have not conferred with a single Member on our side or the side of the Senator from Colorado or with a person in any other place as to what was going to happen this afternoon. I had all my ducks in a row. I had 10 documents in a sheaf; and, like a good lawyer—and my friend is a good lawyer—when one goes before the judge, he lays it out and says, "Judge, here are the citations." I made the allegations, and then I gave the citations from Adlai Stevenson's speech on down; and it will be a pretty good campaign document, if that is the way Adlai wants it, because I wanted to be sure that everything, including the whole press dispatch from the Paris newspaper, and the questions and answers, will be there for reference when the time comes.

While I am about it, there was a question as to whether Mr. Robert Boulay, who was the author of this interview for the Paris paper, had an inadequate perception of the English language. Maybe so, but he is the Time-Life correspondent in Paris; and if he does not know English, I had better write Henry Luce a letter. [Laughter.]

Mr. CARROLL. Mr. President, will the Senator yield?

Mr. KENNEDY. Yes.

Mr. CARROLL. The Senator did this all by himself?

Mr. DIRKSEN. Yes.

Mr. CARROLL. The sledge hammer and the crowbar?

Mr. DIRKSEN. Oh, no. Adlai did that.

Mr. CARROLL. The Senator from Illinois did it by himself?

Mr. DIRKSEN. No; Adlai did that.

Mr. CARROLL. The Senator did not know that others would be here in the Chamber to help attempt to cut down and hamstring one of the great political figures in contemporary American history?

Mr. DIRKSEN. I would not do it for the world. I have too much affection for the Senator from Massachusetts.

Mr. CARROLL. I am sure of that. We have heard about sledge hammers and crowbars, but who put the monkey wrench in the summit? If the majority leader and minority leader said that we should have an investigation——

Mr. DIRKSEN. I said nothing about an investigation.

Mr. CARROLL. Oh, the Senator does not want an investigation?

Mr. DIRKSEN. I do not care who wants an investigation. I make the decisions for myself. I know what I want to say. I have some notion about what the English language conveys. I did not say anything about investigation. Now that the Senator has brought up the subject of monkey wrenches, I think we had better add that to Adlai Stevenson's instrumentalities, because he will probably need it.

Mr. CARROLL. Let us be careful that those instrumentalities do not combine to produce nuclear fatalities, brought on by those responsible for the blunders.

Mr. DIRKSEN. I have been living in the same State with Adlai for years. I love him. I just disagree with him.

Mr. CARROLL. I may say to the Senator from Illinois I was not talking about him personally, because I recognize the tolerance, the statesmanship, and the political sagacity of the Senator from Illinois. We are talking about a different matter here today.

Will not the Senator from Illinois agree with me, from our years of service in the House, there is nothing about the junior Senator from Massachusetts that shows he is either an appeaser——

Mr. DIRKSEN. I did not say he was an appeaser. I am responsible only for my own words.

Mr. CARROLL. Does the Senator say the Senator from Massachusetts is not an appeaser?

Mr. DIRKSEN. I have never used other than the most polite and courteous language to my distinguished friend from Massachusetts; and if I say anything about him, it will be only to toss him a dainty bouquet. [Laughter.]

Mr. KENNEDY. May I say it comes late, but I am a grateful receiver.

Before I take my seat, I wish to point out that the other day the Republican chairman said that—

> Loyal Americans will not take kindly to any politician willing to run down the President for the sake of personal advantage.

The key words in that sentence are "loyal Americans."

Under this formulation of the Republican chairman—today and for the next few months—any of us who feel obligated to criticize American foreign policy run the risk, of being accused as "disloyal appeasers" and "turnquotes."

But despite that risk the criticism is going to continue. It is our function and responsibility to criticize when there are weaknesses to criticize. And we propose to meet that responsibility. The Democratic Party would be unworthy of its traditions and its responsibility as a party if it did not fulfill the vital function of legitimate criticism, heedless of whether the Governor of New Hampshire may say we are soft on communism or the Senator from Pennsylvania may say it is necessary that I purge myself of the charges of appeasement. These points—these critical issues—will continue to be debated, and I hope much of this debate will be carried on on the floor of the Senate—as well as across the Nation.

Before I sit down, I thank the Senator from Colorado [Mr. CARROLL], the Senator from Montana [Mr. MANSFIELD], the Senator from Missouri [Mr. SYMINGTON], the Senator from Oregon [Mr. MORSE], and the Senator from New Mexico [Mr. ANDERSON] for their kind remarks.

Mr. SCOTT. Mr. President, will the Senator yield?

Mr. KENNEDY. I yield.

Mr. SCOTT. I wish to make a further correction. I again invite the attention of the Senator to the fact that I did not use the phrase that he should purge himself of a suggestion of appeasement. The Senator has my notes before him. The Senator knows that I said—as nearly as I can remember, since the Senator has my notes and is holding on to them—that he should resist the suspicion of appeasement. The Senator has made a very good case in so resisting.

I also add that I mentioned earlier I had made a note——

Mr. KENNEDY. The Senator did not say what he says. He is "turn quoting."

Mr. SCOTT. The Senator has my notes.

Mr. KENNEDY. The Senator is "turn quoting."

Mr. SCOTT. The Senator has my notes.

Mr. KENNEDY. The Senator said:

> It is my hope that they will relieve themselves of the curse of suspicion of appeasement.

Mr. SCOTT. The Senator accepts that as what I said?

Mr. KENNEDY. I know the Senator wanted to say what he has said, but he did not say it. He did not say "resist;" he said "relieve."

Mr. SCOTT. "Relieve." I accept what I said. I do not withdraw it. The Senator may recall that I made some reference to the question whether I said "turn quote" in the first instance.

Mr. KENNEDY. The Senator does not withdraw the statement?

Mr. SCOTT. I said that there were notes around on some Senator's desk which showed I had that notation. A page, while the Senator from Massachusetts was talking, has found that paper. I leave it with the Senator from Massachusetts, among his mementos. The Senator will see that the word written in my notes is "turn quote."

Mr. KENNEDY. Does the Senator withdraw the statement: "It is my hope that they—" which would include me—"will relieve themselves of the curse of suspicion of appeasement"?

Mr. SCOTT. I will say to the Senator, as I said before, I do not feel that the Senator is an appeaser. The Senator, in the statement which he made, claimed that the statements by a newspaperman were taken out of context. If that is correct—and I have no reason to feel that it is not correct—the Senator has, to that degree, removed himself from the application of my remarks with respect to appeasement.

I desire at all times to be fair with the Senator from Massachusetts, but I do not and cannot withdraw from the RECORD the newspaper report which was put into the RECORD not by me but by the Senator from Illinois. I hope the Senator from Massachusetts understands that.

Mr. KENNEDY. Yes. I appreciate what the Senator has said, and the remarks of the Senator from Illinois.

The statement of Mr. Shoemaker has been added to by the entire statement. I think that the full statement quite clearly shows what I intended to say—my point of view—which was reported, as I said, that way by the Associated Press. Therefore, I am delighted that the Senator has chosen to withdraw his statement.

Mr. SCOTT. Obviously no one questions the courage, the devotion, or the patriotism of the Senator from Massachusetts. My question was pointed up on the newspaper article. We have discussed it thoroughly. The Senator has offered his explanation. So far as I am concerned, I am willing to let it rest with the article and with the Senator's explanation. I assume that that will be satisfactory to the Senator from Massachusetts.

Mr. KENNEDY. Not quite as satisfactory as it was a moment ago; but in that case I yield the floor.

ENROLLED BILL PRESENTED

The Secretary of the Senate reported that on today, May 23, 1960, he presented to the President of the United States the enrolled bill (S. 44) to authorize the Secretary of the Interior to construct the San Luis unit of the Central Valley project, California, to enter into an agreement with the State of California with respect to the construction and operation of such unit, and for other purposes.

ADJOURNMENT UNTIL 10 A.M. TOMORROW

Mr. MANSFIELD. Mr. President, if there is no further business to come before the Senate, I move that the Senate stand in adjournment, in accordance with the order previously entered, until 10 o'clock tomorrow morning.

The motion was agreed to; and (at 6 o'clock and 23 minutes p.m.) the Senate, under the previous order, adjourned until tomorrow, Tuesday, May 24, 1960, at 10 o'clock a.m.

HOUSE OF REPRESENTATIVES

MONDAY, MAY 23, 1960

The House met at 12 o'clock noon.

The Chaplain, Rev. Bernard Braskamp, D.D., offered the following prayer:

Colossians 4: 3: *Continue steadfastly in prayer.*

Almighty God, Thine is the strength which sustains us, the love which redeems us, the sympathy which comforts us, and the light which leads us.

Grant that we may never lose our faith in Thee, even though we are standing amid what seems to be the defeat of our fondest hopes and dreams.

Help us to believe that the vision of universal peace vouchsafed to our minds and hearts is not too lofty and too wonderful to be fulfilled by Thy divine wisdom and power.

Inspire us with steadfast devotion to continue to pray fervently and to labor faithfully that our disappointed and disheartened humanity may soon find the way of peace and men everywhere shall be mingled in an alchemy of brotherhood.

Humbly we offer our prayer in the name of the Prince of Peace. Amen.

THE JOURNAL

The Journal of the proceedings of Thursday, May 19, 1960, was read and approved.

MESSAGE FROM THE SENATE

A message from the Senate by Mr. McGown, one of its clerks, announced that the Senate agrees to the amendment of the House to a bill of the Senate of the following title:

> S. 44. An Act to authorize the Secretary of the Interior to construct the San Luis unit of the Central Valley project, California, to enter into an agreement with the State of California with respect to the construction and operation of such unit, and for other purposes.

DISPENSING WITH CALENDAR WEDNESDAY

Mr. McCORMACK. Mr. Speaker, I ask unanimous consent that Calendar Wednesday of this week be dispensed with.

The SPEAKER. Without objection, it is so ordered.

There was no objection.

POSTPONING OF ROLLCALLS TODAY AND TOMORROW

Mr. McCORMACK. Mr. Speaker, I ask unanimous consent that any rollcalls today and tomorrow on the passage of any bills or amendments thereto, or a motion to recommit, be postponed to the following Wednesday.

The SPEAKER. Without objection, it is so ordered.

There was no objection.

LOAN OF NAVAL VESSEL TO REPUBLIC OF CHINA

Mr. RIVERS of South Carolina. Mr. Speaker, I ask unanimous consent to take from the Speaker's desk the bill (H.R. 9465) to authorize the extension of a loan of a naval vessel to the Government of the Republic of China, with a Senate amendment thereto, and concur in the Senate amendment.

The Clerk read the title of the bill.

The Clerk read the Senate amendment, as follows:

Page 2, after line 12, insert:

"SEC. 5. Notwithstanding section 7307 of title 10, United States Code, or any other law, the President may, under conditions which he prescribes, lend one submarine to the Government of Canada for a period of not more than five years and may, in his discretion, extend such loan for an additional period of not more than five years. All expenses involved in the activation of this submarine including repairs, alterations, outfitting, and logistic support shall be paid by the Government of Canada. The authority of the President to transfer a submarine under this section terminates on December 31, 1961."

Amend the title so as to read: "An Act to authorize the loan of one submarine to Canada and the extension of a loan of a naval vessel to the Government of the Republic of China."

The SPEAKER. Is there objection to the request of the gentleman from South Carolina?

There was no objection.

The Senate amendment was concurred in.

A motion to reconsider was laid on the table.

BIPARTISAN FIASCO

Mr. DORN of South Carolina. Mr. Speaker, I ask unanimous consent to address the House for 1 minute.

The SPEAKER. Is there objection to the request of the gentleman from South Carolina?

There was no objection.

Mr. DORN of South Carolina. Mr. Speaker, after every unbelievable, fantastic, foreign policy blunder by the United States, there is the inevitable call for unity. The collapse of our abortive attempt at appeasement in Paris is no exception.

The greatest aid to Khrushchev is American unity behind the wrong policy. His best friend so far is and has been this bipartisan foreign policy of the United States. Yalta, Potsdam, aid to the Chinese Communists in 1946 to 1949, United States delay at Panmunjom in Korea, Geneva, Camp David, and now Paris were all defended by a chorus of coverup, censorship, and an appeal to unity and patriotism. This is the surest and quickest road to complete disgrace and defeat of the United States. The late Senator Arthur Vandenberg lost a great opportunity when he joined the bipartisan foreign policy of appeasement and failure. He could have saved Western civilization much anguish by exercising the traditional role of the minority to point out the utter fallacies of Yalta and Potsdam. Through such efforts, the Western peoples could have been alerted to the Communist menace.

Today this bipartisan hayride to destruction must be reversed. We must have a complete change in policy. The Communists must and can be put on the defense. They can be put on the defense by our constant demand that Poland and the captive nations be given their freedom. This bipartisan policy of wasting our strength all over the world, thus pleasing Khrushchev, must be and can be halted. Much of our foreign-aid money should have been and should be spent on making the United States supreme in the air and in space. The greater the mistakes of this so-called bipartisan policy, the greater the clamor for unity behind the same old crowd and the same personnel. We need a change now. Tomorrow will be too late.

QUESTIONS ON NATIONAL POLICY

Mr. KOWALSKI. Mr. Speaker, I ask unanimous consent to address the House for 1 minute.

The SPEAKER. Is there objection to the request of the gentleman from Connecticut?

There was no objection.

Mr. KOWALSKI. Mr. Speaker, speaking on behalf of a large number of Members of this body who last Friday asked the President to answer a series of questions on the U–2 incident and related subjects, I deplore and resent the remarks made by the chairman of the Republican Congressional Campaign Committee.

The questions which we raised are questions which the American people have been asking. They are questions of national policy which affect every American.

When the chairman of the Republican Congressional Campaign Committee accuses us of "following closely the Khrushchev line," he is impugning our patriotism and casting an unwarranted reflection on us as individuals and as elected Representatives of the American people.

I suggest, Mr. Speaker, that an apology is in order.

I suggest further, Mr. Speaker, that the answers to our questions should come from the President of the United States. The Congress and the people have a right to know.

COMMITTEE ON BANKING AND CURRENCY

Mr. ALBERT. Mr. Speaker, on behalf of the gentleman from Alabama [Mr. RAINS] I ask unanimous consent that the Housing Subcommittee of the Committee on Banking and Currency may be permitted to sit today during general debate.

The SPEAKER. Is there objection to the request of the gentleman from Oklahoma?

There was no objection.

NATIONAL AERONAUTICS AND SPACE ADMINISTRATION

Mr. BROOKS of Louisiana. Mr. Speaker, I call up the conference report on the bill (H.R. 10809) to authorize appropriations to the National Aeronautics and Space Administration for salaries and expenses, research and development, construction and equipment, and for other purposes, and ask unanimous consent that the statement of the managers on the part of the House be read in lieu of the report.

The Clerk read the title of the bill.

The SPEAKER. Is there objection to the request of the gentleman from Louisiana?

Mr. ARENDS. Reserving the right to object, Mr. Speaker, the gentleman from Louisiana has informed me that he has spoken with the minority committee members and they are in agreement on this.

Mr. BROOKS of Louisiana. Yes; the gentleman from Massachusetts [Mr. MARTIN] and the gentleman from California [Mr. McDONOUGH] are here, and they are supporting it.

Mr. ARENDS. I withdraw my reservation of objection, Mr. Speaker.

The SPEAKER. Is there objection to the request of the gentleman from Louisiana?

There was no objection.

The Clerk read the statement.

The conference report and statement are as follows:

CONFERENCE REPORT (H. REPT. NO. 1629)

The committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H.R. 10809) to authorize appropriations to the National Aeronautics and Space Administration for salaries and expenses, research and development, construction and equipment, and for other purposes, having met after full and free conference, have agreed to recommend and do recommend to their respective Houses as follows:

That the House recede from its disagreement to the amendments of the Senate numbered 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, and 11, and agree to the same.

Amendment numbered 12: That the Senate recede from its amendment numbered 12, and agree to the same with an amendment, as follows: In lieu of the matter contained in the House bill and in lieu of the matter contained in the Senate amendment insert the following:

"SEC. 4. The sum authorized by section 1(e) for emergency 'Construction and equipment', and any amount, not to exceed $5,000,000 of the funds appropriated pursuant to subsection 1(c) hereof, shall be available for expenditure to construct, expand or modify laboratories and other installations if (1) the Administrator determines such action to be necessary because of changes in the national program of aeronautical and space activities or new scientific or engineering developments and (2) he determines that deferral of such action until the enactment of the next authorization Act would be inconsistent with the interest of the Nation in aeronautical and space activities. The funds

so made available may be expended to acquire, construct, convert, rehabilitate, or install permanent or temporary public works, including land acquisition, site preparation, appurtenances, utilities, and equipment. No portion of such sums may be obligated for expenditure or expended to construct, expand, or modify laboratories and other installations until the Administrator or his designee has transmitted to the Committee on Science and Astronautics of the House of Representatives and to the Committee on Aeronautical and Space Sciences of the Senate a written report containing a full and complete statement concerning (1) the nature of such construction, expansion, or modification, (2) the cost thereof, including the cost of any real estate action pertaining thereto, and (3) the reason why such construction, expansion, or modification is necessary in the national interest. No such funds may be used for any construction, expansion, or modification if authorizations for such construction, expansion, or modification previously has been denied by the Congress.

"SEC. 5. Paragraph 203(b)(2) of the National Aeronautics and Space Act of 1958, as amended (42 U.S.C. 2473(b)(2)), is amended by striking out 'ten' and inserting in lieu thereof 'thirteen', and by striking out 'two hundred and sixty' and inserting in lieu thereof 'two hundred and ninety'."

And the House agree to the same.

STATEMENT

The managers on the part of the House at the conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H.R. 10809) to authorize appropriations to the National Aeronautics and Space Administration for salaries and expenses, research and development, construction and equipment, and for other purposes, submit the following statement in explanation of the effect of the action agreed upon by the conferees and recommended in the accompanying conference report.

Senate amendments one through ten are all of a technical, or conforming, nature. The House recedes on these amendments.

The Senate amended the bill in two other respects, both of which were of a substantive nature. On one of these amendments, the Senate receded and on the other, the House receded.

The first of the substantive Senate amendments (amendment No. 11) provides for an increase of $50,000,000 of emergency authorization authority for "Research and development." The conditions under which the additional authorization provided under the Senate amendment may be used are set forth as follows:

"SEC. 3. The sum authorized by section 1(d) for emergency 'Research and development' shall be available for expenditure to defray the cost of research and development activities which the Administrator has determined to be urgently required in the national interest to exploit technological or scientific breakthroughs, to assure safety of personnel, to fund required research and development program changes, to meet unusual cost variations in research and development activities, and for the other purposes of section 1(b). No portion of such sum may be obligated for expenditure or expended to defray the cost of research and development activities until the Administrator or his designee has transmitted to the Committee on Science and Astronautics of the House of Representatives and to the Committee on Aeronautical and Space Sciences of the Senate a written report containing a full and complete statement concerning (1) the nature of the research or development item or activity, (2) the cost thereof, and (3) the reason why the research or development item or activity is necessary in the national interest."

The Senate amendment was agreed to by the managers on the part of the House in order to be sure that neither the space program nor the safety of personnel are jeopardized by lack of funds. In seems apparent that the National Aeronautics and Space Administration has made little or no provisions in its 1961 estimates for contingencies, cost increases, or unplanned program modification. Oftentimes necessary changes, in order to insure safety of personnel and system reliability, such as the Project Mercury Program, cannot be accomplished by reprogramming alone without adverse effects on other important elements of the space program. Furthermore, information has been received that several of NASA's programs have increased in cost over original budgeted estimates. For example, current estimates of the Atlas-Agena vehicle procurement program have increased $14,620,000. Current estimates on the Thor-Agena vehicle procurement program have increased $300,000. Due to decisions to utilize the Centaur engine in the Saturn program, it is now estimated that $1,500,000 must be incrementally funded in fiscal year 1961 to secure availability of Centaur vehicles for planetary missions. In all, original budget estimates are already $20,565,000 less than the revised current estimates. It is understandable that reprograming to fund these revised programs would have serious effects on other important programs.

The managers on the part of the House recognized that it must be anticipated that plans for, and estimated costs of, various individual research and development programs will be subject to continuing change. It is not possible to make precise forecasts for programs in which, in some cases, we are going beyond existing scientific knowledge.

The total authorization in the House bill was for $915,000,000. The Senate amendment increases the authorization to $970,000,000. This includes the $50,000,000 of emergency authorization for "Research and development," explained above, and in addition a $5,000,000 emergency authorization for "Construction and equipment." The latter $5,000,000 emergency authorization was contained in the House bill, but since it was an emergency authorization it was not totaled with the general authorization figure. The Senate amendment included both general authorizations and emergency authorizations to make a total of $970,000,000.

The other Senate amendment of a substantive nature, deleted section 4 of the House bill which provided 30 additional "excepted" positions with 13, rather than 10, of these positions authorized to be paid salaries up to $21,000. The remaining positions would be within the salary ranges $14,000 to $19,000. The House position was that these positions were essential and that the space program could be expected to be slowed down if NASA was restricted in its efforts to employ first-class personnel. The Senate, therefore, receded to the House position. This Senate amendment also writes back into the bill the emergency "Construction and equipment" authority of $5,000,000. This provision was in the House bill and has been rewritten merely for purposes of clarity.

OVERTON BROOKS,
JOHN W. MCCORMACK,
GEORGE P. MILLER,
OLIN E. TEAGUE,
JOSEPH W. MARTIN, Jr.,
JAMES G. FULTON,
GORDON L. MCDONOUGH,
Managers on the Part of the House.

Mr. BROOKS of Louisiana. Mr. Speaker, I move the previous question on the conference report.

The previous question was ordered.

The SPEAKER. The question is on agreeing to the conference report.

The conference report was agreed to.

A motion to reconsider was laid on the table.

COMMITTEE ON RULES

Mr. BOLLING. Mr. Speaker, I ask unanimous consent that the Committee on Rules may have until midnight to file a report.

The SPEAKER. Is there objection to the request of the gentleman from Missouri?

There was no objection.

PROVIDING COMPENSATION TO JAPANESE GOVERNMENT

Mr. BOLLING. Mr. Speaker, by direction of the Committee on Rules, I call up the resolution (H. Res. 532) providing for the consideration of S. 2130, a bill to authorize a payment to the Government of Japan, and ask for its immediate consideration.

The Clerk read the resolution, as follows:

Resolved, That upon the adoption of this resolution it shall be in order to move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (S. 2130) to authorize a payment to the Government of Japan. After general debate, which shall be confined to the bill, and shall continue not to exceed one hour, to be equally divided and controlled by the chairman and ranking minority member of the Committee on Foreign Affairs, the bill shall be read for amendment under the five-minute rule. At the conclusion of the consideration of the bill for amendment, the Committee shall rise and report the bill to the House with such amendments as may have been adopted, and the previous question shall be considered as ordered on the bill and amendments thereto to final passage without intervening motion except one motion to recommit.

Mr. BOLLING. Mr. Speaker, House Resolution 532 provides for the consideration of S. 2130 to authorize a payment to the Government of Japan. The resolution provides for an open rule with 1 hour of general debate.

The term "Bonin Islands" as used in S. 2130 includes the Bonin Islands proper, the Volcano Islands, Rosario Island, Parece Vela, and Marcus Island. This group lies about 700 miles south of Tokyo. During the war the Japanese Government evacuated from these islands the 7,000 civilian residents, all of whom were Japanese nationals. Immediately after the war the United States allowed 135 former residents of partial

occidental ancestry to return, but, for security reasons, has refused to allow any others to return.

Under article 3 of the peace treaty with Japan, the United States has the right to exercise all and any powers of administration, legislation, and jurisdiction over the territory and inhabitants of these islands, including their territorial waters.

The former residents of the islands have not been successfully integrated into the Japanese economy and live in distressed economic conditions. The Japanese Government provides them with economic assistance and spends a substantial sum annually for this purpose.

The Defense Department is opposed to the repatriation of the former residents of the islands for security reasons. Failing in its efforts at repatriation, the Japanese Government sought compensation. Initially it requested $12.5 million, but it has now agreed to accept $6 million.

The Department of State and the Department of Defense recognize that the former residents of the islands have a legitimate claim. One problem has been how to determine the land value that would form the basis for compensation. The land has not been used for more than than 15 years. It was decided to base the value on the formula used in the calculation of land values in the Ryukyu Islands, former Japanese islands now under U.S. administration. The figure adopted was $1,060 per acre, or $4 million for the total land value of the islands. To this was added interest dating from April 28, 1952, the effective date of the peace treaty with Japan. This brought the total up to $6 million, the amount contained in S. 2130.

The United States will not adjudicate individual claims. When the money has been appropriated, the United States will enter into a written agreement with the Japanese Government under which the latter will engage to distribute the money to the individual families concerned. The subcommittee was assured that this payment is regarded as adequate compensation by the Bonin Islanders and will constitute full satisfaction and settlement of all claims of the former residents against the United States.

The Bonin Islands situation is unique and the subcommittee was assured that the payment of the claims there do not constitute a precedent.

Our continued indefinite reservation of the Bonin Islands for security purposes makes impossible the repatriation of the former residents in the foreseeable future. Without any compensation the Bonin problem will remain a constant and, quite possibly, growing irritant in United States-Japanese relations.

Mr. Speaker, I urge the adoption of House Resolution 532.

Mr. Speaker, I yield 30 minutes to the gentleman from Illinois [Mr. ALLEN].

Mr. ALLEN. Mr. Speaker, I have no objection to the bill and yield back the balance of my time.

Mr. BOLLING. Mr. Speaker, I move the previous question.

The previous question was ordered.

The SPEAKER. The question is on agreeing to the resolution.

The resolution was agreed to.

A motion to reconsider was laid on the table.

PROVIDING FOR PROMOTION OF ECONOMIC AND SOCIAL DEVELOPMENT IN THE RYUKYU ISLANDS

Mr. BOLLING. Mr. Speaker, by direction of the Committee on Rules, I call up the resolution (H. Res. 533) providing for the consideration of H.R. 1157, a bill to provide for promotion of economic and social development in the Ryukyu Islands, and ask for its immediate consideration.

The Clerk read the resolution, as follows:

Resolved, That upon the adoption of this resolution it shall be in order to move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 1157) to provide for promotion of economic and social development in the Ryukyu Islands. After general debate, which shall be confined to the bill, and shall continue not to exceed one hour, to be equally divided and controlled by the chairman and ranking minority member of the Committee on Armed Services, the bill shall be read for amendment under the five-minute rule. At the conclusion of the consideration of the bill for amendment, the Committee shall rise and report the bill to the House with such amendments as may have been adopted, and the previous question shall be considered as ordered on the bill and amendments thereto to final passage without intervening motion except one motion to recommit.

Mr. BOLLING. Mr. Speaker, House resolution 533 provides for the consideration of H.R. 1157 to provide for promotion of economic and social development in the Ryukyu Islands. The resolution provides for an open rule with 1 hour of general debate.

The purpose of H.R. 1157 is to establish a basis in law for U.S. programs for the promotion of economic and social development in the Ryukyu Islands.

The interest of the United States in these islands is indicated by strategic military considerations of the highest importance. Consequently, the task of administering the islands has been assigned by the President to the Department of Defense, an assignment necessitated by the inextricable linking of civil and military functions there. In the tightly constricted area of the Ryukyus, virtually all activities and policies of the local government directly affect military planning and operations. The proposed legislation would formalize existing arrangements for performing the responsibilities of the United States under the peace treaty with Japan and would provide means for maintaining and increasing the effectiveness of the performance of the basic military mission.

The Ryukyu Islands lie southeast of Japan, northeast of Formosa and the Philippines, and west of the Bonin Islands. Okinawa, the main island, is almost 6,000 miles from San Francisco, 970 miles from Tokyo, and about 920 miles from Manila.

Since 1945 the United States has exercised full powers over the Ryukyu Islands, of which Okinawa is the largest. Prior to the war these islands were an integral part of Japan, but following Japan's surrender they were treated as a separate and distinct territory for the purpose of occupation. Unlike Japan, where occupation was carried out nominally under Allied authority, the occupation of the Ryukyus proceeded solely under American control. The measure of U.S. control was determined by international customary and conventional law as well as unilaterally by the United States. While control was restored to local institutions as they manifested a capacity to exercise it, the United States retained all powers, subject only to limitations imposed by international law.

As the sole occupier, the United States was charged with the responsibility for providing government in occupied territories, including all measures necessary to preserve public order and safety.

Although we have rebuilt and expanded the Ryukyuan economy and have given it new direction, it continues, nevertheless, to be an economy of scarcity, and from the viewpoint of natural resources it will never be anything other than that. Prior to the war, as one of the most indigent prefectures of Japan, it received annual subsidies of from $4 million to $6 million from the Central Government in Tokyo. Today, its population density of over 1,000 persons per square mile is twice that of Japan and one of the highest in the world. A substantial portion of its food requirements is imported each year. It has a serious shortage of industrial and commercial skills and inadequate venture capital to exploit such resources as are available. So, in spite of the reconstruction of the major part of the physical plant and the restoration of normal activity, there remains the difficult task of promoting the welfare and well-being of the Ryukyuan people, of bringing their economy closer to viability, of making them as self-sustaining as possible.

That the action proposed by H.R. 1157 is one which has been considered and approved by the Congress previously is illustrated by the fact that similar legislation has been enacted with respect to the Virgin Islands, Guam, the Philippine Islands and Puerto Rico.

Administrative costs of the civil administration of the Ryukyu Islands will continue to require annual budgetary provision; such costs will not, however, be increased as a result of this proposed legislation. The provisions of section 4 of the bill will provide a level of economic assistance somewhat less than one-half of the average annual amount appropriated for economic aid during the period fiscal years 1947–58.

Mr. Speaker, I urge the adoption of House Resolution 533.

Mr. Speaker, I yield 30 minutes to the gentleman from Illinois [Mr. ALLEN].

Mr. ALLEN. Mr. Speaker, I know of no objection to the rule and yield back the balance of my time.

Mr. BOLLING. Mr. Speaker, I move the previous question.

The previous question was ordered.

The SPEAKER. The question is on agreeing to the resolution.

The resolution was agreed to.

A motion to reconsider was laid on the table.

PROVIDING COMPENSATION TO JAPANESE GOVERNMENT

Mr. ZABLOCKI. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (S. 2130) to authorize a payment to the Government of Japan.

The motion was agreed to.

Accordingly, the House resolved itself into the Committee of the Whole House on the State of the Union for the consideration of the bill, S. 2130, with Mr. JONES of Missouri in the chair.

The Clerk read the title of the bill.

By unanimous consent, the first reading of the bill was dispensed with.

Mr. ZABLOCKI. Mr. Chairman, I yield myself 5 minutes.

Mr. Chairman, the legislation before us, S. 2130, authorizes the Secretary of the Treasury to pay to the Government of Japan the sum of $6 million. The payment of such sum shall constitute full satisfaction in settlement of all claims of Japanese nationals resident on the Bonin Islands arising from use and benefit and exercise of property rights or interests in the Bonin Islands by the United States for security purposes. The term "Bonin Islands" as used in this bill includes the Bonin Islands proper, the Volcano Islands, Rosario Island, Parece Vela, and Marcus Island. This group of islands is about 700 miles south of Tokyo. We are holding these islands for security reasons. We have some very important military installations on these islands.

On June 2, 1959, executive communication 1055, consisting of a letter from the Acting Secretary of State, transmitted a draft of proposed legislation entitled "A bill to authorize a payment to the Government of Japan." This was referred to the Committee on Foreign Affairs, and, in turn, referred by the chairman to the Subcommittee on the Far East and the Pacific. Before action was completed by the subcommittee the Senate passed S. 2130 which was referred to the committee. Since this bill is identical with that proposed in executive communication 1055, the subcommittee held hearings on the Senate bill on August 27 and 28, 1959. On August 28 the subcommittee ordered S. 2130 favorably reported to the full committee. On January 20, 1960, the full committee unanimously ordered S. 2130 favorably reported.

To my knowledge there is no opposition to this legislation.

The interests of the United States in these islands was summed up in the communique issued by President Eisenhower and Prime Minister Kishi in 1957:

> The President reaffirmed the U.S. position that Japan possesses residual sovereignty over these islands. He pointed out, however, that, so long as the conditions of threat and tension exist in the Far East, the United States will find it necessary to continue the present status.

The former residents of the islands have not been successfully integrated into the Japanese economy and live in distressed economic conditions. The Japanese Government provides them with economic assistance and spends a substantial sum annually for this purpose.

In conversations with Japanese officials in 1955, 1957, and 1958, Secretary of State Dulles reiterated the opposition of the Defense Department to the repatriation of the former residents. Failing in its efforts at repatriation, the Japanese Government then sought compensation. Initially it requested $12.5 million but it has now agreed to accept $6 million.

The Department of State and the Department of Defense recognize that the former residents of the islands have a legitimate claim. One problem has been how to determine the land value that would form the basis for compensation. The land has not been used for more than 15 years.

During the hearings the subcommittee inquired whether the payment of the Bonin Islands claims involved a precedent for claims by former residents of other islands that had been under Japanese jurisdiction prior to the war. In a memorandum submitted by Assistant Secretary of State Parsons the subcommittee was assured that "the Bonin Islands situation is unique and that the payments of the claims there do not constitute a precedent."

Mr. Chairman, our continued indefinite reservation of the Bonin Islands for security purposes makes impossible the repatriation of the former residents in the foreseeable future. Without any compensation the Bonin problem will remain a constant and, quite possibly, growing irritant in United States-Japanese relations. For this reason I am confident the House will pass this legislation without any dissenting vote.

I reserve the remainder of my time, Mr. Chairman.

The CHAIRMAN. The Chair recognizes the gentleman from Minnesota [Mr. JUDD].

Mr. JUDD. Mr. Chairman, the chairman of our subcommittee [Mr. ZABLOCKI] has explained the reason for this bill to compensate Japan for land in the Bonin Islands to which the 7,000 persons who owned it prior to the war are not being allowed to return. These persons were evacuated by Japan. They would like to go back and resume cultivation of their land, but our Armed Forces, for good and sufficient reasons, does not want any non-Americans on these islands for the present. There are about 150 persons of mixed blood and Japanese citizenship on one small island. They will not be permitted to go to the other islands.

This is a case in which I believe we are getting more than value received. We have several strategic installations in that part of the world with value up to perhaps $1 billion Our control of these islands and installations is essential to our security in the western Pacific. By making this payment, which has been negotiated between the two governments, we can strengthen our position in Japan where at the present time there is great opposition on the part of some students and others to continued close cooperation between the Japanese Government and our own Government. They use this case as a source of propaganda against the United States.

When we make this payment the Japanese Government takes responsibility for handling those 7,000 former residents of the Bonins who are being barred by us from returning to their homes and property. When the tense world situation is over and we do not need such installations in the Pacific and pull out, the Japanese may want to return them to the Bonins. They can do with them as they please. But we will have discharged fully our obligations and be in the clear.

Control of these islands for as long as we need them is essential to our national security. There should be no opposition to the passage of this bill.

Mr. ZABLOCKI. Mr. Chairman, I yield such time as he may desire to the distinguished chairman of the Committee on Foreign Affairs, the gentleman from Pennsylvania [Mr. MORGAN].

Mr. MORGAN. Mr. Chairman, the bill now before the House, S. 2130, authorizes a payment of $6 million to the Government of Japan. But the money is not intended for Japan or the Japanese. The ultimate beneficiaries of the payment will be the 7,000 Bonin Islanders who live in Japan and who cannot return to their native soil because our Government, as part of its defense strategy, must continue to occupy the Bonin Islands.

We do not own the Bonin Islands. We are the lawful occupants by the terms of the peace treaty we made with Japan. The payment authorized in this bill will not give us title to these islands. Nor is the payment a rental of any kind. It is compensation that is to be paid to the former residents of the islands because we have taken their land for an indefinite time. The Department of State advised our committee that the sum will constitute full satisfaction and settlement of all claims of these people against the United States.

Thus far the Bonin Islanders have been living on the margin of economic collapse. They are a simple agricultural people with a minimum of skills. Although they are Japanese nationals, they have not been able to establish themselves in Japanese economic life. Some may ask what the future holds for these people after the $6 million is distributed among the 7,000 former residents. No one can answer with certainty. But the sum should provide them with a modest amount of capital to establish themselves on the land or in small commercial activities or to improve their skills in order that they may enter the mainstream of the Japanese economy.

We have a right to occupy these islands. But I submit that we have a responsibility where the exercise of our right brings hardships. Our Government is neither too powerful nor too insensitive to ignore the distress of small and alien people whose plight arises from our need to use their land

for our security. It is because this bill fulfills an obligation on our part that I urge its passage.

Mr. JUDD. Mr. Chairman, I yield 5 minutes to the gentleman from Iowa, [Mr. GROSS].

Mr. GROSS. Mr. Chairman, I think we ought to get the record straight. We hear that this $6 million expenditure is necessary for security reasons; and perhaps that is true. Then someone else says that it is necessary to compensate some people for an injustice, to take care of people who are in distress. Then someone else says this expenditure must be made because pressure is being put upon the Japanese Government. If this is for the security of the United States, that is one thing; but if this is for the other reasons that have been stated, I cannot go along at all with spending $6 million because it was the Japanese who evacuated the 7,000 people who are to be benefited. We did not do it; the Japanese evacuated their own nationals and then fortified the islands. From that standpoint I can see no reason why we should compensate anybody for anything.

Mr. PUCINSKI. Mr. Chairman, will the gentleman yield?

Mr. GROSS. I yield.

Mr. PUCINSKI. I would like to add to the statement the gentleman just made that Marcus Island was the first target I bombed in the Pacific. The gentleman will be interested to know that the heaviest fortifications in the Pacific were in Marcus Island, and we suffered perhaps some of our greatest losses there.

Mr. GROSS. Is Marcus Island part of the Bonins?

Mr. PUCINSKI. Yes, that is correct.

Mr. GROSS. The Japanese removed these people, then erected fortifications and we lost many American lives taking the Bonin Islands.

From the standpoint of the Japanese Government and the people who were evacuated I do not think we owe them anything.

If we are now paying for some security purpose, that is a different story. I understand it is proposed to pay $879 or something like that to each displaced person. That is approximately the figure; is it not?

Mr. ZABLOCKI. Yes; it comes out to about that.

Mr. GROSS. It is said these 7,000 people have not been integrated by the Japanese. If they have not been absorbed into the economic and social life of Japan by now they probably never will be and the $879 per individual is not going to take care of the situation in the future.

Mr. JUDD. Mr. Chairman, will the gentleman yield?

Mr. GROSS. I yield to the gentleman from Minnesota.

Mr. JUDD. I can assure the gentleman that the primary reason for this bill is because it is essential to our security. I can best explain it by reading from page 2 of the hearings, a statement by the Assistant Secretary of State for Far Eastern Affairs:

> The State-War-Navy Coordinating Committee decided in 1945 that the Bonin Islands should be closed for security reasons to all other settlement. This policy, which has subsequently been reviewed several times, remains in effect.

That is the decision that was made and the reasons for the decision. It has been necessary for us to keep control of these islands.

Maybe we should have taken them in the peace treaty, I do not know. But the fact is we did not take them, and we do not own the islands. Japan owns the islands.

Mr. GROSS. The Japanese Government has residual sovereignty, whatever that means.

Mr. JUDD. The Bonins are not like some of the other areas where we have control. Japan has renounced ownership of those. Here is a case where they own the islands and we need them for the present. Japan has agreed to this arrangement. It quiets all of the claims against us and gives us security—physical, emotional, and military—in that area.

Mr. GROSS. Let us get this down to cases. I can go along with this bill if it is for security reasons.

Mr. JUDD. I give the gentleman that flat assurance.

Mr. GROSS. But I do not go along with it if we are paying off the Japanese.

Mr. JUDD. Neither would I.

Mr. GROSS. Then let us leave out the extraneous and specious statements in behalf of the bill.

Mr. JUDD. The only reason we bring that consideration in is because a troublesome situation has arisen for us and Japan on account of the agitation of some individuals and groups over this issue. The Japanese Government says it can quiet the situation and remove this thorn in our relations and settle the problem with this payment.

Mr. GROSS. I do not think it is going to be done that way. Let me say now that I hope you will not come in here with another bill for $6 million or more in order to placate these people later on.

Mr. JUDD. There is no other situation in the Pacific at all comparable to this.

The CHAIRMAN. The time of the gentleman from Iowa has expired.

Mr. JUDD. Mr. Chairman, I yield the gentleman 5 additional minutes.

Mr. ARENDS. Mr. Chairman, will the gentleman yield?

Mr. GROSS. I yield to the gentleman from Illinois.

Mr. ARENDS. I may say the gentleman from Iowa, knowing something about this situation, that I add my word of endorsement to this proposition. It is a matter of security and goes directly to the point the gentleman, I know, will agree with.

Mr. GROSS. I appreciate the gentleman's statement, but I want to say again I do not like these other issues being brought in. I do not think we are going to satisfy these people over the years with the payment of $879 apiece. I do not think that is going to happen, and I want to clear the record now and say that we are paying this $6 million for security reasons.

Incidentally, it is interesting to note that the Japanese Government first wanted $12.5 million but in a very short period of time reduced the asking price to $6 million, more than 50 percent. I hope this will be the last we hear of this deal. I do not like it, but if it will take care of a vital security problem, affecting our own people, I will go along with it.

Mr. ZABLOCKI. Mr. Chairman, I yield 5 minutes to the gentleman from Colorado [Mr. ASPINALL].

Mr. ASPINALL. Mr. Chairman, I do not pretend to be learned in matters of our relations with foreign nations, but I do have confidence in the work of our Committee on Foreign Affairs.

Mr. McCORMACK. Mr. Chairman, will the gentleman yield?

Mr. ASPINALL. I yield to the gentleman from Massachusetts.

Mr. McCORMACK. The gentleman is very modest when he says he is not learned in foreign affairs. I consider the gentleman one of the most impressive and learned gentlemen on that subject.

Mr. ASPINALL. Our distinguished floor leader is very charitable in his remarks.

Mr. Chairman, in my opinion, this bill is in the interest of our national security. You heard a moment ago the gentleman from Illinois [Mr. PUCINSKI] state that he was one of the first who saw this particular area when our military drive was taken us towards Japan. May I say that the gentleman now speaking is one of the Members of Congress who last saw this area.

It so happens that the Committee on Interior and Insular Affairs has jurisdiction over the Pacific area. We have jurisdiction over the Marshalls, the Carolines, and the Marianas to the west.

In that jurisdiction we have some responsibility over the northern part of the Marianas. This last year it was necessary for the committee, composed of the gentleman from California [Mr. SISK], the gentleman from Nebraska [Mr. MCGINLEY], the gentleman from Hawaii [Mr. INOUYE], and myself together with a staff member, to go into this particular area. We received permission from the distinguished chairman of the Committee on Armed Services to visit in the Bonin Island area. Our committee does not have jurisdiction over the Bonins. However, we thought it would be appropriate for us, with his permission, to go into the area. Accordingly we visited Iwo Jima and Chi Chi Jima. These names mean very much to us. The name Bonin Islands is practically unknown to the American people. But, when I speak of Iwo Jima and Suribachi, you know what we are talking about.

Mr. Chairman, I am interested in this legislation for two reasons, and it is because of these two reasons I wish to secure some information from the committee handling the bill. The first question has to do with the 140 or so citizens of Japan citizenship presently living on Chi Chi Jima Island. I also wish to know if there is any relationship or if any comparison can be made between the moneys that we are to pay

in this particular instance and the moneys which we are paying or are to pay for lands in the Marshalls area.

Last fall when we visited the Bonins we were in the company of Rear Adm. W. R. Eardman. If you do not think that this is an isolated area so far as we in the United States are concerned, you are mistaken. It is very difficult to get into. And, when one finds living in Chi Chi Jima approximately 140 people, many of whom have their family heritage in our own country, names like Savory and Webb from the New England area, descendants of New Englanders formerly engaged in the whaling business, and Washington, another name that is very common there, then he can understand why it is that those 140 have been allowed to return while others have not been given such permission.

There were almost 10,000 Japanese civilians living on these islands during the time just preceding the war. The war came on and most of the civilians were removed to other areas under Japan's jurisdiction. After the fighting was over most of the former residents of the Bonins were found to be in Japan proper. We permitted people of American lineage to return, and that is how the 140 happen to be there at the present time.

In the Marshall Islands to the east, where we have such islands as Kwajalein, we have 70.4 square miles of land area, while in the Bonin Islands we have 45 square miles of land area. There are 14,350 inhabitants living in the Marshalls at the present time. You can see what that land means to them. On Kwajalein, one of the larger islands in the group, the Defense Department has been using the entire area since its occupation by our military forces in 1944. For years we have been negotiating with the Marshallese on a fair value of their land. We do not know how much longer we will have use for it, but probably indefinitely, something like we have with the Japanese in their Bonin Island group. The Marshallese want the title to the land to remain in their names also. We have offered them $500 an acre for an indefinite term of use. Some of the owners have accepted this price; others have not accepted the price offered.

Now, with that in mind, Mr. Chairman, I would like to ask our distinguished colleague, the gentleman from Wisconsin [Mr. ZABLOCKI], a few questions. What items of reimbursement are covered by the $6 million? Are they public, private, personal, or liability values?

Mr. ZABLOCKI. Private and personal items of reimbursement are covered.

Mr. ASPINALL. Is it not a fact that when people are taken from an area under conquest, by tradition they are usually allowed to return to that area?

Mr. ZABLOCKI. That is true.

Mr. ASPINALL. Here they are not permitted to return.

Mr. ZABLOCKI. They are not permitted to return because we have decided that it is not in our national interest.

Mr. ASPINALL. Where will the title to the land involved remain?

Mr. ZABLOCKI. Title to the land will remain with the Japanese, but, in effect, we obtain title to that land since we have indefinite use of these islands.

Mr. ASPINALL. Will this legislation permit claims to be made by individual Japanese against the United States?

Mr. ZABLOCKI. No, sir.

Mr. ASPINALL. Will the present 140 inhabitants of the Bonin Islands—and these are the descendants of the Saveries and Webbs and Washingtons—be able to occupy or use the land as long as the United States remains in possession of the islands?

Mr. ZABLOCKI. On Chi Chi Jima, presumably, yes; on other islands, no.

Mr. ASPINALL. Will the residents of Chi Chi Jima receive their proportionate share of these moneys?

Mr. ZABLOCKI. No. This money is only for those former Bonin Islanders who are not permitted to return to the islands and who are now residing in Japan.

Mr. ASPINALL. Will these inhabitants of Chi Chi Jima be able to get any title to the lands they now occupy?

Mr. ZABLOCKI. No; not under this legislation.

Mr. ASPINALL. Does the gentleman think that this $6 million sum could be considered as rent for the use of the land since 1945 to date? If so, within a few years, if the United States continues to occupy the islands will there be another payment forthcoming?

Mr. ZABLOCKI. No; this is a final settlement. May I point out to my distinguished friend that it is not a rental payment.

Mr. ASPINALL. As I stated just a moment ago, I am interested because of the effect that this has relative to the Marshall Islands of the Trust Territory. For example, on Kwajalein Island, one of the many islands of the Marshall group, the entire area was taken over by the military in 1944. The title still remains with the Marshallese landowners. The High Commissioner of the Trust Territory has been given authority to offer the Marshallese $500 an acre for the use of the land since 1944. The Marshallese, through their attorney, have refused the offer and have brought court action. Now my question is this: How did you arrive at the figure of $1,060 per acre for the land in the Bonins? I realize that land is a very valuable asset to the Japanese but I do not know how it can be more valuable than it is to the Marshallese.

Mr. ZABLOCKI. In answer to the gentleman, it is my understanding that the Department of State in negotiations with the Japanese used land value plus labor and input value of various kinds. I wish to call attention to the statement on page 11 of the hearings where Assistant Secretary of State, Mr. Parsons, in reply to a question states:

> The figure of $6 million is based on the formula used in the calculation of Ryukyuan land values where you assign 40 percent of the production from a given unit of land to land value and 60 percent to labor and imput of various kinds. Then the 40 percent is capitalized at 6 percent; this is multiplied by 16⅔, and you arrive at the figure through that process.

The value of land in the Ryukyus, as the gentleman will recall, is $1,060 per acre.

Mr. ASPINALL. Can my distinguished colleague state whether or not he believes there is any relationship between the formula which his committee has used in this instance and the formula that might be used in determining the values of the Marshallese?

Mr. ZABLOCKI. No; there is no relationship.

Mr. JUDD. Mr. Chairman, will the gentleman yield?

Mr. ASPINALL. I yield to the gentleman from Minnesota.

Mr. JUDD. I would like to add that they have no relationship because in the Marshall Islands we are paying rent. In the Bonins we are paying the Japanese Government the value of the land and it can do as it pleases with respect to these citizens. It intends to compensate them for this land. There is no precedent in this case that could be applied to the Marshalls.

Mr. ASPINALL. May I say that that is exactly what I wanted stated while we are considering this legislation. We do have this legal controversy; we do have a suit in court at the present time and if we are not careful this action might be used against us.

Mr. Chairman, may I make one statement to my colleagues of the House. We held a special meeting with the Bonin Islands Council members when we were on Chi Chi Jima. If my friends would like to have some very interesting reading—it would take about 10 minutes—it would bring to their minds how people who have their heritage in our own country feel about their ties to a country with which they have no common citizenship, but who wish to have such ties in the future, if they can obtain them.

Mr. ZABLOCKI. If the gentleman will yield further, may I suggest that the gentleman insert the minutes of the council meeting at this point in the RECORD?

Mr. ASPINALL. I shall be glad to do that.

Mr. Chairman, the following is the transcript of the hearings of the meeting held by the Council of Chi Chi Jima when our special committee was present in that area:

> CHI CHI JIMA, B.I.—MINUTES OF THE SPECIAL BONIN ISLAND COUNCIL MEETING OF NOVEMBER 19, 1959
>
> The meeting was called to order at 19:35. Present were Lt. Comdr. T. G. Rice, military government representative; Rodrick Webb, president; Jerry Savory, member; Jessie Webb, member; Mitsuru Ikeda, member; Frank Gonzales, member. Special guests were Hon. W. N. Aspinall, Representative from Colorado; Hon. D. F. McGinley, Representative from Nebraska; Hon. D. K. Inouye, Representative from Hawaii; Hon. B. F. Sisk, Representative from California; Rear Adm. W. L. Erdmann, COMNAVMARIANAS; Dr. Jack Taylor, Consultant on Territorial Affairs. Guests were Lt. Comdr. L. E. Trabaudo, MC, USN; Lt. (jg.) S. L. Erwin, Assistant OIC; Richard Washington, judge, Bonin Island court.

The military government representative opened the meeting by introducing the House Insular Affairs Committee to the council members. He explained to the committee members that the Bonin Island Council was comprised of five members elected by a general election. The member receiving the most votes sits as President of the council. The term of office is for 1 year. He explained that all persons over 18 years of age were eligible to vote and that we have experienced 100 percent participation as a result of an ordnance whereby a person is fined if they fail to vote. He also explained that the judge of the Bonin Island court is an appointed office and that the council members sat as the court. He told the committee that the council met once a month, and that the minutes were recorded and sent to the Military Governor via the Deputy Military Governor. He explained that the president of the council presided at the meetings. At the request of the president, the military government representative reads the minutes of the previous meeting and then presents to the Council any information that is pertinent received from the Military Governor or Deputy Military Governor, and any other information of interest, i.e., ship and airplane arrivals, problems of a logistic nature, etc. The president of the council then asks each member to present anything that they wish and to bring up any problems that they have been presented with during the previous month. The council discusses and votes on any matter that requires a decision. He explained that revenue is obtained by taxation of gross income. The tax at present is 3 percent. This money goes to the community fund, and is used as the council sees fit. At the present there is $1,831.88 in the community fund. There is only one person on the island receiving their support from this fund; the rest of the islanders are gainfully employed and are self-sufficient. He explained that the economy of the island is increasing each year.

Congressman ASPINALL asked if the resolutions and ordnances passed on by the council were subject to veto by the military government representative.

The military government representative replied that none had been vetoed.

Congressman ASPINALL asked if the military government representative sat with the members of the Bonin Island Council at the monthly meetings.

The military government representative replied that he sat with the council at all meetings, and that he also sat with the Bonin Island court as an advisory member.

Congressman ASPINALL asked if the military government representative acts in an advisory capacity at the council meetings when decisions of a legislative nature, especially those involving raising revenue and appropriating funds are acted on.

The military government representative replied that he did.

Congressman ASPINALL asked the president of the Bonin Island Council if he exercised his prerogative as president by presiding at the monthly meetings or if the military government representative presided at the monthly meetings.

Rodrick Webb replied that he presided at the monthly meetings.

The military government representative again reiterated that due to the close proximity, so many of the civil problems dovetailed with those of the military that he acted in an advisory capacity on these matters. Matters solely of a civil nature were left to the members of the council insofar as possible.

Congressman ASPINALL asked if any member of the Bonin Island Council had ever served in a governing capacity when the Japanese governed the island.

He was informed that no member had served in such a capacity.

Congressman ASPINALL asked the council members if they were satisfied with their present form of government.

He was informed by the council members that they were satisfied.

Congressman ASPINALL asked the Deputy Military Governor if he or members of his staff reviewed the minutes of the Bonin Island Council meetings.

The Deputy Military Governor replied that he personally reviewed the minutes of the council meetings and without exception he has passed on these minutes and has then forwarded them to the Military Governor.

Congressman ASPINALL asked the age of the person receiving help from the community fund.

Jerry Savory, council member, informed him that she herself did not know her true age, but information gathered from other elderly people of the island placed her age in the vicinity of 70 years. He explained that she had no one to care for her and that each month she received provisions paid for by the community fund from the Bonin Island Trading Co.

Congressman ASPINALL asked if there were any other elder people of the island that felt they too should receive help from the community fund.

Jerry Savory said that to his knowledge there were none. He explained that the rest of the elderly people either were still gainfully employed or had children and family to care for them.

Congressman ASPINALL asked if it was more or less the custom of the people of the islands to care for their elder people within the family if such was possible.

Jerry Savory replied that it was the custom.

Congressman ASPINALL asked if the members of the council were paid for their services.

Jerry Savory explained that the president of the council received $10 per month, members $5 per month, and that the judge of the Bonin Islands court received 10 percent of fines imposed.

Congressman ASPINALL asked if there were many cases tried by the Bonin Islands court.

The military government representative explained that very few cases were tried by the court and that the offenses were minor in nature.

Congressman ASPINALL explained to the members of the council that the committee which he represented had jurisdiction over only the unincorporated or Trust Territories of the Pacific but inasmuch as they were to be in this area they had requested permission to visit the Bonin Islands as guests of the Deputy Military Governor and military government representative to meet with the representatives of the people of the Bonin Islands to hear their views and to find out if they were satisfied with their present form of military government, and that they would report to Congress on their findings. He asked if any members of the council had anything they would like to discuss with the committee.

Jessie Webb asked if the committee could give any information on any decisions pertaining to the ownership of the houses and land on which the people of the Bonin Islands lived.

Congressman ASPINALL explained that as he understood it, until land titles could be determined that it would be impossible to give title to any person living on the property.

The military government representative explained that the Bonin Islanders were concerned over titles to property and houses in the event the Japanese again took possession of the islands. He explained that he believed that the houses would belong to the Bonin Islanders as long as the Navy remained on the islands.

Congressman ASPINALL told the council that Senator FULBRIGHT had introduced and the Senate had passed a bill whereby $6 million would be paid to the Japanese Government to settle with the Japanese people that were dispossessed from the Bonin Islands for the property they owned.

Congressman SISK asked when the Japanese originally settled the island.

Jerry Savory explained that Nathaniel Savory and his party of settlers whom the vast majority of the Bonin Islanders are descendents settled the island in 1830, and the Japanese did not settle the island until 1871. The Japanese were not successful in their attempt to settle in 1871 and left the island to return in 1873, this time to stay.

Congressman ASPINALL asked if the Japanese settled on land owned by the Savory settlers or settled on land of their own.

The military government representative informed him that the land acquired by the Japanese was by legal methods as far as known.

The military government representative explained that basically what the Bonin Islanders are concerned with is that with the exception of possibly three, none of them live on their own homesteads and as they develop their homes and property they are concerned about the security of their homes and homesteads. Therefore, they would like to know that if the Japanese Government accepts the $6 million as payment for land rights if they will then be given title to the homes and properties.

Congressman ASPINALL explained that it was his understanding that if the Japanese Government accepts the $6 million in lieu of claims to property by the former Japanese inhabitants of the Bonin Islands, then the U.S. Government would then hold title to the land, at which time a land officer representing the Navy would see that the land was surveyed and that the people that lived in these areas would be protected in their properties.

At this point Congressman ASPINALL read the bill passed by the Senate whereby $6 million would be paid to the Japanese Government for land rights in the Bonin Islands.

Congressman ASPINALL explained that the bill meant that as long as the U.S. Government maintained possession of the Bonin Islands that neither the Japanese Government or the Japanese nationals that were former residents of the Bonin Islands would have any claims against any of the property. In the event that the United States should enter into an agreement to turn the islands back to Japan then there would have to be some provision in that agreement as to the property rights of the Bonin Islanders that have returned and made their homes here.

Congressman SISK said that as he understood the wording of the bill that the payment of the $6 million would be nothing but payment for an indefinite use permit without any title at all, similar to the bill proposed in the Marshall Islands, maintaining the residual sovereignty of Japan, so that if the Japanese came back to these islands they could reclaim their lands without any reimbursement. He asked if he was right in interpreting the bill this way.

Congressman ASPINALL said that he was correct unless provision was made in the final agreement whereby the Bonin Islanders would be protected.

Congressman SISK said that he was pursuing this line of questioning to aid him in determining which position he would take when this legislation reached the House of Representatives. He said he had doubts as to whether the Japanese people had a legitimate claim to the $6 million for the land in view of the fact that the people presently living in the Bonin Islands had a claim due to prior settling of the islands. He asked when the Bonin Islanders were sent to Japan.

Jerry Savory told him that they were sent to Japan in 1944.

Congressman SISK asked if any of the members of the council owned land in the Bonin Islands at that time.

Frank Gonzales said that he owned the land that is presently known as Jack Williams Beach.

Congressman SISK asked if he now lived on that land.

Frank Gonzales said that he did not live on that land at the present.

The military government representative said that it appeared to him that even if provision was made in the final agreement for protection of the Bonin Islanders' property, they would be dependent upon the Japanese Government to honor the provision and would have to go through Japanese courts for that protection.

Congressman ASPINALL said that in his opinion they would be protected by international law and could go to the Hague Court of the United Nations for protection.

Congressman SISK said that if the Japanese broke the treaty, then it would fall under the jurisdiction of international law and would then have to be taken to the Hague court.

Congressman SISK asked that assuming this treaty was written into the present bill, and these islands were returned to Japan, if the Bonin Islanders were fearful of the Japanese not honoring the treaty.

Jerry Savory said that the majority of the Bonin Islands were, but they were especially concerned for the security of the younger generation. He said they all hoped the United States would keep the responsibility of the islands as long as possible.

Congressman INOUYE asked if the sentiments expressed by the Council were those of the people of the island.

Jerry Savory said that they were.

Congressman Aspinall asked approximately what percentage of the people were in favor of the United States retaining administrative control of the Bonin Islands.

Jerry Savory explained that in 1952 when a delegation of Bonin Islanders went to Washington that 100 percent of the people signed a petition stating they wanted the United States to retain control.

The military government representative polled the Council and asked that if they were asked to sign a petition now if the same percentage of people would sign.

Each member of the Council said they believed that 100 percent of the people would sign such a petition.

Congressman ASPINALL asked how the people would feel if the islands to the south were returned to Japan.

Jerry Savory said that he felt the people would be grateful if Haha Jima could be retained in view of the number of young people. He said he felt that they should have more area in which to settle and make their homes.

Congressman SISK asked how far Haha Jima was from Chi Chi Jima.

The military government representative explained that Haha Jima, a larger island than Chi Chi Jima was located 25 miles to the south.

Congressman SISK asked if there were any families presently living on Haha Jima.

The military government representative told him that the island is uninhabited at the present.

Jerry Savory said that if the United States could retain possession of Haha Jima, the large number of young people that will soon reach adulthood would then have a place to settle and make homes for themselves.

Congressman MCGINLEY said that he had heard that there was difficulty in the Bonin Islanders getting married and asked if someone would explain that situation to him.

Jerry Savory explained that due to the close relationship of the Bonin Islanders, that it was not desirable for them to intermarry. Therefore, the vast majority of the male population go to Japan to seek wives.

Congressman ASPINALL asked if the young females of the islands could go to Japan to seek husbands.

Jerry Savory said that although none had, that it was possible for them to do so.

Congressman ASPINALL asked that if they went to Guam or Japan and married, if they would be permitted to return to the Bonin Islands.

Jerry Savory told him that it would not only be possible, but they would be welcomed.

The military government representative explained there was one island woman married to a Saipanese and another to the principal of the school, a U.S. citizen from Hawaii, and that they were quite happy.

Congressman INOUYE asked if the Bonin Islanders were satisfied with their school system and medical facilities.

Rodrick Webb said that they were satisfied.

(NOTE.—The above transcription is but a portion of the minutes. No further minutes were recorded.)

RODRICK WEBB,
President, Bonin Islands Council.

Mr. ZABLOCKI. Mr. Chairman, I take this opportunity to congratulate my esteemed friend, the distinguished gentleman from Colorado, and to commend him for his fine presentation. He has a thorough understanding of the problems at hand and has consistently shown deep concern for the security of our Nation and for our position in that part of the world. The gentleman from Colorado has presented in detail arguments why this legislation should be passed. I wish to thank him for his contribution.

Mr. JUDD. Mr. Chairman, I have no further requests for time.

Mr. ZABLOCKI. Mr. Chairman, I yield 2 minutes to the gentleman from Illinois [Mr. O'HARA].

Mr. O'HARA of Illinois. Mr. Chairman, it is timely that S. 2130, which was passed by the other body unanimously, which was reported out by the House Committee on Foreign Affairs unanimously, and which was granted a rule by the Rules Committee unanimously, should come before us today. It is a bill of equity and good conscience, presenting Uncle Sam in the image of fairness and of honesty. It is just and meritorious.

I have said that its consideration today is timely. Only last week, on May 19, the treaty of mutual cooperation and security with the United States was approved by the Japanese House of Representatives after a bitter battle with Communists and neutralists. The Japanese House of Councilors still must give its concurrence. The great majority of the men and women of Japan I am sure have a friendly sentiment toward the United States, but there are elements that are seeking to undermine that sentiment of friendship. The prompt and I hope the unanimous passage of S. 2130 will remove one of the irritants that the enemies of the United States have been using in their propaganda.

Aside from my desire as a Member of the Congress of the United States to join with my colleagues in presenting to the world the image of Uncle Sam always as fair and honorable, I have a personal interest in the passage of this bill. At one time, a few years ago, I had the distinction of representing more Japanese-American constituents than any other Member of the House. That probably is not the case at the present time, but certainly there are not more than three or four congressional districts today in which more Japanese-Americans reside. Mrs. Mary Ono, of my staff at my Chicago office, was the first Japanese-American congressional secretary in the history of the Congress.

There are no finer or more stanchly loyal Americans than those of Japanese blood and descent. The parents of some of the Japanese-Americans in my district as well as in other districts came from the Bonin Islands and they with all Americans of Japanese ancestry are concerned with bettering relations with Japan in the interest of peace and prosperity in the Pacific.

I lunched last week with Shig Wakamatsu, national president of the Japanese American Citizens League, and I am proud to say one of my most distinguished constituents, Mike M. Masaoka, the popular and tireless Washington representative of the league, and John Yoshino. The conversation centered on S. 2130. They thought that the enactment of this legislation was long overdue. It is merely a matter of doing the right and the decent thing, not for the Government of Japan, but for human beings, men and women and children whose lands were taken for military use by our Government and who are in need due to their enforced dislocation. I trust the bill will pass unanimously.

Mr. Chairman, I am extending my remarks to include excerpts from a letter by Mr. Masaoka:

Although it has not been officially acted upon by the JACL because we have not had a Biennial National Convention since 1958, many of our members whose parents are from the Bonin Islands and many more of us Americans of Japanese ancestry, who are concerned with bettering cooperation and relations with Japan in the interests of peace and prosperity in the Pacific, are most assuredly for it.

The bill itself was passed unanimously by the Senate and reported unanimously by the House Foreign Affairs Committee and the House Rules Committee. It has the approval of the State and Defense Departments.

The bill simply corrects an inequity in our treatment of two former Japanese island chains in which residual sovereignty continues to be in Japan but whose administration remains, under the identical provision of the Treaty of Peace, with the U.S. Armed Forces. In the case of the Ryukyus, including Okinawa, Japanese nationals whose lands are used for military purposes by our Government are paid rentals. In the case of the Bonins, however, including Ogawasara, Japanese nationals whose lands are being used for military purposes by our Government have never received compensation of any kind whatsoever from the United States. Moreover, Japanese nationals who are former residents of these islands still are not permitted to return to their native home 15 years after the end of hostilities.

This legislation, long overdue, merely attempts to equalize the treatment accorded to Japanese nationals of both the Ryukyus and the Bonins. It provides authorization for the payment of $6 million to the Japanese Government for distribution to these

former residents of the Bonin Islands. To our mind, this is much too small an amount to be paid, but, since the Japanese Government has agreed to this sum we have no alternative at this time but to agree.

There are realities in the world today that make it more important than ever that we do everything possible to maintain cordial relations with Japan. This is the centennial of diplomatic relations between Japan and the United States. The Japanese House of Representatives approved only yesterday (May 19) the Treaty of Mutual Cooperation and Security with the United States after a long and bitter battle with the Communists, leftists, and neutralists. The House of Councillors must still concur in that ratification. The Prime Minister of the Soviet Union last week threatened Japan, and other nations that allow us to base our planes on their territories, with annihilation by nuclear missiles. Neighboring Red China constantly and continuously tries to lure Japan away from the free world. The President of the United States is scheduled to visit Japan in about a month, while the Crown Prince and Princess of Japan are slated to return that good-will visit this fall. Surely, in the light of these circumstances, there can be no reason to deny the former Japanese residents of the Bonin Islands the same treatment in the use of their lands as we have done and are doing for the Japanese residents of the Ryukyus.

The amount is small, but the principle of discrimination that currently characterizes our consideration of the Japanese nationals of the Ryukyus and the Bonins looms large in the hearts and minds of all the Japanese people, not just those formerly resident in the Bonins. The former residents of these islands have conducted themselves with dignity through the past 15 years since the end of hostilities, even though they have and are suffering privations on the so-called Japanese mainland, never resorting to the undemocratic methods of the totalitarians and the Communists but constantly appealing through the democratic system of petition in the faith that American sense of fair play and good conscience would vindicate their gentlemanly procedures. Now that they are on the threshold of witnessing democracy in action correcting an injustice, we trust that the House of Representatives will not frustrate them and their dreams.

The CHAIRMAN. If there are no further requests for time, the Clerk will read the bill for amendment.

The Clerk read as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of the Treasury is hereby authorized to pay to the Government of Japan a sum of $6,000,000. The payment of such sum shall constitute full satisfaction and settlement of all claims of Japanese nationals, formerly resident in the Bonin Islands, arising from the use, benefit, or exercise of property rights or interests in the Bonin Islands by the United States for security purposes, for the period beginning April 28, 1952, and continuing until such time as said use, benefit, or exercise is relinquished by the United States.

SEC. 2. There is hereby authorized to be appropriated the sum of $6,000,000 to carry out the purpose of this Act.

Mr. GROSS. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, the gentleman from Colorado seems to want to give the impression that this problem arises as the result of our conquest of the Bonin Islands. I want to reemphasize that this problem grows out of the Japanese evacuation of their own nationals from those islands at the start of the war and their subsequent fortification of the islands and then the military necessity for us to take the islands. So the problem does not grow out of our conquest of the islands as such. These were Japanese nationals who were removed by the Japanese Government and taken to Japan at the start of the war. The care of these people is basically a responsibility of the Japanese Government.

Now, I should like to ask the chairman of the subcommittee a question. In his opinion, will this set a precedent for future payments?

Mr. ZABLOCKI. No, it will not set a precedent. I would like to call the attention of the gentleman to the reply made by the Assistant Secretary of State, J. Graham Parsons, to the very question I asked him publicly, which appears on page 6 of the hearings. I asked:

Are we setting a precedent for future claims in the Pacific?

And he answered:

We have not so foreseen it. There has been no other case that has come to my attention, in my time in the Department at least, where former residents have claimed that they should either be allowed to go back or that we should compensate them.

In other words, he said this would certainly not set a precedent.

Mr. GROSS. And, in the personal opinion of the gentleman from Wisconsin, we are not setting a precedent?

Mr. ZABLOCKI. On the basis of the testimony we have received, I can give the gentleman the unequivocal answer that we are not setting a precedent.

Mr. GROSS. Will Japan reimburse us when we leave the Bonin Islands if and when we no longer need this area for security purposes? In the opinion of the gentleman, will Japan reimburse us for the $6 million to be appropriated?

Mr. ZABLOCKI. No, under the treaty negotiated with Japan, Japan certainly will not be repaying us the $6 million that we are actually giving to the Japanese Government for distribution to the Bonin Islanders who are no longer residents on the islands or permitted to return to the Bonin Islands.

Mr. PUCINSKI. Mr. Chairman, will the gentleman yield?

Mr. GROSS. I yield.

Mr. PUCINSKI. Will the gentleman permit me to ask the sponsor of this legislation whether or not there was any testimony which would indicate that these Japanese nationals while on these islands in any way were helping the Japanese armed forces at the time our own young men were trying to capture those islands?

Mr. ZABLOCKI. I will be very happy to answer the gentleman's question. I am sure, if the gentleman read the report, he would see that these former residents of the Bonin Islands were no longer on the islands at the time that we captured them and they were of no assistance to the Japanese either in holding the islands or in fighting our forces. They were evacuated and moved to Japan.

Mr. PUCINSKI. If that is the case, then I think the gentleman from Iowa certainly makes a very strong point. The fact is that these people were evacuated not as a result of any of our activities, but rather as a result of the activities of the Japanese Government, and yet we are being asked to compensate them for their loss.

Mr. ZABLOCKI. Mr. Chairman, will the gentleman yield?

Mr. GROSS. I yield.

Mr. ZABLOCKI. But the gentleman from Illinois should bear in mind that we are now preventing them from returning to these islands.

Mr. HOFFMAN of Michigan. Mr. Chairman, will the gentleman yield?

Mr. GROSS. I yield to the gentleman from Michigan.

Mr. HOFFMAN of Michigan. I want to apologize to the gentleman from Iowa personally. I was unavoidably detained. But does the gentleman think he needs a quorum or does it make no difference?

Mr. GROSS. The gentleman from Michigan does not have to apologize to me for anything.

Mr. HOFFMAN of Michigan. Does the gentleman think he should have a quorum? Do you need any help for this economy program that you have been on?

Mr. GROSS. No; the gentleman from Iowa is not interested in a quorum at this time, but he is interested in all the help he can get in behalf of economy and he knows be can depend upon the gentleman from Michigan.

The CHAIRMAN. Under the rule, the Committee rises.

Accordingly, the Committee rose; and the Speaker having resumed the chair, Mr. JONES of Missouri, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the bill (S. 2130) to authorize a payment to the Government of Japan, pursuant to House Resolution 532, he reported the same back to the House.

The SPEAKER. Under the rule, the previous question is ordered.

The question is on the third reading of the bill.

The bill was ordered to be read a third time, and was read the third time.

The SPEAKER. The question is on the passage of the bill.

The bill was passed.

A motion to reconsider was laid on the table.

Mr. ZABLOCKI. Mr. Speaker, I ask unanimous consent that all Members who have spoken on the legislation may extend their remarks and include extraneous material.

The SPEAKER. Is there objection to the request of the gentleman from Wisconsin?

There was no objection.

PROVIDING FOR PROMOTION OF ECONOMIC AND SOCIAL DEVELOPMENT IN THE RYUKYU ISLANDS

Mr. PRICE. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State

of the Union for the consideration of the bill (H.R. 1157) to provide for promotion of economic and social development in the Ryukyu Islands.

The motion was agreed to.

Accordingly, the House resolved itself into the Committee of the Whole House on the State of the Union for the consideration of the bill H.R. 1157, with Mr. JONES of Missouri in the chair.

The Clerk read the title of the bill.

By unanimous consent, the first reading of the bill was dispensed with.

The CHAIRMAN. Under the rule, the gentleman from Illinois [Mr. PRICE] will be recognized for 30 minutes and the gentleman from Illinois [Mr. ARENDS] will be recognized for 30 minutes.

The gentleman from Illinois [Mr. PRICE] is now recognized.

Mr. PRICE. Mr. Chairman, I yield myself such time as I may require.

Mr. Chairman, although this bill, H.R. 1157, bears my name, it is actually one which not only is sponsored by the executive branch, and specifically the Army, but also has received the special attention of the Secretary of Defense, who not long ago urged by a letter to Mr. VINSON that the bill be given prompt consideration because of its importance. I might mention that the former Delegate from Hawaii, John A. Burns, who has known the Okinawan people so well, also sponsored this legislation.

A single sentence description of what the bill will do is that it will permit the retention in the Ryukyu Islands of funds which would be used in the Ryukyus for various governmental purposes.

The bill, however, required more detailed description of these funds and their use in the Ryukyus since there are at least three types of funds covered by the bill.

Section 2 of the bill deals with fines, fees, forfeitures, taxes, and other moneys received by the government of the Ryukyu Islands.

At this point, I would like to describe briefly what the government of the Ryukyu Islands is. It is headed by a chief executive who is appointed by the U.S. High Commissioner. The rest of the government, which is made up of mayors and other local governing officials and a unicameral legislature, are all elected officials. In section 2, it is this part of the government of the Ryukyus which is being referred to.

The funds received by the GRI, as it is called, are derived—as the bill indicates—from fines, fees, taxes, and so fourth. In 1960, it is estimated that they will total $22.4 million. These funds are now retained in the Ryukyus and with respect to them, the bill would provide specific legal sanction for this practice.

The section 2 funds are used today and would continue to be used for the cost involved in all of the normal functions of a national government except those pertaining to national defense and international political relations. These functions would, of course, include education, public health and welfare, public safety, public works and services, economic development, and general government.

The next group of funds involved in the bill are those which are the subject of section 3. These are funds which are derived by the U.S. civil administration of the Ryukyu Islands from the several sources set out in the bill itself, that is to say, public-benefit trusts, business type operations, corporations—wholly or partly owned by the civil administration, and from fines, fees, and forfeitures. These funds are estimated to total $3 million in 1960. They would be used for programs approved by the Federal Government for matters such as typhoon relief, aid to municipalities and other similar functions. The funds referred to in (a) and (b) of section 3 are, like the section 2 funds, now retained in the Ryukyus for expenditure for the purpose I have described.

The funds referred to in subsection (c) of section 3, however, now are deposited into miscellaneous receipts of the Treasury. This represents the smallest amount of funds involved in the bill being only about $50,000 for 1960.

Section 4: This section injects a new concept into the financing of activities in the Ryukyu Islands. The funds referred to in this section are Federal income taxes withheld from the pay of U.S. citizens in the Ryukyus. These funds now aggregate about $9 million annually. At the present time, of course, these taxes are covered into the U.S. Treasury. The Federal Government through the annual budgetary process, appropriates funds for the purposes set out in 4 (a) and (b), that is, promoting the economic development and improving the welfare of the people of the Ryukyus, and reimbursing the GRI for services performed by reason of our Armed Forces in the islands.

Under section 4, not to exceed $6 million in any fiscal year could be appropriated to the High Commisisoner of the Ryukyu Islands to be spent for the purposes stated in the section.

With respect to subsection (c) of section 4, I would like to point out that disaster relief funds, which have been provided by the United States up to this time, have been obtained by reprograming, with serious difficulty and delay, cash proceeds from Public Law 480 commodity sales in other parts of the world. Actually, commodity grants would be continued to be sought to meet the emergency food requirements but section 4(c) would provide funds for rehabilitation construction.

We all know that Okinawa and the Ryukyus generally are subject every year to devastating typhoons. And the care of the people and the rehabilitation of structures destroyed must be considered as an essential part of their fiscal administration.

The question quite naturally arises as to why present procedures of financing in the Ryukyus are not permitted to continue as in the past.

In the first place, the legal authority for the retention of those funds now kept in the Ryukyus is not absolutely clear, and legislation to render this authority clear is, therefore, necessary.

Section 4 of the bill, regardless of its reference to Federal income tax collections in the Ryukyus, is actually nothing more or less than a straight authorization for the appropriation of funds for the specific purposes stated in the section itself. These purposes are, generally, to promote the economy generally of the Ryukyu Islands, to reimburse the government of the Ryukyu Islands for services performed on account of the presence in the islands of our Armed Forces, and for emergency purposes relating to disasters, including typhoons, in that area.

It will be noted that the bill as submitted by the Department has been modified in several respects, the most important of which is through the insertion of language on page 3, lines 7 and 8, which render entirely clear that the Appropriations Committees of both Houses of the Congress will actively participate and, indeed, make all of the final decisions with respect to the funds that are appropriated under this section. The language that I am referring to is as follows: "within such limitations as may be provided hereafter in appropriations acts."

As the bill read prior to the committee's amendments, the language gave every appearance of actually appropriating funds. This action is not within the jurisdiction of the Armed Services Committee. Ours is an authorizing committee. We have neither the desire nor the power to appropriate funds. The Appropriations Committees are the ones to make recommendations in this respect based upon a specific authorization which is being provided in this bill.

Perhaps more important than the specific legal reasons for enacting legislation of this kind is the very special relationship which exists between the people of the Ryukyus and our Government. The Ryukyus are, at least from a lay standpoint, a strange mixture of a foreign country and a country that is not foreign.

Under the treaty of peace with Japan, Japan retained what is called residual sovereignty. This term is extremely difficult to define, but I believe a fair statement of its practical effect is to give the United States complete control over all matters relating to the administration of these islands.

These rights are accompanied by responsibilities, and the responsibilities, too, are rather special in this instance, because, for one reason or another, the entire nonfree world has fastened a most interested eye on Okinawa and the rest of the Ryukyus and it has, therefore, become, as it has frequently been expressed, a showcase of democracy.

This bill will give legal sanction to the retention of essential moneys in the Ryukyus. It will establish a sound relationship, both fiscal and psychological, between those islands and this country—a relationship which all informed persons state to be of paramount importance.

At the recommendation of the Comptroller General, a new section 8 was added to the bill which would render certain that all the financial transactions of the U.S. civil administration in the Ryukyus shall be audited by the General Accounting Office in accordance with the Budget and Accounting Act of 1921 and the Accounting and Auditing Act of 1950.

Because of questions which quite naturally arise with respect to section 4, I would like to deal with it in a little more detail at this time.

The language in section 4 is by no means unique. Section 4 adopts a policy which has general precedents in the case of the Philippine Islands and Puerto Rico in that in those two places, certain taxes were, and in the case of Puerto Rico are, for exactly the same reason as they would be in section 4.

In addition to these general precedents, there are very specific precedents in the case of the Virgin Islands and Guam. In the case of the Virgin Islands, all of the U.S. income taxes collected there are covered into the treasury of the Virgin Islands and held for use in the Virgin Islands.

In the case of Guam, all Federal income taxes are covered into the treasury of Guam and are for use in Guam.

So we are not embarking on anything brand new here.

I make particular note of these precedents only because of the somewhat unusual language of section 4. Actually, the bill by no means grants authority even remotely as broad as the previous acts of Congress relating to the Virgin Islands of Guam. In those cases, the taxes are actually covered into the local treasury. In the case of the Ryukyus, it is our intention only to indicate in a very general way that some funds are generated through income taxes in Okinawa and the Ryukyus and that within clearly defined limitations, a portion of these can be authorized for appropriation to the Ryukyus for use in that area for the purposes stated.

The authority previously granted for Guam and the Virgin Islands is very much broader than the bare basic authority which is being sought here. Appropriations must still be made under the language of section 4 of the bill. Since, as I indicated previously, the committee carefully amended the bill so as to require that the obligation and expenditure of any of the moneys in section 4 shall be "within such limitations as may be provided hereafter in appropriations acts."

Prior to the war, Okinawa and the rest of the Ryukyus were an integral part of Japan. Following Japan's surrender, they were treated as a separate and distinct territory for the purpose of occupancy. And the occupancy was not under allied authority but solely under American authority.

From 1945, when we took Okinawa by conquest, until 1952, our rights and responsibilities were those expressed in the Hague Convention of 1907 and later carried over to the Geneva Convention of 1949.

In 1952, we entered into a peace treaty with Japan. Under article III of that treaty, the United States obtained the right "to exercise all and any powers of administration, legislation, and jurisdiction over the territory and inhabitants" of the Ryukyus. Japan retained only what is called residual sovereignty.

Because the islands are under the jurisdiction of the United States, they do not qualify for the generous benefits provided for free foreign governments under the Mutual Security Acts or other assistance programs. Neither do they receive the benefits which are accorded territorial and insular possessions of the United States.

Because of this peculiar relationship, which I have said is unique, we have assumed rather unusual responsibilities. One of the hardest of these responsibilities to convey as an idea is the importance of providing the Ryukyus with what I will call a reasonably assured source of revenue for necessary works in the islands and thereby give them a reasonably stable economy.

The committee language will have a strong psychological effect in that it will give strong evidence of our intentions to stay in the islands, help the local people, and provide a truly stable economy.

I think it will be of interest to the Members of the House to know that the Comptroller General has expressed his general agreement with the purposes of this bill in his letter dated March 30, 1959, addressed to the chairman of the full committee. The Comptroller General states:

> We agree that legislation such as that contained in H.R. 1157 is desirable in order to provide a basis in law for the programs referred to therein. Furthermore, the provisions of section 3(b) would serve to remove any doubt as to the authority of the United States Civil Administration of the Ryukyu Islands to create corporations wholly or partly owned or controlled by the Civil Administration which might arise by reason of section 304 of the Government Corporation Control Act.

I have already referred to the Comptroller General's other recommendation with respect to insuring his right to audit the accounts of the High Commissioner.

The one objection which the Comptroller General set out in this letter has, I think, been adequately disposed of through the insertion of language in section 4 which renders entirely clear the fact that the Appropriations Committees and the Congress generally will participate actively in any appropriations made for Okinawa and the Ryukyus pursuant to this section.

The bill is a sound one and is one which has been long needed in order to provide a sound legislative basis for our operations in the Ryukyus. I urge prompt and favorable consideration of the bill as a necessary step toward the proper maintenance of what is without doubt the most important military installation of our country in the Far East.

Mr. GROSS. Mr. Chairman, will the gentleman yield?

Mr. PRICE. I yield to the gentleman from Iowa.

Mr. GROSS. The gentleman mentioned residual sovereignty. Does not Japan have residual sovereignty over the Ryukyus?

Mr. PRICE. Yes; it does.

Mr. GROSS. Do we have residual sovereignty over Puerto Rico, the Virgin Islands, and other islands that the gentleman mentioned?

Mr. PRICE. The real point is how long we are going to be in the Ryukyus. The indications are we are going to be in the Ryukyus for many, many years.

Mr. GROSS. But is there a real comparison as between the Ryukyus and the other islands you have mentioned?

Mr. PRICE. At the present time, I would say that there is.

Mr. ARENDS. Mr. Chairman, I yield myself such time as I may desire.

Mr. Chairman, H.R. 1157 has but two purposes. The first of these is to provide clear legislative authority for the retention in the Ryukyu Islands of funds which are today retained in the islands and used for governmental purposes there.

The second purpose which the bill will serve is to provide a legislative basis for the making of appropriations for certain essential programs in the Ryukyu Islands.

Now, what is our interest in Okinawa and the other Ryukyu Islands? Well, it is simply this.

We took Okinawa and the other islands during World War II—took them by combat. At that time, the islands were an integral part of Japan.

At the time of the peace treaty with Japan which was ratified by the Senate on April 28, 1952, Okinawa and the other islands were separated from Japan for all administrative purposes.

Article 3 of the treaty between this country and Japan provided that Japan would concur in any proposal of the United States to the United Nations to place these islands under its trusteeship with the United States as the sole administering authority, and that pending such disposition "the United States will have the right to exercise all and any powers of administration, legislation, and jurisdiction over the territory and inhabitants of these islands."

Under the treaty, Japan did not renounce all right, title, or claim to the islands but it did confer upon the United States what could be called de facto sovereignty.

Ever since that time, there have been really two governments in the Ryukyus. One of them is the GRI, or the Government of the Ryukyu Islands, and the other is our own High Commissioner who is appointed by the Secretary of Defense and who exercises administrative control over the islands.

The Government of the Ryukyu Islands is the local government and is composed completely of people of the Ryukyus.

The GRI is headed by a chief executive who is appointed by the High Commissioner after consultation with representatives of the local legislature. The local legislature consists of a single

House of 29 members who are elected biannually by the various districts in the islands.

Now, the government of the Ryukyu Islands functions in most respects like any local government notwithstanding the fact that the High Commissioner exercises a great deal of veto power over their actions. In the process of running their government, the Ryukyuans, of course, have to provide for the public health, schools, road construction, sanitation, and all of the other things any local government must concern itself with.

In order to carry out these activities, it, of course, must have funds. These funds are derived from the normal sources such as taxes, fees, fines, and such. These will total about $22.5 million for this year. This is their money and they spend it on the governmental functions that I have described.

Now, it is section 2 of the bill which deals with the government of the Ryukyu Islands, the funds which it collects from taxes and so forth and spends for governmental purposes. This money, of course, is all retained in the islands and under the bill will continue to be retained in exactly the same fashion. The reason for section 2 is to give sound legislative authority for the situation which presently exists under the authority of the treaty with Japan. Section 2 does not change anything. It merely gives an existing situation a firm basis in legislative authority.

Section 3 of the bill deals with what I will call the extension of our own Government in the Ryukyus. This is the government headed by the High Commissioner who is also the military commander. His organization also derives certain funds from its governmental activities. These activities are set out in section 3 and include public benefit trusts, business type operations, corporations, fines, fees, and so forth. These will total about $3 million this year.

Now, these funds—except for about $50,000—are today retained in the Ryukyus and are used for those aspects of the High Commissioner's governmental operations.

So, again, section 3, except in a very minor respect, relating to about $50,000 a year, does not change the existing situation at all but does in this instance, too, give a sound legislative basis for a situation which has existed many years. Here, also, the source of the authority so far has been the treaty between our Government and Japan.

Section 4 of the bill, although it might appear on its face to be somewhat unusual, is nothing but legislative authority which will serve as a basis for the making of appropriations by the Congress in an amount not to exceed $6 million each year for the purposes enumerated in the bill itself. That is to say, promoting the economic development of the islands, reimbursing the government of the Ryukyu Islands for services performed for our Armed Forces, and emergency purposes relating to typhoons or other disasters in the islands.

Now, that is all that the bill does. It merely provides sound, well considered basic authority for what is going on today on the one hand and providing clear legislative authority for the making of appropriations for the purposes I have just described.

I have thought it unnecessary to deal with our prime interest in Okinawa and the other islands since this is a matter well known to the Members of this House. It is our most important military base in the Far East and one in which we have invested a very great amount of money. We have been there for a good many years and we will be there for a good many more years to come. Everyone from the President down agrees to this fact and for those who would wish to see from official statements to this effect, I will refer them to pages 9, 10, and 11 of the committee report which provides abundant support for our continued tenure in that part of the world.

This bill is wholly sound legislation and has the approval of the responsible civilian and military officials of the Department of Defense and of the Bureau of the Budget.

I urge support of this bill as one additional step toward the maintenance of our defensive and offensive military power in the Far East.

Mr. PRICE. Mr. Chairman, I yield 5 minutes to the gentleman from North Carolina [Mr. DURHAM], the chairman of the committee that handled this legislation.

Mr. DURHAM. Mr. Chairman, I do not intend to use the 5 minutes because the bill has been well explained by the two gentlemen from Illinois.

When this bill came to our subcommittee I was a little bit worried about it, but the committee went into it thoroughly. After studying it, I felt that it was something that should have been done several years ago because under the present procedure, as you can see from reading the bill and the report and the hearings, they are using these funds received from taxes, fines, and forfeitures without authority from the Congress or without any auditing by the General Accounting Office. This bill requires that they get authority from the Appropriations Committee and it also requires auditing by the General Accounting Office.

The income from these funds runs to something like $9 million a year. Of course the people out there wanted, I believe, $7 or $8 million. We authorized $6 million and put the control back in the hands of the Congress, where it should have been in the beginning. Not only does this have to be handled by the Committee on Appropriations but also checked by the General Accounting Office, which is nothing but sound procedure.

If you will refer to the map on the back of the report and look at the position of Okinawa and the Ryukyus and their strategic position, I believe you will agree that they are the most important islands we are holding today in this troubled world. I do not think we can change that very much at the present time.

Another important factor is that this particular area has the highest density of population of any place in the world. I believe it is 1,000 people or more to every square mile, which is a very high density of population in a section like that. So it is important that we try to stabilize and at least help them as much as they were helped by the Japanese Goverment, because they were appropriating money there to take care of the population before we ever took the islands. So in effect it is what has been done there for many years.

If you will look at the hearings at page 3997, you will notice this is one place that we have been reducing the cost. It has gone down and down every year. We are not spending anywhere near the $6 million and we will not spend that this year. I believe it is something like $1,500,000 or $2 million this year that has been agreed to by the High Commissioner and the authorities there to be spent. So, all in all, I think this bill is a good bill. I think it is a sound measure and one that is in the interest of our national security. We feel this is the right thing to do in the treatment of these people. Also, I think in the long run we are getting out much cheaper than we are getting out in many other parts of the world. The people are growing in stability and they are growing in economic wealth. They are trying to do something and they are doing something. I believe their total budget expenditure runs to something like $30 million a year.

Mr. ARENDS. Mr. Chairman, I yield 5 minutes to the gentleman from Iowa [Mr. GROSS].

Mr. GROSS. I would like to ask the gentleman from Illinois, Do I understand correctly that the Ryukyu Islands are being administered under a United Nations trusteeship?

Mr. PRICE of Illinois. No. They are being administered by the United States.

Mr. GROSS. Does the United Nations have anything to do with the administration of the Ryukyus?

Mr. PRICE. No.

Mr. GROSS. I thought somebody said the United Nations was involved.

Mr. PRICE. You may be referring to the statement in the report on the bill which reads as follows:

> Under the terms of article 3 of the treaty, Japan agreed that it would concur in any proposal of the United States to the U.N. to place these islands, as well as certain others, under its trusteeship with the United States as sole administering authority and that pending such disposition "the United States will have the right to exercise all and any powers of administration, legislation and jurisdiction over the territory and inhabitants of these islands."

Mr. GROSS. What have we been paying for the administration of the Ryukyus out of the U.S. Treasury?

Mr. PRICE. Since 1947 we have been appropriating as high as $50 million, down to a million dollars a year.

Mr. GROSS. Is that for the civil administration of the islands?

Mr. PRICE. Yes, and all the matters connected with such administration.

Mr. GROSS. Does that include the building of a powerplant, or was there anything extraordinary involved in the way of expenditure where the figure was $50 million?

Mr. PRICE. This is all for the purposes set out in the bill, including "promoting the economic development of the Ryukyu Islands and improving the welfare of the inhabitants thereof; reimbursing the government of the Ryukyu Islands for services performed for the benefit of and by reason of the presence of the Armed Forces of the United States within the Ryukyu Islands, including but not limited to reimbursement for such services in the fields of public health and safety," and so on.

Mr. GROSS. This is interesting. How did that come from $50 million down to $1 million?

Mr. PRICE. Immediately after the war great expenditure had to be made because of the great devastation there.

Mr. GROSS. In other words, the tax revenue from the natives or local citizens has increased to make up the difference?

Mr. PRICE. That is part of it.

Mr. GROSS. Where else do we divert income tax money as proposed in this bill?

Mr. PRICE. I have a whole list of places here. We did it in the Philippines; we do it in Puerto Rico, the Virgin Islands, Guam, Samoa, and we do it in many other instances. There are at least 20 or 25 instances where we have done it. They are fully listed in the report and in the hearings on this bill.

Mr. GROSS. We have sufficient American citizens there to accumulate $6 million in Federal income taxes?

Mr. PRICE. They collect more than that; they collect on an average of $9 million a year in income taxes alone.

Mr. GROSS. That is paid mostly by military personnel, is it not?

Mr. PRICE. Almost all. There are a few American businessmen there, but mostly it is military.

Mr. GROSS. There are more people there than I suspected.

Mr. PRICE. Yes; it is one of our biggest and most important installations in the Far East.

Mr. DURHAM. Mr. Chairman, will the gentleman yield?

Mr. GROSS. I yield.

Mr. DURHAM. I would remind the gentleman that this bill provides a sound legislative basis for our operations in the Ryukyus. This bill also places a limit of $6 million on any annual appropriation; they cannot exceed that.

Mr. GROSS. Then do I understand correctly that the expenditures must be approved by the Appropriations Committee?

Mr. DURHAM. That is correct; we appropriate it here in Congress, and the authorization for that is in this bill.

Mr. GROSS. There is no other way by which the appropriations can be made?

Mr. DURHAM. No; and the activities dealt with in section 3 have to be audited by the General Accounting Office, I might mention.

Mr. ARENDS. Mr. Chairman, I have no further requests for time.

Mr. PRICE. Mr. Chairman, there are no further requests for time on this side.

The CHAIRMAN. There being no further requests for time, the Clerk will read the bill.

The Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, in the exercise by the President of the authority over the Ryukyu Islands granted the United States by article 3 of the treaty of peace with Japan, every effort shall be made to improve the welfare and well-being of the inhabitants of the Ryukyu Islands and to promote their economic and cultural advancement, during such time as the United States continues to retain authority over the Ryukyu Islands.

SEC. 2. All fines, fees, forfeitures, taxes, assessments, and any other revenues received by the Government of the Ryukyu Islands shall be covered into the treasury of the Ryukyu Islands and shall be available for expenditure by the Government of the Ryukyu Islands.

SEC. 3. Revenues derived by the United States civil administration of the Ryukyu Islands from the following sources shall be deposited in separate funds, which are hereby authorized to be established by the High Commissioner of the Ryukyu Islands, and shall be available for obligation and expenditure in accordance with annual budget programs approved by the President:

(a) Public-benefit trusts, business-type operations, funds, and enterprises established by the civil administration of the Ryukyu Islands, or its predecessor agencies;

(b) Corporations wholly or partly owned by the civil administration of the Ryukyu Island; and

(c) Fines, fees, and forfeitures received by the civil administration of the Ryukyu Islands.

SEC. 4. Beginning with the fiscal year ending June 30, 1960, and annually thereafter, the Secretary of the Treasury shall ascertain, from information furnished by the High Commissioner of the Ryukyu Islands, the amount of Federal income taxes withheld at the source during the fiscal year, under the internal revenue laws of the United States, from persons stationed or employed in the Ryukyu Islands. An amount equivalent to that so determined, less the estimated amount of refunds and credits, and not to exceed $6,000,000 in any fiscal year, is hereby appropriated to the High Commissioner of the Ryukyu Islands. Such appropriations shall be credited to a separate account to be established by the High Commissioner of the Ryukyu Islands, and shall be available for obligation and expenditures, in accordance with programs approved by the President, for: (a) promoting the economic development of the Ryukyu Islands and improving the welfare of the inhabitants thereof; (b) reimbursing the Government of the Ryukyu Islands for services performed for the benefit of and by reason of the presence of the Armed Forces of the United States within the Ryukyu Islands, including but not limited to reimbursement for such services in the fields of public health and safety, in annual amounts which may be paid in advance to the Government of the Ryukyu Islands; and (c) emergency purposes related to typhoons or other disasters in the Ryukyu Islands. Preference shall be given to programs in which the Government of the Ryukyu Islands participates by sharing part of the costs of contributing other resources. Any unobligated balance in the account in excess of $6,000,000 at the end of any fiscal year shall be transferred and paid over to the United States Treasury as miscellaneous receipts.

SEC. 5. There are hereby authorized to be appropriated by the Congress of the United States such sums as may be necessary and appropriate to carry out the provisions and purposes of this Act.

SEC. 6. The term "Ryukyu Islands," as used in this Act, means Nansei Shoto south of twenty-nine degrees north latitude, excluding the islands in the Amami Oshima group with respect to which all rights and interests of the United States under article 3 of the Treaty of Peace with Japan have been relinquished to Japan.

SEC. 7. Nothing in this Act shall be construed to extend the application of any law of the United States to the Ryukyu Islands which would not otherwise be applicable there.

With the following committee amendments:

On page 3, line 2, strike the word "appropriated" and insert the words "set aside".

On page 3, line 3, strike the word "appropriations" and insert the word "credits".

On page 3, line 4, strike the words "credited to" and insert the words "kept in".

On page 3, line 6, following the comma after "expenditure" insert the following: "within such limitations as may be provided hereafter in appropriations acts".

On page 3, line 20, strike "of" and insert "or".

Page 4, following line 12, insert a new section 8 as follows:

"SEC. 8. All financial transactions of the United States civil administration of the Ryukyu Islands, including such transactions of all agencies or instrumentalities established or utilized by such administration, shall be audited by the General Accounting Office in accordance with the provisions of the Budget and Accounting Act, 1921, as amended, and the Accounting and Auditing Act of 1950, as amended. The representatives of the General Accounting Office shall have access to all books, accounts, records, reports, files, and all other papers, things or property belonging to or in use by such administration, agencies or instrumentalities, and necessary to facilitate the audit. This section does not apply to the Government of the Ryukyu Islands."

The committee amendments were agreed to.

The CHAIRMAN. Under the rule, the Committee rises.

Accordingly, the Committee rose; and the Speaker having resumed the chair, Mr. JONES of Missouri, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee having had under consideration the bill (H.R. 1157) to provide for promotion of economic and social development in the Ryukyu Islands, pursuant to House Resolution 533, he reported the bill back to the House with sundry amendments adopted by the Committee of the Whole.

The SPEAKER. Under the rule the previous question is ordered.

Is a separate vote demanded on any amendment? If not, the Chair will put them en gros.

The amendments were agreed to.

The SPEAKER. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time and was read the third time.

The SPEAKER. The question is on the passage of the bill.

The bill was passed, and a motion to reconsider was laid on the table.

GENERAL LEAVE TO EXTEND REMARKS

Mr. PRICE. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to extend their remarks on the bill just passed.

The SPEAKER. Is there objection to the request of the gentleman from Illinois?

There was no objection.

BENT'S OLD FORT

Mr. ASPINALL. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the further consideration of the bill (H.R. 6851) authorizing the establishment of a national historic site at Bent's Old Fort near La Junta, Colo.

The motion was agreed to.

Accordingly, the House resolved itself into the Committee of the Whole House on the State of the Union for the further consideration of the bill (H.R. 6851) with Mr. EVINS in the chair.

The Clerk read the title of the bill.

The CHAIRMAN. When the Committee rose on Thursday, May 19 last, the committee amendment had been agreed to and all debate under the 5-minute rule on the bill and all amendments thereto was limited to 10 minutes.

The Chair recognizes the gentleman from Colorado [Mr. ASPINALL].

Mr. ASPINALL. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, this is legislation that would authorize the addition of Bent's Old Fort as a historic site of the national park system. This project has been given satisfactory approval by those having the responsibility for determining the values of such historic places. They have suggested that the legislation is worth while and that this particular facility would fit nicely into our national park system. We debated the legislation at some length last Thursday. I sincerely hope that the bill receives the approval of the House.

Mr. CHENOWETH. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, this bill which establishes Bent's Old Fort as a national historic site is a meritorious bill. This legislation has a favorable report from the Department of the Interior, and was unanimously reported by the Subcommittee on Public Lands, and by the Interior and Insular Affairs Committee.

Mr. Chairman, this site was checked by the Advisory Board on National Parks, Historic Sites, Buildings, and Monuments, and was approved by the Board for designation as a national historic site. As I mentioned in the debate on this bill last week, I feel that Bent's Old Fort has such historical significance and importance that it is entitled to this consideration.

I have tried to make it clear, Mr. Chairman, that it may be possible for the Federal Government to acquire the additional land adjacent to the site without cost. I shall certainly do what I can to obtain this land for the National Park Service without expense to the Government.

I again urge the House to pass this bill.

The CHAIRMAN. The time of the gentleman from Colorado has expired.

Mr. GROSS. Mr. Chairman, a parliamentary inquiry.

The CHAIRMAN. The gentleman will state it.

Mr. GROSS. Has all time expired on this bill?

The CHAIRMAN. All time has expired, and, under the rule, the Committee will rise.

Accordingly the Committee rose; and the Speaker having resumed the chair, Mr. EVINS, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the bill H.R. 6851, pursuant to House Resolution 509, he reported the bill back to the House with an amendment adopted by the Committee of the Whole.

The SPEAKER. Under the rule, the previous question is ordered.

The question is on the amendment.

The amendment was agreed to.

The SPEAKER. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time, and was read the third time.

The SPEAKER. The question is on the passage of the bill.

The question was taken; and the Speaker announced that the ayes appeared to have it.

Mr. GROSS. Mr. Speaker, I object to the vote on the ground that a quorum is not present, and make the point of order that a quorum is not present.

The SPEAKER. Under the unanimous-consent agreement previously made in the House, further proceedings on this bill will go over until Wednesday.

Does the gentleman insist on his point of order under those circumstances?

Mr. GROSS. Yes, Mr. Speaker; I insist on the point of order.

The SPEAKER. Did the gentleman just make the point of order that a quorum is not present?

Mr. GROSS. I am objecting to the vote on the ground that a quorum is not present and make the point of order that a quorum is not present.

Mr. HOFFMAN of Michigan. Mr. Speaker, a parliamentary inquiry.

The SPEAKER. The gentleman will state it.

Mr. HOFFMAN of Michigan. There is no unanimous consent that we do not have a yea-and-nay vote on it; is there?

The SPEAKER. There has been such in the House.

Mr. HOFFMAN of Michigan. In the House?

The SPEAKER. Yes.

Mr. HOFFMAN of Michigan. Well, I understood that applied only to a certain day. I did not understand it applied forever, to all yea-and-nay votes.

The SPEAKER. The unanimous-consent agreement was entered into late last week that that would obtain today and tomorrow.

Mr. HOFFMAN of Michigan. That is to say, there is no way to get a yea-and-nay vote on any of these bills if they come up today?

The SPEAKER. Not today.

Mr. HOFFMAN of Michigan. Or tomorrow?

The SPEAKER. Or tomorrow.

Mr. HOFFMAN of Michigan. Well, that is certainly a strange sort of unanimous-consent proposition.

The SPEAKER. Does the gentleman from Iowa [Mr. GROSS] withdraw his point of no quorum?

Mr. GROSS. No, Mr. Speaker; I object to the vote on the ground that a quorum is not present.

The SPEAKER. Under previous order of the House, the vote will go over until Wednesday. If the gentleman insists on his point of order of no quorum, it will have no effect except to get a quorum, but there will not be any vote on the bill.

Mr. GROSS. With that understanding, Mr. Speaker, I withdraw my point of no quorum.

LAND TO CASTILLO DE SAN MARCOS NATIONAL MONUMENT, FLA.

Mr. ASPINALL. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the further consideration of the bill (H.R. 8226) to add certain lands to Castillo de San Marcos National Monument in the State of Florida.

The motion was agreed to.

Accordingly, the House resolved itself into the Committee of the Whole House on the State of the Union for the further consideration of the bill H.R. 8226, with Mr. EVINS in the chair.

The Clerk read the title of the bill.

The CHAIRMAN. When the Committee rose on Thursday last, May 19, committee amendments had been agreed to. All debate on the bill and all amendments thereto were limited to 5 minutes.

The Chair recognizes the gentleman from Colorado [Mr. ASPINALL].

Mr. ASPINALL. Mr. Chairman, I move to strike out the requisite number of words.

Mr. Chairman, this bill refers to improvements in one of our best and most visited facilities of the National Park Service. The old fort at St. Augustine, Fla., is involved. The proposed improvements are necessary so that the old and renewed place can be visited easily and receive the attention by the visiting public that it deserves. This legislation is necessary and timely. I trust that my colleagues will give their unanimous support to the legislation.

The CHAIRMAN. All time has expired. Under the rule, the Committee rises.

Accordingly, the Committee rose; and the Speaker having resumed the chair, Mr. EVINS, Chairman of the Committee

of the Whole House on the State of the Union, reported that that Committee, having had under consideration the bill (H.R. 8226) to add certain lands to Castillo de San Marcos National Monument in the State of Florida, pursuant to House Resolution 510, he reported the bill back to the House with sundry amendments adopted by the Committee of the Whole.

The SPEAKER. Under the rule, the previous question is ordered. Is a separate vote demanded on any amendment? If not, the Chair will put them en gros.

The amendments were agreed to.

The SPEAKER. The question is on engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time, and was read the third time.

The SPEAKER. The question is on passage of the bill.

The bill was passed.

A motion to reconsider was laid on the table.

INACCURATE STATEMENTS ON FOREIGN AID APPROPRIATION BILL

Mr. PASSMAN. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from Louisiana?

There was no objection.

Mr. PASSMAN. Mr. Speaker, an editorial and a news feature article published in this morning's issue of the Washington Post and Times Herald make such inaccurate and distorted statements relative to me with reference to the appropriation for foreign aid—and at a time when truth and objectivity are especially needed in dealing with public affairs—that I believe it is well for me to remind the House at this time that these misrepresentations are groundless, completely without foundation in fact.

I have for a number of years been, and now am, the target of a barrage of uninformed attacks and unwarranted pressures, emanating from many and varied sources, both from within and from without the Government. So I say to you now that I can, and will, prove the validity of my stand—even to the doubting ones, if they will only listen—when the foreign aid appropriation bill for fiscal 1961 is brought to the House floor.

My position on foreign aid needs no defense; it needs only to be understood. I have lived with this monstrosity as chairman of the subcommittee handling the money bill for 6 turbulent years, and for 2 additional years prior to that as a member of the subcommittee. If those in high authority would only find the time to listen patiently, with open minds, while unrefuted facts are revealed, they would then readily admit that the amount of funds requested should be drastically and permanently reduced.

There are numerous instances in which we are now supporting governments that are operating with substantial surpluses; and the only justification offered is that we are giving this money not for economic reasons, but for political purposes. It is admitted that we are being subjected to political blackmail.

Many programs and literally hundreds of projects are being started for which no testimony has ever been presented, justification made, or authorization given by or before the committees of the Congress. Some of these undertakings commit us as far ahead as 1975 with obligations which, if carried to a conclusion, would require the expenditure of tens of billions of dollars.

When the bill is brought to the House floor for debate, I will do my best to acquaint the Members and the public with as many phases as I can, within the time limitations, of many of the deplorable conditions prevailing. Meantime, I urge that the Members personally study the thousands of printed pages of the record of our subcommittee's hearings, copies of which should be available by month's end.

There is nothing personal, Mr. Speaker, about my efforts to reduce the spending for foreign aid which, in all of its phases, is costing our country considerably more than $10 billion a year; but I am convinced that just as surely as night follows day, this program will wreck the economic structure and future well-being of our Nation if allowed to continue unchecked and uncontrolled. My conclusions are based upon factual evidence, and not the unsupported wishes of dreamers and schemers.

I stand on this statement, and can prove its validity. I am confident that I will so prove it when the bill is considered by the House.

May I request your further indulgence in order to express my belief that as long as there is world tension there will be incidents which cause emotional upsets. The knowledge that this is so should fortify us, I believe, in our position that unjustified, unproductive funds, wastefully used, should not be provided for worldwide spending programs. We should guard at all times, and particularly so now, against letting our emotions commit us to poorly planned and unrealistic undertakings.

FEDERAL AID TO EDUCATION

Mr. MATTHEWS. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD and to include extraneous matter.

The SPEAKER. Is there objection to the request of the gentleman from Florida?

There was no objection.

Mr. MATTHEWS. Mr. Speaker, once again the question of Federal aid for education has been brought to a focal point of attention. As in past years, there are many individuals and groups pressuring the Congress to enact legislation and appropriate large sums for aid to our public schools. And, as in past years, their thesis is that problems which now face American education are of such magnitude that they can be solved only by a substantial investment of Federal money.

The matter has been discussed and legislation attempted at several sessions since I came to Congress in 1953. I shall not attempt to enumerate the bills that have been proposed in past sessions, before or since I came to Congress, nor shall I cite their fate. Suffice to say that several hundred bills were introduced over the period from 1871 to 1949, to authorize Federal financial assistance for the general support of elementary and secondary schools. A few succeeded in passing either the Senate or the House, but none was ever enacted into law. In more recent years, the Federal aid bills have shifted emphasis to school construction. This is true of H.R. 10128 soon to be considered by the House. If enacted, this would serve only as a prelude to additional Federal aid for teachers' salaries and other educational purposes. In fact, during this session, the Senate passed, on February 4, S. 8, an act "to authorize Federal financial assistance for school construction and teachers' salaries" following almost 3 days of continuous debate, and this bill is now before the House Committee on Education and Labor. One need only read the CONGRESSIONAL RECORD of February 2, 3, and 4 to see the interest and diversity of opinion which the question of Federal aid to education has aroused in the other body. The matter is of equal interest in the House, where we are now ready to consider same.

Emerging from the testimony to date on this very important subject is the fact that proponents and opponents of Federal aid for education equally share the desire for a public school system in America which shall be second to none. The method of securing and maintaining such a system seems to be the very crux of the question. There are wide variations as to the extent of need.

Proponents of Federal aid urge forcefully that only by substantial Federal grants can the Nation's schools be maintained and prepared to serve the present generation adequately while readying future generations for their respective responsibilities in a space age.

Mr. Chairman, I propose, if given the opportunity when we discuss H.R. 10128, to offer an amendment which I believe would provide substantial assistance to the schools of our Nation and which would eliminate once and for all the threats implied by and inherent in Federal control of an educational system.

My amendment is as follows:

Strike out all after the enacting clause and insert the following: "That 1 per centum of all income taxes collected on individual and corporate income under Federal statutes shall be deemed to be revenue for the State or Territory within which it is collected, for use, for educational purposes only, without any Federal direction, control, or interference.

"SEC. 2. District directors of internal revenue are hereby authorized and directed to transfer to the treasurer, or corresponding official, of the State or Territory within which their respective internal revenue districts are situated, at the end of each quarter, an amount equal to 1 per centum of the taxes from individual and corporate income collected within such State or Territory during said quarter.

"SEC. 3. For purposes of information only, district directors of internal revenue shall report the amounts transferred to State treasurers, or corresponding officials, as authorized in section 2, to the Department of the Treasury, accompanying such report with receipts from the proper State officials verifying the amounts received."

I consider myself among those who have an overwhelming fear of Federal control of education. It is my sincere belief that magnificent progress has been made in the past decade to overcome deficiencies that developed in our public school system over the war years, and I believe we have the most all-inclusive and representative system of education in the world. Having said this, I would add that there is still room for improvement, and that improvement lies in avenues which finances alone cannot reach.

This Congress, in my opinion, must act wisely in the evolution of Federal aid programs, and must look beyond immediate education needs into the far future. Such a forward look can reveal only one picture if we promote an unwise program of Federal financing of education: there will inevitably follow a gradual loss of State and local responsibility for the schools, with a consequent gradual gain of control over the schools and their programs by a centralized body.

In laying the predicate for my amendment, I should like to review as briefly as possible some of the more controversial aspects of the question of Federal aid for educational purposes so that it may be clearly seen in what respects my proposal differs from others that have been introduced on this important subject, and the manner in which I believe hitherto irreconcilable issues may be reconciled.

Among the first questions raised in regard to Federal aid to education are:

First. What is the extent of Federal responsibility for education under the provisions of the U.S. Constitution?

Second. What is the extent of State responsibility under the State constitution?

Third. What precedent do we have for or against Federal aid for educational purposes?

First. Answering the first of these questions, there is nothing in the U.S. Constitution which makes education a Federal function. We are a Nation of 50 sovereign and independent States operating under a Constitution which reserves to them or the people thereof all powers not delegated to the Central Government. To embark on a program of Federal subsidization of education is tantamount to abandoning the principle of States rights and ignoring the constitutional provision that "powers not delegated to the United States by the Constitution, nor prohibited by it to the States are reserved to the States, respectively, or to the people."

Second. Nearly all State constitutions have education clauses making public education the concern and responsibility of the State and local communities thereof.

Third. Proponents of Federal aid support their views by pointing to "historical precedents" for such action including the passage of the Morrill Land-Grant College Act; the Smith-Hughes Act for vocational education; the national school lunch program; assistance to schools in federally impacted areas; the GI bills for World War II and Korean war veterans; and, more recently, the National Defense Education Act. They argue that these programs have operated with a minimum of Federal control and with maximum efficiency and contend that the principle for Federal educational aid having already been established, the enactment of additional legislation at this time looking toward alleviating the national education needs would in no way violate our Constitution nor invite Federal controls with unfavorable consequences.

What the proponents fail to observe is that the foregoing programs have not been related to general education, but rather to grants of land or money for the development of certain study areas, for child health programs, or to fulfill definite responsibilities which were a direct result of Federal activity. The Federal Congress has resisted for nearly a century other types of Federal aid legislation which might directly or indirectly influence the minds and thinking of American youth. In this respect, I fervently pray that the Congress will continue to resist.

Next, we come to questions relating to the financing of school needs such as, first, do the States have the fiscal capacity to take care of school needs?

Second. What resources does the Federal Government have which are beyond the reach of the States?

Third. Which has expanded its indebtedness and tax collection more within the past 30 years—the Federal Government or the State and local governments?

First. In response to the first question, proponents of Federal aid claim that schools are woefully underfinanced and that States and local communities are either unwilling or cannot provide adequate taxation to meet ever-growing needs; that only by intervention of the Federal Government, with its superior taxing powers, will a sufficient share of the Nation's income be allocated to educational needs, and thus avert a national calamity.

Recent statistics of the U.S. Office of Education show that in the past two decades enrollments in educational institutions increased 56 percent while educational expenditures increased 642 percent. In considering these figures we must be mindful of the fact that during the period prices more than doubled, but even then a 56 percent enrollment was accompanied by an increase in educational expenditures of 253 percent computed in dollars of constant purchasing power. The comparative tabulation follows:

Educational expenditures and enrollment, 1940–60

School year	Expenditures	Enrollment
	Thousands	
1939–40	$3,199,593	29,751,203
1949–50	8,795,635	31,319,271
1955–56	16,811,651	39,103,059
1959–60	24,000,000	46,480,000
	Percent	*Percent*
Increase, 1940–60	642	56

The percent of national income devoted to education has increased from 3.7 percent in 1930 to 6 percent in 1960, with expenditures for education increasing from $3.2 billion for the school year 1929–30 to $22 billion for the school year 1958–59, a net increase of 580 percent. By contrast, national income increased for the same period from $87.8 billion to $366.2 billion, a net increase of 317 percent. The comparative tabulations follow:

Educational expenditures and national income, 1929–58

	Calendar year 1929 or school year 1929–30	Calendar year 1958 or school year 1958–59	Increase
Expenditures for education	*Billions* $3.2	*Billions* $22.0	*Percent* +580
National income	87.8	366.2	+317
Educational expenditures as percent of national income	*Percent* 3.7	*Percent* 6.0	

These figures would seem to indicate an almost phenomenal support of education according to our traditional State and local pattern. Since the end of World War II, the American people have spent $19 billion for public-school buildings. They have spent this, moreover, with very little Federal aid—only $300 million, or less than 2 percent, has been provided by the U.S. Government, which has gone largely for buildings in federally impacted areas.

I am exceedingly proud of the achievements of my own State of Florida where great educational gains have been noted along with other types of growth. I should like to insert in the RECORD a table showing the expenditures of the State of Florida for public education from kindergarten to 2 years on the junior college level, from 1955–56 to 1958–59, and estimates for the biennium 1959–61. The figures show that State and county expenditures for public schools in 1956 amounted to nearly $185 million whereas the estimated expenditures for 1961, that is the last year of the biennium, will be approximately $374 million. You will note that in a period of 5 years the expenditures have doubled. I say this is a remarkable record. This is a record that shows how my great State of Florida has decided, in every way it knows how, to accept its just and proper responsibility in the field of public education. I am sure most of the other States have a comparable significant record of achievement.

State of Florida: State and county expenditures for public schools (grades K–14) 1955–56 to 1958–59 and estimates for the biennium 1959–61

	Actual expenditures				Appropriations and estimated expenditures	
	1955–56	1956–57	1957–58	1958–59	1959–60	1960–61
Operations:						
Minimum foundation program, public schools:						
Instructional salaries	$73,494,358	$80,050,317	$104,251,934	$106,391,602	$118,423,914	$128,392,813
Transportation	3,808,810	3,901,858	4,230,371	4,276,402	4,298,605	4,525,933
Other current expense	7,349,426	7,977,906	8,872,721	11,866,435	9,950,475	10,761,663
Total, minimum foundation program, public schools	84,652,594	91,930,081	117,355,026	122,534,439	132,672,994	143,680,409
Minimum foundation program, junior colleges:						
Instructional salaries	(1)	(1)	1,090,049	1,925,259	2,924,117	3,813,900
Other current expense	(1)	(1)	187,513	350,630	477,415	622,931
Total, minimum foundation program, junior colleges	(1)	(1)	1,277,562	2,275,889	3,400,532	4,436,831

Additional county effort	61,908,409	72,214,290	85,485,294	98,530,305	117,537,462	127,691,207
Total, county effort	83,585,798	95,382,245	111,571,361	130,000,000	156,000,000	170,000,000
Total, support of Florida public schools and junior colleges	184,788,323	202,146,089	277,823,770	301,859,021	351,577,895	373,690,586

[1] Junior college funds were included in minimum foundation program-public schools calculations prior to 1957–58.
[2] For biennium.

Source: Budget Director's Office, July 7, 1959.

The State superintendent of public instruction for Florida, in commenting on the 1959 legislative actions, stated:

Financing of public schools was given top priority throughout the session, and an examination of the entire scope of the legislative action pertaining to public schools indicates that education received fair and equitable treatment by the 1959 legislature. The needs of grades 1–12 in the minimum foundation program were met in full, as requested and estimated by the State department of education. No program was eliminated and no program was cut below its current level.

State matching funds for school construction were increased. Additional construction was provided for existing community junior colleges and provision was made for starting needed new community junior colleges * * *.

Allocation of teacher training scholarships was placed on an up-to-date enrollment basis. The summer enrichment program was broadened to include the teaching of academic subjects * * *.

And, equally as important, no legislation which would be considered harmful or detrimental to the future of the public free school system was enacted into law.

To the above, I should like to add that the combined annual budgets for the institutions of higher learning in the State of Florida for the identical periods increased commensurately, as shown by the following figures:

The combined operating expenditures of State supported institutions of higher learning for 1955–56 amounted to $28,194,172. Budgeted for 1960–61 are $50,525,884, an overall increase of $22,331,712. These figures are exclusive of auxiliary enterprises, debt service on revenue certificates or building construction. This is nearly a 90 percent increase in 4 years.

Second. The second portion of the larger question of finances relating to resources of the Federal Government may be answered simply: The Government, of itself, has no funds beyond those which it extracts from taxpayers. Federal aid would merely mean a substitution of the tax collecting power from the States and/or local governments to the Central Government. All money comes from taxpayers.

Third. In regard to the third phase of the question, namely, "which has expanded its indebtedness and tax collection more in recent years—the Federal or State and local governments?" comparative data indicate that Federal taxes increased more steeply, are now leveled at far higher rates, and have become more burdensome than State and local taxes.

Federal taxes multiplied 20 times between 1927 and 1958, State and local taxes 5 times. The following figures illustrate the relative increase:

Federal, State, and local taxes for the period 1927–58

	Federal taxes	State and local taxes
	Billions of dollars	
1927	$3.4	$6.1
1958	68.0	30.4

Federal, State, and local taxes for the period 1927–58—Continued

	Federal taxes	State and local taxes
	Percent of national income	
1927	4.1	7.4
1958	18.6	8.3

Source: U.S. Bureau of the Census, "Historical Summary of Governmental Finances in the United States, 1959"; "Governmental Finances in 1958, 1959."

And the following table illustrates the relative debt situation:

Federal, State, and local debt for the period 1927–58

	Federal debt	State and local debt
	Billions of dollars	
1927	$18.5	$14.9
1958	276.4	58.2
	Percent of national income	
1927	22.6	18.2
1958	75.5	15.9

Source: "Federal Debt," report of the Secretary of the Treasury for 1958. "State and Local Debt," American Enterprise Association, Inc., Report No. 1, Jan. 15, 1960, pp. 32–33.

In brief, the Federal debt multiplied 15 times between 1927 and 1958, the State and local debt only 4 times. State and local debt declined as a percent of na-

tional income while the burden of the Federal debt multiplied more than three times.

It is claimed that the national debt of the United States now exceeds the combined national debts of all the nations of the world. Under the circumstances, Mr. Chairman, it would seem the height of folly to add to the tax burden of the Nation at this time. We should all bear in mind this statement by Chief Justice Marshall:

The power to tax is the power to destroy.

Closely allied to the foregoing major points in the general discussion of finances is this: Is resistance to higher taxes caused by the increasing burdens of Federal taxes or of State and local taxes?

The heavy burden of Federal taxes has certainly adversely affected the fiscal capacity of State and local governments. Federal taxes have preempted the tax field and severely limited the income of State and local governments. As verification for this statement, I call attention to the results of a questionnaire sent out in May 1959 by Hon. CLEVELAND M. BAILEY, chairman of the subcommittee of the House Committee on Education and Labor, to Governors of States and territories, in conjunction with the committee's consideration of H.R. 22, School Support Act of 1959. The questionnaire and replies formed a supplemental committee report on H.R. 22. Five questions were asked by the chairman which were deemed pertinent to the problem of financing education. In my opinion, and in the opinion of some of the recipients, they were leading questions premised on the assumption and anticipated conclusions that most of the States would declare their dependency on Federal aid for their educational programs. Three items in particular were stressed in the general accompanying letter:

First. That there seems to be a consensus in the country today concerning "national goals in school financing."

Second. That the States are already straining their tax resources to meet current needs.

Third. That increasing taxpayer resistance means a Federal program to equalize the tax burden at the national level is indispensable.

The five questions propounded are these:

1. Considering the political realities in your State, do you consider it likely or unlikely that the combined efforts of your State legislature and local school districts will increase school appropriations to the point that your State will come reasonably close to the national goals outlined above by the Secretary of Health, Education, and Welfare, and the Rockefeller brothers report?

2. Does taxpayer resistance to increased school taxes seem to be increasing or diminishing in your State?

3. Is it realistic to look for increases of at least 5 percent each year in school appropriations by the State legislature during your term of office?

4. Judging by the performance of your legislature during the past 4 years could you predict the percentage that schoolteachers' salaries will be increased in your State in the next 5 years?

5. The following conclusion appeared in the Rockefeller report: "It is the weakness in the State and local taxing systems more than anything else that gives rise to current proposals for increased Federal support of education. For those who wish to resist or postpone the resort to Federal funds and at the same time not constrict educational services there seems to be only one alternative: a thoughtful, painful, politically courageous overhaul of State and local tax systems." Is such overhaul presently under way in your State?

We are interested in all of these questions, but primarily interested at this point in question No. 2. Many of the Governors quickly distinguished between "taxpayer resistance to increased taxes" as such, and "taxpayer resistance to increased taxes for school purposes." Many acknowledged an increased resistance to all types of taxation, but not specifically to school taxation. When citizens understood the needs for school programs, they generally favored school taxes. The only fly in the ointment seemed to be the dearth of local taxes by virtue of the more lucrative sources of taxation having been usurped by the Federal Government.

Now let us take a look at the interest in and need for so-called Federal aid for education, as well as the financial picture with respect to schools, coming directly from the heads of States, that is, the Governors or their spokesmen.

Nine of those addressed did not even reply. Most of the replies—a total of 25—were noncommittal, merely giving a résumé of the laws affecting the financing of their school systems. The majority seemed to imply that their laws were inadequate. One State, Arkansas, indicated the financial outlook was not good, but expressed no desire for Federal aid. Ten of this noncommittal group indicated excellent financial backing and outlook for their public schools; in some instances the outlook was better than the so-called national goals cited by Chairman BAILEY in his letter. Fourteen were completely noncommittal and merely cited their laws.

Many Governors objected to the assumption underlying the proposed questions, namely, what actually constituted national goals. The Governor of Virginia criticized the questions as "too limited in source and number to constitute a solid basis for assuming that they represent a consensus for national goals, and any attempt to broaden the source of opinion on this important matter is weakened by requesting answers to specific questions that in themselves stem from a doubtful assumption."

Eight Governors categorically denied any need for Federal aid and were strongly opposed to same.

Four Governors only came out strongly for Federal aid: Alaska, Michigan, Minnesota, and Nebraska. Alaska as a Territory had always had aid through the Department of the Interior and the transition to statehood would entail difficulties without continued support for the Alaska educational system.

Michigan indicates a bad financial situation, though one is left to wonder if the cause is political or financial. In any event, she would favor Federal aid. Nebraska seems to be in a desperate plight and would favor relief. Minnesota thinks it could do a better educational job with Federal aid.

Three additional States have no real objection to Federal aid: Colorado does not need help, but does not object to Federal aid; Maryland and North Carolina prefer local and State control, but are not especially opposed to Federal aid even though they do not need it.

Lastly, there are several States outspoken against Federal aid to education. These include Indiana, Iowa, Kansas, Montana, North Dakota, South Carolina, Virginia, and Texas. Comments of some of the governors are enlightening:

The Governor of Iowa says:

The mechanism of Federal aid to education will not make available economic resources not already available to the various States and the local political subdivisions financing public school systems in this country.

The Governor of Indiana says:

Excellent local support has been given to public education in Indiana.

And he points out that:

Americans have always regarded public education as the particular province of local communities, and history has demonstrated that when the people lose control of the education of their children—and vest it in one centralized authority or bureau—that socialism, nazism, fascism, and communism can more easily gain control of the government with the immediate and complete loss of individual freedom.

The Governor of Kansas says:

In a moment of hysteria, it is possible that the country may be stampeded into action that will destroy further the traditional responsibilities of local governments in providing for the educational needs of the citizens. * * * It is my opinion that given anywhere equal opportunity the local and State governments are better able to solve educational problems than are members of a Federal bureaucracy.

The Governor of Montana says:

Rather than being trapped by a loaded question of the "when did you stop beating your wife?" variety, I would like to point out that, in my opinion, as Governor of Montana, that the educational needs of Montana and Montanans are best determined by those at the local and State levels, rather than from a distant office in Washington or New York.

The Governor, incidentally, gives a remarkable picture of support at the State level in Montana.

The Governor of North Dakota says that with appropriate tax overhauling "we would not need Federal aid for education. I consider it likely that the combined efforts of our State legislature and local school districts will increase local school appropriations to continue the advancement of and improvement in public education. Taxpayer resistance seems to be decreasing as far as school support is concerned."

The Governor of South Carolina says:

I would like to say we are very proud of our program and we propose to continue that program through State efforts. Two years ago the special Presidential Commission studying the so-called national emergency in public schooling found that in only 13 States in America is a child not being denied an education for the lack of a classroom or a schoolteacher. Low per capita income South Carolina is one of these 13. We do not want Federal aid. We do not need Federal aid.

The Governor of Virginia, among other things, says:

Virginia is recognized nationally for its sound fiscal policy in governmental affairs. * * * Despite the fact that Federal programs in health, welfare, and the like have required matching funds locally to such an extent that the residual resources have correspondingly dwindled for education, it would appear wise to reflect carefully before embarking on elaborate Federal aid programs in general education under the guise of national defense. The power of control that inevitably accrues to the holder of the purse string can often be visibly guarded when applied to ships and roads and buildings. It subtly escapes this scrutiny, however, when applied to training the mind of youth in the form of education. * * * It is not the seen enemy we fear half so much as centralized control of the affairs of the mind.

And the Governor of Texas, in quoting from a report of a committee appointed by him says:

The advancement and continuing support of public education is a fundamental obligation of State and local government. A free society must develop its human potential by identifying, nurturing, and wisely using its talents.

In other words, the Governors of the several States, as I analyze their replies as objectively as possible, do not appear to feel the need of Federal aid as legislation presently before this Congress contemplates. Though not asked to specifically comment on their attitudes toward Federal aid for education, many nevertheless spoke out against it and did not even attempt to answer the main questions that were asked them. Many have problems of taxation, but they feel there is no special resistance to taxation when it is known that it is for school purposes. I am sure that all realize that if the Federal Government spent less they would certainly have more to spend on their own respective State services.

Much of the clamor for Federal aid revolves around the alleged problem of classroom shortage and the inability of State and local governments to finance school construction rapidly enough to overcome the present gap and the ever-widening shortages predicted for the foreseeable future. This particular facet of Federal aid is the one selected for primary emphasis at this time and is, indeed, the main purpose of H.R. 10128. If enacted, it would be an opening wedge for the National Government to step into the educational picture. Where this bill calls for a billion dollar appropriation, this would be a mere bagatelle to the billions that would be demanded in the future. Statistics offered in the committee report on H.R. 10128, and in various studies by staunch proponents of Federal aid, are in no way conclusive of the need for Federal aid to alleviate shortages. Here are some of the statistics offered in support of Federal aid, derived from reports of the U.S. Office of Education:

Estimated shortage, 1950, 250,000 classrooms.

Estimated shortage, 1953, 312,000 classrooms.

Estimated shortage, 1954, 370,000 classrooms.

Interestingly enough, I understand these figures were obtained on the basis of a nationwide school facilities survey which cost $5 million.

In 1956 the Committee for the White House Conference on Education reported the result of its own shortage survey at 198,625 classrooms. During the autumn of 1956, and the 3 succeeding years, the U.S. Office of Education showed the following classroom shortages, as compiled from information furnished by the State departments of education:

Estimated shortage, 1956, 159,000 classrooms.

Estimated shortage, 1957, 142,300 classrooms.

Estimated shortage, 1958, 141,900 classrooms.

Estimated shortage, 1959, 132,400 classrooms.

According to their own figures, this would represent a reduction in classroom shortage between 1954 and 1959 from 370,000 to 132,000. There is such variation in the reports from the State departments of education that grave doubt has been raised regarding the accuracy of these estimates; however, we may assume that they are indicative of the general overall picture of classroom shortages.

A comparison of classrooms in use with pupil enrollment from surveys made in 1954 and 1959, respectively, shows:

	1954	1959	Increase (+) or reduction (−)
Classrooms in use	983,000	1,279,000	+30
Pupil enrollment	30,045,000	35,990,000	+20
Pupils per classroom	30.6	28.1	−2.5

A recent forecast of classrooms needed for the next decade is 610,000. To take care of an increased enrollment of 8.7 million students, it is alleged that 312,000 new rooms are needed; a backlog holdover of needs from the 1959 survey is indicated at 132,000 rooms; and for anticipated abandonments which must be replaced, an additional 166,000 will be needed. This would average 61,000 classrooms per year during the decade, whereas classroom construction without any Federal money, averaged 66,700 per year, during the past 5 years. If the States make the same effort during the next decade as they have in the past five, classrooms can be constructed to meet increased needs without any Federal intervention. Moreover, if there is a lessening of State and local support as a result of Federal assistance, the picture would be far less optimistic so far as the final net results are concerned. The American people have spent an average of $1 billion per year since the end of World War II on school construction. I raise the question: would they continue to make the effort to raise $1 billion annually for the next 10 years, if the Federal Government enacts a Federal assistance program? I believe the answer to this question would be the same today as that which was given in May 1957 when Time magazine sampled opinion. The May 13, 1957, issue of Time magazine carried the following:

Of all the items in President Eisenhower's domestic program, few seem less likely to succeed than Federal aid for school construction. But would the defeat of this proposal be as great a calamity as its backers insist? Last week Time surveyed 48 States to find out. The answer: No. Though the Nation as a whole must keep building classrooms faster than ever before, a surprisingly big proportion of the States do not need—or do not want—any help from the Government.

Some of the States which got off to a slow start in meeting their increased classroom needs have now taken positive action in that direction. Alabama may be cited as an example. Last August the State legislature authorized a substantial aid program to be financed by issuance of $100 million of State bonds. This will take care of two-thirds of the reported existing shortage of classrooms in the State of Alabama. Others are taking similar action.

The minority views included in the committee report on H.R. 10128 point up with great clarity the weaknesses of this bill. They deserve our strictest scrutiny. They complain that "neither the Subcommittee on General Education, nor the full committee, held any public hearings on the subject of this bill, or the bill itself, in the present session of Congress. There is a positive need for such hearings."

The objectivity and reliability of the committee's favorable recommendations are open to question in view of the significant progress that has been made in meeting needs during the past several years, without any Federal aid, and the relative decline in backlog estimates. The minority wisely states the obvious, namely, that "no adequate and effective program of Federal aid can properly ignore the rapidly shifting patterns of need and response which have taken place in education in this country."

With specific reference to backlogs, page 16 of the report states:

We do not question the existence of some backlog. We do believe, however, that there is and will continue to be an irreducible minimum backlog of classroom need, regardless of any question of Federal aid. To the extent this exists, and for other reasons discussed later in this report, the urgency of the presumed classroom shortage is considerably diminished.

On page 18, the report further states:

It is also evident that the construction peak has been crossed and within 5 years the number of classrooms required to keep fully abreast additional needs will be only half as much each year as actually have been built in the past few years.

Much credence has been given to the distress signals created on the ground of alleged school district debt limitations. Proponents of Federal aid for school construction claim that over the years "more and more school districts have exhausted their resources," and can no longer build their own classrooms. A careful reading of pages 22 and 23 of the minority views on H.R. 10128 show that such districts are an infinitesimal part of the whole; that—

The 237 borrowed-up districts reported in the last survey amount to only six-tenths of 1 percent, or 6 out of every 1,000 of the Nation's 40,000 school districts. The enrollment in these districts is less than 1.5 percent of the U.S. total.

In other words, the fiscal capacity of only a limited number of the 40,000 school districts in the Nation has been exhausted. One member of the committee very aptly raised this question:

> Why, indeed, should we spread nearly a thousand million dollars tax money around the country in order to help these districts?

Another weakness pointed to by the minority is that H.R. 10128, if enacted, would allocate funds without regard to need or financial ability to construct schools. It constitutes a sort of Government "payola" whereby the States are led to expect something for nothing, whereas, in reality, none will ever recover what it is compelled to put into the program by way of additional taxation. In fact, many, including some of the poorer of the States, may find themselves in the position of being taxed without any appreciable possibility of recovering on their investment for this reason. Section 7(a) states:

> The amount allotted to any State under section 4 for any year shall be reduced by the percentage (if any) by which its State school effort index for such year is less than the national school effort index for such year. The total of such reductions shall be reallotted among the remaining States by proportionately increasing the amounts allotted to them under section 4 for such year.

According, if a poorer State finds itself incapable of raising by legislative enactment enough for maintaining its school system, plus a sum sufficient to meet the "State school effort index" prescribed by this bill, it will in effect be paying taxes to support a program from which it cannot profit.

The bill, by implication, looks to future extensions, for it makes provision for this option:

> In lieu of making grants of State funds required under subsection (a), any State which wishes to pay the principal and interest annually becoming due on bonds or other obligations issued to finance school facilities projects may elect to have its allotment (or a designated portion thereof) for any fiscal year made available to it in the form of Federal commitments to pay all of the principal and interest annually becoming due on an equivalent amount of such bonds or other obligations.

Obviously a billion dollar appropriation, spread over 3 years, as contemplated by H.R. 10128, would not be adequate to assist States with bond issues within the life of the bill.

Though H.R. 10128 relates only to Federal aid for school construction, as already indicated, we should not overlook the fact that S. 8, which also includes aid for teachers' salaries, has already passed the Senate and is now pending before the House Committee on Education and Labor. Enactment of H.R. 10128, which is not needed, would be only a prelude to enactment in this session and forever hereafter of vast appropriations not only for school construction purposes but teachers' salaries and other educational purposes. For that reason, the question of Federal aid for teachers' salaries should also be discussed as a component of the general subject.

The matter of teachers' salaries and teacher shortage seems to deserve the thoughtful attention of every right-minded citizen. I should like to say here that all of my adult life with the exception of 4 years spent in military service during World War II was devoted to the field of education, until I came to Congress in 1953. I was a high school teacher, a high school principal, and I held an administrative office in a university for a total service of 21 years in the cause of education. My home is Gainesville, Fla., the home of the great University of Florida. Some of my closest and dearest friends and associates are engaged in the field of education.

I am well aware of the acute need of better teacher salaries. I know from experience the sacrifice entailed in trying to maintain minimum decent standards of living for one's self and one's family on a teacher's salary. I am aware of the fact that participation in the adventures and uncertainties of the new space age will require greater numbers of technically and scientifically trained personnel. I am aware of the present rapid increases and predicted future increases in the public school enrollments.

Because of my personal interest in the subject of teachers' salaries, I have been pleased to observe the increased and deserved attention given this matter in recent years. Florida enacted a minimum foundation law several years ago which has brought substantial relief by way of increased salaries to our teachers. Although salaries for competent teachers are not yet so adequate as they ought to be, I call attention to the relative increased earnings of teachers as a group, compared with Federal Government employees and other persons working for wages or salaries during the period 1929 to 1958:

Earnings of teachers and other groups 1929 and 1958

	Teachers	All persons working for wages or salaries	Civilian employees of Federal Government
1929 (actual dollars)	$1,400	$1,405	$1,933
1929 (in 1958 dollars)	2,358	2,366	3,255
1958 (actual dollars)	4,792	4,324	5,514
Percent increase in constant dollars	+103	+83	+69

Since the turn of the century there has been a gradual downward trend in the ratio of pupils to teachers in our public schools. During a 60-year period student enrollment increased 132 percent, instructional staff increased 234 percent, and the ratio of pupils to teacher declined by 30 percent, indicating that a sufficiently large number of persons have been attracted to the teaching profession to bring about a constant lowering of pupil-teacher ratios.

During the past decade there has been a substantial increase in the number of college students whose professional choice is directed toward the field of education. Should this favorable trend continue for another decade beginning with 1960, the output of teachers will be doubled, while the annual increase in school enrollment should be only about half as much as it was in the last half of the decade just ending.

The same question raised in conjunction with the question of Federal assistance for school construction may be asked here: If the Government through a Federal assistance program makes grants to States for teachers' salaries, would the magnificent effort made at the State and local level for insuring more remunerative teachers' salaries be maintained? Would there not be a lessening of local effort when confronted with the reality of Federal aid?

I come now to the crucial point of conflict in the controversial issue of Federal aid for education, and that is Federal control. The fear engendered by the threat of a Federal-controlled system of education is genuine. Aside from the questionable constitutionality of Federal aid for education, the chief obstacle to enactment of such legislation in the past has been an overriding fear of the consequences of Federal control of our educational system. Woodrow Wilson once said that:

> The history of liberty is the history of the limitation of governmental power, not the increase of it.

I need not remind this Congress that it was the educational control of Germany—of German youth—under the Nazi regime, after Hitler came to power, and the control of all educational media in the Soviet Union after the 1917 Revolution which first conditioned Germany to precipitate a catastrophic world war, and secondly, enabled Russia to threaten increasingly and unceasingly the peace of the world since the end of that war.

Speaking as the father of three children, I fear possible Federal control over the schools of this Nation as much as I do the menace of communism itself. If and when our educational system passes to the Federal Government, the Constitution of these United States, with all of its matchless guarantees of freedom, will be rendered obsolete.

All of the recent bills introduced, relating to the subject under discussion, have tried to allay the underlying fear of Federal control by including a section to this effect:

> In the administration of this act, no department, agency, officer, or employee of the United States shall exercise any direction, supervision, or control over the policy, determination, personnel, curriculum, program of instruction, or the administration or operation of any school or school system.

Let me say emphatically that I believe this particular clause, although representing the sincere sentiments of those who formulated it, is no more than a pious platitude. Whenever you have the type of overall educational support for school construction or teachers' salaries on the Federal level, called for in the Federal aid for education bills, you will inevitably have Federal control.

Management of a Federal aid program, if enacted, would be vested in the Commissioner of Education of the U.S. Office of Education. Two former U.S. Commissioners of Education unequivocally have declared that Federal

aid without Federal control is an illusion. Dr. Jno. J. Tigert, former U.S. Commissioner of Education and president emeritus of the University of Florida—my alma mater—has said:

> If we embark upon a program of turning over Federal money to schools without any strings attached, it is only a question of time until the waste, extravagance, and misuse of these funds will result in a reaction or a change. The alternative is Federal control.

Dr. Samuel M. Brownell, another U.S. Commissioner of Education, stated:

> On the one hand, we have presented to us arguments that there will be no Federal control accompanying Federal aid. Alongside, we find evidence showing the inadequacy and inequality of education in States able to support a good educational program, and evidence of inefficient or inadequate efforts by these States to eradicate inequality and inefficiency within their borders. If there is to be little or no Federal control accompanying Federal aid, what right have we to expect a major improvement of the education within States under the same leadership that they now have? Thus, if Federal aid is to bring about better schools, it seems apparent that there must be some Federal control.

I realize that times are different and great changes have taken place in our political and economic thinking since these gentlemen spoke out a number of years ago. This fact is dramatically borne out by the following:

When the national defense education bill came up for consideration before the Congress during the close of the 85th Congress in 1958, it was represented as a temporary emergency need specifically related to our defense effort. It was our partial answer to the sputnik launching. But, I fear it was motivated by a more far-reaching objective—eventual Federal support for American education on a large scale. The fears engendered by Russian scientific progress had excellent propaganda value in gaining an entering wedge for such a change in traditional policy, which theretofore had been barred under the impact of sound public opinion. I call attention to remarks of the present U.S. Commissioner of Education, Mr. Lawrence G. Derthick, made on November 24, 1958:

> The National Defense Education Act represents a major breakthrough in the area of Federal concern for education. Its impact will be felt for many years to come. Congress has taken a significant step forward in the field of education.

This act was hailed by professional and nonprofessional educators as one of the most important legislative measures of the Congress. But this act is already under severe criticism by many who report "scents of Federal control." According to press reports, widespread dissatisfaction with the act has been expressed by some of the Nation's school administrators. The act has been described as having "Federal control written into it" in spite of honest congressional efforts to the contrary.

The lack of restrictions imposed by the Federal loan funds have, I understand, often set aside well established and smoothly working State programs, and the latter have been replaced by undesirable aspects of Federal control which proponents of Federal aid are always insisting will never come to pass.

It is the consensus of opinion among some of the outstanding deans of graduate schools that there is grave danger in the method of awarding fellowships under the act. I fear if the U.S. Office of Education should be given enough money to control 25 percent of the fellowship awards in our universities, and if methods already initiated are continued, our system of graduate education would be forcefully directed and almost exclusively directed from Washington, D.C. Few institutions would care to institute programs which the U.S. Office of Education would fail to support, while meritorious programs would wither from lack of strong students and the competitive incentives which Federal aid provides. Emphasis has been placed by those administering the act on new and expanded graduate programs, leading, it is feared to Federal support of programs of questionable quality in untried situations and in second-rate institutions which presently are unable to provide even the basic support needed for already-established programs.

Speaking at a nationwide convention of the American Association of School Administrators, Dr. Degar Fuller, executive secretary of the Council of Chief State School Officers, in outlining experiences that have alerted school men to flaws in what they otherwise considered a welcome act, said:

> It has Federal control in it, because there is a Bureau of the Budget, a Bureau which is manned with people who feel their duty is to follow every dollar down to the end. When this situation obtains, there is bound to be Federal control, there is no way to prevent Federal bureaus from following every Federal dollar to the end.

As I have stated before, in my opinion, every American citizen has an obligation to do all in his power to insure an adequate school system for the students of today and tomorrow. In spite of the magnificent progress that we have made, there is a continuing need to do better, to provide more and better facilities, a greater number of better trained teachers, and more adequate compensation for dedicated teachers. Men of good will in this Congress and out are divided on the best ways to meet the challenge which an adequate educational system for America poses. We are beset with statistics from the National Education Association, the U.S. Office of Education, the Rockefeller Brothers, and other sources reiterating limiting factors in our educational system. A sort of national inferiority complex has developed because of reported educational advances made in the Soviet Union in recent years. Much of the pressure now on Congress stems, I fear, from the propaganda value which long-time proponents of Federal aid have derived from visitors' reports on Russian education. I do not believe we should be pressured by fear into actions that may have a disastrous effect on our Nation.

Mr. Speaker, the amendment about which I talked at the beginning of my remarks is not altogether new in concept. A similar amendment has been introduced in previous years. My amendment, in brief, would provide that 1 percent of all income taxes collected on individual and corporate income under Federal statutes be returned to the States and territories within which it is collected for use for educational purposes only, without any Federal direction, control, or interference.

The amendment I propose would meet, I sincerely believe, the many and significant objections that have been raised to Federal aid for education bills that have been introduced in successive congressional sessions. It would provide substantial additional assistance for school purposes in the simplest sort of way. While it might not initially provide the resources envisioned by some of the bills that have been introduced, it is conceivable that, with any attenuation in the defense or military needs of the Nation, the amounts returned to the States would more than take care of their increasing educational needs. I could wish, too, that my bill, if enacted, might establish a precedent whereby, in the future, there would be a return of additional tax funds to the States with an accompanying return of programs which rightfully are the responsibility of the States.

My amendment, if enacted, would first of all provide a large measure of aid for education without additional taxation. Any increase of Federal taxes or in the Federal debt, which would be necessary to finance other proposals now before the Congress, would be prevented.

Second. It would definitely not contribute to the socialization of our educational system.

Third. It would require no additional Federal agency, nor extension of any existing Federal bureaucracy to handle the remittances to the various States.

Fourth. The distribution would be fair and just, because a State would receive funds in proportion to Federal income tax collections within it. By making this specific money available at a time of need, State efforts to meet the demands of their own educational programs might be encouraged while the avenues of Federal control, as already pointed out, would be eliminated.

Fifth. There is a precedent for earmarking certain Federal tax collections. Congress has for several years directed that funds equal to revenues from certain taxes shall be made available to the States for designated purposes, that is to say, proceeds of excise taxes on firearms, shells, and cartridges are used for wildlife restoration, and excise taxes on fishing rods, and so forth, for fish restoration and management projects; and certain Federal tax collections in Puerto Rico, Virgin Islands, Guam, and American Samoa are now made available for the exclusive use of such possessions.

Sixth. One of the greatest arguments that proponents of a gigantic aid program for education have is that the Federal Government has appropriated to itself all of the so-called attractive tax raising sources such as the income tax. What I propose would take some of that

income tax and give it back to the States to use exactly as they want to use it in the field of education.

Mr. Speaker, my amendment, if enacted into law, would give us a saner approach to the fiscal problems of this Nation. It would make us realize that money does not grow on trees and, if we appropriate money in Washington, we are going to have to raise the money from the people of the respective States. I sincerely believe that my amendment would meet with general approval for if it were enacted it would effectively stay the hand of reckless spending and the inevitable Federal control that would come as a result of other measures now before the Congress.

I am sure that I speak for a vast number of our citizens when I say that we should keep our hands completely off a vast new program of Federal aid for education. With increased local citizen interest in education, and accelerated State efforts on behalf of the schools, we shall find each citizen doing his own part in support of education. In this manner current demands will be met and foundations for the future soundly laid. The success of the public school system of America depends, after all, upon the participation, interest, and support of all citizens in every community of the Nation. The work of the State and local governments in education has, in the past, given us an educational system unequalled in the world. These same efforts can yet best serve us if we but allow them to do so.

Mr. Speaker, I would like to include at this point in the RECORD the amounts of tax money to be returned to the States for educational purposes, in the event my amendment is passed. The statistics are for 1958; the amounts for 1960 would, of course, be much greater. I earnestly appeal to each of you to vote for this amendment and to avoid the evils of Federal control of education and the useless pyramiding of our Federal debt:

State or region	Income tax collections, fiscal 1958 [1]	1 percent of tax collected
Alaska	$41,531,000	$415,310
Alabama	473,419,000	4,734,190
Arizona	224,899,000	2,248,990

KINZUA DAM PROJECT

Mr. GOODELL. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD and include a statement.

The SPEAKER. Is there objection to the request of the gentleman from New York?

There was no objection.

Mr. GOODELL. Mr. Speaker, last Friday the Subcommittee on Public Works reported out the appropriation bill for 1961. In spite of a rising tide of public concern over the so-called Kinzua Dam project, $4.53 million is being appropriated for this project in fiscal 1961. The Kinzua Dam will require the flooding of 9,077 acres in the Allegheny Reservation of the Seneca Nation of Indians, cutting the heart out of what is left of Seneca land. It is the general belief that the Kinzua project will ultimately destroy the Seneca Nation by separating them from their beloved lands. For the past 3 years a swelling controversy has raged around the possibility of alternate projects accomplishing as much or more than the Kinzua, without hurting the Seneca Indians. Dr. Arthur Morgan, a former chief engineer for the TVA and a renowned expert in hydraulic engineering, has prepared a thorough comparison of the Kinzua Dam and the alternate Conewango Dam projects. Under unanimous consent, I include Dr. Morgan's analysis in the RECORD at this point for the benefit of all Members:

A COMPARISON OF THE KINZUA PLAN AND THE CONEWANGO PLAN FOR CONTROL OF THE UPPER ALLEGHENY RIVER

(Statement presented to the Subcommittee on Public Works of the House and Senate Committees on Appropriations by Arthur E. Morgan, May 5 and 6, 1959)

There are two proposed methods for controlling the Upper Allegheny River for flood control, and for increasing the low-water flow downstream.

DESCRIPTION OF THE TWO PROJECTS

The Kinzua plan provides for a dam across the Allegheny River a few miles above Warren, Pa. It would store water during floods, and let it out as soon as possible afterward, so as to be ready for the next flood. Also, it would store a limited amount of water, claimed by the Corps of Engineers to be 550,000-acre feet, for increasing the low-water flow.

The Conewango plan would divert the flow of the Allegheny River through a 6-mile channel into a large glacial depression, where it would be stored for flood control and for increasing the low-water flow. The regulated low-water flow would pass partly down the Allegheny and partly down the channel of Conewango Creek. In case of a flood too large to be held in the Conewango Reservoir, the excess would be passed through an outlet channel and through control gates to Cattaraugus Creek, and so to Lake Erie.

The Conewango-Cattaraugus site is a rare occurrence in nature. Being out of the ordinary and unexpected, it is not surprising that the possibility was overlooked. Before the last glacial period the Allegheny River flowed north into Lake Erie. The ice of the glacial period dug a big hole, in the same way that it dug the Finger Lakes in New York State, and pushed the earth and rock ahead of it, making a dike which turned the Allegheny River away from Lake Erie and to the Ohio River. If we cut through this dike, and use this glacial hole to store water, we have a reservoir with about three times the capacity of Kinzua. The old Allegheny River channel and South Cattaraugus Creek provide a rock gorge, for much of its distance hundreds of feet deep, to carry away the excess floodwater to Lake Erie. A diversion channel about 5 miles long would carry floodwater from the Conewango Reservoir to this deep-rock gorge, and just before it enters the gorge there would be control works to regulate the flow.

Where the Conewango Creek flows out of this Conewango Reservoir site there would be a relatively small dam, which would control the flow. Here the part of the regulated low-water flow which did not pass directly down the Allegheny River would pass down Conewango Creek, entering the Allegheny at Warren, Pa. Conewango Reservoir would completely protect Warren, Jamestown, and the area between from floods from the upper Conewango Creek. Kinzua would give no protection from floods on the lower Conewango.

Just below where a channel would divert the Allegheny River into Conewango Reservoir there would be a relatively small dam across the Allegheny to prevent any flood water from flowing down the Allegheny. Thus, all floodflows from above that point would be entirely removed from the Allegheny and Ohio Rivers. Most of that floodwater could be stored in Conewango Reservoir for use during low water. In case of unusually large floods the excess would pass down the very large preglacial channel of the Allegheny (Cattaraugus Creek) to Lake Erie. A limited amount of regulated low-water flow should be passed down that channel to take care of a very bad pollution condition on the Cattaraugus Creek.

Most of the Conewango Reservoir site is a great marsh, much of it useless. The margins are used for pasture. Almost no one lives on the marsh, but there are dairy farms and several villages around the edges. There are almost no industries in the locality. It is an economically depressed area. The parts of the villages which would be flooded could be moved up the hill for a fraction of a mile without destroying or disrupting the communities. A permanent lake of at least 28 square miles would be created, with all its recreational and economic advantages.

I shall have time here to present only a summary of our findings with reference to the Kinzua and Conewango projects. The evidence and the details which support these findings are given in a longer statement which I shall supply to the Committee. I have dealt with this situation from

the background of more than 50 years of almost uninterrupted experience with water control projects. Incidentally, several of my most striking successes have resulted from a persistent policy of overall exploration of situations in search of unexpected possibilities which conventional or routine engineering had overlooked. At this late date I would not risk my professional reputation on an irresponsible venture. I am thoroughly convinced that my conclusions are sound.

AN ENGINEERING OVERSIGHT

There was an engineering oversight more than 30 years ago when the Kinzua plan was, in fact, selected. Unless that oversight is corrected, Pittsburgh, Warren, and other cities will have less flood protection from the upper Allegheny that they need, and far less than is readily available by the use of Conewango. Unless corrected, that oversight will cost the country much more than $100 million, and probably three or four times as much, in added cost or loss of values. This is not an irresponsible guess, but the result of applying the methods used by the Corps of Engineers in estimating benefits for requesting appropriations; or in one case, determination of costs or loss by the rules established by the American Association of Highway Officials.

In the years since the original oversight, much officework and some fieldwork has been done on the details of Kinzua, and massive reports on those details have been made by the corps, but no general exploration and study have been made either by the corps, or by engineers employed by the corps, to review the original decision of more than 30 years ago, as to what alternative possibilities existed. The best of those alternative possibilities remained undiscovered and unrecognized. This statement applies to the recent work of the Tippetts firm, which was employed by the corps, as well as the work of the corps itself.

I am not here to criticize or blame. The issue far transcends personalities. If we are correct, and we believe that we are, the country will gain greatly by adoption of the Conewango plan. Fortunately, as rarely occurs, the opportunity exists to correct an oversight of 30 years standing.

KINZUA IS INADEQUATE

The trouble with Kinzua is that it does not have enough storage capacity, and that it cannot be enlarged. The approximate location of the Kinzua Dam site is fixed by natural conditions, and cannot be changed. The city of Salamanca, located in the valley bottom, upstream from the dam, sets the limit of how far upstream the water can be stored. Kinzua has capacity for just so much storage, and no more. No amount of engineering calculations can change those hard facts.

Kinzua storage is not enough. All the Corps of Engineers can do with Kinzua is to whittle down their estimates of requirements until they are as small as the absolutely limited capacity of Kinzua, and then to call those quantities enough. This whittling down has been of serious proportions.

To begin with, the corps decided that Pittsburgh needs to be protected against only half of the maximum probable flood, as determined by the U.S. Weather Bureau, at the request of the corps. The great flood catastrophes of the short history of our country have mostly come from rare, unusual, so-called unprecedented storms. I believe that, in view of the concentration of people and property at Pittsburgh, and the extreme vulnerability of that city to floods, it would be good policy to provide a greater degree of protection. With Kinzua such increase is impossible.

In contrast, Conewango, at a cost of $25 million less than the Army estimate for Kinzua, and $50 million less than the real cost of Kinzua, would fully and completely protect Pittsburgh and Warren from the most extreme flood, up to 2½ or 3 times what Kinzua would fully protect against, and would provide as much storage as is claimed for Kinzua for increasing low waterflow.

If the capacity of Conewango should be increased to the point where it would cost $105 million, or $8 million less than the Army Engineers estimate for Kinzua, and I recommend that course, Conewango would not only protect against the most extreme maximum flood, but in addition would have capacity to store three times as much water as is claimed for Kinzua for increasing the low waterflow. The findings summarized here are on the basis of that larger capacity. Such storage would enable Conewango to store for low-water increase the entire year's flow during low-water years, and in addition to hold over much of the flow of wet years for use in dry years.

Now, in order to consider some of the whittling down that must be done for Kinzua to make it appear large enough to give full protection from even half the maximum flood, let us assume for the moment that Pittsburgh needs to be protected from a flood only half as great as the probable maximum, as estimated by the Weather Bureau.

To begin with, the flood storage provided for Kinzua in the Army plans is not 50 percent of their own estimate of the maximum flood, but for only 43.2 percent. The deficiency is 117,000 acre-feet.

A further deficiency arises from the fact that, whereas the Army plans presume to store 745,000 acre-feet for flood storage, and 573,000 acre-feet for increasing low waterflow and for dead storage, yet the total storage capacity of the reservoir falls short of this amount by 138,000 acre-feet. The reasons why, in case of Kinzua, the same storage space cannot be used both for flood control and for low water storage are given in our longer statement.

Again, the Army plans for Kinzua have inadequate provisions for snow on the ground at the time of the flood storm. Here is a deficiency which may amount to 200,000 acre-feet or more.

The Army plans assume that two-thirds of the storm rainfall would run off, including snowmelt, if any. We have dependable record, for a similar area on flatter land—the Dayton flood of 1913—with similar rainfall conditions, with no snow on the ground, where the runoff was more than 90 percent of the rainfall. If we assume even 80 percent of runoff, instead of 66 percent, this deficit is 158,000 acre-feet.

These items, amounting to more than 600,000 acre-feet, indicate a very large deficiency below a factor of safety which would be desirable, even on the basis of protecting against only half the maximum flood. That deficiency is more than the entire storage assumed to be provided for low water control.

Against such possibilities and uncertainties, reasonably conservative engineering judgment will seek for a margin of safety, especially as some of these possibilities tend to be cumulative—that is, they tend to accentuate each other, and to occur at the same time. It is the good fortune of the Upper Allegheny situation that all this factor of safety, and much more, can be secured by the Conewango plan at less than the cost of Kinzua. And, because of the smaller and simpler structures required, the Conewango construction would require 2 years less time.

If we consider that protection against two-thirds of the maximum storm would be desirable, rather than against a storm half the maximum, the deficiency would be increased by about 290,000 acre-feet, making a total deficiency for Kinzua of more than the whole flood control storage planned for Kinzua.

THE ECONOMIC AND HUMAN LOSS OF KINZUA

Additional storage capacity, to provide a reasonable margin of safety against even half the probable maximum flood at the Army estimate of the cost per acre-foot of storage in Kinzua, would be worth $57 million.

The storage of three times as much water for increase of low waterflow, estimated by methods adopted by the U.S. Public Health Service and the Corps of Engineers, would have an additional value of $9 million to $30 million.

The Army plans for Kinzua require that after a flood the flood-control portions of the reservoir shall be emptied as soon as possible, at the rate of 25,000 cubic feet per second, so as to have storage space for the next flood. That water must go down the Allegheny past Warren, to Pittsburgh and into the Ohio River. To empty the Kinzua Reservoir at this rate after a standard design flood would take about 3 weeks. In at least three quarters of the cases this release would be during the flood season, just the time of year when the Ohio and Mississippi are most likely to be in flood.

Moreover, a decision would have to be made at the time of every moderate flood whether to recognize the possibility of a subsequent great storm and to keep storage space for it by letting the early part of the flood go down to Pittsburgh, with moderate damages of from $3 million to $30 million, or to hold the water behind the Kinzua Dam and save Pittsburgh the moderate damages, but to take the chance of having used up the storage, and so of having exhausted that much storage capacity when the catastrophic flood comes. Usually the guess that the flood will be moderate would be right. Only in case of great floods would it be wrong. In every one of the more than 25 cases where the Corps of Engineers has estimated the benefits which would have accrued to Pittsburgh if Kinzua had been built, they assumed that only a moderate flood would occur. The operation of the Kinzua Dam, as the Corps of Engineers announce they would operate it, would be on the assumption that there would be no storm greater than 43.2 percent of the probable maximum, and that none of the possibilities and exigencies I have mentioned would occur. Kinzua would protect Pittsburgh from moderate flood losses only at the risk of increasing damage from a very large flood. With Conewango, no such issue arises, since the storage capacity plus discharge capacity to Lake Erie is more than ample for all purposes.

As another element in the situation, the National Government is spending hundreds of millions of dollars to control floods throughout the Ohio and Mississippi River Valleys. This commonly is by storage reservoirs, which can hold the flood back for a limited time. The Conewango plan would take the part of this unwanted water which could not be stored in Conewango for increase of the low water supply, and would remove it entirely from the Ohio-Mississippi River system, discharging it into Lake Erie. Taking the value of removing such excess of floodwater as it is variously estimated by the Army Engineers, we have an estimated value of somewhere between $60 million to $200 million.

There is another serious disadvantage of Kinzua. The Kinzua Reservoir would destroy the only water level highway through the mountains in that region, one of the finest highway locations in Pennsylvania, and would replace it with a steep, crooked two-lane highway along the precipitous mountainside, with grades of 10 percent at sharp curves. This would then be one of the

poorest through highways in Pennsylvania—far below the minimum standards for American highways. Using the basis of estimate established by the American Society of Highway Officials, we estimate the loss and damage of this change, which is a proper element of cost of Kinzua, to be $25 million. Conewango does not have any similar item.

The Allegheny Valley from Warren to Salamanca is one of the finest recreation, fishing, and hunting areas in Eastern America, as is indicated in the report of the Army Engineers. The valley bottom provides almost the only winter forage for the deer and wild turkey in the State parks adjoining it, and is essential to the maintenance of the good hunting. All this would be destroyed by Kinzua Dam, whereas Conewango would not only preserve this resource and give it a good nearly uniform flow of water the year round, but in addition, would create another recreation area far greater than the lake at Kinzua. The loss of public value due to the destruction of the Allegheny Valley recreation area would run into millions of dollars.

The Kinzua project would require the removal of the Pennsylvania Railroad from a long stretch of the Allegheny Valley. In view of its use as a heavy coal-carrying route and of actively pending industrial developments along the valley, especially in papermaking, this is a matter of consequence.

In the entire Ohio-Mississippi River system there is no other point where a given amount of storage for increasing low water flow would be so valuable. Conewango would double the minimum flow of the Ohio at Pittsburgh, and for some distance below, and would increase the minimum flow through the entire length of the Ohio and lower Mississippi Rivers. Because of salt beds, cheap coal, and abundant labor, this area promises to be the chemical industry center for America, the chief limiting factor being the water supply. Conewango would conserve that to the utmost. Kinzua would waste the greater part of it.

ADVANTAGES OF CONEWANGO

The advantages of Conewango over Kinzua to which we have applied financial estimates, using the minimum figures in all cases, amount to more than $100 million, and if less than the maximum figures are used, to about $400 million.

It is almost embarrassing to mention such large figures in speaking of the advantages of Conewango over Kinzua, when a fraction of that difference should be conclusive. The fact is that in the Conewango setting and the natural enormous outlet channel to Lake Erie we have a most unusual situation. In probably not one reservoir building job in a thousand would one find such a combination of favorable conditions. But there it is, and these surprising values naturally follow from it. Why throw them away for the sake of not admitting an error of 30 years ago?

It may be argued that if Kinzua is built now, in a few years when the air is cleared, Conewango can then be built. But this would mean a great loss. The irreplaceable water-level highway along the Allegheny would have been destroyed. The exceptionally fine recreation area along the Allegheny would have been wiped out. And since both reservoirs are not needed, most of the cost of building Kinzua would have been wasted.

THE COST OF CONEWANGO

Now as to cost estimates for constructing Conewango. Our estimate is $60 million less than that of the Tippetts firm for the same degree of protection they planned. About half that difference is due to the fact that the Tippetts firm overlooked the best of the possibilities, that is, the outlet to Lake Erie by Cattaraugus Creek. When they started their study I told them that I had only begun to look into the many possibilities of Conewango and that further exploration might disclose great opportunities for economies. I urged them to make those further studies. They did not do that, but only looked into the specific suggestions I was able to make at the time they began. I continued my inquiry, and turned up other possibilities so much superior as to make my earlier suggestions obsolete. When I asked the Tippetts engineers to look into other possibilities I had found, they replied that they did not have time to do so. They never made a general study of the situation, and never qualified themselves to pass on all the major alternatives.

Diversion down the Cattaraugus, which the Tippetts engineers did not study, reduces the cost by $20 million under the plan for diversion down Silver Creek, which they did study. A proper treatment of the Pennsylvania Railroad, which they overlooked, further reduces the cost by about $9 million. These two corrections alone would reduce the Tippetts estimate of cost for Conewango to where it is no higher than Kinzua. But there are other large errors in the Tippetts estimate, to the extent of another $30 million.

Construction conditions for Conewango are strikingly different from those for Kinzua. For instance, excavation for Kinzua highways is on precipitous mountainsides, and a large part of it is in solid rock. In contrast to this, the principal earthmoving for Conewango highways is on level bottom land, where there is no rock, but only sand, gravel, and clay. There are millions of yards of this exceptionally favorable work, which would actually cost only about a third as much per cubic yard as would the earth and solid rock on the precipitous mountainside in Kinzua. The Army Engineers estimated $1 a cubic yard for this difficult mountainside earth and rock excavation. The Tippetts engineers took that price per yard and applied it throughout for highway and railroad earthmoving for Conewango, where the real cost would be about a third as much per cubic yard.

The Tippetts engineers took the same course concerning timber clearing. For the Kinzua job, the timber clearing is mostly on steep, rocky mountainsides, or along riverbanks where the trees lean toward the water, and fall into it when they are cut, making it necessary to haul each one out by cable. There are more than a hundred miles of such riverbanks on the Kinzua project. For the Kinzua job this clearing was estimated at $500 an acre. On the Conewango project the timber clearing is in large tracts of flatland, where modern clearing equipment is at its best, and where the actual cost per acre of clearing would be about a third as much for Kinzua. Yet here the Tippetts firm used the same price, $500 per acre, for the broad flatlands in Conewango as was used for the steep mountainsides and miles of riverbank clearing on Kinzua.

This same careless process of transferring unit costs on one job to very different conditions on another job was used in relation to earth dam construction. That is not responsible engineering.

Also, the Tippetts engineers, in estimating highway changes for Conewango, ignored the published and accepted standards of the U.S. Bureau of Public Roads and the New York Department of Public Works, which provide that such an improvement is responsible only for meeting the extra expense made necessary by the improvement. The Tippetts engineers planned farflung highway changes, with standards of construction far more expensive than anything now existing or (with the single exception of U.S. Route 17) beyond anything even remotely planned in that area, and charged the whole cost to the Conewango project, thus improperly adding millions of dollars to their estimate.

In order that there should be the least possible reason for differences of opinion about cost estimates, we used the Tippetts estimates unchanged except where we had clear reason and data for changing them. For a large part of the Tippetts estimates they give almost no data from which their estimates can be checked. We took their estimates without change in such cases, not because we think they are right, but because they gave almost no information for checking them. We believe they are too high by a further $5 to $10 million more of improper cost.

With the corrections in unit costs which I have mentioned, and with the change of outlet and treatment of the Pennsylvania Railroad, our estimate for Conewango to fully protect Pittsburgh and Warren from three times as large a flood as would Kinzua, and to store the same amount of water for low water increase, is somewhat less than $85 million. If the project should be enlarged to cost $105 million, which still is $8 million less than the Army engineers estimate for Kinzua, then in addition to all these values it would also store three times as much water as Kinzua for increasing the low water flow.

THE BASIS OF THE DECISION OF THE CORPS OF ENGINEERS AGAINST CONEWANGO

The Tippetts engineers, in their letter presenting their report to the Corps of Engineers, made just three points against the Conewango plan. They were:

First, that the plan would cost more;

Second, that more people would be displaced; and

Third, that more land would be taken.

The charge that Conewango would cost more is inaccurate.

As to persons displaced, the six villages in the Kinzua Reservoir would be completely buried under water, and according to the explicit statement of the Army Engineers, 90 percent of the population in the Kinzua Reservoir would have to be removed to entirely new locations at a considerable distance.

In the Conewango area, on the contrary, at least 75 percent of the persons affected live in six villages around the margins of the marsh. The parts of these villages which might be flooded would be moved up hill a fraction of a mile without interrupting the community life. These are extremely quiet places in an economically depressed area. In one of these village only one new house—a 4-room cottage—has been built in the past hundred years. These old villages would be changed to live communities in one of the best recreation areas in the region.

The Tippetts report improperly included the entire population of these villages among the persons displaced by the Conewango improvement. If these villages are omitted from the count, the displacement is far greater for Kinzua than for Conewango. Therefore, that criticism is misleading and inappropriate. Moreover, the Tippetts report failed to count approximately 400 of the 835 Indians who would be displaced by the Kinzua project.

As to land taken, it is not acres which count, but values. The Conewango Marsh has little value. Omitting the villages mentioned, the market value of the land, as estimated by the Corps of Engineers and by the Tippetts engineers, and including the State park land, is greater for Kinzua than for Conewango. That criticism of Conewango has no validity.

These three reasons are the only ones given by the Corps of Engineers to the public and to the Congress in announcing the decision rejecting the Conewango plan.

An engineering oversight of more than 30 years ago never has been competently reviewed during the years since, either by the

Corps of Engineers or by engineers employed by them. If not corrected, it will cause the loss of hundreds of millions of dollars in cost and values. If I should be able to contribute in some degree to preventing that loss, and to avoid the breaking of the oldest living treaty of our country, I should feel that I had at least justified my food and lodging for my lifetime.

Respectfully,

ARTHUR E. MORGAN.

APPENDIX

HOW THE CORPS OF ENGINEERS CHECKED ESTIMATES FOR THE DIVERSION PROJECT TO LAKE ERIE

When I testified before the Senate subcommittee in April 1957, my testimony and that of Barton M. Jones was given by Senator ELLENDER of the Senate subcommittee to the Corps of Engineers with a request that our estimates be appraised. Senator ELLENDER, chairman of the subcommittee, said:

"At this point I wish to state that I am going to ask Mr. Tofani to bring the suggestion of Mr. Morgan to the attention of the Army Engineers, and when I recall them in the next 2 weeks that they are prepared and give us an estimate of the costs and advisability of such a method to control the waters of the Allegheny.

"I wish to give you assurance that before this committee acts we shall go into the details of your views. * * * And I hope that the engineers give you the same treatment that you give to them. * * * I have been dealing with them, the Army Engineers, 20 years now. I haven't found them wanting." (Public Works Appropriation, 1958, pp. 2464, 2471, and 2473.)

Without doubt the action of Congress has been in part based on the assurances given them by the Corps of Engineers.

The reply of the corps to the Senate committee was characterized by a lack of understanding and an inaccuracy which we can scarcely imagine coming from a great public agency. The Conewango setting makes possible several different types of design. One of these, as described by Barton Jones in his testimony, calls for a very large channel, with 160 million yards of excavation, to carry all flood water quickly to Lake Erie below ground level, with almost no reservoir storage, and therefore requiring the taking of relatively little land—in this case 8,000 acres. It would, in fact, drain and reclaim several thousand acres of the Conewango marsh. Another type of design called for large storage capacity in that same marsh, requiring the taking of 32,000 acres of land, but calling for the excavation of 60 million cubic yards of earth—100 million cubic yards less.

In estimating the cost for the Senate committee, the corps took the big estimate of 160 million cubic yards of excavation from one type of plan, and the big estimate of 32,000 acres of land from another very different design, and included the cost of both as though they were part of one design. It would be physically impossible for these two major elements to be parts of the same plan.

The land to be taken by the large channel would be mostly in the lowest part of the Conewango marsh. The actual sales prices for the lowland which would be occupied by this channel, were recorded by the Tippetts engineers, runs from $6 to $30 per acre. The estimate presented by General Person is $567 an acre. Thus, General Person's estimate of the cost of land required is more than 75 times what it should be.

It is clear that whoever made this estimate was ignorant of the fundamental conditions of the plans for which he was making an estimate, and similarly uninformed as to the nature of the land taken and as to its going value. Of course, this resulted in a totally false and inaccurate estimate of cost.

This impossible combination of elements from strikingly different plants was accompanied by an excessive estimate of unit cost and the mistaken classification of material. The Corps of Engineers estimated that the work proposed in Mr. Jones' testimony would cost $200 million as against Mr. Jones' estimate of $80 million. The largest single item in the estimate of the corps, as estimated by General Person, was for construction of a section of large channel calling for the excavation of 77 million cubic yards of glacial sand, clay, and gravel.

Now the Tippetts engineers, who made their study a few months later, in the employ of the Corps, had a large item for substantially identical material, to be excavated under less favorable circumstances.[1] In that largest item in the project, their estimated cost, for identical material under less favorable conditions, was considerably less than half as much per cubic yard as in the estimate presented by General Person for the Corps of Engineers.

The work involved in this very large item is standard, large scale excavation, with no complications, and the cost can be estimated within quite narrow limits. On such work a difference of 25 percent either way from the mean would represent a very wide range for competent bidders who are financially and otherwise equipped to do the work to advantage. The variation of more than 100 percent in the estimates for such work is beyond all reason. It does not represent responsible estimating.

For another large item of 25 million cubic yards of identical material, that in the diversion channel, the estimated cost per cubic yard given to Senator ELLENDER by General Person for the corps is more than twice as high per cubic yard as that estimated by the Tippetts engineers for that identical material a few months later.

In addition the estimate which General Person presented to the Senate committee improperly classified more than 20 million cubic yards of excavation, and estimated it at more than five times the cost per cubic yard estimated by the Tippetts firm for substantially identical material. On these three earth moving items alone the estimate of the Corps of Engineers, as given to the Senate committee, is about $50 million higher than it would be at the Tippetts estimate of unit cost for the same material.

The very careful and detailed analysis we had made of this cost indicated that the Tippetts estimates are somewhat high. Our estimates were made by a man whose work for 25 years has been to make detailed working estimates by which large contractors make their bids on large earth moving contracts. The estimates he made for this work were in the same careful detail with which he makes estimates for contractors' bids.

The estimate made by General Person for the Senate committee might be excused on the ground that in the short space of 2 weeks no adequate estimate could be made, and that mistakes were probable. Yet when General Person presented this estimate to the Senate committee, he testified:

"We feel the studies have been completed, and that further studies would not affect our conclusion."

That has been the position of the corps all along.

Is it not a serious matter that when a Senate committee specifically calls for the judgment of a great national agency as to the adequacy of an estimate it is considering, that this agency should present a statement prepared without even a rudimentary understanding of the work under consideration, and that its estimates of cost should be more than double those made by responsible engineers? Under such circumstances, what chance is there for a fair hearing to be had? This, I regret to say, is somewhat typical of the publicity which has issued from the Pittsburgh office of the corps.

---

[1] The chief differences were that the length and size of the channel in the Person item was larger, and that therefore the cost of equipment per cubic yard would be less in the item estimated by the Corps of Engineers than in the item estimated by Tippetts; and that the larger dimensions of the Person item would be more favorable to the method of excavation proposed (by Tippetts), the use of suction dredge. The actual unit cost for the Person item would be about 15 percent or 20 percent less than for the Tippetts item.

LETTER TO THE PRESIDENT

Mr. KOWALSKI. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD and include a letter to the President.

The SPEAKER. Is there objection to the request of the gentleman from Connecticut?

There was no objection.

Mr. KOWALSKI. Mr. Speaker, a letter asking a series of questions on the U–2 incident and the summit meeting has been sent to the President of the United States by a large group of Members of the House.

The letter was sent to the White House Friday afternoon. Since then additional Members of the House have expressed a desire to sign their names to the letter.

A report listing additional signatures will be made to the House.

Mr. Speaker, following is the text of our letter to the President:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D.C., May 20, 1960.

President DWIGHT D. EISENHOWER,
The White House,
Washington, D.C.

DEAR MR. PRESIDENT: I am authorized by the undersigned Members of the House of Representatives to send you this letter.

We are distressed over the collapse of the summit meeting and the damage to our prestige and leadership in the world. The cause of world peace has been endangered. We believe that Congress and the people must ask the following questions. We believe it is the administration's responsibility to answer these questions:

1. Why was the U–2 flight over the Soviet Union ordered just prior to the summit meeting?

2. When the U–2 incident became public, why were a series of contradictory and false statements issued by administration officials—and who was responsible?

3. Why did the administration order a worldwide military alert from Paris on the eve of the summit?

4. Why did the administration first indicate that as a matter of national policy it would continue manned flights over Russia, and then reverse itself and say that it had ordered them discontinued?

5. Was it necessary to compromise the announced peaceful role of the National Aeronautics and Space Administration (NASA) by using it as a cover for an espionage operation?

6. Why was there no coordination between the agency responsible for the U–2 flight and the agency responsible for our diplomatic functions?

7. Why did the President announce in advance that as our Chief of State he might return to Washington before the conference ended?

8. Has the traditional American policy of civilian supremacy over the military been impaired?

Cordially,

FRANK KOWALSKI, Member of Congress, Connecticut; CHET HOLIFIELD, 19th District, California; LEE METCALF, 1st District, Montana; STEWART L. UDALL, 2d District, Arizona; ROY W. WIER, 3d District, Minnesota; GERALD T. FLYNN, 1st District, Wisconsin; JAMES ROOSEVELT, 26th District, California; JEFFERY COHELAN, 7th District, California; THADDEUS M. MACHROWICZ, 1st District, Michigan; WILLIAM S. MOORHEAD, 28th District, Pennsylvania; HENRY S. REUSS, 5th District, Wisconsin; ROBERT W. KASTENMEIER, 2d District, Wisconsin; FRANK THOMPSON, JR., 4th District, New Jersey; JOSEPH E. KARTH, 4th District, Minnesota; DON MAGNUSON, 7th District, Washington; LEONARD G. WOLF, 2d District, Iowa; B. F. SISK, 12th District, California; MERWIN COAD, 6th District, Iowa; DOMINICK V. DANIELS, 14th District, New Jersey; JOHN A. BLATNIK, 8th District, Minnesota; CLEMENT W. MILLER, 1st District, California; BYRON L. JOHNSON, 2d District, Colorado; J. EDWARD ROUSH, 5th District, Indiana; HARRIS B. MCDOWELL, JR., At Large, Delaware; JOHN F. SHELLEY, 5th District, California; EDITH GREEN, 3d District, Oregon; AL ULLMAN, 2d District, Oregon; CHARLES O. PORTER, 4th District, Oregon; JOHN BRADEMAS, 3d District, Indiana; LEROY H. ANDERSON, 2d District, Montana; JOHN D. DINGELL, 15th District, Michigan; JAMES C. OLIVER, 1st District, Maine; HUGH J. ADDONIZIO, 11th District, New Jersey; PETER W. RODINO, JR., 10th District, New Jersey; SAMUEL N. FRIEDEL, 7th District, Maryland; THOMAS L. ASHLEY, 9th District, Ohio; CHESTER BOWLES, 2d District, Connecticut; ELMER J. HOLLAND, 30th District, Pennsylvania.

Additional signers to letter to President on U–2 and summit:

THADDEUS J. DULSKI, 41st District, New York.

GEORGE P. MILLER, Eighth District, California.

KENNETH J. GRAY, 25th District, Illinois.

CECIL R. KING, 17th District, California.

CHARLES C. DIGGS, JR., 13th District, Michigan.

JOHN R. FOLEY, Sixth District, Maryland.

WINFIELD K. DENTON, Eighth District, Indiana.

VICTOR L. ANFUSO, Eighth District, New York.

EDNA F. KELLY, 10th District, New York.

DAN ROSTENKOWSKI, Eighth District, Illinois.

GEORGE A. KASEM, 25th District, California.

JAMES M. QUIGLEY, 19th District, Pennsylvania.

More names to be added to the list of signers for the letter to the President on the U–2 flight and summit:

LEONARD FARBSTEIN, 19th District, New York.

HERMAN TOLL, Sixth District, Pennsylvania.

WILLIAM H. MEYER, at large, Vermont.

EMANUEL CELLER, 11th District, New York.

JOHN H. DENT, 21st District, Pennsylvania.

EARL HOGAN, Ninth District, Indiana.

EMPLOYMENT DISCRIMINATION BECAUSE OF AGE

Mr. WOLF. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Iowa?

There was no objection.

Mr. WOLF. Mr. Speaker, years ago this country recognized its responsibility to its children, and the first child labor laws were enacted. By the enactment of these laws, the Congress of the United States said that it believed there should be a minimum age established when a child could work.

The bill I introduce today will recognize another responsibility which I feel has become the responsibility of this Congress. That is to insure that men and women who desire to work, who are physically able, and who have proper technical skills and employment experience for the positions for which they apply, are permitted to work without regard to age.

Recent congressional hearings and studies reveal the fact that discrimination because of age can begin to haunt an individual as early as age 45 or even before. As our economy experiences more and more automation we find that workers in the 45 to 65 age group find it increasingly difficult to secure new employment.

To be unemployed because of age is a deep humiliation to a worker in the age group just mentioned, and jeopardizes the livelihood of themselves and their families. At the same time our Nation is deprived of one of our most valuable resources, the skill and experience of the mature person.

The American Legion and the Fraternal Order of Eagles, in both of which I am a member, have been concerned about this problem for some time, and I want to commend them for the educational campaign which they have carried forward to acquaint employers with the advantages of hiring workers in the 45 to 65 age bracket.

My bill would make discrimination because of age an unfair labor practice. It would amend the National Labor Relations Act by making it unlawful for an employer or a labor organization "to refuse to hire, to discharge, or otherwise discriminate against any individual with respect to his terms, conditions, or privileges of employment, otherwise lawful, because of such individual's age, when the reasonable demands of the position do not require such an age distinction."

Mr. Speaker, the reasons usually given for refusing to hire older workers is that they have "slowed down" or are "irregular in reporting on the job."

This assertion, Mr. Speaker, is not borne out by the facts which are included in the reports from the McNamara Subcommittee on the Aged and Aging in the United States, and a study conducted by the Department of Labor in 1956. These studies showed that older job seekers are more highly skilled and more stable in terms of job changes and job tenure than younger workers. Also, these studies showed that there were no significant differences in absenteeism and safety records between young and older workers.

The hearings of the McNamara subcommittee make it clear that little progress has been made through voluntary or State action, and that it must now become a national legislative issue to overcome discriminatory employment practices.

My bill will make it plain that national policy is strongly opposed to such a waste of human resources and manpower, and that we are determined to do something about it.

EXTENSION OF REMARKS

Mr. McCORMACK. Mr. Speaker, I ask unanimous consent that the gentleman from Connecticut [Mr. BOWLES] be permitted to extend his remarks in the CONGRESSIONAL RECORD and include extraneous matter, notwithstanding the fact that it is estimated by the Public Printer to cost $243; and that the gentleman from New York [Mr. MULTER] notwithstanding an estimated cost of $384.75, may have the same permission.

Mr. HOFFMAN of Michigan. Reserving the right to object, Mr. Speaker, can the gentleman tell us what is the total cost where these extensions exceed the authorized cost?

Mr. McCORMACK. On the two cases I have just referred to?

Mr. HOFFMAN of Michigan. Yes.

Mr. McCORMACK. One was in the sum of $384.75 and the other $243.

Mr. HOFFMAN of Michigan. Both Democratic requests?

Mr. McCORMACK. I think that is an unnecessary observation.

Mr. HOFFMAN of Michigan. Undoubtedly it is unnecessary, but——

Mr. McCORMACK. If we go into that, it will apply both ways.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

COMMITTEE ON AGRICULTURE

Mr. GATHINGS. Mr. Speaker, I ask unanimous consent that the Committee on Agriculture may have until midnight tonight to file a report on the bill H.R. 12176.

The SPEAKER. Is there objection to the request of the gentleman from Arkansas?

There was no objection.

CASCADE, IOWA, MEDICAL CENTER EXAMPLE OF RURAL AMERICA IN SUCCESSFUL SELF-HELP PROGRAM

The SPEAKER. Under previous order of the House, the gentleman from Iowa [Mr. WOLF] is recognized for 20 minutes.

Mr. WOLF. Mr. Speaker, America's increasing population and higher living standards have created the need for more and better hospital and medical facilities. The Federal Government has

already recognized this need, and its responsibility in this field by helping communities, through their State agencies, to construct those hospital and medical facilities which are necessary to meet their needs. It has done this through the well-known Hill-Burton hospital program.

This program has been a great help. The needs of all communities, however, cannot be accommodated as only those areas which State agencies determine have the greatest needs or priorities have been able to construct hospital and medical facilities with Hill-Burton matching funds.

There is located in my district in northeastern Iowa a community which provides an excellent example of the action which a community can follow when it finds that it must construct modern medical facilities, without Federal aid, in order to attract and keep a local doctor. The community to which I refer is Cascade, Iowa. It has a population of 1,500.

I would like to point out the tremendously vital service which the local newspaper performed in informing the citizens of the area of possible courses of action and in creating enthusiasm for the project. The efforts of the Cascade Pioneer-Advertiser contributed a great deal to the successful culmination of the community's efforts. The work of this newspaper, in stimulating local interest and cooperation, can serve as an example to other newspapers in communities with similar problems.

On June 4, 1959, the local newspaper, the Cascade Pioneer-Advertiser, carried an editorial pointing out the need for resident doctors and a hospital. The editorial stated:

CASCADE NEEDS RESIDENT DOCTORS; HOSPITAL HERE DEEMED NECESSARY

What is one of the major problems facing small town Americans? That might be cataloged under one heading, adequate medical service. Hundreds of small towns, all over the United States, have that vexing problem, among them Cascade. What is the true picture regarding medical doctors locating in small towns? If you, as a citizen, interested in your community, in its growth and well being were to ask that question of one or all three of the committee appointed within recent months by the Commercial Club to look into the local doctor situation, you would be greatly concerned and shocked.

The day of the old family physician is passé. Gone is the day when the old family doctor, answered your summons, day or night, in fair weather or foul. Probably one of the last of that kind, Dr. M. I. Nederhiser, is just now returning to office practice, following an illness of several months, brought on by overwork. In their place has come the specialist.

Today's doctors demand and get something more than just an office in which to practice. Yes, the doctor of today wants and must have hospital facilities. If those facilities are not available the doctor goes elsewhere.

It doesn't take a seer or someone versed in business projection to reach that conclusion. All it requires is a visit with one or all three local men acting as a doctor committee, or by your own personal contacts, both inside and out of the medical profession.

As one young doctor who recently visited Cascade put it, "Our class has it made. We can practically dictate our own ticket. This is a business proposition with us just as it is with anyone else about to engage in business. There must be adequate facilities available. What do you have to offer?"

Cascade as it is presently constituted is similar to other small towns needing additional medical service. It has plenty of work, too much for one doctor to handle. True hospital facilities are as near as 8 miles in one direction and 25 in another direction but evidently that does not suffice. They must be here.

One of Iowa's small towns which can boast to top medical service is Buffalo Center, population 1,200. It has three medical doctors, all under 40 years of age. How did they secure three such doctors? First and foremost the town has hospital facilities. Originally started by a Dr. Dromlage, the hospital with a recent new addition is 100 by 40 feet of brick design, modern in every way. It has 14 rooms containing 20 beds. Twenty-three people are on its payroll including nurses, nurses' aids, cooks, and so forth.

A basic requirement for any community, if it is long to remain in the sun, is to be constantly alert toward improving itself. One of those basic requirements is adequate medical service. What then must we do as citizens of this community to insure the health of not only ourselves but our neighbors, as well. We must meet those challenges which face the small town and make every attempt to solve them. First, by being a booster for community betterment and second, whenever and wherever possible to assist in a monetary manner.

On June 18, 1959, the Cascade Pioneer-Advertiser explained to its readers the Buffalo Center, Iowa, Hospital and Clinic project as follows:

BUFFALO CENTER HOSPITAL AND CLINIC

The town of Buffalo Center, population 1,200, has the above fine hospital available for use by the residents of the area. The hospital has 20 rooms and last year admitted 936 patients. Services available include: obstetrical, surgical, X-ray, complete lab, physical therapy, and general medical. Three young doctors are on the staff of the Buffalo Center Hospital, which was founded by a fourth doctor, Dr. George Francis Dolmage. Considerable effort is now being expended by interested persons trying to build a hospital in Cascade.

WHAT'S YOUR IDEA?

An editorial in this column 2 weeks ago on the possibilities of building a hospital here and through such a hospital alleviate our medical doctor shortage, drew much favorable comment. Everyone agreed a hospital or clinic should be built. Not only was the local comment favorable, but it was well received in other localities. The editorial pointed up the fact that Buffalo Center, a town of 1,200 people, which is about 300 smaller than Cascade, has its own hospital the 3 young medical doctors. That hospital is self-sustaining. The editorial was read over quite a wide area, as the writer has been told of a number of other towns who now have hospitals or realize they must provide better health facilities for residents of their communities. Three towns who are presently building hospitals or will get them underway shortly are Guttenberg, Cresco, and Decorah. Each of those three towns now have hospitals but within recent months those hospitals failed to meet State requirements. In each instance it was a case of either building a new hospital, completely revamping their present one, or just quitting. As can be imagined not one chose the last. On the contrary each decided to provide their people with the best facilities possible. Under such community momentum, new hospitals will be built, assisted by the Hill-Burton Federal plan which provides that the Federal Government furnish 33⅓ percent of the cost. Location of each of the towns mentioned bears out the fact they are within easy driving distance of other towns having hospital facilities. Buffalo Center is close to Clear Lake, Mason City, Lake Mills, and Forest City. Decorah is only 1 hour removed from the Mayo Clinic at Rochester. Guttenberg is the same distance or approximately so as is Cascade from Dubuque. Will we as a community unite and give the hospital or clinic our fullest consideration or shall we just forget the whole proposition?

On July 2, 1959, the Cascade Pioneer-Advertiser in citing the Guttenberg, Iowa, Hospital as an example, stated:

ANOTHER TOWN LOOKS FORWARD

Guttenberg, Iowa, a town of 1,900, 38 miles north of Cascade, with only 400 larger population, has broken ground for a beautiful new 30-bed hospital. It can in reality accommodate 40 beds. When complete it will be ultramodern and compare favorably with any Dubuque hospital, only on a smaller scale.

The present hospital at Guttenberg was condemned in recent months by the State board of health. It therefore became necessary to do one of three things, remodel the present structure, build a new one, or fold up, so to speak, insofar as home hospital facilities were concerned. Having had the many benefits, over a long number of years, that a hospital can and does bring, there was only one thought uppermost in the minds of the majority of the people of that community, and that was of course to build.

Originally it was planned to start on a small scale, around $50,000 to $100,000, a unit for the handling of minor surgery, confinements, etc. When the fund drive actually got under way there was so much enthusiasm generated it immediately became apparent they could do much better.

Application for a Federal grant brought the information that the area actually needed a 30-bed hospital, and on that premise, money would be available. To fulfill that requirement it was necessary for the community to project its thinking: $300,000 was raised by contributions, a $100,000 bond issue passed with the Government furnishing the $200,000.

Cascade does not need a $600,000 hospital or one of anywhere near that amount. The above does show, however, what another Iowa town, in our population bracket is doing to cement its community. What Cascade probably does need is what Guttenberg originally started out to get, a $50,000 to $100,000 hospital where minor surgery, confinements, etc., may be taken care of. We either move forward or slip backward. There is no middle ground insofar as community life is concerned. In your measured judgment which of the two has Cascade done in the past 3 years?

On July 16, 1959, the new medical clinic in Elizabeth, Ill., was cited by the Pioneer-Advertiser:

ANOTHER SMALL TOWN LOOKS FORWARD

Elizabeth, Ill., on U.S. Highway 20, is about 25 miles east of Dubuque and has a population of 800. It has recently completed a medical clinic at a cost of $28,000. Information provided by Mr. John H. Gerkman, owner of an appliance center bearing his name, furnishes the Pioneer-Adviser with the following data relative to that clinic:

The building is 44 by 36 and was built in accordance with the Sears-Roebuck Foundation plan. The Sears Foundation furnished the building plans free. Mr. Gerkman said it was not necessary for the Sears Foundation to help them further but that help was available. "The building is very modern," Mr. Gerkman wrote. "It is brick veneer, has two examination rooms, two treatment rooms, consultation room, nurse and reception room, large waiting room, emergency room, X-ray room, utility room, two washrooms. The building is air conditioned, gas heated."

Mr. Gerkman also writes they had been trying to secure a doctor for more than a year but none were approachable because of the lack of modern facilities.

An organization, known as the Elizabeth Development Association, numbering 14, was set up. Each member subscribed for $2,000 in shares, total $28,000. A board of directors and building committee were elected. This board took office in December of last year. Today, Mr. Gerkman writes, "We have a young doctor who likes the setup very much."

Mr. Gerkman invites people from this area who might be interested in the clinic to drive to Elizabeth and see it close up.

Having shown the residents of the area what other towns of comparable size had accomplished in providing adequate medical and hospital facilities for their people, the Pioneer-Advertiser on August 13, 1959, announced a community-wide hospital survey in Cascade under the direction of the Sears Foundation of Chicago, Ill., to ascertain the community needs in the way of increased hospital and medical services. The text of this announcement follows:

SURVEY TO DETERMINE MEDICAL STATUS

Going forward this week is an impartial random, communitywide sample survey to ascertain what this community needs in the way of increased medical services.

This survey is being made under the supervision and direction of Sears Foundation, Chicago, Ill. Assisting in the work are two separate groups, Cascade Woman's Club and members of a committee from American Legion and business circles which has been meeting regularly Monday evenings to try and seek an answer to more adequate medical service for this area.

NEED NEW INSTRUMENTS

Cascade is not the only small community which finds itself in the position of having curtailed medical service. Other small communities are likewise handicapped when competing with larger towns and cities for the services of doctors. The reason: doctors today need laboratories, X-rays, modern instruments—all the facilities of modern medicine to verify their diagnosis and speed patients' recovery.

MUST HAVE FACILITIES

Doctors now locate in cities where they have the facilities they need, at the local hospital. But if they settle in small communities they usually must either buy the equipment or do without.

Consequently, as doctors die or move away, few younger doctors take up their practice. The people in such communities are then forced to go to larger towns or cities for their medical care. And even when some doctors remain, who have inadequate facilities, the people rely on them mainly for emergencies and first aid. Their more serious ailments are treated by larger towns and city doctors.

NEED MODERNIZATION

To combat that, small communities like Cascade must provide themselves with modern medical facilities. Only then will competent young doctors be induced to settle in small communities, like ours. And only then will people of this area receive the quality of medical care they need.

WILL SHOW NEED?

The community survey which is now being conducted will show whether a definite need exists for a doctor or doctors in this community. This preliminary survey provides a factual evaluation of the medical needs of this area—and if such do exist the community has something of definite value with which to interest the doctor or doctors.

PROFESSIONAL ARCHITECT

Sears Foundation has retained a professional architect who specializes in medical architecture. Plans are available through them for a one- and two-doctor unit that is adaptable to local conditions, modern in design, and contains many built-in features. Complete plans and specifications are given to cooperating communities.

The community that provides modern medical facilities increases also its competitive position with larger communities in obtaining a physician. Sears, Roebuck Foundation has a close working relationship with the American Medical Association and the State medical societies. The foundation will also assist the doctor or doctors in setting up forms, accounting procedures and policies. It will also assist as an expert in medical business practice.

Sears, Roebuck Foundation is a nonprofit corporation and endowed by Sears, Roebuck & Co. to aid in the economic and social improvement of the American community.

In summing up what the committee has been doing and is still doing, with the help of the local woman's club, if the survey returns are favorable and a definite need is established for more adequate medical services, we must become more self-reliant and adopt also a do-it-ourselves plan, fashioned somewhat after the lines of those appearing in the Sunday daily newspapers. We either move forward or backward. There is no standing still.

A report on the medical economic survey was published in the Pioneer-Advertiser on September 10, 1959, as follows:

MEDICAL ECONOMIC SURVEY OF CASCADE, IOWA, BY THE SEARS, ROEBUCK FOUNDATION

It is the purpose of this survey to evaluate the community and its trade area as to its medical habits, economic potential, and ability to support a doctor. The foundation has been conducting such surveys for over 2 years and in those communities surveyed that have secured doctors, the doctors' actual experience shows, in every case, the economic potential as stated in the survey, to be conservative.

POPULATION COMPOSITION

Cascade, Iowa, is a town of 1,423 population, located 25 miles west of Dubuque. The population is mainly German and Irish, consisting of 42.7 percent adult, 57.3 percent children. Main industry is beef raising and farming.

HOSPITALIZATION

During the last 12 months, it is estimated 16.5 percent of the population was hospitalized. They went to:

Town:	*Distance (miles)*	*Percent*
Monticello, Iowa	10	48.3
Dubuque, Iowa	25	38.0
Iowa City, Iowa	60	12.6
Cedar Rapids, Iowa	45	1.1

The causes were:

	Percent
Medical	52.8
Surgical	26.4
Obstetrics	20.8

SICKNESS IN THE AREA

During the last 12 months there was an estimated 4,477, separate illnesses necessitating 8,155 individual visits to the doctor. This averages 27 patients a day visiting doctors. The breakdown shows these patients are visiting doctors in the following communities:

Town:	*Distance (miles)*	*Percent*
Monticello	10	61.5
Dubuque	25	20.8
Cascade	--	11.2
Dyersville	16	4.5
Other towns	--	2.0

DISTANCE TRAVELED

In order to visit doctors, the people of the Cascade area, in the last 12 months, traveled 228,580 miles. This averages 790 miles per day, round trip or roughly the distance from Cascade to Birmingham, Ala.

Economic potential

Estimated expenditure for medical care based on office calls and inoculations only	$22,675
Estimated expenditure for medicines (bought in towns other than Cascade)	17,000
Estimated annual expenditure for gas and oil driving to and from doctors offices	4,070
Total	43,745

In addition, these persons, when visiting doctors in neighboring towns purchase household supplies (other than medicines) estimated to total $72,530.

INSURANCE

Fifty-four percent carry hospital insurance.

Forty-three and three-tenths percent carry health insurance.

AN INVITATION

You and your family are urged to attend a meeting of utmost importance to the future of this entire community, a medical center, bringing with it increased medical coverage. This meeting will be held at 8 p.m., Monday, September 14 at Legion Pavilion, Cascade.

Speaker will be Mr. Norman H. Davis, from Sears Foundation, Chicago, Ill., who will tell us how we, as a community, may secure increased medical coverage.

Slides of other medical centers will be shown.

COMMITTEE ON EXPANSION FOR MEDICAL SERVICE.

A communitywide meeting was held on September 14, and the results of that meeting were reported by this local paper on September 17 as follows:

[From the Cascade (Iowa) Pioneer-Advertiser, Sept. 17, 1950]

OVERWHELMING MARGIN FAVORS CENTER PROJECT

By an overwhelming margin of 231 to 6, those persons attending Monday evening's public meeting voted to work with the Sears Roebuck Foundation to secure increased medical facilities for Cascade and community. The written vote was taken following a 2-hour meeting in Legion Pavilion.

Norman H. Davis, director of the foundation's medical program, gave a talk on the community medical assistance plan and showed slides of one- and two-doctor units the foundation has helped communities build.

The next step will be organizational. A nonprofit corporation will be formed and an executive committee appointed. This committee will then form solicitation teams for the fund raising which will be in the form of pledges of loans to the corporation. The pledges will be called in at a later date. Retirement of these loans (they are not donations) is determined by the executive committee and will be done as the corporation is financially able to do so. Income for the loans comes from rent of the doctors. The stockholders may decide at a later date if they wish to sell the building to the doctors, should they want to buy it.

Davis pointed out that no less than a 2-doctor unit should be considered for Cascade. The cost of such a medical center can be guaranteed by the foundation not to exceeed $35,000. That cost would be for a building 48 x 44 and would include everything but the doctors' equipment, which

they will purchase themselves. Davis pointed out that the Sears-Roebuck Foundation has nothing to sell, but is only interested in giving its services to those communities needing them.

SECURE DOCTORS

Another service that will be performed by the foundation will be to use its contacts with the placement service of the American Medical Association, the State medical society and the efforts of its own medical advisory board in interesting physicians to come to Cascade. Davis pointed out that when a community accepts the program offered by the Sears-Roebuck Foundation and raises money to build the medical center, then the foundation feels obligated to work toward securing doctors until they are successful. He said the foundation takes the responsibility of getting doctors because of working with the community on the problem.

The following eight excerpts from the Cascade Pioneer-Advertiser depict the fund-raising drive, the election of temporary officers, the selection of a hospital site, the start and progress of construction:

[From the Cascade (Iowa) Pioneer-Advertiser, Oct. 1, 1959]

MEDICAL CENTER FUNDRAISING DRIVE TO BEGIN NEXT WEEK

The fundraising drive to build the medical center for Cascade and area will start early next week. Campaign materials have been received from the Sears, Roebuck Foundation and precampaign planning is now being taken care of.

A recent survey made in Cascade by the foundation shows that an average of 23 patients a day travel to surrounding communities for medical care. This results in a cash loss of medical fees of $22,675 and $17,000 for medicines. It requires $4,070 for gas and oil to visit these communities. In addition, these persons, when visiting doctors in neighboring towns purchase household supplies (other than medicines) estimated to total $72,530. This brings the total economic loss to Cascade to $116,275.

The Community Medical Assistance Plan of the Sears, Roebuck Foundation offers Cascade an opportunity to stop this economic loss as well as make our area a trade center for this rural area.

[From the Cascade (Iowa) Pioneer-Advertiser, Oct. 8, 1960]

ONE-THOUSAND-DOLLAR LOAN TO MEDICAL CENTER

The American Legion Auxiliary of Cascade at its Monday meeting voted to loan $1,000 to the fund for the construction of the Cascade Medical Center, Inc. Mrs. R. P. Neiers, auxiliary president, presented the check Tuesday morning to R. L. Tucker and Adrian Kurt, committee members. The fund drive was officially opened Tuesday evening when over 40 captains met to receive their instructions and pledge cards. Every person in the area will be contacted to help reach the goal of $50,000.

[From the Cascade (Iowa) Pioneer-Advertiser, Oct. 15, 1959]

PROGRESS NOTED—MEDICAL CENTER CAMPAIGN TARGET DATE IS SATURDAY

Target date for completion of the fundraising drive for the Cascade Medical Center, Inc., has been set for Saturday, October 17. This was the date set at the meeting of the captains on October 6.

The captains should turn in their checks and completed pledges at the Cascade State Bank before 4 p.m. Saturday. A special account has been opened at the bank to handle the fund.

Workers have been busy all week making their calls to help reach the goal of $50,000. To insure the drive's success, it will be necessary for everyone to lend as much as possible. Anyone not contacted by Saturday who desires to make a loan to the center may do so at the bank or by calling one of the captains listed in last week's paper.

Additional captains named since last week's paper include Robert Curoe, Ray and Duane Recker, Walter Callahan, and Ralph McCarthy.

All captains are asked to meet Saturday night in the auxiliary room of the Memorial Building at 8 p.m.

[From the Cascade (Iowa) Pioneer-Advertiser, Oct. 2, 1959]

GETTING CLOSE—MEDICAL CENTER FUND PLEDGED $44,000

The fundraising drive to build the Cascade Medical Center, Inc., is nearing completion thanks to the generous support accorded it by approximately 480 individuals, clubs, and organizations. As of this date the fund has reached the total of $44,937.

A few area captains have yet to make their reports so it now appears that the goal of $50,000 will be reached. No doubt some persons wishing to make loans to the Center were missed in the solicitation. The committee would appreciate those persons stopping at the Cascade State Bank or contacting one of the committee members who will fill out a pledge card for them. Those persons can help immensely in reaching the final goal.

MEETING SATURDAY

Any captain who has not made a report as yet is urgently requested to do so on or before Saturday. Cash and pledges can be turned in at the Cascade State Bank or may be turned in at a meeting set for the captains Saturday night at 8 p.m. in the auxiliary room. Saturday night will be the final report so all captains are urged to attend.

Monday's Commercial Club meeting produced another $500 loan when the club members voted to lend that amount.

ARCHITECT HERE

The committee has been informed by the Sears-Roebuck Foundation that its architect, Mr. Don F. Putney, of the Technical Service, Burlington, will be in Cascade Tuesday of next week to look at possible building sites for the Center. He will make a recommendation as to the best site available.

Final results of the drive will be announced in next week's paper.

[From the Cascade (Iowa) Pioneer-Advertiser, Oct. 29, 1959]

MEDICAL CENTER—TEMPORARY OFFICERS, DIRECTORS ARE NAMED

A temporary slate of officers and directors has been named for the Cascade Medical Center, Inc. The group will hold office until the first annual meeting of stockholders.

R. L. Tucker has been named president; Edward Kremer, vice president; and W. T. McDermott, secretary-treasurer. Named as directors were Adrian Kurt, Ray Noonan, Dr. E. J. Bisenius, Mrs. R. L. Tucker, Richard Devaney, Mrs. Charles Schneiter, Mrs. Roy Ganfield, and Leo Sullivan.

Don S. Putney, R.A., medical facilities planning consultant, Burlington, was here Monday to look at possible building sites. E. C. Whiting, medical structures consultant, Iowa City, creator of modular coordinated medical practice facilities, was here Monday evening to meet with the committee to discuss the building and construction procedure. He will return Monday evening to again meet with the board.

GOAL ALMOST REACHED

With almost all captains having reported in, the financial goal has been almost reached. It is hoped all captains will be finished with their calls by Saturday night.

[From the Cascade (Iowa) Pioneer-Advertiser, Nov. 5, 1959]

ENTER CONTRACTS—SELECT EAST SIDE LOTS FOR MEDICAL CENTER

E. C. Whiting, of Iowa City, consultant for Modular Coordinated Medical Practice Buildings, met Monday evening with the Cascade Medical Center Committee. Following a long discussion, second in 2 weeks, the committee entered into contracts with Mr. Whiting and Lyle Rogers, of Warsaw, Ill., who will act as general contractor, to erect a Modular Medical Building here. Mr. Rogers will work under the supervision of Mr. Whiting.

Two building sites were given careful study. The committee acting upon advice from both Mr. Whiting and Don S. Putney, engineer consultant, of Burlington, selected what is known as the Legion lots in East Cascade.

Mr. Whiting has been consultant to about 60 of these buildings this year. Mr. Rogers has three or four of those buildings in various stages of completion at this time.

Bids will be offered local concerns on lighting, heating, plumbing, air conditioning, and floor coverings.

Because work is starting almost immediately and at an accelerated pace, it will be necessary for stockholders to move up the date of their pledges. It is hoped that other public-spirited citizens will join in this community-wide project. Stock purchases are available through members of the committee or at Cascade State Bank.

[From the Cascade (Iowa) Pioneer-Advertiser, Nov. 19, 1959]

MEDICAL CENTER BUILDING STARTED

Construction started last week on the Cascade Medical Center, Inc. The footings were dug Friday, and Monday the cement was poured. A picture shows the building-site after the footings were dug. The picture was taken with American Legion Post 528's park in the background. Steel for the 44-foot-5½-inch by 49-foot 5½-inch building will be shipped from Elizabeth, Ill., on November 28. Pledge reminder letters are now being mailed to stockholders so that building expenses can be met as they arise. Payments on the pledges can be returned in the return envelopes enclosed with the pledge reminders, paid at the bank, or paid to one of the center officers.

[From the Cascade (Iowa) Pioneer-Advertiser, Dec. 10, 1959]

MEDICAL CENTER PROGRESSING

Work on the Cascade Medical Center is rapidly progressing. Work was just starting on the steel bar joists and steel fabricated trusses Tuesday when a picture was taken. Workmen finished the steel installation yesterday (Wednesday) and now have started on the roof. A photo also shows the exterior prefab wall panels. Lyle Rogers, Warsaw, Ill., the general contractor, has been supervising the construction. Art Dehner is the subcontractor. Completion date is tentatively set for mid-January.

Mr. Speaker, the dedication ceremonies of this new medical center were held on April 3, 1960. As the newspaper said:

It was through the combined efforts of everyone that a dream became a reality.

Perhaps this is why on a cold, damp, raw day, almost a thousand people came to the ceremonies and viewed the medical center with shining eyes and pride in their own personal accomplishment.

The Pioneer-Advertiser on April 7, 1960, reported as follows:

This community's new medical center was dedicated with appropriate ceremonies Sunday. The weather was not 100 percent cooperative but the number of people at both the program and open house following was nothing short of tremendous. Had good weather prevailed, it is doubtful if the crowds could have been handled. It is estimated 500 people attended dedication ceremonies in Legion pavilion and no fewer than 800 viewed the center during the afternoon.

Program speakers were lavish in their praise of the medical center, as well they might be. Its exterior beauty is eye-catching. Its interior, circular in design, is novel at the same time labor-saving for the doctor. Sears-Roebuck Foundation is to be highly complimented for the features incorporated into this building. One speaker at Sunday's dedication said it compared favorably with any to be found in Chicago, New York or San Francisco. Another voiced the opinion it was comparable to any in the Nation. In both instances they were right. This entire community may take pardonable pride in this medical center. It was through the combined efforts of everyone that a dream became a reality. This medical center should prove conclusively that small communities are far from gasping for their last breath. Each community is just as good as its residents wish to make it.

Mr. Speaker, it was my privilege to speak at the dedication ceremonies, and the report on my remarks follows:

"If this town is dying, then I would like to be a part of it." So spoke Representative LEN WOLF at the dedication program Sunday of the Cascade Medical Center. WOLF's words were in reply to recent articles in a neighboring newspaper which implied that rural America (the small towns) was dying and would become a thing of the past.

Over 500 persons attended the dedication program and an estimated 800 visited the center during the open house which followed.

RURAL AMERICA ON THE GO

Representative WOLF, in his dedication address, referred to the completion of the medical center as, "Rural America in action; rural America on the go." He praised the area for its adjustment to changing times and its ability to get things done by the action of its own people.

"It's easy to write to Congressmen in Washington," WOLF said, "and say we need help, but first you must prove that you can help yourself. This has been done here in Cascade and community."

Speaking on "Community Relations and Medical Care" WOLF concluded his address with, "God bless you for the work you've done, I'm proud to be a part of you today."

TUCKER MASTER OF CEREMONIES

R. L. Tucker, president of the board of directors of the medical center, turned in an excellent job as master of ceremonies at the formal program.

The Reverend Thomas Bisenius, chaplain of Post 528 and assistant pastor at St. Lucas, offered the invocation.

Several distinguished guests were introduced including Mayor Leo Hirtz, Bernard; Mayor William Mausser, Epworth; Mayor Cliff Knippel, Dyersville; Mayor Leo Dolphin, Cascade; and E. C. Whiting, consultant for the center project.

Dr. Robert Myers, president of the Jones County Medical Society, was present representing the society. He congratulated the Cascade area on the completion of its fine center and extended best wishes to Dr. Mehrl as he started practice in Cascade. "From my own experiences," Dr. Myers said, "You couldn't have picked a better town."

DAVIS SPOKE

Norman Davis, director of medical programs for the Sears-Roebuck Foundation, extended his congratulations for the rapid completion of one of the best medical centers in the United States. "This medical facility could be put in any size city in the country and would rank at the very top," Davis told his audience. He presented a plaque to the center from the foundation in recognition of the project's completion.

Aslam Zafar, in this country from Pakistan to study Democratic policies and agricultural practices, accompanied WOLF from Washington and spoke briefly. Zafar has been assigned to WOLF because of the latters interest in agriculture.

Dr. William J. Mehrl, who started practices in the center Monday, expressed his gratitude for the help and kindnesses that had been extended to him and his family since they moved to Cascade the previous Thursday. Dr. Mehrl said they are looking forward to living in Cascade and becoming a part of the community. He also announced that Elizabeth Carr, R.N., would be the nurse at the center. Later, he officiated at the ribbon-cutting ceremony at the center.

LEGION COLOR GUARD

Personnel from Cascade American Legion Post 528 comprised the color guard. Making up the guard were Jerry Green, Pat Kean, Dave Dolphin, Herb Green, and Dick Sullivan.

The Dubuque American Legion Drum and Bugle Corps provided the days musical entertainment.

The Cascade Women's Club served coffee and cookies during the open house at the center.

Mr. Speaker, I hope that this presentation of Cascade's accomplishments will show other communities which are faced with similar difficulties that they can cause miracles to happen through their own concerted efforts.

LEAVE OF ABSENCE

By unanimous consent, leave of absence was granted to Mr. CHIPERFIELD (at the request of Mr. ARENDS), for May 23 and 24, on account of attending United Nations sessions in New York City.

SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to:

Mr. WOLF (at the request of Mr. MCCORMACK), for 20 minutes today, and to revise and extend his remarks and include extraneous matter.

Mr. CONTE (at the request of Mr. QUIE), for 30 minutes, on Wednesday, May 25.

EXTENSION OF REMARKS

By unanimous consent, permission to extend remarks in the CONGRESSIONAL RECORD, or to revise and extend remarks, was granted to:

Mr. O'HARA of Illinois and to include extraneous matter.

Mr. DULSKI in two instances and to include an editorial.

Mr. SISK and to include a speech by Mr. WOLF.

Mrs. KEE.

Mr. BOSCH.

Mr. ALGER.

(At the request of Mr. MCCORMACK, and to include extraneous matter, the following:)

Mr. RIVERS of Alaska.

Mr. FOGARTY in three instances.

(At the request of Mr. QUIE, and to include extraneous matter, the following:)

Mr. BROOMFIELD.

ENROLLED BILLS SIGNED

Mr. BURLESON, from the Committee on House Administration, reported that that committee had examined and found truly enrolled bills of the House of the following titles, which were thereupon signed by the Speaker:

H.R. 4029. An act to amend the Internal Revenue Code of 1954 to eliminate the proration of the occupational tax on persons dealing in machineguns and certain other firearms, to reduce occupational and transfer taxes on certain weapons, to make the transferor and transferee jointly liable for the transfer tax on firearms, and to make certain changes in the definition of a firearm;

H.R. 6482. An act relating to the credits against the unemployment tax in the case of certain successor employers;

H.R. 6779. An act to amend section 170 of the Internal Revenue Code of 1954 (relating to the unlimited deduction for charitable contributions for certain individuals); and

H.R. 9308. An act to extend until June 30, 1963, the suspension of duty on imports of crude chicory and the reduction in duty on ground chicory.

SENATE ENROLLED BILL SIGNED

The SPEAKER announced his signature to an enrolled bill of the Senate of the following title:

S. 44. An act to authorize the Secretary of the Interior to construct the San Luis unit of the Central Valley project, California, to enter into an agreement with the State of California with respect to the construction and operation of such unit, and for other purposes.

ADJOURNMENT

Mr. MCCORMACK. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 1 o'clock and 54 minutes p.m.), the House adjourned until tomorrow, Tuesday, May 24, 1960, at 12 o'clock noon.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

2171. A letter from the Acting Secretary of Defense, transmitting 36 reports covering 49 violations of section 3679, Revised Statutes, and Department of Defense Directive 7200.1, entitled, "Administrative Control of Appropriations Within the Department of Defense," pursuant to section 3679(i)(2), Revised Statutes; to the Committee on Appropriations.

2172. A letter from the Acting Secretary of Defense, transmitting a draft of proposed legislation entitled "A bill to change the method of promotion of Reserve officers of the Air Force to Reserve general officer grades"; to the Committee on Armed Services.

2173. A letter from the Director of Research and Development, Department of the Army, transmitting a report on Department of the Army research and development contracts for $50,000 or more which were awarded during the period July 1 through December 31, 1959, pursuant to Public Law 557, 82d Congress; to the Committee on Armed Services.

2174. A letter from the Secretary of Commerce, transmitting the 51st quarterly report, covering the 1st quarter 1960, pursuant to the Export Control Act of 1949; to the Committee on Banking and Currency.

2175. A letter from the Acting Secretary of Defense, transmitting the anual report of the American National Red Cross for the fiscal year ending June 30, 1959, pursuant to the act of Congress approved January 5, 1905 (33 Stat. 599), and as amended by the act approved July 17, 1953 (67 Stat. 173); to the Committee on Foreign Affairs.

2176. A letter from the Comptroller General of the United States, transmitting the initial report on the review of the administrative management of the ballistic missile program of the Department of the Air Force; to the Committee on Government Operations.

2177. A letter from the Comptroller General of the United States, transmitting a report on the review of the automatic data-processing (ADP) installation, New Orleans commodity office, Commodity Stabilization Service, Department of Agriculture, October 1959; to the Committee on Government Operations.

2178. A letter from the Administrator, General Services Administration, transmitting the report of the Archivist of the United States on records proposed for disposal under the law; to the Committee on House Administration.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, pursuant to the order of the House of May 19, 1960, the following bills were reported on May 20, 1960:

Mr. CANNON: Committee on Appropriations. H.R. 12326. A bill making appropriations for civil functions administered by the Department of the Army, certain agencies of the Department of the Interior, the Atomic Energy Commission, the Tennessee Valley Authority, and certain study commissions, for the fiscal year ending June 30, 1961, and for other purposes; without amendment (Rept. No. 1634). Referred to the Committee of the Whole House on the State of the Union.

Mr. COOLEY: Committee on Agriculture. H.R. 12261. A bill to amend the Agricultural Adjustment Act of 1938, as amended, and the Agricultural Act of 1949, as amended, with respect to market adjustment and price support programs for wheat and feed grains, to provide a high-protein food distribution program, and for other purposes; without amendment (Rept. No. 1635). Referred to the Committee of the Whole House on the State of the Union.

[*Submitted May 23, 1960*]

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. MORRISON: Committee on Post Office and Civil Service. H.R. 9883. A bill to adjust the rates of basic compensation of certain officers and employees of the Federal Government, and for other purposes; with amendment (Rept. No. 1636). Referred to the Committee of the Whole House on the State of the Union.

Mr. DAWSON: Committee on Government Operations. Sixteenth report of the Committee on Government Operations; (Rept. No. 1637). Referred to the Committee of the Whole House on the State of the Union.

Mr. DAWSON: Committee on Government Operations. H.R. 9996. A bill to amend section 402 of the Federal Property and Administrative Services Act of 1949, to prescribe procedures to insure that foreign excess property which is disposed of overseas will not be imported into the United States to the injury of the economy of this country; with amendment (Rept. No. 1638). Referred to the Committee of the Whole House on the State of the Union.

Mr. COOLEY: Committee on Agriculture. H.R. 9866. A bill to establish Federal agricultural services to Guam, and for other purposes; with amendment (Rept. No. 1639). Referred to the Committee of the Whole House on the State of the Union.

Mr. COOLEY: Committee on Agriculture. H.R. 11615. A bill to amend section 4 of the Watershed Protection and Flood Prevention Act; with amendment (Rept. No. 1640). Referred to the Committee of the Whole House on the State of the Union.

Mr. COOLEY: Committee on Agriculture. H.R. 12176. A bill to amend title V of the Agricultural Act of 1949, as amended, and for other purposes; without amendment (Rept. No. 1642). Referred to the Committee of the Whole House on the State of the Union.

Mr. DELANEY: Committee on Rules. House Resolution 536. Resolution for consideration of H.R. 10128, a bill to authorize Federal financial assistance to the States to be used for constructing school facilities; without amendment (Rept. No. 1643). Referred to the House Calendar.

REPORTS OF COMMITTEES ON PRIVATE BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. O'BRIEN of New York: Committee on Interior and Insular Affairs. H.R. 11854. A bill to clarify the ownership of certain church properties located in the Virgin Islands; without amendment (Rept. No. 1641). Referred to the Committee of the Whole House.

PUBLIC BILLS AND RESOLUTIONS

Under clause 4 of rule XXII, pursuant to the order of the House of May 19, 1960, the following bill was introduced May 20, 1960:

By Mr. CANNON:

H.R. 12326. A bill making appropriations for civil functions administered by the Department of the Army, certain agencies of the Department of the Interior, the Atomic Energy Commission, the Tennessee Valley Authority and certain study commissions, for the fiscal year ending June 30, 1961, and for other purposes.

[*Introduced and referred May 23, 1960*]

Under clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. ASPINALL:

H.R. 12327. A bill to provide for the erection of Freedom Monument symbolizing the ideals of democracy, and for other purposes; to the Committee on Interior and Insular Affairs.

By Mr. BARDEN:

H.R. 12328. A bill to extend and improve the special education and rehabilitation services provided by the Federal Government; to the Committee on Education and Labor.

By Mr. BETTS:

H.R. 12329. A bill relating to the gift and estate tax treatment of the relinquishments of certain powers in the case of reciprocal and other trusts; to the Committee on Ways and Means.

By Mr. BREEDING:

H.R. 12330. A bill to authorize an appropriation for the special milk program for children for the fiscal years 1962 and 1963; to the Committee on Agriculture.

By Mr. CELLER:

H.R. 12331. A bill for recovery by the United States of costs and expenses to it arising out of the negligent or wrongful acts of third persons; to the Committee on the Judiciary.

By Mr. GEORGE:

H.R. 12332. A bill to establish an Arms Control Research Institute; to the Committee on Foreign Affairs.

By Mr. JOHNSON of Maryland:

H.R. 12333. A bill to extend to nonprofit sport fishing or fishing fair or contest organizations and associations the third-class mail rates applicable to certain categories of nonprofit organizations or associations; to the Committee on Post Office and Civil Service.

By Mr. JONES of Missouri:

H.R. 12334. A bill to decelerate depreciation of income of cotton producers; to the Committee on Agriculture.

By Mr. MURRAY:

H.R. 12335. A bill to amend the Federal Employees' Group Life Insurance Act; to the Committee on Post Office and Civil Service.

H.R. 12336. A bill to amend section 507 of the Classification Act of 1949, as amended, with respect to the preservation of basic compensation in downgrading actions; to the Committee on Post Office and Civil Service.

H.R. 12337. A bill to provide for allotment and advancement of pay with respect to civilian employees of the United States in cases of emergency evacuations from certain areas, and for other purposes; to the Committee on Post Office and Civil Service.

By Mr. POWELL:

H.R. 12338. A bill to amend certain laws of the United States in order to abolish the death penalty, and to substitute in lieu thereof life imprisonment; to the Committee on Armed Services.

By Mr. REES of Kansas:

H.R. 12339. A bill to amend the Federal Employees' Group Life Insurance Act; to the Committee on Post Office and Civil Service.

H.R. 12340. A bill to provide for allotment and advancement of pay with respect to civilian employees of the United States in cases of emergency evacuations from certain areas, and for other purposes; to the Committee on Post Office and Civil Service.

By Mr. SAUND:

H.R. 12341. A bill to amend section 8e of the Agricultural Adjustment Act (of 1933), as amended, and as reenacted and amended by the Agricultural Marketing Agreement Act of 1937, as amended, so as to provide for the extension of the restrictions on imported commodities imposed by such section to imported shelled walnuts, dates with pits, dates with pits removed, and products made principally of dates; to the Committee on Agriculture.

By Mr. SAYLOR:

H.R. 12342. A bill to provide for the erection of Freedom Monument symbolizing the ideals of democracy, and for other purposes; to the Committee on Interior and Insular Affairs.

By Mr. SCHWENGEL:

H.R. 12343. A bill to strengthen the enforcement provisions of the Federal Water Pollution Control Act and extend the duration of the authorization of grants for State water pollution control programs, and for other purposes; to the Committee on Public Works.

By Mr. SMITH of Iowa:

H.R. 12344. A bill to amend the Federal Property and Administrative Services Act of 1949 with respect to the procurement of

property and services, and for other purposes; to the Committee on Government Operations.

H.R. 12345. A bill to require the use of competitive bidding to the maximum practicable extent in the procurement of property and services by the Armed Forces through the establishment of specific standards governing the use of negotiated contracts for such procurement, and for other purposes; to the Committee on Armed Services.

By Mr. SPENCE:

H.R. 12346. A bill to amend section 14(b) of the Federal Reserve Act, as amended, to extend for 2 years the authority of Federal Reserve banks to purchase U.S. obligations directly from the Treasury; to the Committee on Banking and Currency.

By Mr. VINSON:

H.R. 12347. A bill to establish a Judge Advocate General's Corps in the Navy; to the Committee on Armed Services.

By Mr. WOLF:

H.R. 12348. A bill to amend the National Labor Relations Act to make it an unfair labor practice for an employer or a labor organization to discriminate unjustifiably on account of age; to the Committee on Education and Labor.

By Mr. ZABLOCKI:

H.R. 12349. A bill to authorize Federal financial assistance to the States to be used for constructing school facilities; to the Committee on Education and Labor.

By Mr. CORBETT:

H.J. Res. 711. Joint resolution designating the red and white carnation and the blue cornflower as the national floral emblem of the United States; to the Committee on House Administration.

By Mr. POWELL:

H.J. Res. 712. Joint resolution proposing an amendment to the Constitution of the United States to abolish the death penalty under the laws of the United States, any State, or any other place subject to the jurisdiction of the United States; to the Committee on the Judiciary.

By Mr. SPENCE:

H.J. Res. 713. Joint resolution to authorize the use of surplus grain by the States for emergency use in the feeding of resident game birds and other wildlife, and for other purposes; to the Committee on Banking and Currency.

By Mr. CORBETT:

H. Con. Res. 692. Concurrent resolution to create a Joint Committee on a National Fuels Policy; to the Committee on Rules.

By Mr. DAWSON:

H. Con. Res. 693. Concurrent resolution authorizing the printing of additional copies of House Document No. 198 of the 84th Congress, entitled "The Commission on Intergovernmental Relations"; to the Committee on House Administration.

By Mr. DENT:

H. Con. Res. 694. Concurrent resolution to create a Joint Committee on a National Fuels Policy; to the Committee on Rules.

By Mr. MORRISON:

H. Res. 537. Resolution providing for the consideration of H.R. 9883, a bill to adjust the rates of basic compensation of certain officers and employees of the Federal Government, and for other purposes; to the Committee on Rules.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. BLATNIK:

H.R. 12350. A bill for the relief of Marion John Nagurski; to the Committee on the Judiciary.

By Mr. DOWNING:

H.R. 12351. A bill for the relief of Charles B. Forrest; to the Committee on the Judiciary.

By Mr. FARBSTEIN:

H.R. 12352. A bill for the relief of Marta Manelli; to the Committee on the Judiciary.

By Mr. McDONOUGH:

H.R. 12353. A bill for the relief of Edgar Allen Gallegos and Ana Gloria Gallegos; to the Committee on the Judiciary.

By Mr. O'NEILL:

H.R. 12354. A bill relating to the effective date of the qualification of Plumbers Union Local No. 12 pension fund as a qualified trust under section 401(a) of the Internal Revenue Code of 1954; to the Committee on Ways and Means.

By Mr. RIVERS of Alaska:

H.R. 12355. A bill to validate the homestead entries of Leo F. Reeves; to the Committee on Interior and Insular Affairs.

By Mr. YOUNGER:

H.R. 12356. A bill for the relief of Masaki and Yaeko Ouchi; to the Committee on the Judiciary.

By Mr. BRADEMAS:

H.J. Res. 714. Joint resolution to authorize the President of the United States to confer a medal on Dr. Thomas Anthony Dooley III; to the Committee on Banking and Currency.

By Mr. LANE:

H. Res. 538. Resolution providing for sending the bill H.R. 4426, with accompanying papers, to the Court of Claims; to the Committee on the Judiciary.

MEMORIALS

Under clause 4 of rule XXII, memorials were presented and referred as follows:

By the SPEAKER: Memorial of the Legislature of the State of Nevada, memorializing the President and the Congress of the United States to establish a system of payments by the Federal Government to the State of Nevada or its local governments, which payments will be made in lieu of property taxes on federally owned property in this State, which property is immune from State or local taxation; to the Committee on Interior and Insular Affairs.

Also, memorial of the Legislature of the State of Nevada, memorializing the President and the Congress of the United States to propose constitutional amendment abolishing income, estate, and gift taxes and prohibiting the Federal Government from engaging in any business, professional, commercial, financial, or industrial enterprise except as provided in the Federal Constitution; to the Committee on the Judiciary.

Also, memorial of the Legislature of the State of Nevada, memorializing the President and the Congress of the United States to oppose passage of H.R. 1884, which if enacted will prohibit the States from imposing a length-of-residence requirement as a condition to receiving welfare benefits under the Social Security Act; to the Committee on Ways and Means.

PETITIONS, ETC.

Under clause 1 of rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

470. By Mr. HARMON: Petition of Harold J. Crowley, Shelbyville, Ind., and 16 others, opposing the enactment of H.R. 10033; to the Committee on Post Office and Civil Service.

471. By the SPEAKER: Petition of Charles Fluhrer, president, Machine, Tool & Die Local 155, United Electrical, Radio & Machine Workers of America, Philadelphia, Pa., petitioning consideration of their resolution with reference to supporting and requesting enactment of the Forand bill, H.R. 4700; to the Committee on Ways and Means.

EXTENSIONS OF REMARKS

Washington Report

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 23, 1960

Mr. ALGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following newsletter of May 21, 1960:

WASHINGTON REPORT

(By Congressman BRUCE ALGER, Fifth District, Texas, May 21, 1960)

Future historical analysis of the summit may record that President Eisenhower's conduct scored a great victory for the free world. Meanwhile, we can all be "Monday morning quarterbacks." We all can expect, also, the bitterest, least-temperate appraisals to come from politically motivated office-seekers. At the moment, the nicely staged show of bipartisan support represented by the Democrat leadership's message to Ike at the summit has been rudely shattered by presidential-aspirant Stevenson's sharp attack on Eisenhower's administration. A spirit of constructive criticism would be more apparent if Mr. Stevenson had not alleged that it will take a Democrat administration and himself to do the job. Of course, we all know each person's evaluation of himself is high. That's human. But it's another thing to suggest against the background of the Yalta, Potsdam and Teheran Conferences that a Democrat administration can better handle or solve foreign problems.

Health care for the aged continues as the focal point of the social security bill being prepared for House debate. A move to hold hearings to get further information was defeated. To me it is inconceivable that a right solution can come from ignorance of the facts. We still have no comprehensive knowledge of medical services available or of medical needs and how they are being met, since we lack information on State and local programs. All we have, as data, is Health, Education, and Welfare Department information on Federal programs, which are only a part and not the major part at that. In my view, this is not responsible conduct, neither to other Members of Congress who look to the Ways and Means Committee for guidance in this field nor to the people of the Nation, including the aged and all taxpayers. Fortunately, the final page of this story has yet to be written. I hope politics will not dictate it.

The Small Business Investment Act of 1960 expands the Federal effort to make equity type capital and long-term credit more readily available for small business concerns. We thus add to the Federal bureaucracy and

the tax load, so that we can turn around and lend businessmen money to replace that taken from them in taxes. Tax relief, I believe, would be the greatest and soundest aid that businessmen or anyone else could ask of the Federal Government.

Debt reduction: Can debt be reduced by borrowing money to pay on it? To me, that's hardly more sensible than setting up a savings account by getting a loan at the bank. Yet there is periodic and favorable mention of a bill which would force Federal debt reduction without compelling a balanced budget or limiting the power to borrow further, which would leave us in exactly that situation. A better solution, it seems to me, would be enactment of a constitutional limitation on the Government's power to tax, spend, and borrow and which would require a yearly balanced budget.

H.R. 5, the Foreign Investment Incentive Act, passed narrowly 195 to 192. Earlier this year it was left hanging in midair after partial floor debate. Though aimed basically at according U.S. firms doing business abroad the same tax treatment given foreign-based subsidiaries of U.S. companies, the 61-page bill was complicated and technical. It was not understood by many, I am sure, among both the proponents and opponents. Originally a move to simplify and equalize tax treatment, the bill soon became one of concern to the State Department (to help develop officially designated underdeveloped countries); Labor Department (that wage levels and working conditions in these industries must not be substandard according to each country's standard); Commerce Department (only 10 percent of goods manufactured by U.S. industries located abroad can be shipped back into the United States); and so on. Thus a tax bill became the vehicle for a lot of social proposals in no way related to taxes.

Construction of a Federal Center Building in Dallas may have been delayed indefinitely by a strictly partisan move among Democrats on the Public Works Committee. The vote, I'm told, was 18 to 7 with all Republicans voting for approval of the project and all Democrats (including 10 proxies) against.

Controversial issues lie ahead in the short time left before adjournment and political conventions: (1) Federal aid to education; (2) Federal aid to depressed areas; (3) Federal aid to the housing industry; (4) interest rate ceiling. These are some that will provoke bitter partisan arguments. This does not assure a proper solution for the problems, of course.

Random notes: The television series will continue on WFAA–TV Sundays at 10:30 a.m. * * * A preliminary tabulation of the questionnaire returns is complete, and I hope to finish a survey of this year's answers by June 1. Any who mean to reply to the current questionnaire and have not yet done so should send it to me this month.

Award to Dr. J. Fred Rippy

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 23, 1960

Mr. O'HARA of Illinois. Mr. Speaker, it is with pleasure that I announce to the House the 1960 William Volker Distinguished Service Award for outstanding achievements as a scholar and teacher to Dr. J. Fred Rippy, history professor emeritus of the University of Chicago. A stipend of $15,000 goes with the award.

Dr. Rippy was a member of the University of Chicago faculty for 31 years until his retirement in 1958. He was internationally recognized as America's foremost authority on Latin America. He now resides in Durham, N.C.

It will interest my colleagues to know that this distinguished scholar for years has been a regular reader of the CONGRESSIONAL RECORD. No matter how busy his schedule, he has found time to read the CONGRESSIONAL RECORD as part of his daily must.

Hon. Leonard G. Wolf Discusses Role of Congress in Space Age

EXTENSION OF REMARKS
OF
HON. B. F. SISK
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 23, 1960

Mr. SISK. Mr. Speaker, my good friend and able colleague from Iowa, the Honorable LEONARD G. WOLF, of Iowa, was selected as the guest speaker at the National Aeronautical Electronics Conference at Dayton, Ohio. Congressman WOLF is a distinguished member of the Committee on Science and Astronautics, upon which I also have the honor of serving. I have had an opportunity to observe his fine work on the committee, and I think every Member will want to study Congressman WOLF's description of the work of the committee and his pertinent comments on America's position in the space age, which formed the theme of his speech at the Conference on May 3.

The text of Congressman WOLF's address follows:

I am indeed flattered to have this opportunity to speak to you tonight. It is always a stimulating experience to address an audience of well-informed and highly professional people such as you. By the way, I stand here, as a one-time Navy electrician, World War II vintage and I know the difference between an ohm and a watt, or a resistor and a condenser, and especially the difference between a hot line and a ground. I find this very inadequate after today's experiences at Wright Patterson.

But I think that if I were now pursuing a career in the field of electronics I would be greatly excited and stimulated by the great events that are taking place in the programs of rocket research and space exploration currently being pursued by the Department of Defense and the National Aeronautics and Space Administration. These events have a significance to developments in electronics research that stretches out into the future far beyond our ability to envision. The implications in the single fact of being able to communicate with and receive information from a space vehicle—Pioneer V—out to 50 million miles or more are to me simply staggering. We are only now approaching the threshold of achieving manned flight through space to the moon and to the planets, which could not be possibly accomplished without the unceasing drive toward progressive development that has been demonstrated over the past years not only by you and your colleagues, but also by our great national industrial complex that has made possible the comparatively recent growth of the electronics industry. Today I met a man who is still working, yet worked with the Wright brothers just a few short years ago.

Now, let me go into the role of Congress in the development of our space programs, and in a much larger sense, its interest in all aspects of scientific research and development.

For many years, perhaps more positively since World War II, there has been a growing awareness in Congress, particularly in the House of Representatives, of the increasing importance of scientific research and development in the everyday life of our people and, equally important, as a very important part of our defense and national resources.

If we reflect upon the historical significance of our great economic and social advances that followed World War I, of the roaring twenties, of the depression, of the thirties, and of another great industrial and economic upsurge coming out of World War II, we can then perceive more clearly the recent emergence into early maturity of a vigorous approach, nationally, to scientific research and development as the root-source of future security and economic prosperity. Congress and the executive branch, including the military departments, have been keenly aware of this fact, and nowhere has this awareness been more pointedly expressed than by the Department of Defense in its requests for steadily increasing appropriations to pursue military research and development programs submitted to Congress every year.

For instance, the budget for research, development, and engineering submitted by the DOD for the coming fiscal year is almost $6 billion. And the National Aeronautics and Space Administration has almost doubled its budget in its 2 years of existence from $500 million to more than $900 million. Congress has expressed its awareness of the importance of R. & D., by appropriating almost all the funds requested.

Of course, we have had outstanding scientific organizations within the many Departments of the Government for many years. I need only point to the National Bureau of Standards and the National Science Foundation, as examples. But, in comparison to the DOD, the funds required by these organizations have been very small indeed.

My committee, the Committee on Science and Astronautics as well as the Senate Committee on Aeronautical and Space Sciences, is the latest and perhaps the most significant expression of Congress of its awareness that productive research and development, both basic and applied, has become a factor of major importance to our national community. Incidentally, my committee is the first standing committee that has been created by the House of Representatives since 1900. During the 2d session of the 85th Congress, the Select (that means temporary) Committee on Astronautics and Space Exploration, working with great energy and drive, created the National Aeronautics and Space Administration and dedicated it to the peaceful exploration of space for the benefit of mankind everywhere.

My committee is the direct descendant of that select committee and has functioned with even greater vigor and action. My committee has a record of having held more hearings in its first year than any committee in the history of Congress. To give you an idea of the extent of our interests and jurisdiction, aside from our legislative responsibilities, we have held definitive hearings on the international control of outer space, ground-cushion phenomena, satellites for world communication, missile development and space science, space propulsion,

nuclear explosions in space, to name only a few. Yes, and in earth sciences, oceanography, social sciences, too.

But, you may ask why does a congressional committee take the time and expend the energy to make such detailed investigations? Why doesn't it just concern itself with enacting legislation and acting as a watchdog over the executive branch? The answers to such seemingly innocuous questions are really quite complex.

Ladies and gentlemen, it has been my continuing mission since being elected to Congress, to point out as emphatically and as often as I can, that within our country there is no longer existing a clear division between civilian and military. We no longer live during times of peace and of war.

We are, and have been for many years, continually and unceasingly at war—with only the shooting suspended and not always is this true. Now, no one doubts that Western civilization is faced, in the form of the Communist philosophy, with its most deadly threat since Genghis Khan stormed out of Mongolia with his "golden horde" and brought Europe almost to the brink of complete political and social disintegration in the 12th century. To quote Gen. John B. Medaris, who appeared before our committee on February 18 of this year, "Fundamentally [the United States-Soviet competition] is a clash between different philosophies as to the position of the individual in society. The field of conflict is so broad, so profound, that it encompasses every element of international power—military, economic, diplomatic, political, psychological, and spiritual."

Coupling my first premise that scientific research and development is assuming a paramount importance to the lives of all our people, with the realization and acceptance of the fact that we are engaged in a universal conflict, which can result only in unconditional surrender either by the West or the East, Khrushchev's "We will bury you" was no figure of speech, then it should become clear that each and every one of you, and your colleagues in the other scientific disciplines, hold presently, to a major degree, the responsibility for our continued existence as free people. It therefore becomes the objective of Congress and my committee to support and foster, as a principal national resource, the scientific mission in every field of endeavor.

In this connection, let us consider the education of our young people. We have held considerable hearings on this subject and received testimony from many outstanding educators and educational administrators. And I am sure that many of you have a deep interest in this field. In this very basic, fundamental area, we are, right now, seeing the Soviet Union turning out scientists and engineers at a rate far surpassing our own. The Red bosses recognized years ago that the success of their mission to communize the world would depend upon excelling all other nations, particularly the United States, in science and technology. Such success would depend totally on the quality and quantity of trained scientists that would be available to their research and engineering programs, and ultimately making world dominion possible. We must come to grips with the great needs in the field of education and quit arguing over who has the responsibility to do it and get the education program going.

You can see why we in Congress and in my committee are concerned with the education of scientists in our country, and also for the material well-being of much of the world.

Let me speak now about the interest of our committee in the space program.

During the International Geophysical Year recently terminated, the United States assumed the responsibility for placing a satellite in orbit around the earth to explore the regions beyond our atmosphere. The Navy, and the Naval Research Laboratory was assigned the Vanguard mission and proceeded with the necessary design, engineering and tests, despite the fact that the Army's Ballistic Missile Agency at Huntsville, Ala., by slightly modifying the existing Redstone missile, was ready to place a satellite in orbit almost a year before the scheduled Vanguard. Then, as we all know, came the great awakening; inaugurated by Sputnik I. Our complacency had been jolted. False illusions regarding the Soviet Union's technological capabilities were thoroughly dissipated. And we stood before the world, figuratively, with our scientific halo down around our ears. We learned there was no longer room for complacency. I left Russia just a few days before Sputnik I, when, in my first speeches, I suggested Russia had some scientific surprises for us my audiences laughed with pompous self-esteem. And then sputnik—then my audiences would say, "Now how come? What happened to American leadership?"

Between Sputnik I and now has evolved gradually, grimly, and often painfully, the comprehensive space research program now underway in NASA. And there is no question that in the last few years, our satellite and deep probe projects have paid off handsomely. It is an established fact that our space vehicles have contributed data to the scientific communities of the world that quantitatively and qualitatively exceeds that of the Soviet Union by several orders of magnitude.

I'd like to read two significant comments from Mr. Baldwin of the New York Times.

Baldwin says the reason for this is that we Americans have not recognized sufficiently the psychological and political aspects of the space race. "The nation's space program," he writes, "has been too much under the authority of the mathematical scientists—the 'pure' researchers to whom scientific facts and findings are ends in themselves—and the budget planners, economists and cost accountants."

However, in awareness of the political and psychological importance of space achievements Moscow has been far more perceptive than Washington. Our greater proficiency in the accumulation of scientific data has been more than offset in world opinion by the Russian "firsts"; first sputnik; first deep-space probe; first picture of the "dark side" of the moon; first rocket to hit the moon. Moreover, the Soviet space program excels our own in the greatly superior thrust of the Soviet booster rockets.

And a comment of Dr. Eberhardt Rechtin, the Chief of the Telecommunications Division, states this in the following manner: "At the present time, one of the most remarkable features of the U.S. position is the almost complete lack of urgency in the space program. Our space program costs less than $10 per year per U.S. adult or roughly, one evening's entertainment per year."

Yes, insofar as booster thrust and weight lifting capabilities are concerned our rocket development is still several years behind that of the U.S.S.R., whose Sputnik III exceeded in weight, the total sum of the payload of every satellite and space probe we have sent up, to date.

However, in many long hours of hearings our committee has heard from Dr. T. Keith Glennan, Administrator of the National Aeronautics and Space Administration, and his associates, regarding the progress of current NASA satellite launching programs, the development of large and superlarge boosters, and the plans for a continuously productive program leading to an ever-growing space capability. And I can assure you tonight that our future in space looks very promising indeed, particularly with regard to the development of large boosters such as the Saturn and the Nova. However, I cannot equate our relationship with Russian progress. They are not standing still. But despite our successes so far the history of the management process that have characterized our missile and space programs has left much to be desired. To put it bluntly, they were delayed by an almost pathological inability to choose our objectives and to make management decisions on the top level, to organize Government resources for the job needed to be done.

And I say this despite the brilliant success of our Armed Forces in bringing their ballistic missiles to operational status in record time. To quote Dr. Simon Ramo, outstanding scientist and industrial organizer of our day, who appeared before our committee: "We have become bogged down again with the real bottleneck—not the limited technical and physical resources available in this Nation, but instead, the slow process of decisionmaking, organization, and arrangementmaking.

"Today, years after complete demonstrations of our technical capability and years after the unprecedented simultaneous implementation of all of the production tools and facilities and operational military planning for the full utilization of these technical accomplishments, we still seem to be involved in major debates as to how many should be the numbers of missiles that we provide to insure inevitable retaliation—this, even though a substantial part of America's capacity for competitive hardware production stands unused." I might say at this point, that most of the rivalry and friction between the services has been caused by this decisionmaking problem at the top. The individual chiefs have had to fight to maintain their programs. And they hoped that the rival chiefs would do the same. But all of this should have been unnecessary, had proper decisions been made and on time at the summit.

This is where Congress and my committee has made the largest contribution—the continuous insistence and polite prodding that all the responsible Government agencies develop, by every means available, the most efficient organizations possible, obtain the best scientific talent available, and provide leadership to American industry which, in the final analysis, is the only instrumentality by which our national scientific objectives can be achieved.

I have tried in these few brief moments to give you an idea of the depth and breadth of my committee's responsibilities and areas of action. We Americans are living in a period of fateful decisions made by men who are motivated either by a belief in moral law and the inherent dignity of man, or in the supremacy of the state. These decisions will inevitably and permanently effect our lives as free people, surrounded by an incredible plentitude that has been the product of our science, our technology, our industires and hard work, a plentitude that is experienced nowhere else in the world. We are richer far beyond what our fathers ever envisioned we could be. And our material wealth is the envy of all peoples. Our danger lies in the complacency bred by plenty.

I have had an opportunity to travel extensively in the world, only recently returning from southeast Asia and the Orient. There I saw human degradation of a fantastic order that beggars description. I have seen people who are struggling to survive without even the basic human needs of food, clothing and shelter, living in the midst of squalor that makes our worst city slums look like the hanging gardens of Babylon. I have been in places where a cupful of rancid, spoiled food is worth more than a human life. And yet, these people live in hope, striving as best they may for a better future for their children. And they have before them two avenues that they could travel toward that future—one posted with

the hypocrisy and blandishments of communism, the other with the promise and truth of democracy. I say to you that we are competing with the Soviet Union, not for space, not for the marketplace, but for the minds and trust of uncommitted peoples all over the world.

How is American science, research, technology a part of this competition? We have made it irrefutably evident that the products of hard work, the exploitation of our natural gifts and the unceasing development of our scientific and technical aptitudes have been combined to give America what it has today. And this, the most important point of all, has been done within a society of free men and women in less than 200 years. And, the same is possible for all peoples. This is the message we must bring to those struggling people. This is the bright hope we must give them. Material and spiritual progress is possible without destroying the basic freedoms.

I think, ladies and gentlemen, that perhaps our greatest virtue is not solely in our abilities to produce, but rather too, in our willingness to give. I think that most of us believe that we are our brother's keeper, and have acted that way over the years. I do not mean to imply that in helping to feed the hungry, clothe the naked, and shelter the homeless of the world that each one of us were self-conscious in doing so. Nor do I believe we have sent our bounty overseas like the ostentatious philanthropist.

No. Because I have seen in these countries American shovels, tractors, combines, looms, all types of machinery along with American scientists, technicians, engineers, doctors—there to teach and instruct those people how to help themselves, and to have pride in their own accomplishments. We must increase this area even more. We must lead in this area, not as a military power, but as a free nation whose only desire is to help raise up mankind.

I need only point to our enormous contributions to the rebuilding of war-devastated nations, particularly Japan, now a thriving, vigorous commercial country 15 years after almost complete economic disaster.

These are the things that American science has made possible. And thus through our technology have we affirmed our principles of morality and humanity. We must be sure that those countries which have not as yet finally chosen the road down which they will march toward the future, have an opportunity to respond to those same eternal principles and hopefully create a better life for their people through the democratic process.

Therefore, you and I, as participants in this great outpouring of scientific discovery, energy, and accomplishment, in our own humble way, strive for the common goal so earnestly desired by everyone. You, more directly than I, can be part of translating concept into reality.

The goal of my committee, as the instrument of the greatest form of human government the world has ever known, guides and attempts to give to our national research and development programs a positive and constructive emphasis. It is the firm belief of my colleagues that the results achieved through our national and scientific efforts should benefit all mankind. As an instrument of the Government that stands as a symbol of intellectual fredeom for everyone, the Committee on Science and Astronautics has the incomparable opportunity to play a major role in assuring to ourselves and the free world the security and tranquility that is sought and dreamed of by so many. And with God's help, that opportunity will lead man ever closer to realizing the promise that was given to him 2,000 years ago in Bethelhem, "Peace on earth, to men of good will."

Graphic Arts Awards

EXTENSION OF REMARKS
OF

HON. THADDEUS J. DULSKI

OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, May 23, 1960

Mr. DULSKI. Mr. Speaker, each year the Buffalo Newspaper Guild, Local 26, in Buffalo, N.Y., sponsors a competition whereby staff members enter their respective work which was published in their newspaper during the year.

More than 300 entries were submitted by staff members of four Niagara Frontier daily newspapers. The winners were selected by newsmen in Detroit, Pittsburgh, and Toronto.

Buffalo Evening News staff members won all five awards in the graphic arts—three in photography, and one each for cartooning and illustration. Its reporters and editors took both sports writing prizes and also scored in the editorial writing, individual reporting, woman's page and headline writing categories.

The Buffalo Evening News winners were:

Millard H. Browne, chief editorial writer of the News, who won the prize for the best editorial with an inspiring observation directed toward the "Class of 1959."

Pulitzer Prize winning cartoonist, Bruce Shanks, scored again with a cartoon that asked what Premier Khrushchev had in his other hand on the occasion of his American visit last year.

For his analysis and description of the uproar attending the Buffalo reassessment job, Ernie Gross, a News city hall reporter, carried off the prize for the best individual reporting.

A heading on a story about the button industry's woe—"Buttons All at Loose Ends as Zippers Pull to the Top"—gained the best headline awards for Elwood M. Wardlow, assistant copy desk chief.

Jean Reeves Allan won the prize for the best woman's page writing, with three interviews with home economists at a convention.

A stunning story about people who drive in the classic 500-mile Memorial Day race at Indianapolis won Jack Horrigan, sportswriter, the accolade for the top sports feature.

Dick Johnston's piece about a preseason clash between the world champion Montreal Canadiens hockey team and the Buffalo Bisons won the sports news story award.

A warm pen-and-ink sketch of St. Bonaventure University's late Reverend Thomas Plassman to accompany a feature story about the famous "Father Tom" won John A. Sunley this year's illustrator's award.

The Buffalo Courier-Express had three winners—one in feature writing, one in spot news category, and the other in interpretive writing. They are:

Richard Hirsch, who won his award in feature writing for his weekly column "Offhand," which has appeared in the Sunday Courier-Express for more than 2 years. This is the second award he has won for his column. He also won another award last year for a series, and a fourth award as well as the Walter O. Bingham plaque in 1956 for journalistic achievement.

George Wyatt won his award in the spot news category for an interview of a Massachusetts resident who was kidnaped in his car and threatened with death until he escaped in Amherst. He was cited for presenting the interview in "an interesting and dramatic manner."

William Folger, a previous winner in 1956, won his award in interpretative writing for his weekly column on the church page. His column also won him a Freedom Foundation award earlier this year.

Three photography awards went to the following News staffers:

Robert L. Smith's shadowy dramatic picture of physicians at Our Lady of Victory Hospital trying to revive an asphyxiation victim won the spot news picture award.

Merrill D. Matthews scored in the feature picture category with a Thanksgiving picture showing a small boy trying to hold down a large turkey.

Two speeding girls racing to the finish wire in the Erie County Junior Olympics gave William Dyviniak the honors in the sports picture department.

One winner will be selected from all these categories for the 1959 Walter A. Bingham Memorial Award, a prize honoring a late Buffalo Evening News photographer.

Steuben Society of America Banquet

EXTENSION OF REMARKS
OF

HON. ALBERT H. BOSCH

OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, May 23, 1960

Mr. BOSCH. Mr. Speaker, on Saturday evening, May 21, 1960, the Steuben Society of America held its 41st anniversary banquet in New York City. This society which bears the name of Baron Friedrich Wilhelm von Steuben of Revolutionary War fame lists under its policy and program:

1. This society aims to loyally support the Constitution of the United States of America, advocates the proper application of its provisions, and endeavors to inculcate the principles underlying government by a federal republic with limited, delegated powers.
2. This society is dedicated to maintaining the independence and sovereignty of the United States of America and its freedom from all foreign influence.

The society was very fortunate in having for its speaker at the 41st anniversary banquet the Honorable KENNETH B. KEATING, U.S. Senator from the State of New York. The Senator delivered a very timely and stirring address of tremendous interest to his audience and which I believe should be read by every citizen of the United States.

Under leave to extend my remarks, I include the text of the address to which I have referred:

STEUBEN SOCIETY, MAY 21, 1960

Mr. Chairman, members of the Steuben Society of America, it is a profound source of pleasure to me to have the opportunity to be with you here tonight. Your famous Steuben Society is more than an assemblage of outstanding and loyal American citizens. It is a part of the America that we love and cherish—a symbol of the great stream of culture, of talent, of patriotism that has flown into our Nation from the great source of the German peoples, to strengthen and to ennoble this land we are proud to call our own.

Baron von Steuben can never be a mere name to Americans. He remains forever a part of our history, a part of our greatness, a part of our pride as a nation.

This is a time to be proud to be an American. This is a moment in history when the spirit that has made us great—the spirit of free men in a free society—is facing a challenge unique in the annals of our Nation.

And that challenge is being met—therein should lie our pride—by a massive and intense dedication to the principle that man is a creature of God, a creature of dignity—and that nothing we can strive for, nothing we can fight for represents a greater or more compelling cause.

We have known the face of danger here in America. It has surged before our eyes, cold and menacing, from the years of our history.

It was the ugly face that Americans braved with men like Baron von Steuben at their sides and in their vanguard.

It was the pitiless face we have seen on land and sea and in the air through all the wars of our birth, our growth and our maturity. A familiar face—but a foredoomed face—because the valor of American hearts, the strength of American arms crushed it to earth.

Now danger stalks the world again. It is not the danger dressed in uniform, the one we know only too well. It is rather the danger dressed in a garb of philosophy that is not only anti-God, but also anti-man. I here speak of man as a spirit, not as an animal, as an individual, not as a number. I speak of the mass operation to dehumanize man, to brutalize him, to legislate out of existence his soul, his conscience, his personality.

This is a new and ominous visage of danger. And it is not distant. It is not isolated in some remote land. It is pervasive. It is present. It is glaring at us on all sides. And you can read its identity card. It says, "communism."

Geography is no longer a lesson for children. It is a lesson for us all. The map of the world represents a study that should command far more attention than it does. For its blood-red areas are vast and growing.

The red stain has spread—is spreading—and as it seeps across new frontiers, as it trickles into new areas, the homeland of freedom undergoes a concurrent shrinkage, loses ground, loses strength, loses prestige.

This is the silent battleground upon which we fight this day. This is the threat to our way of life. This is the face of danger.

It is so often a well-masked face that we are prone to ignore its presence. As a nation we have been accustomed to fight conventional battles with conventional weapons.

Today the enemy may put on the very disguise of freedom in order better to fight freedom. In the name of liberation he practices enslavement. In the name of the people he oppresses the people. In the name of peace he would destroy peace.

This is a new pattern of conquest in the history of our world, new and ominous and deadly. As a symbol of its technique we have only to consider the ill-fated summit conference.

It is apparent, grimly apparent, that Khrushchev went to Paris to obstruct, to confuse, to attempt to divide, rather than in the spirit of peace seeking or peace making.

And the pretext he has used to promote failure is in itself an affirmation of the Soviet code of expediency, of total disregard for concepts of right and wrong.

Here we have the supreme irony of perhaps the greatest spymaster in history demanding an apology because his nation has been spied upon. Moral indignation is a mask that fits him poorly, yet he flaunts it before the world like an angel of innocence. Meanwhile, his espionage agents, scattered like termite colonies throughout the world, are eating away at the foundations of freedom wherever they are to be found.

And while those agents walk through our open doors, a great black expanse of secrecy marks the Communist areas on the strategic map of the world. It is a world hermetically sealed—in the military sense. Historically, our American cry of vigilance has been "on the ramparts we watch." And watch we must, so long as the shadow of an upraised fist falls across the sunlight of our freedom.

The resolve of the United States to live up to its role and responsibility as the leading Nation of the free world has been made unmistakably apparent to the Kremlin.

And if we must choose a symbol of this resolve it is to be found in Germany—in our unqualified support of the magnificent citadel of freedom that West Germany and West Berlin represent to this divided world.

Standing literally on the battleline of two opposing global forces, free Germany is an eloquent testimonial to human courage, to the spiritual quest for freedom, for self-determination, no matter what the risks, no matter what the sacrifices.

It is one thing to be brave behind a wall of security; it is another and higher courage to face up boldly to danger, head high, heart high, firm in the sense and assurance that one is in the right, that there can be no compromise with principle, no dilution of the basic freedom that means more than life itself. Our support, our identification with the cause of free Germany is, to be sure, a great bulwark in their struggle. But we did not invent the raw courage of the German people.

We did not put the fire of patriotism, of dedication in the hearts of Chancellor Adenauer, of Mayor Willy Brandt, of all the millions of free Germans who stand solidly, steadfastly, and unafraid on the very rim of danger.

In this regard, may I say a word or two about the matter of Khrushchev's threat to conclude a separate peace treaty with East Germany and turn over access to West Berlin to the Communist regime. It is seriously to be questioned whether the facts of life—facts growing out of the very German character he has attempted to subjugate—will make such a move politically practicable.

By this I mean that the strong signs of instability in Germany—which is another way of saying the presence of the free spirit of Germany—may well make a peace pact with East Germany fraught with danger for the Kremlin. For it implies an Ulbrecht regime that will be on its own both in foreign affairs and in domestic state security, and such an eventuality may create more problems than it solves, so far as the Communist grand design is concerned.

It is especially appropriate, in these days when the fate of freedom is at stake in the world, that I should have the opportunity to speak before the Steuben Society. For in your charter, in your reason for existence, is typified not only the spirit of a free America but the vigilance to keep it free.

Our strength, as a nation, must be measured by people, not by armaments. Our true strength is not in our military muscles, but in our citizens' hearts—in the spiritual dedication of people like yourself to the living honor of our great country, to the love it inspires in Americans, to the respect it inspires in all corners of the world.

Particularly is this spirit of dedication called for in an age of tremendous counterforces that press hard against our house of freedom, that chip away at its foundations, that would engulf it in the new, dehumanized society that communism seeks to create.

What is imperatively called for in this hour is an awareness of the presence of danger—and it is in this field that the mission of the Steuben Society becomes of paramount importance.

It is my feeling that too many Americans are prone to confuse their material well-being with a sense of security—to confuse their inalienable rights with permanent, impregnable liberty, to assume that labor-saving devices and freedom-preserving devices come in the same packages. The Steuben Society serves this Nation well when it raises its voice to remind us all that freedom is something that we can lose as well as win—and that to keep it in our possession, cherished for the God-given attribute it is, we must have the eyes to keep watch on it, and the heart to fight for it in its hour of danger.

We live in a new and dangerous world, and we need Paul Reveres like yourselves to alert the country to the perils of indifference, of apathy, of the assumption that freedom is a birthmark that no power can remove—when it is actually an inheritance that can be lost by default.

Above all, the struggle we are engaged in must be seen in the true perspective of our sense of survival as a nation, not in the false and twisted perspective of irrationality and blurred values. In this regard, let me say that I have been appalled at the number of letters I have received openly condemning our Nation for conducting spy flights over Russia. In the eyes of these citizens—yes clouded by a woeful misunderstanding of the facts of political life—we had no right to try to protect America and all free men from the sudden fist that strikes out of the dark to smash our freedom, to smash all that we have fought and died to create, before and since the founding of the Republic.

These are honest, well-meaning citizens. Happily, they are a small minority. Yet it is symptomatic of the confused values of our time that such people are prone to plead the cause of the enemy of liberty by seeking to apologize for one manifestation of the very acts of intelligence-gathering which are employed against us unceasingly, night and day, year by year.

If we were the victims of a nuclear Pearl Harbor—and heaven grant that terrible visitation may never come—these same citizens would assail our Government for failure to have secured the intelligence that would have rendered such an attack impossible.

Patriotism, like charity begins at home. And that, too, is where vigilance begins—where security begins—in the minds and in the hearts of the American people.

We must be an aware people—an informed people—if we are to preserve intact and undiminished the precious gift of freedom that was handed down to us—that remains our sacred trust for so long as we live.

That is why I would wish to see the influence of your wonderful Steuben Society radiated throughout our land—why I would wish to see it galvanize to action a love of country, a devotion to country that too often slumbers in the soft featherbed of apathy, of indifference, of sheer unawareness of the tremendously meaningful hours and days we are living, in this world of hostility, of challenge, and of change.

In closing, may I leave with you this one observation. It has significance, I feel, in the light of what has been said here tonight. History has recorded for us the many ways in which human freedom has died—gloriously, cravenly, forlornly—but the saddest, most ignominious death of all is when freedom dies in its sleep.

Juvenile Delinquency

EXTENSION OF REMARKS
OF

HON. JOHN E. FOGARTY

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Monday, May 23, 1960

Mr. FOGARTY. Mr. Speaker, under leave to extend my remarks I include an address which I delivered at the AFL–CIO Joint Council Meeting on Juvenile Delinquency, New York, N.Y., on May 12, 1960.

RESPONSIBILITY IN JUVENILE DELINQUENCY

It is a pleasure to be here with you today, and I welcome this opportunity to share with you my thoughts on juvenile delinquency.

As a Member of your Congress and chairman of the Appropriations Committee for health, education, and welfare funds, I have been fighting for new programs and legislation to help reduce juvenile delinquency. I know you are just as concerned with this as I am. And so, what I have to say to you will be a reminder of our shared responsibility for meeting and dealing with this serious problem.

Moreover, I shall point out some of the ways by which we can more strongly attack and deal with the growing menace of juvenile delinquency. The situation is not hopeless. Far from it. But there are things we need to do that we are not doing—and the time for action is now. So, what I shall say will show the gloomy side—the staggering statistics of juvenile delinquency. But it will also reveal the hopeful side—the opportunities for positive programs and action.

Juvenile delinquency is reaching epidemic proportion in our society. It is causing grave concern not only to you and to me, but to every American concerned about the present and future welfare of our country.

The statistics are shocking. The number of delinquency cases disposed of by juvenile courts in the United States nearly tripled between 1948 and 1958. During this period the child population of delinquency age increased by about a third, while the delinquency rate per thousand children in this age group doubled. Cause for further alarm is the fact that acts of violence against persons are increasing more rapidly than almost any other form of juvenile delinquency. The cost of delinquency in dollars and cents is also staggering. FBI estimates indicate that juvenile delinquency currently represents a drain on our national economy of $4 billion each year.

But the problem is even more serious than the surface facts make it appear. It is reliably estimated that one boy in five in this country now has a delinquency record by the time he is 18 years old. Though it is true that many of the offenses that are counted in establishing this figure are relatively minor, it is also true that the statistics on delinquency are limited to cases known to law enforcement agencies and courts. For every child who becomes a juvenile court statistic there are two or three who are dealt with informally by the police, even though they may have committed similar offenses. About half of all arrests for burglary and larcency and almost two-thirds of the arrests for auto theft involve persons under 18 years of age. Yet in these three categories, slightly less than one offense in four results in an arrest.

It is obvious then that the figures on delinquency represent only the surface portion of a menacing iceberg—an iceberg in which we should include all of the thousands of youngsters with delinquent behavior patterns. These young people must also be seen as people, not merely as statistics. They are the citizens, the workers, the parents of the next generation. They are individuals with productive potential—and many of them have the basic abilities to make important creative contributions to our society. We simply cannot afford this kind of waste of our productive youth. No country, not even ours, is rich enough or ever will be rich enough to afford it.

The child population of delinquency age will increase by about 50 percent in the next two decades. On top of this, in the next 2 decades many more of our people will be living in or near big cities. At present, the big city delinquency rates are three to four times the rural and small town rates, and adult crime rates also increase with the size of the city. It seems very likely, therefore, that as we become a more urban nation our delinquency and adult crime rates will continue to rise, with more delinquents in the juvenile age bracket and more and more of them moving into adult crime as they grow older.

For the last 13 of my 19 years in the Congress, I have been active—either as a ranking member or chairman—on the House committee responsible for levels of programs that include the field of delinquency. The subcommittee which I head has become increasingly alarmed at the national juvenile delinquency problem. Accordingly, last year our committee asked the Department of Health, Education, and Welfare to coordinate a special effort and give leadership to persuade more of our scientists to turn their attention to study in the behavioral sciences. Such studies, we felt, should include inquiry into the psychological, emotional, and environmental factors leading to deviant behavior in youth.

From such knowledge we could hope to find a way of preventing juvenile delinquency. Let me quote from our report:

"In the Department of Health, Education, and Welfare we have the Children's Bureau and the National Institute of Mental Health, both with interest, experience, and resources in the fields of child behavior, child welfare, and child psychology. It would seem that a collaborative effort by these two agencies, one oriented to research in behavioral, psychological, and psychiatric sciences, and the other oriented to research in sociological science with emphasis on child welfare, could lead to methods for helping reduce the tragic social burden that juvenile delinquency represents."

We asked the National Institute of Mental Health and the Children's Bureau to undertake a most careful and thoughtful study of what can and should be done in future years in the field of juvenile delinquency prevention.

The joint report of the National Institute of Mental Health and the Children's Bureau has now been received. Its contents indicate that, though we do not now have any final answers regarding the nature of delinquency and the most effective ways of treating different types of delinquents, we do have a good deal of useful knowledge resulting from scientific studies and from the experience of people working in the field of delinquency.

We are not completely ignorant and helpless before this crisis. We can identify the problem, we can plot its course, at least crudely, and we can take preventive measures. It is not enough to be against delinquency—it is our responsibility to develop a major national blueprint for the control of this epidemic. Fortunately, it is not too late for prevention and control if we are willing to take bold, expensive, and large-scale action, to conduct field experiments and demonstrations, to train needed personnel, and to do more research.

Our committee is recommending such action and is also recommending an appropriation of $1 million to the National Institute of Mental Health and $60,000 to the Children's Bureau in the coming fiscal year to inaugurate the first steps for such a program. We recognized, of course, that substantially larger sums will be needed in the succeeding years as demonstration, research, and training projects get under way, and as State and local governments begin to apply the findings from these projects.

But while Federal leadership and help are needed in attacking the problem, it must be clearly recognized that this effort requires the active teamwork of responsible private organizations such as the community service organizations of AFL–CIO, social and health agencies, schools, churches, and many other civic and community organizations. Such teamwork of public and private resources is required not only because the problem is reaching epidemic proportions but also because delinquency is so deeply interwoven into the fabric of our society.

Since it is obviously impossible to completely remake our society, it is appropriate to concentrate on a few strategic factors which people who have worked extensively with delinquents consider to be crucial.

There are numerous families with inadequate incomes in the deteriorated areas of our big cities. Many such families are unable to do an adequate job of child-rearing because of physical health and mental health problems, and because of lack of meaningful ties with religious, social, educational, and health agencies in the community. Health, counseling, remedial education, recreation, welfare, and voactional guidance services must be provided to these families, where needed, on an individual basis. Also, the basic structure of health, education, and welfare services for the entire community must be strengthened to prevent the spread of delinquency and other social contagion from these malfunctioning families. By focusing on such families and the services which they and their neighbors need, it is possible to launch an attack on delinquency now, even though we cannot deal with all the myriad factors associated with delinquency at once. The rationale for such an approach is derived from an examination of certain dominant trends in the American way of life today.

In our huge, complex, industrialized and mechanized urban society, we no longer have the informal social controls that characterized the rural way of life in America during the 19th century. For those who would achieve a rewarding position in legitimate society, a long educational preparation is required. Besides, there are widespread pressures which prevent youth from holding jobs or even learning jobs before they are 18 or older. At the same time, our society becomes increasingly complex and keeps changing so rapidly that it is more and more difficult for youth to establish a meaningful way of life and select a suitable career.

The child of today, unlike his counterpart 100 years ago, or even 50 years ago, does not have a sense of belonging, of never questioning his place in the community, in the economy, and in the world at large. In our medium-sized and larger cities there are many children in the low-income areas who are faced with the fact that neither they, their parents, their neighbors nor their

friends feel that they belong to the community or have a responsible role to fulfill. Particularly if they are part of a minority group, they constantly feel rejected or at least ignored by the bulk of the population. When the urban low-income child starts school he is likely to find that his previous life experiences have not prepared him for this setting, and that school represents preparation for a way of life that appears to have no place for him except in the most menial and lowest paid occupations.

Unless an understanding parent, teacher, neighbor, clergyman, or social worker can help him, through a continuing relationship, to understand this educated world better and see a meaningful role in it for himself, he is unlikely to develop the feeling that he belongs to this complex education-ridden society. This process of alienation from productive society can start very early indeed in the case of a child whose home is extremely deprived in human relationships and material needs.

Unfortunately, the major social trends of our time that accompany urbanization tend to create more and more of these rootless, alienated, and finally rebellious children. These trends include industrialization, increasing technology, larger and larger organizations, and the overall continuing expansion of our economy.

It is apparent that there are not going to be any easy answers to the problem of delinquency. It is equally apparent, also, that we cannot expect to make any real inroads against delinquency unless we simultaneously launch a broad campaign in the whole field of child welfare.

We need more and better professional services for children and families before problems arise. And in our programs designed to treat the juvenile delinquent, we need more emphasis on coordinating and strengthening all of the basic local social services for children. Such a program is impossible without broad citizen support at every level.

As chairman of the committee in Congress that has supported research programs to a very great degree of success in the medical and biological sciences, I believe it is possible to attack the juvenile delinquency problem through similar programs. I believe the Federal Government must support research, demonstrations, and training to provide the necessary scientific knowledge and personnel. The State and local governments do not have the resources for all that is needed of this kind of activity. On the other hand, the actual services to children and their families must be provided in the individual community, with the help of the State and local governments.

This will be done, but only if people everywhere want it strongly enough. Citizens and citizen groups, including such outstanding leadership groups as the AFL–CIO Community Services program, must indicate that they are willing to support Federal and State tax levels sufficient to maintain adequate child welfare research, training, and service programs. They must take the initiative in insisting that local governments, agencies, and civic groups mobilize to improve social services—and that careful and thoughtful planning is done before any action is initiated.

A careful blueprint is also needed in order to attack delinquency adequately. The Federal Government has a substantial role in this program and has already begun to take action through some of its agencies. For example, the National Institute of Mental Health is now conducting a substantial program of research focused on basic processes involved in social problems, development of effective preventive and treatment methods, and methods of training personnel to do work connected with these social problems. The Institute is attempting to acquire more scientific knowledge about the many processes involved in producing delinquents.

The major effort, however, is concentrated on effective application of current knowledge and skills. The consensus of experienced professionals in the field is that serious delinquency usually involves a long-term social and psychological process. In many delinquents the first symptoms appear in early childhood, with onset varying between ages 2 and 10. There is evidence that the process can be reversed or at least arrested, but early intervention and continuing attention are required. In this respect delinquency roughly resembles diabetes, which physicians are able to control if they spot the illness early enough and provide continuing care for an indefinite period. With delinquency, however, such control methods are less reliable, though promising.

Preventive care needs to continue at least through the adolescent years, perhaps beyond. In mild cases, such care may involve no more than an initial diagnostic study, followed by periodic contact with a trained probation officer or other experienced person, plus occasional provision of necessary health, counseling, remedial education, recreational, and vocational guidance services. In more serious cases, a continuing and intensive rehabilitative process is required, involving a concentration of coordinated services.

An essential counterpart to such individual and family care is an attempt to modify the spirit of the community in high-delinquency areas so that adults in these areas will show a more accepting, helping, and nurturing attitude toward all children in the area, including delinquents, and will participate in mobilizing and improving all community services for youth.

Since many experienced delinquency workers feel that they could do a much better job if they had adequate resources, the Institute of Mental Health is supporting three research and service groups who are testing out special delinquency control approaches. In order to provide these and similar groups with more effective tools to carry out control programs, support is also being provided for projects focused on early identification of delinquents and predelinquents, special methods of treating such children and their families, and methods of evaluating the effectiveness of preventive and treatment programs.

One of the three special projects at the University of Michigan is being carried out in a city of about 200,000 population. Thus far it has involved an intensive study of the social and psychological characteristics of delinquents in the community as compared with children whose behavior is exemplary and outstanding. There has also been extensive study of community services and of social and institutional factors involved in delinquency.

The next phase will be to transmit results of the study in appropriate form to a group of leaders in community services for youth, as well as to the community at large. This feedback process should mobilize a groundswell of community interest and concern which will insure total community support for a carefully planned delinquency control program. If community resources are insufficient to provide services needed in such an all-out control program, they will be supplemented in order to carry out the program at an effetcive level for an adequate demonstration period.

Another special project, set up in a middle-sized city in Massachusetts, is attempting to devise methods for classifying a sample of all delinquents coming to the court so that they can be referred for appropriate treatment. This effort is based on the observation that most communities lack resources and techniques needed for adequate diagnosis and disposition of delinquents. These diagnostic instruments have now been developed and are being applied to a sample of all delinquents coming to the court. The next phase will include a tryout of the recommended dispositions or treatments, with local services for this purpose being augmented as needed.

The largest project undertaken thus far is that of mobilization for youth, on the Lower East Side of New York City. This project, still in its formative stages, is expected to include both preventive and treatment services for predelinquents, delinquents, and their families, plus a broad program aimed at modifying community attitudes toward youth and at reorganizing and augmenting services designed to help youth move into productive adult lives.

Mr. James McCarthy, who is here today, can tell you more about this project, since he is the director of its action program. All three of the special projects being supported by the National Institute of Mental Health are of the type that need extensive participation by community service programs such as your own.

Aside from general support for such programs, there are a number of special ways in which organizations concerned with community health and welfare, and in particular your organization, can help attack the problem of juvenile delinquency. Let us first consider the problem of youth employment.

Early in this century child labor laws were introduced to prevent the exploitation of children and youth in unhealthful work situations. At the same time public education was expanded on a compulsory basis so as to permit all children to complete high school. We are now finding that many children have such serious difficulties with education that they are ready to leave school by the time they reach their teens. Many of them now do leave school by age 14 on a formal basis, or informally by very frequent truanting and by being inattentive and disruptive in class.

The great bulk of delinquents are recruited from this group. Over half of all delinquents are educationally retarded and a large proportion of school dropouts become involved in delinquent acts. However, automation and the shorter work week have made it extremely difficult to bring younger teenagers into the labor force, and organized labor has legitimately been concerned about attempts to lower the working age.

Yet some means must be developed for gradually preparing the school-rejected and school-rejecting teenagers for a useful work career. In some European countries such youth serve as apprentices in a wide variety of occupations and are thus gradually introduced into the adult labor force. I offer no solutions to you at this time, but would suggest that this is a problem which merits the special concern of your organizations.

The advent of the shorter workweek brings increased concern for constructive use of leisure time. It is within their leisure time that many of our teenagers get into difficulty. Certainly the opportunities for constructive use of leisure time are extremely limited in some of the deteriorated areas of our large cities. There is a great need for hobby programs, recreation programs of all kinds, and for the help of a large number of responsible citizens in developing such programs. These programs must be adequately planned and supervised.

Here in New York City there are a variety of such programs. For example, some schools are open all day and also during the evening, providing supervised hobby and recreation programs as well as programs throughout the summer months. Other agencies, including schools, are carrying on activities which help new migrants from Puerto Rico or from rural

areas of the South to become acquainted with the customs, services, and opportunities of the big city.

Experienced workers in the field of delinquency recognize the importance of citizen and voluntary organization participation in carrying out prevention and treatment programs. The actual or potential delinquent and his family in a low-income area may require a variety of remedial education, health, counseling, recreation, and vocational guidance services. If such services are to be provided in a way that meets local needs in a coordinated fashion, a large number of responsible local citizens must serve on boards, in planning agencies, and as volunteers. Such support is needed not only for agencies serving delinquents but for all agencies concerned with the welfare of the child and his family.

Although public interest in a problem like delinquency is aroused when an epidemic of vandalism, theft, or violence occurs, such interest is apt to subside as other pressing problems arise. Besides, delinquents have no lobby, as do, for example, the physically handicapped and mentally retarded children. Parents of delinquents do not organize as do the parents of these other handicapped children.

Therefore there must be continuing support from responsible organizations like yours for constructive legislation and for community efforts in the field.

Finally, and perhaps most important of all, much help is needed in spreading community concern for every child of the community, in setting standards, and in sharing these standards with parents of children in our most deprived areas. Because we are living in what has been called an affluent society, we are too apt to assume that prosperity has filtered around all of the corners in our economy. We are too apt to assume that significant portions of our society who do not share the comforts and opportunities on which middle-class values are predicated will nevertheless owe full allegiance to such values.

Delinquency is a growing, threatening epidemic in our national life, and only a portion of it is visible. National leadership and help is required to cope with this problem. And a larger part of that leadership must come from the teamwork of many public-spirited orgnizations, one of the more important of which is the community services program of the AFL–CIO.

Inactivation of 449th Fighter-Interceptor Squadron, at Ladd Field

EXTENSION OF REMARKS
OF
HON. RALPH J. RIVERS
OF ALASKA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 23, 1960

Mr. RIVERS of Alaska. Mr. Speaker, I consider it my duty to call to the attention of my colleagues in the House an alarming development with regard to our national defense. I refer to the incredible decision of the Air Force, recently announced, that it will inactivate and phase out the 449th Fighter-Interceptor Squadron at Ladd Field, near Fairbanks, Alaska, in August 1960. This unit, which is the only one of its kind in Alaska north of the Brooks Range—the only other fighter-inceptor squadron in Alaska being at Elmendorf Air Force Field near Anchorage, Alaska—has for many years been regarded by the highest military authorities as an indispensable shield against potential aggression by the Russians. Ladd Field, only 600 miles from Siberia, is a part of our northwest bastion of defense; a vital link in our perimeter of national defense, which includes Alaska as the corridor between Asia and North America, being an area once characterized by the late great Army officer, William "Billy" Mitchell, as "the most important strategic place in the world."

As recently as last March the Air Force programed replacement of its 25 F–89 aircraft at Ladd AFB for F–101Bs, in line with strengthening the defensive power of the 449th Fighter-Interceptor Squadron. This occurred at a time when international tensions appeared to be relaxing. Now in the midst of a worsened world situation stemming from our U–2 observation flights over Russia, we are confronted with the Air Force's sudden plan to withdraw from Ladd Field, soundly established on American soil in the shadow of the Iron Curtain, as contrasted with many of our foreign airbases which are built on political quicksand.

On July 4th last, at Auburn, N.Y., I had the privilege of speaking at a ceremony honoring our 49th State, in which I extolled the foresight and wisdom of former Secretary of State, William Henry Seward, in effectuating the purchase of Alaska from Russia, and noted the disadvantage the rest of North America would now be suffering if Alaska were yet in the hands of the Russians. Both the audience and I visualized the idea of Russian bombers and missiles being located in Alaska pointed toward the great industrial centers of the older States and Canada, and we did not like what we saw, which lent enhanced meaning to the memory of William Henry Seward.

Now we are told by Gen. Curtis LeMay, who requested the construction of Eielson AFB a decade ago as a launching ground for SAC bombers just 26 miles from Fairbanks, that Alaska is now of subordinate strategic importance and that for economy reasons the risk of phasing out the 449th Fighter Interceptor Squadron may be taken. This, in the face of the fact that said squadron has been on the alert for years to defend not only Ladd Field and environs against the possibility of a Russian paratrooper attack or destructive bombing mission, but to likewise defend the great SAC installation and runway at Eielson AFB with resultant protection of our whole country.

Since long-range missiles presently under development are presumably not yet operational, the Russian airpower according to Gen. Thomas D. White, Chief of Staff of the Air Force, is still Russia's most dangerous weapon. To my mind this makes the problem elementary and the answer apparent—this is no time to inactivate any part of our manned fighter-interceptor forces. Comes the day when East and West will have each other thoroughly pinpointed with adequate arrays of ICBM's, there may be no further use for Air Force bases as we know them today, but the time is not now, any more than it is time to phase out the Air Force itself.

I realize that the Air Force is hurting because of the recent congressional appropriation cutback on Bomarc widely regarded as an extravagant fifth wheel in our overall missile program, but do not think this justifies the economy reaction displayed in the plan to chop down our manned fighter strength. This reaction is equivalent to saying to the Congress, "You want economy so we will give it to you—where it hurts." Instead, the money saved on Bomarc should be made available to strengthen our manned fighter defenses. Such approach would be consistent with the fact that the top stratum of the Air Force has turned down the request of Lt. Gen. Frank A. Armstrong, Jr., Commanding General of the Alaskan Command, for intermediate range missile installations in Alaska to offset the 27 Russian missile installations in Siberia across the Bering Strait. If Alaska is not an area usable for exchanging missile blows with the Russians, it must be regarded as an area vulnerable to attack and attempted occupancy by the Russians for use against the rest of our country as a nearby launching platform.

An excellent and more complete treatment of this whole subject is found in the remarks of Senators BARTLETT and GRUENING of Alaska set forth in the CONGRESSIONAL RECORD of May 17, 1960, beginning on page 10407 with the speech of Senator GRUENING. I invite all of you to read the able presentations of the two Senators, for the vital interest of all the people of the United States is at stake.

Keenotes

EXTENSION OF REMARKS
OF
HON. ELIZABETH KEE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 23, 1960

Mrs. KEE. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD I include a copy of my newsletter released today:

WASHINGTON, MAY 23, 1960.

KEENOTES BY REPRESENTATIVE ELIZABETH KEE

The collapse of the summit conference raises many grave problems for the United States and the rest of the free world. One thing appears to be certain—the cold war will be resumed with all of its dangerous implications.

The country is united behind the President. In view of Premier Khrushchev's violent and bitter attacks on Mr. Eisenhower, there is nothing else the country can do. A show of weakness at this point on our part or that of our allies could be fatal.

The failure of the summit negotiations to produce results is not surprising. But what is surprising is the violent manner in which Khrushchev chose to prevent them from even getting under way. The shooting down of the U–2 plane was the excuse he used. Obviously, he had made up his mind before coming to Paris to block any meaningful talks.

The important thing now is to present a united front to the world to meet an expected series of crises in the coming months. An inquiry into an unfortunate series of events preceding the Paris meeting can wait until a more appropriate time.

VETO BY PRESIDENT UNFORTUNATE

The veto by President Eisenhower of legislation to help in the economic rehabilitation of distressed areas is unfortunate. Twice Congress has passed this bill and each time the President has seen fit to kill it by veto.

In my opinion, the need for this legislation has been clearly established. There are thousands of people in various parts of the Nation who are at present leading hopeless lives. Their jobs are gone and the prospects of finding gainful employment are dim.

This legislation would have launched a cooperative program to rebuild these areas and create jobs for the unemployed. The President's six reasons for vetoing the bill did not seem to be very convincing to me.

Eventually, a program of this kind must be put into operation. The President's two vetoes have cost us valuable time in attacking a serious national economic problem.

WATERSHED PROTECTION PROGRAM STRENGTHENED

The House has voted an additional $4.9 million for the watershed protection program.

The idea behind the program is this: By building dams and other water checking facilities on small streams, the danger of downstream flooding on larger streams is lessened without the need for large, expensive dams. Also, the damage to productive farm land is kept to a minimum.

This program has been a success. In West Virginia and other States, some projects are actually under construction and others have been completed. There have been so many requests by local interests for inclusion in the program that additional planning funds were essential.

Protection of soil is one of the major problems facing the Nation. Soil is one of our most precious assets. We must not squander it.

I also strongly support the soil conservation program under which locally managed districts are formed to install soil conserving practices on a broad scale. Millions of acres are now included in soil conservation districts which are practicing the latest methods of conserving and preserving the soil.

This is a fine program which enjoys almost unanimous support in Congress.

Prices Charged by Hospitals for Drugs Administered to Patients

EXTENSION OF REMARKS
OF
HON. THADDEUS J. DULSKI
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 23, 1960

Mr. DULSKI. Mr. Speaker, since medical plans for the aged have been advanced, many problems have come to light. A study made 2 years ago revealed that 40 percent of our retired people have some form of health insurance. Even this is often inadequate, and it is expensive in view of the limited resources of the greater majority of our senior citizens. In the meantime, medical costs continue to rise.

I return to my district every weekend and meet with many constituents, some of whom have had the misfortune of illnesses that have run into exorbitant costs.

In recent months public attention has been glaringly focused upon the high drug prices in our country, and emphasis has been properly placed on the wide disparity between the manufacturing cost of certain drugs and their retail selling price. I have followed the hearings conducted by the Senate Antitrust and Monopoly Subcommittee, of which Senator ESTES KEFAUVER is chairman, and I have noted one aspect of this problem which has not yet been explored. This is the price charged by hospitals for drugs administered to patients. Since the patient in a hospital is a captive customer with respect to the drugs that are administered to him, I feel that this should also be an area for investigation by the subcommittee.

In reviewing the many complaints that I have received from constituents, I find that many of the statements rendered by hospitals, for the drugs administered to the patient, are not itemized. Also, in every case, it was felt that the charge for drugs was excessive.

I shall include a copy of a bill which one of my constituents received from a hospital, covering 1 week's expenses last October for one of his relatives. I was astounded when I saw the charge for drugs—$676.25. This was over half the cost of the entire hospital bill:

The following is a duplicate of this bill:

Board and room (7 days, at $21.50)	$150.50
Cardiogram	15.00
X-ray	20.00
Oxygen	78.00
Glucose	11.00
Laboratory examinations	207.00
Surgical dressings	9.08
Special medicines	676.25
Total	1,166.83

Under "Special medicines," or drugs, we find the following items:

Aqueous penicillin (190,000,000 units)	$380.00
Molar NA Lactate I.V.	21.00
Chymar	5.00
Cediland I.V	4.00
Hydrocortisone	24.00
Solu Cortel	15.00
Vitamin B_{12}	10.00
Digalon	2.00
Streptomycin	8.00
Saline	.75
ASA suppositories	7.50
Chloromycitin	102.00
Levaphed	3.00
Sulfadiazene	12.00
Glucose	75.00
Rontine	7.00
Total	676.25

It is my earnest hope that the Senate Antitrust and Monopoly Subcommittee will delve into this aspect of drug prices since it is evident that a great quantity of drugs is dispensed through the medium of our hospitals. In view of the lack of competition in this area, corrective legislation may be necessary as determined by the facts after careful exploration by this subcommittee.

Washington, D.C., International Race

EXTENSION OF REMARKS
OF
HON. J. GLENN BEALL
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Monday, May 23, 1960

Mr. BEALL. Mr. President, I ask unanimous consent to have printed in the CONGRESSIONAL RECORD, a statement which I have prepared on the Washington, D.C., International Race, the "Olympic of Racing," held on Veterans Day at the Laurel, Md., racetrack.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

WASHINGTON, D.C., INTERNATIONAL RACE—THE OLYMPIC OF RACING

On November 11, Veterans Day in the United States, the unique Washington, D.C., International Horserace will be presented to the sporting people of the world for the ninth time. As each year becomes history, global interest shows a decided increase, not only among the peoples of the world who breed, own, and race thoroughbreds, but also by racing's millions who thoroughly enjoy keen competition anywhere.

By its very nature, the Washington, D.C., International is an "Olympic of Racing." By adding a sound sporting idea to modern air transportation, the Laurel Racecourse has developed an international spectacle already ranked the equal, if not surpassing, other worldwide contests featuring representatives of various countries in a struggle for global supremacy.

The Washington, D.C., International, with its Olympic overtones, is especially significant this year, a year in which the United States engages the nations of the world in athletic prowess.

Horseracing is not included on the official Olympic agenda at Rome, but what could be more fitting than for this great Maryland racing classic to serve as an Olympic vehicle? Understandably, it would be unofficial. But it isn't too far-fetched to see this sporting equine test, involving all the skill, speed, and stamina connected with the ancient Olympics, as a part of the games every 4 years, albeit not counted officially.

The race, begun in 1952 by Laurel President John D. Schapiro, was planned with this very idea in mind, that the best horses in each country, meeting on grass, the natural footing for a thoroughbred, and at the classic distance of a mile and a half, should have the opportunity of competing for the world championship of racing, in the same manner the various nations battle for supremacy in other sports. This certainly parallels the Olympic pattern.

Present-day air travel, with its speed and up-to-date equipment, has been largely responsible for this new era of international racing, but it remained for Laurel to do the pioneering and earn the success. It has meant work—hard work—and a lot of time, but the sporting people of the world now have a race of worldwide importance, a race in which the various champions of each nation can meet on equal footing in a battle for the bluest of all blue ribbons—a world championship.

It is especially fitting that this "Olympic of Racing" is held on Maryland soil. A small State in size and population, Maryland is nevertheless one of the Nation's leading producers of the thoroughbred horse. Over 55,000 acres are devoted to this industry, and farms range from the 2,500-acre Holly Beach farm near Annapolis to the

half-acre lot near Timonium where the fabulous Maryland-bred horse, Yes You Will, was raised.

The area comprising Baltimore, Howard, Harford, Prince Georges, and Montgomery Counties, produces 13 percent of all the thoroughbreds foaled yearly in the United States. And yet, with all this production, all but a small minority of breeders retain their produce for racing purposes, as compared to the commercial breeding establishments of Kentucky and Virginia.

So it is with a great deal of pride that I am able to point out that Maryland is the scene of the Washington, D.C., International. Despite the name of the race, it is Maryland's own, being staged by Marylanders on Maryland soil. It carries the name of Maryland all over the world, something no other sporting event in the State does, because racing, unlike other American sports, is known far and wide. And the Washington, D.C., International, by its very name, is of prime importance to the vast amount of people all over the globe who have a strong affinity for the sport of horseracing.

Repeal the Two-Term Limit

EXTENSION OF REMARKS
OF
HON. WILLIAM S. BROOMFIELD
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, May 23, 1960

Mr. BROOMFIELD. Mr. Speaker, just a few years ago, the 22d amendment to the Constitution was adopted, limiting the number of years a President could serve as Chief Executive of our Nation.

Since this amendment became a part of the supreme law of our land, there have been many criticisms of this provision.

There have been charges that it would seriously cripple the power of a President in his dealings with Congress. It has been said that this amendment even affects his role as titular head of his own political party and makes it extremely difficult to win support for his own programs among Members of Congress.

All these are valid criticisms, and we have seen the truth of these accusations during the past few years here in Washington.

But now we are faced with a much more serious effect of this amendment upon our Nation. We are faced with the very survival of civilization, with our existence as a nation.

The fact is that Premier Khrushchev has used our own Constitution against us. He has taken advantage of the 22d amendment to try to force his will upon us, to insult our President and the people of our Nation.

Mr. Khrushchev has said that he will not go to the summit for another conference until such time as President Eisenhower is out of office and a new President is elected.

We, as Americans, are prevented from returning President Eisenhower to office by a decisive margin to rebuke Premier Khrushchev, to show him that we oppose any such meddling in our internal affairs, particularly by one who has shown such a great disregard for truth, for honesty, for freedom and humanity.

What if Premier Khrushchev had not had the 22d amendment to lean on during his Paris outburst? Could he have successfully insulted our President and our people?

I do not believe so. The reason is that we, as Americans, would have had a means of showing up Premier Khrushchev in very short order.

We could have demonstrated to the world that we stand behind our President, and that we do not want to be pushed around by anyone. We could have returned President Eisenhower to the White House for a third term.

Under such circumstances, I doubt very seriously if there would ever have been a walkout by Khrushchev at the Paris conference. I believe he would have had to tone down his remarks and his accusations about the U–2 flights. I believe he would have considered what a resounding vote of confidence by the American people in their President would do to his threats and insults.

Quite likely, there would have been no Paris walkout. There would have been no period of renewed tensions and a dashing of hopes for peace.

The dangers in Russian prestige would have been too great. The odds would have been against Khrushchev.

President Eisenhower is the first President who has served under the terms of the 22d amendment. Already, this amendment has done great harm to our people, has caused serious damage to efforts to secure world peace, to end tensions and permit the world to live in some sense of security.

The weakness of this amendment has made itself readily apparent, and we should see to it that a President of the United States never again finds himself in this predicament.

Therefore, I urge repeal of the 22d amendment in the best interests of our people and our future.

I am well aware of the fact that some members of my own political party were the strongest advocates of this amendment. However, it was not foreseen—it could not be foreseen—that this amendment would be turned against us.

If we are to give our President the responsibility for our foreign policy, for maintaining world peace, then we must give him the authority to cope with these problems.

It is asking too much of any man to take on a dangerous and deadly foe with one hand tied behind his back, and that is exactly what we have asked our President to do.

A recent editorial in the Daily Tribune of Royal Oak, Mich., points out the dangers very clearly, and at this point I would like to have this article inserted in the CONGRESSIONAL RECORD:

[From the Daily Tribune, May 18, 1960]

REPEAL TWO-TERM LIMIT

When the Premier of Soviet Russia calls the President of the United States a "lame-duck President, it is time we reconsider the 22d amendment.

This amendment was adopted in spite. It limits the terms of the President to two. It was urged by those whose sole intellectual gift was hindsight; men with little real understanding of the legitimate use of governmental power but with a vast greed for it—if it is held by someone else.

By telling President Eisenhower that perhaps the Soviet Union will extend a new invitation for a Presidential visit—"in 6 or 8 months"—Premier Khrushchev automatically made the summit conference a 1960 campaign issue. It is bald interference in our internal affairs.

The choice of paths to peace is, of course, a legitimate campaign issue. But an issue for Americans. We may disagree among ourselves as to which is the wisest course to pursue, and vote accordingly. But the point is that the discussion and decision will take place within a general agreement, as Americans, that our primary concern is with the security and future of the United States of America.

The danger in Mr. Khrushchev's gambit, for us as well as for the Soviet Union, is that he may misread the election returns as either for or against the Soviet Union—as he already has chosen to misunderstand the meaning of the U–2 flight.

Mr. Eisenhower, the first President to hold office under the 22d amendment, already has felt the effect of limitation on Presidential power in his relations with Congress.

It was well understood before the adoption of the 22d amendment, that a President in a position to succeed himself was in a more effective position to secure carrying out the decisions our Constitution requires him to make. Now Khrushchev has pointed up an even more dangerous limitation on the power to represent the United States effectively in foreign affairs.

Economics, Ethics, and Mental Illness

EXTENSION OF REMARKS
OF
HON. JOHN E. FOGARTY
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES
Monday, May 23, 1960

Mr. FOGARTY. Mr. Speaker, under leave to extend my remarks I include an address which I delivered at the 11th Mental Hospital Institute, Buffalo, N.Y., on October 20, 1959:

ECONOMICS, ETHICS, AND MENTAL ILLNESS

(Address of the Honorable JOHN E. FOGARTY, Member of Congress, Second District, Rhode Island, at the 11th Mental Hospital Institute, at the Hotel Statler in Buffalo, N.Y., on October 20, 1959)

Distinguished guests, ladies and gentlemen, I am greatly honored by your invitation to present the academic lecture at this 11th Annual Mental Hospital Institute. I have a sense of some temerity, however, in addressing a group such as this on the subject of ethics and mental illness. All of you have, in the most practically real and effective way, dedicated yourselves to improving the condition of the mentally ill. The staffs of the outstanding hospitals that have received the Mental Hospital Service Achievement Awards here tonight are in the front echelons of an army of many thousands who work against tremendous odds. These people, despite the magnitude and seeming hopelessness of the task, have made substantial gains in the campaign to improve care and treatment for the mentally ill, to help them recover more rapidly and more fully. As a layman, I can

add to your great effort only my indirect help, my understanding, and my support for your work.

I have been closely concerned for a long time, as many of you may know, with the problems of mental and emotional disorders. The prevalence of these illnesses, and the regularity with which they afflict a large proportion of our people in every class and condition of society put them in a critical category all by themselves. If mental illness were acutely contagious instead of causing chronic invalidism and disability, our country and all the countries of the civilized world would long ago have declared a state of emergency against this epidemic.

As a nation, we are painfully aware of the economic costs of mental illness; we have deep sympathy for the misery of those who suffer from mental illness and the hardships endured by their families; we want to do as much as we can to alleviate this suffering—but we are not sure how much we can afford to do; what limits we should set to our efforts in the light to what we know at present; in what directions we should exert our efforts most vigorously.

The dilemma was posed most succinctly in the recent report on the economics of mental illness. This report is the second in a series being issued by the Joint Commission on Mental Illness and Health as part of a national mental health survey initiated by Congress. The purpose of the survey is to bring together a comprehensive body of findings and recommendations that will serve as the basis for planning a stepped up, comprehensive national mental health program.

Dr. Rashi Fein, the economist who worked out methods for estimating the direct and indirect costs of mental illness in the United States, estimates them conservatively at a minimum of $3 billion each year. This figure obviously does not represent the full cost of mental illness. It includes direct costs of caring for the mentally ill expended by public and private agencies, by the patients and their families, by public institutions and private foundations. It includes estimates of such indirect costs as loss of production and loss of earnings. It does not include the costs of private care outside the hospital, of public assistance to the mentally ill or the handling of the mentally ill by police, court, penal, social welfare and other public institutions. Nor does it include the costs of related problems such as drug addiction, alcoholism, juvenile delinquency, and mental retardation.

The $3 billion figure includes $100 million as an estimated minimum direct cost of care provided by psychiatrists in full-time practice. It does not include the cost of payments to psychiatrists in part-time practice, to general practitioners, or to internists for the care of the mentally ill. I am sure that you who work in the field are well aware of the difficulty of gathering accurate statistics on this subject. It has been estimated that perhaps 50 percent of the patients consulting general practitioners are suffering from complaints of an emotional origin. If this cost were included, we would have to add another $1 billion to our $3 billion annual total.

We all are, of course, painfully aware that even though we pay out $3 billion annually, we are not providing our mentally ill with anything like the best care presently possible. The average expenditure per patient in a public mental hospital is just a little better than $4 a day. This compares with a daily cost of approximately $25 in a general hospital. The staff of the Joint Commission raise some very provocative questions in their preface to Dr. Fein's report. They ask: "How much would it cost to provide the highest possible standard of care for the mentally ill? Can we afford these costs? More exactly, which can we better afford—the cost in human misery caused by mental illness or the cost in dollars to provide the best care we know how to give?"

As a people, we Americans are committed morally and ethically to the proposition that each man and woman is entitled to the opportunity to realize his best capabilities. This includes the opportunity to receive proper medical care, regardless of income, social class, or the nature of the illness. We subscribe to the statement in the constitution of the World Health Organization that "the enjoyment of the highest attainable standard of health is one of the fundamental rights of every human being without distinction of race, religion, political belief, economic or social condition." However, we are a practical people. We also want to know whether large increases in the money spent to treat mental illness would be justified from an economic as well as a humanitarian viewpoint. Will increased expenditures tend to reduce the extent of the problem in the future? Where will the money come from? Should available increased funds be spent to step up research that hopefully will reduce the problem drastically at some future date—and, in the meantime, limp along with inadequate care for those who now are mentally ill or who become mentally ill in the near future?

From an ethical point of view, I do not believe that we have any choice. We cannot abandon one iota of the available potential for uncovering useful new knowledge through research. Equally, we cannot abandon the mentally ill. We are morally obliged to strive, to the limit of our abilities and resources, to improve the lot of the mentally ill, to make treatment more effective, to increase our efforts at cure and rehabilitation. Certainly people suffering from this illness are entitled to the same consideration as those with physical illness. As you know any person with acute appendicitis can obtain a good surgeon to remove it regardless of his ability to pay. We do not provide similar services for the mentally ill.

But because our resources are far from unlimited, we must make choices. What kinds of expanded services for the mentally ill are likely to be the most profitable? Where will our efforts be apt to bring the greatest payoff in terms of patient recovery?

Until fairly recently these were questions which could be answered almost solely on empirical evidence. And as a glance back over history will remind you, the answers that were accepted and applied in treatment were colored more often by the intellectual attitudes of the times than by detached analysis. Thus, little of constructive value was done to help the mentally ill in Western Europe until the age of enlightenment at the end of the 18th century. Paradoxically, the period of the Renaissance, during which new emphasis was placed on the dignity and worth of the individual, was characterized by cruel and repressive treatment for the mentally ill.

As you know, it was not until the 1800's that a systematic approach to mental illness was predicated on the belief that the mentally ill are entitled to the humane treatment that is the inalienable right of all human beings. This era of moral treatment, based on principles advocated by Pinel and Tuke, stressed the importance of attempting to influence the mentally ill by appealing to them with kindness and understanding rather than by regimenting them. Although it was believed that mental illness was caused by some unknown pathological process in the brain, the advocates of this type of treatment felt that their approach would do much to help their patients.

In that era, there were so few mental hospitals in the United States that only a small fraction of the people who needed hospital care would be admitted, but the hospitals that did exist were operated along excellent principles. They were small. The superintendents were highly intelligent and well motivated. The atmosphere was friendly, comfortable, hopeful, and the superintendent was able to talk to each patient daily. Despite the paucity of treatment methods, the number of discharges and recoveries in these hospitals was substantial.

Further advances in care and treatment were made in the big mental hospitals that were established during the latter half of the 19th century. New discoveries made during the first half of the present century enabled us to conquer the psychoses due to pellagra and general paresis. The use of shock therapy changed the entire picture with respect to involutional melancholia. The various psychotherapies were developed, and much was learned about the anatomy, physiology, and pathology of the nervous system.

In our own day, we have witnessed a period of remarkable progress which began shortly after World War II. Stimulated by the realization that mental and emotional disorders were a dangerous hazard to our safety as a nation, Congress, at that time, initiated our present ongoing program of support for research, training, and service in the field of mental health. In the short span of years since then, this activity has grown manyfold. Equally important, new work in the field of mental illness has been begun and stimulated by State and local government agencies, institutions, private foundations, citizens' organizations, universities and medical schools, training centers, and groups of all types throughout the country.

I have watched this campaign grow and spread, as you all have, and I must say the results have been impressive. New research findings have emerged—the tranquilizers and other psychoactive drugs have come into general use—we have developed new ways of training personnel and using people now available to treat patients—we have set up new kinds of treatment facilities and changed our uses of present facilities. The growth in treatment resources and know-how has been little short of phenomenal. Though we are still far from our goal, we have, I believe, what no previous period had. We have a handle with which to grasp the problem of mental illness. We have some tools that can help us decide, on a scientific basis, where our expanded efforts are most likely to bring results in terms of patient recovery.

Among the more useful tools, it seems to me are the epidemiological studies of mental illness. These studies have provided new knowledge about who becomes ill, how long they remain ill, what happens to the mental patient both in and out of the hospital, and the effects of new therapies and new kinds of domiciliary and outpatient care. This kind of information, obviously, is of first importance in long-range planning and in making critical decisions which will affect the patterns of caring for the mentally ill for decades to come. A great deal of this information has come from the many statistical studies of mental hospital populations sponsored and conducted by the States in the Model Reporting Area for Mental Hospital Statistics, with the guidance, cooperation, and assistance of the National Institute of Mental Health. Experts in this field have charted new ways of analyzing the problems of mental illness.

To me, one of the most significant changes that has taken place in recent years is that communities are assuming more responsibility for the care of the mentally ill. Services and facilities that make it possible to keep people out of mental hospitals and still give them adequate care are being established throughout the Nation.

Of particular importance has been the increase of psychiatric facilities in general hospitals. The numbers of these hospitals accepting psychiatric patients rose from 43 in 1939 to almost 1,000 in 1958.

The increase in the number of outpatient clinics and the extent of their services has been equally phenomenal.

New types of outpatient facilities and day-care and night-care centers have been opened.

Emergency psychiatric services are being developed which hopefully will obviate the need for hospitalization in some instances.

Nursing homes and chronic-disease hospitals are being used more and more for care of such groups as the aged mentally ill.

There has also been an increase in after-care facilities in the community so that patients who have been released are less likely to relapse.

Within the mental hospitals, there have also been significant changes. In fact, from what I have read I would say that there has been a virtual revolution in the way in which the hospital views and handles the mental patient, a revolution that has been reflected in the more hopeful attitude toward mental illness prevalent throughout our society today. The use of total push programs, begun about 10 years ago, have demonstrated that many backward patients—the ones for whom hope had long since been abandoned—could improve to the point where they can be returned to the community.

The open hospital has been another major step forward in the attempt to prevent long-term hospitalization and its associated ill effects. The healthy activity and sense of purpose that characterize the modern mental hospital are a far cry from the atmosphere that surrounded the mental hospital even as recently as 25 years ago. The idea of the open hospital has come to our shores in recent years from England where it has worked out very successfully in a number of hospitals. As yet it is not so generally accepted here as abroad.

A number of commentators have pointed out an apparent difference in the amount of violence among British and American patients and have suggested that something in the British personality or the more uniform culture in Great Britain may make the open hospital more feasible there than here. But the precedent for patient freedom in this country existed long ago. In 1842, Charles Dickens described, in his "American Notes," scenes in the Boston Lunatic Asylum that would do justice to the more enlightened of our present-day institutions. "Every patient in this asylum," Dickens wrote, "sits down to dinner every day with a knife and fork; * * * At every meal, moral influence alone restrains the more violent among them—but the effect of that influence—is found, even as a means of restraint, to say nothing of it as a means of cure, a hundred times more efficacious than all the strait-waiscots, fetters, and handcuffs. * * *"

One might logically conclude, therefore, that the success of the "open door" is dependent upon a real change in attitude toward the mentally ill. Opening locked doors and giving patients the social freedom that is rightfully theirs is not enough. There must be real conviction on the part of the entire hospital staff that the patient can improve. Patients must be given treatment; all the available therapies—chemotherapy, psychotherapy, physical therapies and so on—must be marshalled and organized on an individual basis so that each patient is given the benefit of all that is now known about treating mental illness.

More and more the hospital must take its place as part of a network of mental health services in the community. The treatment and rehabilitation programs of the hospital need to become more closely integrated with community health and social services, so that the patient can receive continuous psychiatric and social assistance that will change as his needs change—and so that he will be able to maintain his links to the community and to his family throughout the course of his illness.

Dr. Robert Felix, Director of the National Institute of Mental Health and president-elect of your American Psychiatric Association, pointed out this need at your meeting 2 years ago when he said: "I would envision the time when we would consider the hospital period not as a separate entity, but as an entity in the total therapeutic program of the individual." The hospital also must share its responsibilities in the total community forces available for fostering preventive programs and positive mental health activities. Dr. Felix has also said: "* * * members of our hospital staffs are going to be much more effective as a total therapeutic instrument in hospital programs if there are devices set up whereby they must spend some of their time in consultation with other agencies in the community."

This means that hospital staff would become involved in a whole array of community activities—such as industrial mental health, school mental health, the mental health aspects of law enforcement programs, and various community mental health activities in cooperation with civic leaders. Although these activities would, of course, burden the already overcrowded schedule of hospital staff, the benefits would far outweigh the difficulties—and the advantages would probably spur renewed and successful efforts at expanding hospital staff. Closer contact with the community would give the hospital physician, nurse, social worker, and psychologist a clearer understanding of the problems confronting the patient when he leaves the hospital. Such contacts would also stimulate professional personnel and other people working and living in the community to provide services within the hospital and help the hospital staff.

Ideally, if we are to make the mental hospital an effective therapeutic instrument, it must be set within a larger community which itself is a healing community—in which the general climate and the available services tend to minimize the unhealthy stresses which contribute to mental illness, and tend to promote mental health in a positive way. Recent research leaves no doubt that an individual's social environment has a tremendous influence on his mental health. In the hospital, a therapeutic environment means a climate in which the entire staff brings help to the patients and the patients help one another—in which there is increased emphasis on patient self-government and the patient is given more responsibility for managing his own affairs—in which treatment and help and rehabilitation are dominant. In the community a situation conducive to mental health means ready and adequate help for families in trouble, before one of their members breaks down—it means helping families recognize the early signs of mental illness and seek the proper kind of help as soon as possible—it means halfway houses, sheltered workshops and social-therapeutic clubs for discharged patients—it means the establishment of mental health centers to serve as screening and referral agencies—it means psychiatric emergency services and foster-home care and other measures to avoid long-term mental hospitalization.

The problem of avoiding long-term mental hospitalization is perhaps most acute with the aging—the group who are the particular focus of this Mental Hospital Institute. The problem represented by the disproportionately large number of persons 65 years and over being admitted to public mental hospitals will become an even more critical one in the years ahead. It is estimated that by 1980 the number of people 65 years and over in the general population will double. If the current trend remains fixed, the increased numbers of older people in our mental hospitals will be tremendous. This will pose additional problems, because older patients require a great deal of physical and medical care and special staff attention.

This emerging problem suggests increased emphasis on research in many directions. For example, we need to know more about the aging process itself, about the cause of mental illness in the aged, and about the cultural and economic factors that determine choice of the hospital for needed care. Not all patients with mental diseases of the senium are cared for in mental hospitals. There are a variety of other facilities available—homes for the aged, nursing homes, chronic disease hospitals. We need more facts before we can decide which facility can furnish the most appropriate care.

Perhaps we should give more thought to foster home care of the aged patient whose condition does not necessitate hospitalization but who does not have a family able or willing to give him the help he needs. In thinking of such foster care, we should not ignore the contributions that might be made by the increasing numbers of healthy and active older people in our population—people for whom the responsibility of providing a foster home for aged patients would mean the difference between aimlessness and a sense of purpose and being needed that are essential to everyone's mental health. Payments for providing such foster care might mean the difference between self-respecting independence for thousands of healthy elderly people and the economic dependency on others that in itself can breed psychological problems for the aged. Perhaps this approach could help the older people to help themselves.

But the question of institutional or community or home care of the aged mentally ill, as of other types of mental patients, is only one aspect of the problem. The choice of treatment and treatment facility will change with constantly changing medical knowledge about prevention, treatment, and rehabilitation. It will change as attitudes of the community toward mental illness keep changing. It will change as we learn more about the complex interactions of biological, psychological, economic, and social forces that influence mental health and mental illness. The mental hospital is in a strategic position to contribute to the accumulation of that knowledge as well as to test it out with patients. It can be a living laboratory for the study of mental illness. The establishment of research activity within the hospital itself would help to strengthen its ties with university and other research centers, and would make the hospital more attractive as a place to work and learn. In thus branching out into other activities, the mental hospital may help to solve the chronic problems of insufficient staff that has tended to keep it ingrown and isolated in the past.

I am aware that most of these thoughts have occurred to all of you, perhaps many times. I am also aware of the numerous practical problems and obstacles that daily frustrate your attempts to move ahead. But, as you carry on your deliberations at this institute, and as you work in your respective hospitals throughout the coming year, you should know that there is broad and generous public support for your efforts. I believe I express the feelings of the vast majority of our people when I say that our country is committed to a full program of activity in the field of mental illness, up to the limit of our economic, and scientific abilities.

The U.S. Merchant Marine and World Trade

EXTENSION OF REMARKS
OF
HON. ANDREW F. SCHOEPPEL
OF KANSAS
IN THE SENATE OF THE UNITED STATES
Monday, May 23, 1960

Mr. SCHOEPPEL. Mr. President, I ask unanimous consent to have printed in the CONGRESSIONAL RECORD an address entitled "The U.S. Merchant Marine and World Trade," delivered by the Honorable Frederick H. Mueller, Secretary of Commerce, before the Port of Washington Propeller Club, in celebration of National Maritime Day, at the Statler Hotel, in this city, on May 20, 1960.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE U.S. MERCHANT MARINE AND WORLD TRADE

(Text of address by the Honorable Frederick H. Mueller, Secretary of Commerce, prepared for delivery before the Port of Washington Propeller Club in celebration of National Maritime Day, Statler Hotel, Washington, D.C., Friday, May 20, 1960)

It was just 27 years ago today that the Congress, by joint resolution, established May 22 as National Maritime Day and provided for its annual proclamation by the President. It provides an occasion to commemorate the first transoceanic voyage of any ship powered by steam. For on May 22, 1819, the SS *Savannah* started the voyage which ushered in a new era in merchant shipping.

This year another chapter in maritime history will be written. As President Eisenhower noted in his Maritime Day proclamation, "This year will witness the harnessing of the atom for the benefit of mankind as the world's first nuclear-powered merchant ship, the NS *Savannah*, sails out upon the high seas."

But, as the President also noted, National Maritime Day each year also provides an occasion to honor the U.S. merchant marine and all who help to maintain an industry and service so essential to the economy and security of the free world.

In all of our proper celebrations all over the country, however, it behooves all of us to remember another anniversary—for it points a moral. A century ago last month the famous Pony Express began operating between St. Joseph, Mo., and Sacramento, Calif.

You might be interested in the kinds of ads used to recruit the boys who manned this wild and woolly route to carry messages at the rate of $5 a half ounce—later reduced to a dollar. One was reproduced in the Washington Evening Star for April 9:

"Wanted—young, skinny, wiry fellows not over 18. Must be expert riders willing to risk death daily. Orphans preferred. Wages $25 a week."

In its short life the Pony Express sure had glamor. Buffalo Bill Cody and Wild Bill Hickok were in the select company of riders, and Mark Twain penned their praises. They astonished the world with their record of 7 days and 17 hours carrying Lincoln's first inaugural address.

But the enterprise went broke, for a variety of causes, in about 18 months. It was given the final blow when the first transcontinental telegraph line, building from both coasts, was finally joined and completed at Salt Lake City in October 1861. Technological progress, which within the lifetime of men and women still living has seen the world move from the Pony Express days to jet planes that can cross the entire continent between breakfast and lunch, has been inexorable. However glamorous the good old days, competition in new and improved methods of transportation and communication have sounded their knell.

I say this not to play the specter at the feast on this occasion, but to note another purpose of Maritime Day celebrations. Past accomplishments inspire them—but we must look ahead, reflect upon our problems, and plan a better future for the maritime industry.

I say "we" advisedly. The Department of Commerce, the U.S. Government, in fact the people of the United States and the whole free world, have a vital stake in your economic health and growth. Before getting into some specifics, let me spell that out as a step in enlisting the kind of help we shall need to do what sorely needs to be done.

We have survived two world wars and were able to end the bloody stalemate in Korea, aiding our allies in all of these struggles, in great measure because we could stay in business on the world's sea lanes. Today, with an even greater threat, U.S.-flag ships must be available to deliver U.S. economic and military aid to nations whose strength and growth are vital to our own.

On the strictly commercial side, we need your help. As you know, the President recently intiated a national export expansion program—a partnership by the Federal Government and private industry to sell more American goods abroad. The Departments of State and Commerce are stepping up services to help business to do more business overseas.

We urge the maritime industry to take a fresh look at the trade and tourist picture. I am sure that your great industry will join with other American business enterprises in seeking new markets for American products and new traffic for American shipping.

As our foreign trade expands—and expand it must—we have a job to convince both exporters and importers that they should move a substantial portion of their cargoes on fine American ships.

Now for those specifics. What is plaguing your industry? We don't have all the answers, but we've been learning fast.

Recently, I submitted to the President the report which he requested me to make, as Secretary of Commerce, on Federal transportation policy and program. The problems of the merchant marine were identified in the light of general problems of public policy in transportation. The general recommendations we made were stated in summary form, and require further elaboration in detail.

As the decade opens, the strategic position of the United States has undergone a transformation. In former years we felt as a nation that we faced but a single acute threat to our national security. The response to it was specific and decisive: specific plans for defending the security of the free world.

This specific, decisive policy had all the virtues of a simple issue which could be stated in term easily understood. It had its influence on our merchant marine policy. Since our objective was specific our merchant marine policy could be equally specific; we could say that our defense plans and assumptions required a civilian merchant marine of X number of tons or X number of ships to augment our logistical plans. Merchant marine planners could look to the military authorities for their specific logistical requirements and could attempt to build a merchant marine policy on the assumptions presented to them.

Under today's conditions in international affairs, this simple, black and white way of planning a national merchant marine is no longer possible, let alone desirable. We have a whole economy to think about. What was once a simple issue of military power between the free world and the Soviet bloc has become a problem of more uncertainty and more complexity. We face continuous threat and tension in many areas.

This evolving situation has introduced great uncertainties into military planning, and consequently into the national defense aspects of our merchant marine policy. We can no longer plan merchant marine policy on the basis of a specific set of figures on national defense requirements. While defense plans must recognize that a backlog of merchant ships is of great potential value, this value must be measured against a great variety of other military problems.

Furthermore, our economic policies in this coming decade will have important impacts on our political relationships. Like the world strategic situation, the world economic situation is evolving from the severe simplicity of the past to increasing complexity. Our foreign trade and balance of payments have reflected this changing picture. We know that we must be competitive if our economy is to survive in a world of growing productivity.

The growing competitiveness of world trade has made a profound impact on our shipping industry. Our national merchant marine now carries less than 20 percent of our foreign trade tonnage, a lesser rate than any time since before the First World War. Furthermore, wide cost differentials exist between our maritime industry and those of other countries in the construction and operation of ships.

Historically the Government has sought to meet this particular competitive disadvantage with a variety of subsidies. Construction and operating differential subsidies have been granted, and such subsidy costs have increased. Under cargo preference laws, reserving to privately owned and operated American flag merchant ships at least 50 percent of Government-financed cargoes, the unsubsidized part of our foreign trade fleet is also being aided.

One of the major policy goals recommended in our transportation report is to improve the efficiency of shipbuilding and ship operation to meet foreign competition and reduce the need for Federal subsidy. The research and development programs of the Department of Commerce have been greatly expanded over the past 5 years. The NS *Savannah* is one result, and others—such as the hydrofoil vessel and the automation of ship operations—are on the way.

These measures looking toward industry and Government cooperation toward greater efficiency, obviously require the full cooperation of American labor.

Here I feel we all—and again I say "all" advisedly—have done very little. I refer to the fact that the connection between the worker's job and the safety and security of his home and family has not been emphasized.

On the face of it labor has been a major beneficiary of our merchant marine subsidy policy. And no one would argue with the fact that labor and management in your industry have a common interest in the continued existence of American ships and shipyards. But are the implications of these facts sufficiently known on both sides of the bargaining table?

American labor has learned, in many industries, that mechanization and automation make and keep jobs, and make a higher standard of living possible. American management has learned that labor has a right to a measure of protection and a voice in decisions affecting their livelihood. And great progress has been made.

But it is later than we think. New means of labor-management cooperation must be found to improve the competitive position of our merchant marine. We need new machinery where automation does not apply—human machinery to provide flexibility and rapid change in service to meet the changing demands for service.

The least that the public has a right to demand is that those who are the beneficiaries of subsidies as well as the payments of customers should work together to give value received. I have high hopes that our transportation report, emphasizing competition and deemphasizing subsidies, can gradually permit the Government to concentrate our tax money upon those programs which the Government alone can undertake and carry through.

Maritime management and labor surely have the know-how to do the job. Our foreign trade and domestic commerce are growing, as is our population and the world's population. Subsidies should operate as an incentive to greater initiative and efficiency on the part of the American Merchant Marine. No one knows better than you in the industry that subsidies do not guarantee a profit to the operator.

That happy solution to your difficulties depends, in the final analysis on your ability to secure cargoes at remunerative rates. The Maritime Administrator, implementing section 212 of the Merchant Marine Act of 1936, has appointed a committee to study and develop ways and means to induce importers and exporters to give preference to vessels under U.S. registry.

It is not unreasonable to shoot for a goal of at least half of our export and import traffic to move in American-flag bottoms. Yet in 1958 only a third of such traffic moving by liner ships over essential foreign trade routes moved in U.S.-flag ships. If bulk cargoes are included, this proportion drops to 16 percent.

All of us can do a better job than that. We can bring home to those controlling selection of carriers that U.S.-flag carriers usually—and subsidized operators must—purchase and use U.S. products except under emergency conditions. Your service—unlike foreign shipping operators who come and go as they please—is stable and regular. Our shipyard workers and seamen benefit from use of American-flag ships and in turn increase purchase of American goods and services.

These are but elements of good salesmanship, and we need the hard sell in your industry as much as we need it to better our whole export position.

Meanwhile we in Government are going ahead with further proposals for merchant marine construction and operation, based upon our evaluation of shipping needs and such strategic assumptions as seem reasonable. But our concentrated attention will increasingly be on means of increasing the competitive quality of our merchant marine to assist in the improvement of the competitive position of your industry in world trade.

This effort will involve hard decisions and the solution of difficult problems. For many it will require a new outlook. Industry and labor must make their own constructive suggestions to the Government on means of improving the value of the merchant marine to American business in foreign trade. And much more emphasis must be given to research and development.

The program I have described, based upon the findings and recommendations in our transportation report, will be a major experiment in industry-labor-government partnership. The stakes are high. They involve our national survival as well as that of your industry. Upon its success rests not merely our own prosperity. The peoples of the world of the 1960's will grow even closer together in time—and we hope in freedom—through progress in science and the exchange of goods made possible by peaceful trade.

The pony express beat the then world's record for carrying messages 2,000 miles at about 250 miles a day a century ago. Yet with all its gallantry it couldn't beat the competition of technological advance.

But the spirit of those young men, whose exploits have enchanted several generations of Americans, is still with us. It is that spirit which will yet carry the message of freemen and free enterprise around the world and perhaps to the unexplored reaches of the universe.

Libraries, Education, and Society

EXTENSION OF REMARKS
OF
HON. JOHN E. FOGARTY
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES

Monday, May 23, 1960

Mr. FOGARTY. Mr. Speaker, under leave to extend my remarks I include an address which I delivered at the Drexel Institute of Technology, Philadelphia, Pa., on May 17, 1960:

LIBRARIES, EDUCATION, AND SOCIETY

(Remarks made by Representative JOHN E. FOGARTY at Drexel Institute of Technology on May 17, 1960, on occasion of his receiving the Distinguished Achievement Award from the Graduate School of Library Science and the Library Alumni Association)

Today I saw for the first time the impressive new quarters of the library school here at Drexel.[1] I am sure they bring to you a deep sense of pride and gratification—much as your Distinguished Achievement Award, and this opportunity to meet with you have given me. It is a fine thing to feel that one's efforts have played some part in strengthening the American heritage.

A library school—or legislation to aid libraries—can do just that: It can enrich society and strengthen the Nation. It does this mainly through the enduring contribution of libraries to education.

America's strength was once felt to lie predominantly in her agricultural and geographic advantages. Since the turn of the century, industry and natural resources have been paramount. Both, of course, remain essential to our country's strength and her leadership among free peoples. But the close of World War II brought sharply into focus another basic resource—education; and recent years have commanded its critical appraisal. It is now clear to many that agriculture and industry, however prolific, cannot insure supremacy or even survival without a stronger fiber of education in the social fabric.

The modern concept of education is a broad one. Besides the schools at all levels, many institutions and media are recognized as educational—partly because of their mounting interest in the role. There are more and more educational uses of films and recordings, radio and television, magazines and newspapers, pamphlets, and books. There is an upward trend in the publication of all factual matter. I believe these changes reflect generally a felt need of people for a broader view of the world about them.

One institution with a growing educational mission is the library. It is axiomatic, of course, that libraries should serve scholarship; but I refer to a more active part in the educational process. Increasingly the progressive library is concerned with information—with collecting, lending, and promoting current reading matter, films, recordings, and other educational materials. Thus the library aligns itself with institutions and forces that are shaping our national destiny.

It is my conviction that this is the way in which libraries of all types can best serve the community in our dynamic times. Libraries are more than storehouses; their broader function is to teach.

For many years I have given my best thought to certain needs and aspirations of our people. This has been basic to my responsibilities as a Representative to Congress from the Second District of Rhode Island, and as chairman of the subcommittee in the House of Representatives which is concerned with appropriations to the Department of Health, Education, and Welfare. I am pleased to say that many libraries and library groups are closely allied with the Department in several of its programs. They collaborate in activities of the Office of Education and the National Library of Medicine. They share particularly the interests of the Public Health Service in aging, juvenile delinquency, and blindness.

As an interested layman, I should like to express briefly some views on the library's role in these tremendous problems.

One of the great paradoxes of the modern world is the problem of our aging population—the medical and social needs that have risen as a result of our longer life span, which is largely attributable to advances in medicine and public health. Since 1900, people over 50 have increased in our population from 13 percent to more than 22 percent. By 1970, nearly 25 percent of the American people will be over 50, and 10 percent will be over 65. This implies a continued increase in those burdens that weigh so heavily upon the aged—health problems, occupational difficulties, lowered income, unsatisfactory living conditions, loneliness.

In attempting to come to grips with such a problem one naturally turns to institutions and individuals that might be expected to help. A group that has outlined its objectives with regard to the aged is the National Library Association. It has spelled out in congressional testimony[2] how the public library renders direct services to the elderly; supplies middle-age groups with literature on retirement plans, housing and income; coordinates interested civic groups and educational programs; and assists personnel who work with the aging through books, films, and exhibits.

These seem to me excellent, practical objectives that might well be extended to all libraries. In addition, I should like to see library schools expand the training of librarians to work with the elderly. Some studies should be undertaken to settle the question whether cultural and educational interests can actually retard mental decline, and to learn how libraries can help bring out and utilize the older person's best attributes. It would be a great credit to library science, and quite fitting, if some library group were to lead the way toward salvaging the elder population's vast resource of experience and skills.

The library's place in our culture is nuclear: it offers literature, information, and recreation to many groups, the young as

[1] The Graduate School of Library Science (third oldest in the United States and among the first five in enrollment) and the Drexel Library are housed together in the Library Center, opened in the fall of 1959, and the latest addition to the physical plant in the current expansion program.

[2] Senate Committee on Labor and Public Welfare, Aug. 4, 1959.

well as the old. I feel that its values to youth have barely been tapped. In many young people, there is a spirit that rebels against education—or rather, against being taught. This finds a terrible and ruinous expression in the juvenile delinquent, whose rebellion may lead to total loss of educational contact. And yet the delinquent or predelinquent does not necessarily resist learning. His indifference or hostility may embrace only the formal aspects of education—the classroom and its implication of discipline and conformity. The same individual may sometimes be reached through an appeal to his curiosity, his need to excel, or his natural love for reading, music, or some related pursuit. Every era has its Bohemian movement, which is essentially rebellious and yet intellectual or artistic.

The difficulty, of course, is to capture and hold interest. The library has strong competition, and I can offer no formula. I only know that the mind of youth is capable of intense application in response to the right appeal. With no coercion whatever, youth can master difficult sports, jazz music, automotive mechanics, radio engineering. And we have all seen young people come to public libraries in underprivileged metropolitan sections, drawn by up-to-date material on invention, the space age, sports and recreation, career opportunities, and interesting lives. I have seen this in districts where crime and violence beckon constantly to every child. In light of these things, I am confident that ways can be found to enhance the appeal and effectiveness of libraries in helping the prospective citizen.

You may be interested in certain resolutions passed at the recent White House Conference on Children and Youth, which included nearly 100 librarians among the delegates.

One resolution called for adequately supported studies to determine the effects of reading books, magazines, and newspapers upon young people. Another recommended that much more extensive use be made of films and other instructional material in both formal and informal education. Several resolutions were aimed at augmenting the opportunities for training and participation in dramatics, theater arts, and film production.

With direct reference to libraries, it was resolved that action should be taken to extend the availability of public library service to every citizen; that libraries be established in schools, colleges and universities, with a view to helping them achieve higher standards; and that reading, training in the selection of literature, and recruitment of personnel trained in reading guidance be vigorously promoted.

One of the forums resolved that young people should be encouraged to study the great ethical, moral and religious truths, and to use these to formulate codes of conduct for their guidance toward good citizenship.

I believe we shall soon see legislation and other efforts to implement these recommendations at local, State, and Federal levels. Meanwhile, library workers will be able to draw on the resolutions in seeking interest and aid.

Another medical and social area in which libraries are making a valuable contribution is blindness. Despite public and private efforts over many years, the number of blind persons in this country is about 350,000 and is steadily increasing. The Public Health Service's National Institute of Neurological Diseases and Blindness is attacking the problem from the medical standpoint. On the social side, I believe there is need for a good study on problems related to blindness and the needs of the blind. One objective would be to help create a national atmosphere more favorable to the blind person and his role in society. This would call for studies of existing conditions, including the problem of providing books and recordings. The best library services now available for the blind should be augmented and extended.

Some of you may not know that the Library of Congress program to provide books for the blind is currently operating under an appropriation of $1.6 million, which is a little more than ever before. To date, the Library has provided about 5,600 titles in Braille and Moon type and 4,000 talking books. Approximately 70,000 of the Library's machines are now in use.

As I have indicated, many grave medical and social problems call strongly on libraries among other key groups. Assistance to libraries themselves has been made available through the Library Services Act. In fiscal year 1960 allotments are based on the maximum authorized appropriation, $7.5 million. In this session of Congress, I have introduced a bill to extend the act for another 5 years beginning July 1.

This Office of Education program has helped to bring library services to 30 million people in rural America. It has provided trained personnel, 200 bookmobiles, and 5 million books and other materials. Fifty-two States and territories are now participating. Since the beginning of the program in 1957, the matching requirements have stimulated local governments to increase their library appropriations by 45 percent. One of the most encouraging results is the development of an effective system of libraries, with strong centers, cooperative processing, and so forth. And throughout the Nation there is a growing awareness of the meaning of libraries in education.

In my own State of Rhode Island, progress under the act has been typical. A special unit, Public Library Services in Rural Areas, was set up in the office of the secretary of state to administer the program. A director, assistant director, clerical staff, and a bookmobile were added and new quarters obtained. A book grant was made to rural libraries, with provisions for emphasis on reference materials. Books are ordered and processed by the State agency. A series of workshops has been held at headquarters, and State consultant and bookmobile services have steadily grown.

Another law that has much significance for libraries is the National Defense Education Act of 1958. This is primarily designed to strengthen, improve, and expand education in the United States at all levels. Libraries are specified as basic to the educational process. I should like to call attention to the fact that projects developed under the act may include books and other materials, and that these are not yet available in adequate quantity and quality. Library materials to aid both teachers and students are needed for a balanced program.

Of the 10 titles in the act, title III offers the most direct opportunities for libraries. This authorizes $70 million a year until July 1962 for improved science, mathematics, and modern foreign language instruction in public schools. Federal funds are available for laboratory and other special equipment. By the language of the act, special equipment includes printed materials (except textbooks) and audiovisual materials and equipment. Minor remodeling and special equipment needed by the library because of its necessary expansion may be included under projects approved by the State educational agency and the U.S. Office of Education.

Other titles also pertain to libraries and librarians. Title II, for example, which provides loans up to $5,000 for college students. Persons training to become librarians are eligible, and 50 percent of the loan will be canceled for those who serve as school or teacher librarians for 5 years. Another example is title IV, which provides graduate fellowships aimed particularly at the preparation of teachers for colleges and universities.

I urge all of you to review the provisions of the National Defense Education Act (Public Law 85–864) and to be sure your students are familiar with the aspects pertaining to libraries. The ALA or the U.S. Office of Education will gladly supply details.

While speaking of Federal aid to libraries, I will make a point that may seem to the older hands here a little obvious. I refer to the fact that a library in the modern sense, adequately stocked and staffed to pull its own weight in an educational program, requires strong support from many quarters—particularly in the form of funds. A school of library science would do well to train its advanced students in the practice of fund raising. You must have support at local, State and National levels. To this end, librarians should take steps to increase public awareness of the library—to make it felt as a part of the community. It is largely through trustees and friends of libraries that the trend toward a more educational role must be advanced.

Such a role is necessarily diversified, and I have mentioned only some aspects. I have merely alluded to the library's part in cultural enrichment. Society depends upon the library for many things, not the least of which is its capacity to deepen appreciation and stimulate interest in the arts and sciences, in our principles and traditions, and in the peoples of other lands. This is an intangible role, but nonetheless a real one. It evokes a vital spirit in every American—the spirit to see our country progress and lead.

In this complex troubled world, the sciences loom in importance. Our prestige among nations depends largely upon our scientific preeminence. No amount of military preparedness could compensate for a lag in scientific knowledge or manpower. Nor can we ignore the value of the health sciences in a military and economic sense, for the cost of disease is the greatest burden any country can bear in war or peace. All this has direct bearing in the library field. You must continue, and I hope expand, your efforts to interest more people in the various sciences—in their support, their progress, and their application. Again the library is a powerful force for motivating, guiding and teaching.

It is a responsibility of libraries to help keep alive the spirit of culture and learning. I know of no better way than to cherish and promote the freedom to read. As a nation we are not given to slogans or glib phrases for expressing our deeper values. It is not easy to tell in a word or two what America stands for. Yet we can say that our country and its Constitution are flatly opposed to censorship—that anyone can go to a public library and read any book fit to print, whether or not the ideas it expresses are generally accepted. This is specific enough, and should be widely proclaimed as a basic fact. It is the librarians who make such freedom possible by seeing that all sides of a social issue are presented, trusting in the American way to speak for itself. Freedom to read is fundamental to true democracy.

I have rambled a good deal, but I believe I can sum up the main theme. The library in modern society is particularly important as an educational institution. To enhance its social value, it must strengthen its educational role. This may be effected through the teaching of librarians, studies in the use of the library as an education instrument, promotion of science, and aid to special groups such as the young at critical ages and the elderly. Progress along these lines will require friends, funds, and a strong voice in the community. Finally, libraries of all types, in preserving the freedom to read, in the broadest sense, both serve and exemplify the American ideal.

Address by Senator Wiley Over Radio Liberty to People of the Soviet Union

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, May 23, 1960

Mr. WILEY. Mr. President, in the light of recent events—particularly Mr. Khrushchev's new hard line at the Paris meetings—the free world, I believe, must make a renewed effort to get across the truth about world affairs to the people under Communist domination.

Now, how can this be accomplished?

There are, of course, a number of ways:

We recognize, however, that the construction of the Bamboo and Iron Curtains make it exceedingly difficult to get through to the dominated peoples.

Recently, I was privileged to participate in a broadcast to the people of the Soviet Union over Radio Liberty.

Incidentally, I believe the splendid work carried out by Radio Liberty, Radio Free Europe, Voice of America, and other private and publicly sponsored efforts to get the truth to the people under Communist domination, are indeed most commendable, and deserve the gratitude of the Nation.

The purpose of my broadcast was to provide the people behind the Iron Curtain with a realistic picture of the significance of the summit, of the U–2 flight, of the conduct of Mr. Khrushchev. Too, the talk reiterates the dedication of the free world—despite Mr. Khrushchev's unwillingness to discuss differences at the Paris meeting—to continue, in a resolute, fearless, undaunted effort, to find peaceful ways to resolve the differences between the East and West, and to create a better world.

Despite the resumption of Soviet jamming of radio broadcasts, I am hopeful that this message will get through.

Such broadcasts, I believe, represent the kind of efforts which will need to be broadened, not only through radio and television, but also through other contacts, in the light of the new hardened Soviet policy.

Reflecting further upon this need, I ask unanimous consent to have two items printed at this point in the RECORD:

First, a statement released today, stressing the need for "going over the heads" of the Communist leaders to the people behind the Iron and Bamboo Curtains with the truth of world affairs; and, second, excerpts of my address over *Radio Liberty*, scheduled to be broadcast early this week to the people within the Soviet Union.

There being no objection, the statement and excerpts were ordered to be printed in the RECORD, as follows:

WILEY URGES GREATER EFFORTS TO GO OVER THE HEADS OF COMMUNIST LEADERS TO PEOPLE BEHIND THE IRON AND BAMBOO CURTAINS WITH TRUTH OF WORLD AFFAIRS

Senator ALEXANDER WILEY, Republican, of Wisconsin, senior Republican of the Senate Foreign Relations Committee, today urged a greater free world effort to go over the heads of the Communist leaders to dominated people with the truth on world affairs.

"Around the world, people of the globe find themselves alternately involved in hot and cold wars, because of Communist activity," Senator WILEY said.

"Today, the hard core of Communists actually comprises only about 4 to 6 percent of the people in the Soviet Union; and about 2 percent in Red China, with additional scatterings of Communists elsewhere in the world—although fortunately a very, very small portion of the population.

"The question, then, arises: How long will the world tolerate the troublemaking of these perpetrators of discord, and advocates of a political-economic system of dictatorship contrary to the yearning, and will for freedom of all mankind? How long will we—as a world—allow such a minuscule minority to keep us on the brink of war?

"We recognize, of course, that the hard-core Communists, particularly in Red China and the Soviet Union, have an iron grip of control on these countries. Insofar as possible, however, I believe that we need a greater effort to go over their heads to reach the almost 1 billion people under domination, with: The truth about world affairs—for example, the real story of Khrushchev's torpedoing the Paris meeting; and the dedicated efforts, outside the Communist orbit, to promote a real peace—based upon justice and order—by the non-Communist people and nations.

"In such efforts, of course, we must be careful not to drive the Communist leaders so tightly into a corner that they push the panic button and touch off a nuclear-missile war.

"Despite this need to tread carefully, however, I believe the United States and the free world can—and should—be far more effective in getting across the story of freedom.

"Last session, I introduced a bill, S. 2188, to provide a Citizens Council to make a reevaluation of our effectiveness—or lack of effectiveness—in getting the truth to the people behind the Iron-Bamboo Curtains. The purpose of the Council would be to: reevaluate the Communist global ideological challenge and reappraise our own efforts in the light of that challenge; increase public awareness of the importance of the battle of men's minds, and our efforts to (a) counter the Soviet offensive, and (b) lay a foundation of free ideas, translated into the language that people of other lands can more easily understand—upon which to build a better world; and, extremely important, to increase the use of ingenious know-how which our free enterprise system has developed for mass media, to a better freedom-spreading program.

"Encouragingly, the idea of the Freedom Council has been endorsed by a number of outstanding individuals—well qualified to evaluate the need in the field, including the following:

"Former President Herbert Hoover: 'Your idea is magnificent.'

"David Sarnoff, chairman of the board, Radio Corporation of America: 'I heartily agree with your view that a greater United States and free world effort is needed to combat the Communist ideological offensive.'

"Howard K. Smith, CBS News: 'It's an excellent idea. One of our chief faults—an odd one for a nation that has produced so many fine speakers—is a recently acquired inability to articulate our case. It is most noticeable in our time when our chief adversary is a natural genius in public relations.

" 'I hope the bill is passed and the Council can become effective as soon as possible.'

"Eric Johnston, president, Motion Picture Association of America: 'I like your idea to establish a Citizens Council for Advocacy of Freedom. It deserves the support of Congress.'

"Dwayne Orton, president, Council for International Progress in Management; also editor of Think, published by International Business Machines Corp.: 'I am very much interested in your bill, S. 2188. This strikes me as a very sensitive and needed stroke on the ideological offensive.'

"Robert F. Hurleigh, president, Mutual Broadcasting System, Inc.: 'I am most grateful to you for contacting me regarding your proposed Citizens Council for Advocacy of Freedom, for the ideas outlined in your pending bill support the very philosophies on which the heavily accented news schedules of the Mutual Broadcasting System are now based. * * *

" 'If there is anything the Mutual Network or I can do to further your Council plans, please do not hesitate to call on us.'

"Julian Goodman, NBC News: 'The purposes of your plan for a Citizens Council for Advocacy of Freedom are highly laudatory, and I certainly endorse them wholeheartedly. Any move we can make in this direction would certainly be useful.'

"The proposal—providing a mechanism for improving our 'salesman's' techniques—should, I believe, be enacted by Congress.

"We can expect, of course, that the Communist leaders—through jamming of Western radio broadcasts and through maintenance of the Iron-Bamboo Curtains—will continue to obstruct our efforts to get through to the dominated people. If we can achieve our objective—and I believe this is possible to a much greater degree than is now occurring—however, it would represent a major step toward reducing the power and threat of international communism and establishing ultimate peace in the world," Senator WILEY concluded.

EXCERPTS OF INTERVIEW WITH SENATOR ALEXANDER WILEY, SENIOR REPUBLICAN, SENATE FOREIGN RELATIONS COMMITTEE, FOR BROADCAST OVER RADIO LIBERTY, TO THE PEOPLE OF THE SOVIET UNION

Citizens of the Soviet Union: I welcome the opportunity to send warmest greetings to you from the people of the United States.

Historically, we have enjoyed friendship and mutual respect. Although people of different lands, we seek the same goals: Good homes for our families; freedom to go to the church of our choice; ever-better schools for our boys and girls—to enable them to grow intellectually, morally, and spiritually; jobs for our workers; an ever-higher standard of living; and better and better cities, farms, factories, roads, modes of travel—overall, a better way of living for all our people.

Although there are differences in the world, I do not believe any real difference exists between our people—who seek, and yearn for, a peaceful world in which to build what—to each of us—is the "Good Life."

Now, why can't we accomplish this objective?

As a nation, we are sorry that Mr. Khrushchev could not find it in his heart to sit down at the conference table with Prime Minister Macmillan, President de Gaulle, and our own beloved president, Mr. Eisenhower in Paris to discuss—reasonably and rationally—the issues troubling the world.

His excuse was the U–2 flight. However, he has known for a long time—as we have known of counter activities—of air surveillance and other types of information-seeking activities. Had Mr. Khrushchev been willing to agree to an "open skies" proposal—as recommended by President Eisenhower; or to work in a really constructive way to establish peace, the U–2 flight or, conversely, the spy activities directed by Mr. Khrushchev would not occur at all.

Realistically, there had been no great hopes for finding answers—magiclike—to all questions at the summit. However, we had thought that a pattern might be estab-

lished for frank, open discussions on how to resolve some of the differences between our governments and create a more peaceful atmosphere.

We regret, too, that President Eisenhower will not be able to visit with you next month—as he had been invited to do—by Mr. Khrushchev. We had hoped that he could bring to you, personally, the warm greetings and "handshake of friendship" of the American people. A man devoted to peace, you will recall that he fought with your sons and daughters against a common enemy—nazism—in the Stalingrads of Europe—to free the world from fear of aggression.

If he could have visited you, we felt that across your great country—as throughout the world—would ring out resounding the familiar, warm, hearty greeting: "I like Ike."

Now the invitation has been withdrawn. Why?

Mr. Khrushchev again says it was because of the flight of the U–2 over the Soviet Union. Was it really?

For years, both our Governments—even though Mr. Khrushchev has not as yet willingly admitted this—have tried to find out about each other's activities, particularly as these relate to military power.

Was the U–2 flight, then, really the basic cause of your Premier's refusal to contribute to world peace at the Paris Conference?

No, I don't think so; since it was only one small act, blown up out of proportion, indulged in for purposes of national interest by nearly all countries in the world, including the Soviet Union.

What, then, was the real reason for Mr. Khrushchev's refusal to sit down with the leaders of the Western Powers to try to find a road to peace?

Perhaps you, the people of the Soviet Union, best know the answer.

Any great guilt, however, and yes, condemnation, must be placed upon those who continue to thwart real progress toward peace.

Unfortunately, we have listened much to Mr. Khrushchev "flexing his missiles," threatening us, and others, with military destruction.

We don't like what we hear. We wish it had not been said. But we cannot ignore it.

Like you, the Russian people, we, too, feel we have a great country with proud traditions and real hopes for the future.

The objectives of U.S. policy—and this reflects the will of the people and leaders alike—are not to fight with you, but to be your friends.

In the face of warlike threats, however, we do not feel that we can go to sleep, then possibly be attacked, and one morning wake up to find ourselves slaves of another country.

Instead, we have found it necessary, against our will and traditions, to put more and more money, manpower, and brainpower into an effective, powerful, jet missile, atom space defense; incidentally, a strong, mighty force to be reckoned with carefully by any would-be aggressor.

If we had our way, however, we would like to beat our swords into plowshares, to channel great resources, skill, and human ingenuity of our country and the world into farm machinery, hospitals, homes, schools, roads, food for the hungry, books and teachers for the millions in the world who cannot read or write; more electric and atomic power for factories, homes, and farms, and a million other uses for peaceful purposes.

In America, we are fortunate that most of our population enjoys a great many of these advantages. Yet we know that until the good things of life are brought to all people, at home and abroad, there can be no real peace.

We seek for other countries what we wish for ourselves, the right to create and live under a self-determined form of government. But our philosophy is more than live and let live; instead, we are willing to live and help live.

Unfortunately, this cannot be accomplished in a world of threat and counterthreat by the great powers.

Recognizing the destructive power of modern weapons, we know that in a nuclear-missile war, both attacker and attacked would be largely, if not wholly, destroyed. Consequently, we shall continue to do all we can to establish a world of order, justice, and peace.

Despite the unwillingness of Mr. Khrushchev to negotiate at Paris, we as a nation, and our President, and other leaders are undaunted. We shall go ahead—relentless, fearless, in a dedicated way, to try to find ways and means—to create a more peaceful world.

In our efforts we shall depend also upon you—the people of a great country—to assist us in spirit, and as you can, in fact, to find the right road to a better world and a life of peace.

SENATE

TUESDAY, MAY 24, 1960

The Senate met at 10 o'clock a.m., and was called to order by the President pro tempore.

The Chaplain, Rev. Frederick Brown Harris, D.D., offered the following prayer:

Our Father God, as with a new day another chance for love and service comes from Thy hand, may we be solemnly conscious that wrought deeply in the texture of human life are inexorable laws far beyond the reach of debates or legislative fiats. In the crises of these explosive days, give us to see that one of those fundamental laws, as framed by man's Best Man, is that to selfishly save life is to lose it, and to lose it for humanity's sake is to find it. Thou art making it plain on this rapidly shrinking globe that there are no borders or frontiers to neighborliness and brotherhood.

As we seize this day, may its fleeting hours remind us in solemn tones that life is too short to be little, and that the most potent truth which can guide our actions and fix our goals is that he who does not guard his fellow's security is diligently engaged in the destruction of his own, as the ages confirm.

We ask it in the name of Him who is the way and the truth. Amen.

THE JOURNAL

On request of Mr. JOHNSON of Texas, and by unanimous consent, the reading of the Journal of the proceedings of Monday, May 23, 1960, was dispensed with.

MESSAGES FROM THE PRESIDENT

Messages in writing from the President of the United States submitting nominations were communicated to the Senate by Mr. Miller, one of his secretaries.

EXECUTIVE MESSAGES REFERRED

As in executive session,

The PRESIDENT pro tempore laid before the Senate messages from the President of the United States submitting sundry nominations, which were referred to the appropriate committees.

(For nominations this day received, see the end of Senate proceedings.)

MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Bartlett, one of its reading clerks, announced that the House had passed the following bills, in which it requested the concurrence of the Senate:

H.R. 1157. An act to provide for promotion of economic and social development in the Ryukyu Islands; and

H.R. 8226. An act to add certain lands to Castillo de San Marcos National Monument in the State of Florida.

HOUSE BILLS REFERRED

The following bills were each read twice by their titles and referred as indicated:

H.R. 1157. An act to provide for promotion of economic and social development in the Ryukyu Islands; to the Committee on Armed Services.

H.R. 8226. An act to add certain lands to Castillo de San Marcos National Monument in the State of Florida; to the Committee on Interior and Insular Affairs.

LIMITATION OF DEBATE DURING MORNING HOUR

Mr. JOHNSON of Texas. Mr. President, under the rule there will be the usual morning hour; and I ask unanimous consent that statements in connection therewith be limited to 3 minutes.

The PRESIDENT pro tempore. Without objection, it is so ordered.

COMMITTEE MEETINGS DURING SENATE SESSION

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that the Committee on Finance be permitted to meet during the session of the Senate today.

The PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that the Committee on Labor and Public Welfare be permitted to meet during the session of the Senate today.

Mr. DIRKSEN. Mr. President, I have been asked to object to that request.

The PRESIDENT pro tempore. Objection is heard.

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that the Committee on Foreign Relations be permitted to meet during the session of the Senate today.

The PRESIDENT pro tempore. Without objection, it is so ordered.

On request of Mr. JOHNSON of Texas, and by unanimous consent, the Committee on Interior and Insular Affairs was authorized to meet during the session of the Senate today.

RESOLUTIONS OF GENERAL COURT OF MASSACHUSETTS

Mr. SALTONSTALL. Mr. President, on behalf of my colleague, the junior Senator from Massachusetts [Mr. KENNEDY], and myself, I present, for appropriate reference, resolutions of the General Court of Massachusetts memorializing the Congress of the United States to enact legislation to increase the compensation for postal employees.

There being no objection, the resolutions were referred to the Committee on Post Office and Civil Service, and, under the rule, ordered to be printed in the RECORD, as follows:

RESOLUTION MEMORIALIZING THE CONGRESS OF THE UNITED STATES TO ENACT LEGISLATION INCREASING THE COMPENSATION OF POSTAL EMPLOYEES

Whereas there is now pending before the Congress of the United States legislation, including H.R. 9883 and H.R. 9977, which would increase the compensation of postal employees; and

Whereas the Post Office Department requires adequate means for attracting and retaining efficient and well-qualified personnel in order to maintain the operations at a high level of service: Now, therefore, be it

Resolved, That the General Court of Massachusetts respectfully urges the Congress of the United States to enact legislation that will increase the compensation of all postal employees; and be it further

Resolved, That copies of these resolutions be sent forthwith by the secretary of the Commonwealth to the President of the United States, to the Presiding Officer of each branch of the Congress, and to each Member thereof from this Commonwealth.

Adopted by the Senate, April 25, 1960.

IRVING N. HAYDEN,
Clerk.

Adopted by the house of representatives in concurrence, April 27, 1960.

LAWRENCE R. GROVE,
Clerk.

Attest:

JOSEPH D. WARD,
Secretary of the Commonwealth.

AREA REDEVELOPMENT—RESOLUTION

Mr. JAVITS. Mr. President, I ask unanimous consent to have printed in the RECORD a resolution adopted by the Board of Supervisors of Schenectady County, N.Y., urging the President to sign the distressed areas bill.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

RESOLUTION 84

Resolution in support of Federal aid to distressed areas

Whereas Schenectady County is one of the areas in the Nation still suffering from chronic unemployment with all the attendant influences on the economic life, stability and future growth of our community: Now, therefore, be it

Resolved, That the Schenectady County Board of Supervisors urge the President of the United States to sign the $251 million aid to distressed areas bill approved by the U.S. Senate and House of Representatives; and be it further

Resolved, That copies of this resolution be transmitted to the President of the United States, Senators KENNETH B. KEATING and JACOB K. JAVITS, and Congressman SAMUEL S. STRATTON.

HAWK MOUNTAIN DAM—RESOLUTION

Mr. JAVITS. Mr. President, I ask unanimous consent to have printed in the RECORD a resolution adopted by the Board of Supervisors of Delaware County, Delhi, N.Y., protesting against the construction of the Hawk Mountain Dam in the east branch of the Delaware River, at the town of Hancock.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

RESOLUTION 38

Resolution on Hawk Mountain Dam

Whereas the Town Board of the Town of Hancock has presented to the Delaware County Board of Supervisors a resolution passed by said town board opposing the proposed dam at Hawk Mountain, in the east branch of the Delaware River, town of Hancock; and

Whereas said town board opposes said dam because their supervisor, Fred R. Dix, was informed on the 4th day of May 1960, at a public hearing held at Port Jervis, N.Y., that the proposed dam area would not be taxable; and

Whereas the town of Hancock and the county of Delaware would lose the tax on approximately 25 percent of the assessed valuation of the town of Hancock; and

Whereas there now exists two dams in the county of Delaware built by the city of New York, namely; one at Downsville which floods 5,700 acres of land, and one now being built at Stilesville which will flood approximately 4,900 acres of land. The proposed dam at Hawk Mountain would flood approximately 8,100 acres of land: Now be it

Resolved, That the Board of Supervisors of Delaware County go on record as opposing the proposed Hawk Mountain Dam, first because of the loss of tax on approximately 25 percent of the assessed valuation in the town of Hancock, and secondly, because of the loss of livable, beautiful land wherein our people and those wishing to come into our county may find suitable locations where they may dwell in peace and quiet and enjoy rural life to the fullest in the natural scenery which God has given us; and be it also

Resolved, That a copy of this resolution be sent the U.S. Army Engineer Corps office, 2635 Abbottsford Avenue, Philadelphia, Pa.: Hon. KATHARINE ST. GEORGE, House of Representatives, Washington, D.C., and Hon. JACOB K. JAVITS, U.S. Senate, Washington, D.C., and Senator KENNETH KEATING, U.S. Senate, Washington, D.C.

W. J. STORIE,
Clerk of Board.

REPEAL OF TELEPHONE EXCISE TAX—RESOLUTION AND LETTER

Mr. HUMPHREY. Mr. President, stockholders of the New Ulm, Minn., Rural Telephone Co., at their annual meeting adopted a resolution asking repeal of the telephone excise tax. I ask unanimous consent that the resolution and letter transmitting it to me be printed in the RECORD, and referred to the appropriate committee.

There being no objection, the resolution and letter were referred to the Committee on Finance, and ordered to be printed in the RECORD, as follows:

Whereas toll telephone services are now subject to a Federal excise tax; and

Whereas this tax was considered to be a World War II revenue measure and also a measure to curtail the use and construction of new telephone facilities; and

Whereas it has been many years since the end of World War II; and

Whereas said tax is discriminatory toward the telephone interests: Now, therefore, be it

Resolved, That the stockholders of the New Ulm Rural Telephone Co., an independent telephone company with headquarters in New Ulm, Brown County, Minn., respectfully ask that said tax on toll telephone services be repealed as it is no longer necessary and has served the purpose for which it was originally placed on all toll telephone services; and be it further

Resolved, That a copy of this resolution be sent to the U.S. Senators for the State of Minnesota and to the various Congressmen from the State of Minnesota.

JOHN G. HOLLAND,
Manager.

APPROPRIATIONS FOR PLANT QUARANTINE AT PORTS OF ENTRY—RESOLUTION

Mr. HUMPHREY. Mr. President, as a Senator from one of the great Midwest States bordering the St. Lawrence Seaway, I would like to express my gratification that the Department of Agriculture asked for, and has been allowed, additional funds that will strengthen the quarantine inspection services needed to protect the United States from the entry of foreign diseases and pests. With the opening of the seaway, deep water cargo vessels are enabled to move far into the midst of our valuable agricultural areas. Expert and unceasing care is needed to guard against new plant and animal diseases which, if undiscovered, could lead to untold millions of dollars of loss.

Many organizations and business people of Minnesota, sensitive to this threat and their responsibility, have asked that Congress take the steps necessary to avoid this hazard. Many organizations have passed formal resolutions asserting their interest. Typical is one received yesterday by the Senator from Minnesota, passed by Union Local No. 63 of the Public School Employees. I ask unanimous consent that this resolution appear at this point in the RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

RESOLUTION ON QUARANTINE AND GRAIN INSPECTION

Whereas agriculture is one of the Nation's most important industries and the harbor of Duluth-Superior is well on the way to becoming the greatest lake port for the export of agricultural products and the import of other goods; and

Whereas it is of utmost importance to safeguard the agricultural heartland of the United States and Canada from infestation by foreign plant and animal diseases and insect pests which may be introduced through the port of Duluth-Superior in ships or cargoes originating abroad; and

Whereas millions of dollars worth of crops and animals and thousands of hours of manpower are in jeopardy if destructive pests infest port facilities, elevators or warehouses necessitating fumigation or causing quarantines which might result in embargoes being placed on any shipments in and out of the port of Duluth-Superior by domestic or foreign buyers; and

Whereas there are several State and Federal inspections involved before ships can dock, unload or load whereby uncoordinated inspection operations could lead to duplication, loss of time and money by labor, management and shipping: Now, therefore, be it

Resolved, That this body urge the Federal and State administrators having jurisdiction over the various types of ship and cargo inspections, both incoming and outgoing, to provide enough inspectors to permit adequate, prompt inspections and avoid delays of shipping; and be it further

Resolved, That coordination of the various types of inspection be worked out by those in authority to avoid duplication of effort, loss of time for labor and delay of shipping operations.

ADOLPH ROLEK,
Recording Secretary.

REPORTS OF COMMITTEES

The following reports of committees were submitted:

By Mr. BYRD of Virginia, from the Committee on Finance, without amendment:

H.R. 11405. An act to provide for the treatment of income from discharge of indebtedness of a railroad corporation in a receivership proceeding or in a proceeding under section 77 of the Bankruptcy Act commenced before January 1, 1960, and for other purposes (Rept. No. 1416).

By Mr. MURRAY, from the Committee on Interior and Insular Affairs, with amendments:

S. 1889. A bill to authorize the transfer of three units of the Fort Belknap Indian irrigation project to the landowners within the project (Rept. No. 1417).

By Mr. ANDERSON, from the Committee on Interior and Insular Affairs, with amendments:

H.R. 8295. An act to authorize the transfer to the Navajo Tribe of irrigation project works on the Navajo Reservation, and for other purposes (Rept. No. 1418).

By Mr. FULBRIGHT, from the Committee on Foreign Relations, with an amendment:

S. 2634. A bill to amend the International Claims Settlement Act of 1949, as amended, relative to the return of certain alien property interests (Rept. No. 1419).

By Mr. SPARKMAN, from the Committee on Banking and Currency, with an amendment:

S. 3226. A bill to amend section 809 of the National Housing Act (Rept. No. 1420).

AMENDMENT OF MERCHANT MARINE ACT OF 1936, TO REMOVE CERTAIN LIMITATIONS ON CONSTRUCTION DIFFERENTIAL SUBSIDY — INDIVIDUAL VIEWS (S. REPT. 1415)

Mr. MAGNUSON. Mr. President, from the Committee on Interstate and Foreign Commerce, I report favorably, with amendments, the bill (S. 2584) to amend title V of the Merchant Marine Act, 1936, in order to remove certain limitations on the construction differential subsidy under such title, and I submit a report thereon.

I ask unanimous consent that the report may be printed, together with the individual views of the Senator from Ohio [Mr. LAUSCHE].

The PRESIDENT pro tempore. The report will be received and the bill will be placed on the calendar; and, without objection, the report will be printed, as requested by the Senator from Washington.

EXECUTIVE REPORTS OF A COMMITTEE

As in executive session,

The following favorable reports of nominations were submitted:

By Mr. BYRD of Virginia, from the Committee on Finance:

Arnold Raum, of Massachusetts, to be a judge of the Tax Court of the United States;

Allin H. Pierce, of Illinois, to be a judge of the Tax Court of the United States;

Graydon G. Withey, of Michigan, to be a judge of the Tax Court of the United States; and

Irene F. Scott, of Alabama, to be a judge of the Tax Court of the United States.

BILLS AND JOINT RESOLUTION INTRODUCED

Bills and a joint resolution were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. BEALL:

S. 3585. A bill for the relief of Dr. Benigno R. Lazaro; to the Committee on the Judiciary.

By Mr. FULBRIGHT (for himself and Mr. SPARKMAN):

S. 3586. A bill to authorize additional funds for public facility loans, and for other purposes; to the Committee on Banking and Currency.

(See the remarks of Mr. FULBRIGHT when he introduced the above bill, which appear under a separate heading.)

By Mr. MORSE:

S. 3587. A bill for the relief of Hamish Scott MacKay; to the Committee on the Judiciary.

(See the remarks of Mr. MORSE when he introduced the above bill, which appear under a separate heading.)

By Mr. DODD:

S. 3588. A bill to amend the act of September 2, 1957, relating to the settlement of certain inequitable losses in pay suffered by commissioned officers under emergency economy legislation; to the Committee on Finance

S. 3589. A bill for the relief of George Michael Barakos; to the Committee on the Judiciary.

(See the remarks of Mr. DODD when he introduced the first above-mentioned bill, which appear under a separate heading.)

By Mr. SPARKMAN (for himself and Mr. O'MAHONEY) (by request):

S. 3590. A bill to amend the Federal Trade Commission Act to strengthen independent competitive enterprise by providing for fair competitive acts, practices, and methods of competition, and for other purposes; to the Committee on Interstate and Foreign Commerce.

(See the remarks of Mr. SPARKMAN when he introduced the above bill, which appear under a separate heading.)

By Mr. BEALL (for himself and Mr. HICKENLOOPER):

S.J. Res. 197. Joint resolution to give recognition to the two American scientists who discovered the great radiation belt surrounding the earth; to the Committee on Aeronautical and Space Sciences.

(See the remarks of Mr. BEALL when he introduced the above joint resolution, which appear under a separate heading.)

CONCURRENT RESOLUTION

PRINTING OF CERTAIN PUBLICATIONS

Mr. DODD submitted a concurrent resolution (S. Con. Res. 107) authorizing the printing of certain publications for the use of the Subcommittee on Internal Security of the Senate Committee on the Judiciary, which was referred to the Committee on Rules and Administration, as follows:

Resolved by the Senate (the House of Representatives concurring) That there shall be printed, for the use of the Subcommittee on Internal Security of the Senate Committee on the Judiciary, the numbers of copies specified of the following publications:

(1) The Effect of Red China Communes on the United States (hearing before the Subcommittee to Investigate the Administration of the Internal Security Act and Other Internal Security Laws of the Committee on the Judiciary, United States Senate, March 24, 1959), five thousand copies;

(2) Statement by J. Edgar Hoover (S. Doc. 80, Eighty-sixth Congress, second session), ten thousand copies;

(3) The Revival of the Communist International and Its Significance for the United States (committee print, Eighty-sixth Congress, first session), five thousand copies;

(4) Contradictions of Communism (committee print, Eighty-sixth Congress, first session), twenty thousand copies;

(5) Report of the Subcommittee To Investigate the Administration of the Internal Security Act and Other Internal Security Laws to the Committee on the Judiciary, United States Senate, for the Year 1958 (committee print, Eighty-sixth Congress, first session), ten thousand copies; and

(6) The Communist Party of the United States of America—A Handbook for Americans (S. Doc. 117, Eighty-fourth Congress, second session), twenty thousand copies.

RESOLUTION

UNITED STATES AGAINST WILLIAM PRESSER—ATTENDANCE OF CERTAIN WITNESSES

Mr. McCLELLAN submitted a resolution (S. Res. 326) requesting the production of certain Senate committee records for the trial of William Presser in the U.S. District Court, Cleveland, Ohio, and authorizing Senator JOHN L. MCCLELLAN and Walter J. Sheridan to testify in said trial, which was considered and agreed to.

(See the above resolution printed in full when submitted by Mr. MCCLELLAN, which appears under a separate heading.)

AUTHORIZATION FOR ADDITIONAL FUNDS FOR PUBLIC FACILITY LOANS

Mr. FULBRIGHT. Mr. President, on behalf of myself and the junior Senator from Alabama [Mr. SPARKMAN], I introduce, for appropriate reference, a bill to increase the public facilities loan authorization by $100 million.

I ask unanimous consent that the text of the bill be printed in the RECORD at this point in my remarks.

The PRESIDENT pro tempore. The bill will be received and appropriately referred; and, without objection, the bill will be printed in the RECORD.

The bill (S. 3586) to authorize additional funds for public facility loans, and for other purposes, introduced by Mr. FULBRIGHT (for himself and Mr. SPARKMAN), was received, read twice by its title, referred to the Committee on Banking and Currency, and ordered to be printed in the RECORD, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 203(a) of the Housing Amendments of 1955 is amended by striking out "$100,000,000" and inserting in lieu thereof "$200,000,000."

SEC. 2. Section 203(b) of the Housing Amendments of 1955 is amended by inserting "be" immediately after "may".

Mr. FULBRIGHT. Mr. President, the public facilities loan program is for the purpose of purchasing obligations of, or making loans to, State and local governments for building or improving essential public works where financing is not otherwise available on reasonable terms and conditions. Priority is given to loans to smaller communities for such essential public works as storage, treatment, purification or distribution of water; sewage, sewage treatment, and sewer facilities, and gas distribution systems.

The Housing and Home Finance Administrator, acting through the Community Facilities Administration, is authorized to purchase the obligations of and make loans: first, to States; second, municipalities and other political subdivisions of States; third, to public agencies and instrumentalities of one or more States, municipalities, and political subdivisions of States; and fourth, to public corporations, boards, and commissions established under State law to finance specific public projects under State or municipal law.

By law, applications for public facility loans which are received from communities of less than 10,000 population having an urgent and vital need are given priority consideration. The maximum loan term is 40 years. The interest rate is established from time to time, taking into account the current average rate on outstanding marketable obligations of the United States of comparable maturities. The interest rate paid by the community varies according to the type of obligation issued to secure the loan. On general obligation bonds, the current rate is 4⅝ percent, and on revenue bonds the rate is 4⅞ percent.

The public facilities loan program is by no means a new or recent program. For 21 years, the Public Agency Division of the Reconstruction Finance Corporation assisted municipalities in financing public facility improvements, such as sewage and water distribution systems. During that period, the program, aggregating more than $1.5 billion, was operated without loss to the Federal Government. Upon dissolution of the RFC, the authority for this program was specifically retained, to be operated by an agency to be designated by the President. When such agency was not so designated, the Congress approved legislation in 1954 directing the Housing and Home Finance Agency to administer the program. Since very little was accomplished toward assisting communities needing vital public works during the year following this congressional action, legislation was enacted in 1955 to revive the program and place it on an operating basis. One of the provisions contained in the 1955 legislation established a revolving loan fund of $100 million.

Since 1955, some 257 communities have had applications approved for approximately $80 million of loans to assist them in the construction of needed public works projects, practically all of which have been water and sewer projects. This leaves a balance of $20 million in the fund. According to the Community Facilities Administration, applications on hand as of the end of April of this year amounted to $22.8 million; thus, applications exceed the balance on hand by approximately $1 million.

The President's budget message called for an additional $100 million of funds for this program. In requesting this amount, the President stated that this was necessary because the present funds would be exhausted by early 1961. It is obvious from the number of applications on hand that, for practical purposes, the fund is exhausted now.

I would like to include in the RECORD at the end of my remarks a table showing the communities in my own State and those in the State of Alabama which have participated in this beneficial program.

Mr. President, although I am introducing this bill—and supporting it—to provide for a continuing public facilities program, I would prefer to reconstitute and liberalize the program as proposed by S. 1955, the Community Facilities Act of 1959, which I and several other Senators sponsored during the 1st session of the 86th Congress. But I must face reality and be practical. The present administration is opposed to S. 1955, and it appears hopeless to assume that such a measure could be enacted into law during the few remaining weeks of this session of the Congress.

On January 3, 1961, a new Congress will convene. On January 20, 1961, a new Executive will take office. I am very hopeful that the outlook then for a more general community facilities loan program will be more favorable than it has been throughout the present administration. In the meantime, the bill I am introducing can provide for the continuation of a program which is still useful, even though it is unduly restricted, and carries unnecessarily high interest rates, under the present administration.

Mr. President, I ask unanimous consent that tables bearing on this subject be also printed in the RECORD at this point.

There being no objection, the tables were ordered to be printed in the RECORD, as follows:

Community Facilities Administration, public facility loans program

LOANS APPROVED IN STATE OF ALABAMA (FROM INCEPTION THROUGH MAY 15, 1960)

Applicant and location	Type of facility	Amount	Applicant and location	Type of facility	Amount
Town of Akron, Hale County	Water	$66,000	Town of Loxley, Baldwin County	Water	$122,000

[1] Loan reduced to $7,000,000 due to reduction in costs.
[2] $65,000 sold to others, and loan reduced to $135,000.

HAMISH SCOTT MacKAY

Mr. MORSE. Mr. President, I introduce, for appropriate reference, a bill for the relief of Hamish Scott MacKay.

This bill is designed to authorize the Attorney General to discontinue deportation proceedings against MacKay. The facts of this case are comparable to those of another Oregonian who has been subjected to deportation proceedings—Willia Niukkanen, also known as William Albert Mackie—on whose behalf I introduced the bill, S. 3543 on May 13.

A résumé of the facts in Mr. MacKay's case is contained in a letter dated April 28 addressed to me by Mr. Nels Peterson, a Portland, Oreg., attorney. I ask unanimous consent that Mr. Peterson's letter be included in the RECORD at this point in my remarks.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

APRIL 28, 1960.

Re deportation of Hamish Scott MacKay.

Senator WAYNE L. MORSE,
U.S. Senate,
Senate Office Building,
Washington, D.C.

DEAR SENATOR MORSE: The Supreme Court of the United States denied certiorari for the above named on Monday, April 18, 1960.

Herewith follows a summary of the life of Hamish Scott MacKay and the course of the deportation proceedings instituted against him.

Hamish Scott MacKay was born near Calgary, Alberta, Canada, in 1905. His father was born in Scotland and immigrated to the United States, and in 1900 was living in North Dakota and there obtained American citizenship by naturalization. In 1903 the father of Hamish Scott MacKay was married to Hamish Scott MacKay's mother who was a native born American citizen, one of whose ancestors signed the Declaration of Independence. Immediately after their marriage, they moved to the wilderness of Canada. In 1905 Hamish Scott MacKay's father became naturalized, but having resided there less than the requisite 3 years to become entitled to be naturalized. The relationship between Canada and the United States was governed by a treaty dated May 13, 1870 (16 Stat. 775), which provides that citizens of either country naturalized as citizens or subjects of the other should be treated as citizens of such country by the country of origin. The treaty further provided that in case citizens of one country naturalized in another, wished to renew their residence in the country of origin, they could be restored to the privileges of citizenship "on such conditions as the government may think fit to impose." The foregoing is only background information as explanation of our later contention that Hamish Scott MacKay was an American citizen by derivation of a naturalized citizen of the United States, his father, and by a native born citizen of the United States, his mother. We contended upon the petition for writ of certiorari, as we did in the lower courts, that the intention of the treaty between Great Britain and the United States was to prevent statelessness and that Hamish Scott MacKay acquired derivative citizenship under this treaty. Hamish Scott MacKay came into the United States for permanent residence with his father and mother in 1924. His father (James Scott MacKay) attended a chiropractors' school in Davenport, Iowa, went to the State of Colorado and practiced chiropractics for approximately 2 years. His father returned to Canada in the fall of 1927 and died on February 9, 1928. Hamish Scott MacKay returned to Canada for a short time and reentered the United States for permanent residence on November 28, 1928, at North Portal, N. Dak.

Hamish Scott MacKay settled in Portland, Oreg., in the early thirties after having served in the National Guard in the State of Illinois. Hamish Scott MacKay was a carpenter by trade and was married in Portland, Oreg., to a native born citizen of the United States. Two sons were born as issue of the marriage. During World War II the wife of Hamish Scott MacKay abandoned her husband and the children and he obtained a decree of divorce from her and was awarded the custody of his two sons, whom he thereafter substantially reared alone until his marriage in 1949 to his second wife, a native born American citizen.

On May 25, 1949, a warrant of arrest was issued for the arrest of Hamish Scott MacKay on the ground that he was an alien subject to deportation, in that after entry into the United States he was alleged to have been a member of an organization, association, society or group that advises, advocates or teaches the overthrown by force and violence of the Government of the United States, pursuant to the act of October 16, 1918 (40 Stat. 1012, as amended). Hearings began July 24, 1950, and continued from time to time thereafter. During the course of the hearings, an additional charge was lodged against MacKay that he was deportable for being a member of the Communist Party after entry into the United

States, pursuant to the Internal Security Act of 1950 (64 Stat. 987) enacted September 22, 1950. At the original hearing, a witness, one Paul Crouch (now deceased) allegedly then living in Florida, testified as to the aims and purposes of the Communist Party. His testimony was hardly credulous (e.g., he testified he was able to read newspapers at the age of 6 years) and he testified that the Communist Party, during his membership in the thirties, advocated the overthrow of the Government by force and violence. This witness, Paul Crouch, had been court-martialed in Hawaii but by some mysterious circumstance had been released. (Incidentally, after the passage of the Internal Security Act of 1950, proof that the Communist Party of the United States advocated the overthrow of the Government by force and violence no longer became necessary, hence the lodging of the additional charge against Hamish Scott MacKay of membership in the Communist Party.)

Following the hearings, he was ordered deported, which order was affirmed by the Board of Immigration Appeals. In October, 1955, MacKay filed with the Board of Immigration Appeals a motion to reopen the hearing for the purpose of filing an application for suspension of deportation. On October 31 MacKay filed a petition in the U.S. District Court for a writ of habeas corpus and for injunctive relief. The trial judge denied the writ and the injunction, but the U.S. Court of Appeals for the Ninth Circuit issued a restraining order and allowed his release upon bail. In June, 1956, a hearing on his application for suspension of deportation was held and the relief requested denied, although the Government admitted that hardship was shown. The appeal to the Ninth Circuit Court of Appeals, by stipulation, was dismissed and the matter referred back to the U.S. District Court where an amended petition for injunctive relief and for a writ of habeas corpus was filed on March 5, 1958.

The amended petition challenged the constitutionality of the Internal Security Act of 1950 and we contended that the case of *Rowoldt* v. *Perfetto* (355 U.S. 115, decided Dec. 7, 1957) was controlling, and that the Government had failed to prove "meaningful association" with the Communist Party. Our contentions were based upon the evidence presented by the Government by the witness Lee Arthur Knipe and by the testimony of the divorced wife of Hamish Scott MacKay. We also contended that MacKay had not been afforded a fair hearing on his application for suspension of deportation because the "special inquiry officer" at the hearings was one and the same person who served as a hearing officer upon his deportation hearings.

At this moment, Hamish Scott MacKay is buying a modest home in Portland, is married and has a 17-year-old son in high school. His older son has served honorably in the U.S. Army after graduation from high school in Portland, Oreg. His older son is married and has a child. He is married to a native-born American citizen, Annabelle MacKay. Hamish Scott MacKay has been active in the Boy Scouts, has belonged to various unions, and the only testimony against him related to activities of the unemployed for bread and butter and relief in the depression of the thirties. The evidence, vague in nature, covered the years 1936 to approximately 1941.

Hamish Scott MacKay has been active in the Oregon State Grange, in school activities for his sons and other community activities. He has never been convicted of any crime and denies that he was ever a member of the Communist Party.

All of the reasons, except a shorter period of residence in the United States of America, apply to Hamish Scott MacKay as apply to William Albert Mackie.

I believe that my review of the legal aspects in Mackie's deportation apply equally to Hamish Scott MacKay.

We respectfully urge that appropriate special legislation be introduced to permanently stay his deportation and permit his continued residence as a person of good moral character, with deep family and property involvements, here in the city, State and country of his choice.

Yours sincerely,

NELS PETERSON.

Mr. MORSE. Mr. President, a point that I cannot stress too much in these deportation cases is the fact that individuals such as Hamish MacKay, under existing law, are being subjected to the loss of a very precious privilege—that of residence in the United States—without trials by juries of their peers. In these cases the basic facts are determined by a special inquiry officer. I am strongly of the opinion that, when such a privilege is at stake and the possibility of banishment to foreign soil is involved, the basic facts should be determined by American jurors. There can be no substitute for the decision of jurors who, by the very nature of their citizenship rights, understand the importance not only of national security but of the humanitarian interests involved.

I urge early consideration of this case by the Senate Committee on the Judiciary, and it is my hope that the committee will report on this bill well in advance of the end of the current session. It would be better to keep MacKay in the United States under surveillance, if deemed necessary, rather than send him to Canada. My bill proposes the humane, Christian approach to these unfortunate cases. Here is a man who has lived most of his adult life in the United States. He claims he was never a Communist. If he was caught in the tentacles of the Communist net in the United States, it was before the end of World War II. His record for years has been one of loyal patriotism to the United States. He is an uneducated man, a hard-working man, a family man, a man who should be allowed to continue to live in this country on condition of continued patriotic good behavior.

Mr. President, I ask unanimous consent that the bill be printed in the RECORD.

The PRESIDENT pro tempore. The bill will be received and appropriately referred; and, without objection, the bill will be printed in the RECORD.

The bill (S. 3587) for the relief of Hamish Scott MacKay, introduced by Mr. MORSE, was received, read twice by its title, referred to the Committee on the Judiciary, and ordered to be printed in the RECORD, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Attorney General is authorized and directed to discontinue any deportation proceedings and to cancel any outstanding order and warrant of deportation, warrant of arrest, and bond, which may have been issued in the case of Hamish Scott MacKay. From and after the date of enactment of this Act, the said Hamish Scott MacKay shall not again be subject to deportation by reason of the same facts upon which such deportation proceedings were commenced or any such warrants and order have issued.

SETTLEMENT OF INEQUITABLE LOSSES IN PAY SUFFERED BY CERTAIN COMMISSIONED OFFICERS

Mr. DODD. Mr. President, I introduce, for appropriate reference, a bill to amend the act of September 2, 1957, relating to the settlement of certain inequitable losses in pay suffered by commissioned officers under emergency economy legislation.

Under the act of September 2, 1957, Public Law 85–255, commissioned officers of the uniformed services finally received, after 25 years or more, the increased pay to which they were entitled when advanced in rank during the period 1932–34.

Notwithstanding the pay was earned over 25 years ago, the Treasury Department required the Comptroller General to deduct 18 percent withholding tax in the case of every living officer. In a Treasury Department ruling published as Revised Rule 58–443, the Internal Revenue Service admitted that the money paid under Public Law 255 "qualifies as back pay" as remuneration received by a Federal employee.

The bill which I introduce today, would simply make effective as a practical matter the Treasury Department ruling. For example, in the case of Rear Adm. R. E. Bakenhaus, he was admittedly due back pay in the total sum of $3,450.46. When he applied for payment under Public Law 255, all he actually received was $2,850.45. The Comptroller General deducted $590.01 as withholding tax. If he had been paid in 1932–34 he would have been liable for little or no income tax whatever.

Had this situation been realized and foreseeable, of course, Congress would have prevented it when Public Law 255 was enacted by including language similar to this bill.

There should be no objection to this correctional bill. It would not apply to widows of officers as the Comptroller General did not deduct a withholding tax in their cases when payments were finally made under Public Law 255.

It is estimated that since 2,381 officers were compensated under Public Law 255, and that at least 20 percent are now deceased, this bill would allow the remaining living officers, about 1,900 in number, to receive the tax withheld from them. This bill would at last end the injustice which arose more than 25 years ago.

The PRESIDENT pro tempore. The bill will be received and appropriately referred.

The bill (S. 3588) to amend the act of September 2, 1957, relating to the settlement of certain inequitable losses in pay suffered by commissioned officers under emergency economy legislation, introduced by Mr. DODD, was received, read twice by its title, and referred to the Committee on Finance.

AMENDMENT OF FEDERAL TRADE COMMISSION ACT TO STRENGTHEN INDEPENDENT COMPETITIVE ENTERPRISE

Mr. SPARKMAN. Mr. President, by request, I am introducing on behalf of myself and the Senator from Wyoming [Mr. O'MAHONEY] a bill to prohibit certain loss leader sales. I offer this bill in order that the appropriate Senate committee may have an opportunity to study the subject and to conduct hearings on the proposed legislation.

Many small businessmen and associations of small businessmen feel that this legislation is necessary to the survival of our traditional economic system. Among the associations strongly endorsing the bill are the National Association of Tobacco Dealers and the National Independent Dairies Association.

Similar legislation has been introduced by the chairman of the House Small Business Committee and by several of his colleagues.

Mr. President, I hope that the introduction of this proposal may provoke study, discussion, and constructive criticism.

The PRESIDENT pro tempore. The bill will be received and appropriately referred.

The bill (S. 3590) to amend the Federal Trade Commission Act to strengthen independent competitive enterprise by providing for fair competitive acts, practices, and methods of competition, and for other purposes, introduced by Mr. SPARKMAN (for himself and Mr. O'MAHONEY), by request, was received, read twice by its title, and referred to the Committee on Interstate and Foreign Commerce.

RECOGNITION TO AMERICAN SPACE SCIENTISTS

Mr. BEALL. Mr. President, on my own behalf and on behalf of the senior Senator from Iowa [Mr. HICKENLOOPER], I introduce, for appropriate reference, a joint resolution to give recognition to the two American scientists who discovered the great radiation belt surrounding the earth. The two scientists are Prof. S. F. Singer, of Maryland, and Prof. J. A. van Allen, of Iowa, who have worked together in many cooperative space undertakings.

Prof. Van Allen made the discovery of the radiation belt through the use of the U.S. Explorer satellites launched by the Army Ballistic Missile Agency in Alabama in cooperation with the Jet Propulsion Laboratory in California.

The theoretical existence of the Van Allen Belt was advanced earlier by Prof. S. F. Singer, of Maryland.

The world scientific community has recognized the great value of this discovery. The discovery has changed the concept of the radiation environment of the earth, has illuminated the origin of important geophysical phenomena, and also has important implications for manned space flights.

The Russians, following their custom of claiming credit for all of history's great scientific discoveries, have recently credited themselves with this discovery by our own American scientists. On April 21 last, the Soviets announced that four Russian physicists had been awarded the Lenin Prize for 1960 for discovering the external radiation belt around the earth. Such a claim is completely without justification; the radiation belt was discovered by our own professors Van Allen and Singer 2 years ago, and that distinction should not be denied them by Russia's false claim.

Since long before Russia's Sputnik I, American scientists have been carrying out research projects which have greatly contributed to the knowledge of space and the powers operating in it. These scientists have come from universities and research institutions of every section of the United States. Their accomplishments portray the working of the American system, in which Government and non-Government scientists work side by side, in which public and private resources are combined for the public good. Our space scientists, unlike their Soviet counterparts, are free agents, contributing their work to the national space effort of this free Nation.

I think it is appropriate that the Government of this country undertake in the future to give official recognition to important accomplishments in scientific fields.

I hope that the joint resolution which I am introducing will act to express to the two scientists connected with the discovery of the great radiation belt some of the appreciation that the people of this country feel for their important work.

The PRESIDENT pro tempore. The joint resolution will be received and appropriately referred.

The joint resolution (S.J. Res. 197) to give recognition to the two American scientists who discovered the great radiation belt surrounding the earth, introduced by Mr. BEALL (for himself and Mr. HICKENLOOPER), was received, read twice by its title, and referred to the Committee on Aeronautical and Space Sciences.

UNITED STATES AGAINST WILLIAM PRESSER—ATTENDANCE OF CERTAIN WITNESSES

Mr. McCLELLAN. Mr. President, I submit a resolution, and ask unanimous consent for its immediate consideration.

The PRESIDENT pro tempore. The resolution will be read for the information of the Senate.

The Chief Clerk read as follows:

Whereas the Permanent Subcommittee on Investigations of the Senate Committee on Government Operations has in its possession certain records pertaining to an investigation dealing with William Presser, President of the Ohio Conference of Teamsters and President of Joint Council 41, and the International Brotherhood of Teamsters and its Locals and other affiliate organizations; which investigation was conducted in 1958 by the Senate Select Committee on Improper Activities in the Labor or Management Field; and

Whereas the Senate referred to the Department of Justice the transcript of the records on a citation of contempt of the Senate, which transcript contained allegations of the mutilation and destruction by said William Presser of certain records under subpena by the Select Committee; and

Whereas the matter of United States against William Presser, now pending trial in the U.S. District Court, Cleveland, Ohio, charges said William Presser with obstruction of justice; and

Whereas the Department of Justice has requested the production of the records in this matter and has requested that Senator JOHN L. McCLELLAN, former chairman of the Senate Select Committee on Improper Activities in the Labor or Management Field and present chairman of the Permanent Subcommittee on Investigations of the Senate Committee on Government Operations, and, further, requested that Walter J. Sheridan, formerly an investigator for the Senate Select Committee on Improper Activities in the Labor or Management Field and presently an investigator for the Permanent Subcommittee on Investigations of the Senate Committee on Government Operations, to appear and testify in the above proceedings; and

Whereas by the privileges of the Senate no Member or Senate employee is authorized to appear or testify or to produce Senate documents but by order of the Senate: Therefore be it

Resolved, That the Permanent Subcommittee on Investigations of the Senate Committee on Government Operations is granted leave to permit the copying and presentation of certain records for examination in connection with the aforementioned court case, the records thereupon to be returned to the possession of the Subcommittee on Investigations; and be it further

Resolved, That Honorable JOHN L. McCLELLAN, a Member of this body, and Walter J. Sheridan, an investigator employed by the Senate, are authorized to appear and testify in the above-mentioned proceedings.

Mr. McCLELLAN. Mr. President, the resolution is self-explanatory.

The PRESIDENT pro tempore. Is there objection to the request for the present consideration of the resolution?

There being no objection, the Senate proceeded to consider the resolution.

The PRESIDENT pro tempore. The question is on agreeing to the resolution.

The resolution (S. Res. 326) was agreed to.

ADMISSION OF CERTAIN VESSELS TO AMERICAN REGISTRY—AMENDMENT

Mr. JAVITS (for himself and Mr. KEATING) submitted an amendment, in the nature of a substitute, intended to be proposed by them, jointly, to the bill (S. 3516) to admit the vessels *Fort Town*, *Maple City*, and *Windmill Point* to American registry and to permit their use in the coastwise trade, which was referred to the Committee on Interstate and Foreign Commerce and ordered to be printed.

ADVANCEMENT OF MARINE SCIENCES—ADDITIONAL COSPONSOR OF BILL

Mr. MAGNUSON. Mr. President, I ask unanimous consent that the name of the junior Senator from South Carolina [Mr. THURMOND] be added as a cosponsor of the bill—S. 2692—to advance the

marine sciences, to establish a comprehensive 10-year program of oceanographic research and surveys; to promote commerce and navigation, to secure the national defense; to expand ocean resources; to authorize the construction of research and survey ships and facilities; to assure systematic studies of effects of radioactive materials in marine environments; to enhance the general welfare, and for other purposes, introduced by me on September 11, 1959.

The PRESIDENT pro tempore. Without objection, it is so ordered.

OFFICE OF INTERNATIONAL TRAVEL AND TOURISM AND TRAVEL ADVISORY BOARD—ADDITIONAL COSPONSOR OF BILL

Mr. MAGNUSON. Mr. President, I ask unanimous consent that the name of the senior Senator from New York [Mr. JAVITS] be added as a cosponsor of the bill—S. 3102—to strengthen the domestic and foreign commerce of the United States by providing for the establishment of an Office of International Travel and Tourism and a Travel Advisory Board, introduced by me on February 25, 1960.

The PRESIDENT pro tempore. Without objection, it is so ordered.

TO PRINT AS A SENATE DOCUMENT A STUDY BY DR. HERMAN KAHN ENTITLED "THE NATURE AND FEASIBILITY OF WAR AND DETERRENCE" (S. DOC. NO. 101)

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed as a Senate document a study by Dr. Herman Kahn entitled "The Nature and Feasibility of War and Deterrence," along with a short foreword which I have prepared.

This paper summarizes some of the points in a forthcoming book by Dr. Kahn, which is to be published by the Princeton University Press later this year. I want to indicate my appreciation to Dr. Kahn for his granting me permission to present this provocative study to the Senate.

The PRESIDENT pro tempore. Without objection, it is so ordered.

NOTICE OF HEARINGS ON CERTAIN BILLS BY SUBCOMMITTEE ON DONABLE PROPERTY OF COMMITTEE ON GOVERNMENT OPERATIONS

Mr. GRUENING. Mr. President, I wish to give notice that the Subcommittee on Donable Property of the Senate Committee on Government Operations will hold public hearings on (a) S. 2725, S. 2732, S. 3154; (b) S. 3489; (c) S. 3493; and (d) S. 2605 and S. 2388, beginning on Wednesday, June 1, 1960, at 10 a.m., room 3302, New Senate Office Building. Those desiring to testify should so inform Mr. Glenn Shriver of the committee's staff.

ADDRESSES, EDITORIALS, ARTICLES, ETC., PRINTED IN THE RECORD

On request, and by unanimous consent, addresses, editorials, articles, etc., were ordered to be printed in the RECORD, as follows:

By Mr. RUSSELL:

Address delivered by Senator SMATHERS, of Florida, before the Atlanta Bar Association.

By Mr. HUMPHREY:

Address delivered by him at Bethany College, Bethany, Va., on May 5, 1960, relating to disarmament.

Address delivered by him, entitled "The War That Can Be Won," at Wheeling College, Wheeling, W. Va., on May 5, 1960.

INQUIRY, RESPONSIBILITY, AND SOLIDARITY

Mr. JOHNSON of Texas. Mr. President, we are in a situation which demands the utmost in calmness and coolness from all of our people. This is definitely a time for all good Americans to be responsible.

The concept of responsibility and the concept of solidarity call for some forbearance from all participants, and demand that we keep foremost in our minds the basic objective of our Union, which in this case is to preserve our freedoms and our way of life from the maneuverings and the tactical moves of communism.

When I was a very young boy, my father taught me that no man's judgment on any given question is any better than the information that man has on that question. What we in this country need now is information that will shed light, instead of partisanship which will generate heat.

We have two Senate committees which have distinguished themselves by their responsibility and by the objectivity with which they have gathered information. I refer to the Foreign Relations Committee, headed by the very able and distinguished Rhodes scholar, the junior Senator from Arkansas [Mr. FULBRIGHT], and to the Government Operations Subcommitee on National Policy Machinery, headed by the very able junior Senator from Washington [Mr. JACKSON], who for more than a year have been studying questions pertinent to this subject. Both of these committees have discussed with the appropriate officials the wisdom of receiving briefings, pursuing studies, eliciting the truth, and gathering the facts, in order not only that the Congress will be fully and adequately informed but also that all the information in the national interest can be given to the American people.

In addition, other committees which have jurisdiction in this field, such as the Armed Services Committee and the Committee on Aeronautical and Space Sciences, may conceivably gather some information.

Mr. President, this is not the time to anticipate the work of those committees by coming to conclusions on the basis of alleged newspaper interviews which may well have been garbled in translation or which, through improper emphasis, may have changed a thought. What we need is information about what happened, not suspicions about each other.

Mr. President, in this case there is no individual who is in particular trouble. It is our country about which we must be concerned. I have said, and said repeatedly, that unity does not require sweeping the facts under the rug, no matter how unpleasant those facts could or might be. I do not think there is any disposition to do that; but the situation does require treatment of the facts candidly, calmly, coolly, in an objective vein and in a nonpartisan vein. I think the Nation will be well served if we proceed in that manner.

I know of no reason why all the pertinent information available to the Executive cannot be given without transgressing security, to the people of this country. I am informed that that is the policy of the President, following international conferences, and that that practice will be adhered to, as announced, on Wednesday evening.

It is also the policy of the Congress, following conferences with other nations, to have the Secretary of State and other appropriate officials report to the Congress or to the appropriate committees on the developments at those conferences.

Last week, following the return of the distinguished Secretary of State and the chairman of the Foreign Relations Committee, I discussed at some length with the chairman of the Foreign Relations Committee, Mr. FULBRIGHT, the wisdom of having his committee meet with the Secretry of State and with the appropriate officials to receive full and adequate briefing and elicit all the information possible in order better to serve the national interest.

I have also conferred with other committee chairman who may have jurisdiction in connection with some of the subjects discussed. From time to time, I am sure they, in cooperation with the executive branch, will sit down and will reason together, not for the purpose of finding a scapegoat, but for the purpose of building a strong policy that will better serve America in the days ahead.

Mr. DIRKSEN. Mr. President, I think I can concur in nearly everything the majority leader has said. Certainly I shall not replow old ground.

With reference to the item about the possibility of a garbled newspaper dispatch or inverview, of course I let that speak for itself. I thought the record was pretty well documented.

Yesterday, I referred to the refreshing viewpoint expressed by the majority leader. I expressed my consternation of spirit that my fellow compatriot from Illinois, the former Governor, saw fit to use the language he did employ in his address in Chicago, and to give it such a very definite partisan cast. Beyond that, I need not go.

We shall watch the enfoldments as time goes on. If and when comment is called for, obviously that comment will be made.

Mr. KEATING subsequently said: Mr. President, I desire to say just a word in commendation of the distinguished ma-

jority leader for the remarks which he has just made. He has spoken, as he usually does, as an American, and not as a partisan. This is one very important reason for his effectiveness in this body.

It is, of course, the desire and aim of all of us to look to the future, rather than to the past. If mistakes have been made, they can and must be used in building a better and more hopeful future. That is what the American people want and that is what they deserve.

The Congress, of course, has a perfect right to inquire into these matters. It has a perfect right to obtain all information available which is consistent with the security requirements of the Nation.

If these committees will approach their studies in this vein and in consonance with the convictions expressed by the majority leader, our country will be the stronger for these actions.

Certainly, the approach of the distinguished majority leader to this problem is worthy of merit. It is one which as I have said, I hope will be followed by many others in the forthcoming inquiries which are to be made into the U–2 incident and its surrounding circumstances.

ANNIVERSARY OF DEATH OF SECRETARY OF STATE JOHN FOSTER DULLES

Mr. MANSFIELD. Mr. President, 1 year ago, our late Senate colleague and Secretary of State John Foster Dulles passed to his reward.

This morning, at the Department of State, his successor, Mr. Christian Herter, and colleagues in the Department commemorated the day. It is interesting to note that on Tuesday next, representatives of the SEATO powers will convene in Washington to discuss matters of mutual interest. SEATO was the brainchild of Secretary Dulles, and I was privileged, along with him and Senator J. Alexander Smith, to be one of the three signatories for the United States.

Mr. Dulles was a lifelong student of diplomacy and statecraft. He was a man of determination and will power. He could always see the other side of the coin, in connection with any matter brought to his attention.

He was a devoted public servant, a man of devout religious conviction, and one who always carried the interests of our country in his heart and in his head.

This statesman of brilliant intellect and keen insight has left his mark. We shall continue to miss him, and we shall always remember him with affection and respect.

We are happy that he has been succeeded by his former associate in the Department of State; and Secretary Dulles himself would be proud of the man who has taken his place in the State Department—Christian Herter, of Massachusetts.

I note this anniversary because of the many services Secretary Dulles rendered to our country. He was a good man, a good Senator, and an outstanding Secretary of State.

Mr. COOPER. Mr. President, I am glad that the junior Senator from Montana has taken this occasion to recognize the anniversary of the death of the late Secretary of State.

A year ago John Foster Dulles died. We remember him today, as he will be remembered by future generations, for his devotion to the United States and to freedom throughout the world. In every capacity in which he served he brought honor to our country.

NOW IS THE TIME TO GO ALL OUT FOR PEACE—STARTING WITH ENFORCIBLE ATOM TEST BAN

Mr. PROXMIRE. Mr. President, with all the tumult and the shouting about appeasement, there is the danger that all of us in the Senate will lose sight of the fact that the prime purpose of a U.S. Senator is still to work for peace with freedom. Of course, freedom is absolutely essential. I am sure there is not a U.S. Senator who would not prefer to die for freedom than to have this country submit to Moscow as the price of peace. Personally, I think it is a terrible waste of time for us to stir up the country's emotions by pretending there are any Americans of any influence in either party who do not share this determination.

At the same time, Mr. President, while we insist on freedom, the junior Senator from Wisconsin believes we should go all out to achieve peace, especially now, when every American citizen who can read a newspaper knows how tragically the prospects for peace have dimmed in recent days.

This is a time when the world is rocketing on to one cataclysmic triumph after another in the art of destroying life on earth. A few years ago it was the H-bomb, now mass produced, a few hundred of which could wipe out life in this Nation. A few thousand could destroy life on earth. The H-bomb is said to have its fallout drawbacks to the aggressor as well as the victim. Today we have developed missiles capable of delivering H-bomb warheads literally thousands of miles precisely on target in a matter of minutes. Tomorrow we will develop the neutron bomb, the death-ray bomb, that can kill without danger to the aggressor. What will come next?

Mr. President, can anyone read the history of mankind, with its steady, rhythmic pulsation of a war every generation, without recognizing it is not enough to hope that, in Churchillian phrase, "Safety will be the twin brother of annihilation, survival the child of terror?"

With all the dangers we confront, we must act, we must risk, we must work for peace—or we know in our hearts we are doomed.

Mr. President, this is why even now—I should say especially now—there must be voices raised in this government pleading that one of the last great hopes for peace—that great first step towards armament control—the conference on suspending nuclear tests, will not fail.

With this in mind, Mr. President, I ask unanimous consent that an excellent letter by Prof. Herbert Jehle, a professor of physics at George Washington University, to the Washington Post, setting forth the practical prospects and promise of the test-ban negotiations, be printed in the RECORD at this point.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

PERSPECTIVES ON DETECTION

There has been a lot of misunderstanding about the hearings of the Joint Committee on Atomic Energy on the detection of nuclear explosions. Last week, a critical evaluation of the congressional hearings on that topic was given by the eminent nuclear physicist, Dr. H. A. Bethe, professor of physics at Cornell University, former member of the President's Science Advisory Committee, who was a member of the technical team at the Geneva test-ban negotiations.

What follows is a summary of Dr. Bethe's remarks.

The test-ban negotiations are the only negotiations between East and West which got somewhere. A great many articles have been agreed upon, though the more sticky articles are still to be negotiated.

East and West have a different way of approaching the issue. The Russians started these negotiations from the political point of view; no controls, no detection, no inspection. We moved a long way from this point. The West started from the position that nuclear test cessation agreements must have safeguards.

And because the U.S.S.R. is sensitive to the presence of visitors, we will make the safeguards as technical as possible. We will ask for 20 control stations in Russia, and 180 altogether in the world.

It is easy to detect nuclear explosions which occur in the atmosphere.

But now we have the underground tests. They were first made in 1957 in the series known as Operation Plowshare, or experiments in the peaceful uses of atomic energy. These are quite difficult to detect, but we can be proud of the achievements in the field of test detection. We can detect the major underground explosions.

The technical situation is fully taken into account by the President's proposal of February 11 which covered ban on tests in the air, in water, in near space; and underground insofar as explosions stronger than 20,000 ton TNT equivalent, i.e., 4.75 earthquake magnitudes are concerned. This means that we want the test ban to be enforcible, or limited to those explosions that we can detect with present techniques.

What the Holifield hearings in April established was that the basis of this proposal was technically sound. In all essential points this proposal was accepted by the Russians.

Since the question is being asked, where does our detection capability stand? With the 1958 Geneva network of stations we can detect underground tests of magnitude 20 kilotons or larger ones in Nevada type geological conditions. There are about 130 earthquakes above magnitude 4.75 (20 kilotons equivalent) annually in Russia; 50 percent of them would be identifiable as earthquakes—not explosions—by the first motion of the seismographic recordings. This would leave about 60 events per year unidentified.

With a slight extension of the net from 20 to 30 stations inside Russia as suggested by Dr. Richard Latter, one can improve the detectability of 20 or more kiloton events, leaving only 10 unidentified events per year. This makes it possible to reveal clandestine nuclear tests by on-the-spot inspection.

The idea of concealing large nuclear explosions in cavities can't be taken quite seriously. Natural cavities (which are usually too small), and big artificial salt domes, constructed for the purpose, are the proposed means of achieving decoupling. Though such an Albert Latter hole is technically possible, it usually cannot be dug secretly, even if we disregard information leaking through defectors from behind the curtain.

We are, however, by no means powerless against muffled bomb tests in cavities, and it is in this context in which I proposed a network spacing of 125 miles instead of the 1958 Geneva network spacing of 600 miles. In such a net we would detect even the muffled explosions of 20 kilotons, decoupled to 70 tons. This would mean some 600 stations if we put them evenly all over Russia.

But it would only be necessary to put the stations this close in the seismic regions, that is, in regions in which there are many earthquakes and in regions where there are possibly salt domes. If you spread them this close in those regions only, you would need about 200 stations inside Russia.

The extra stations would be of the small unmanned type which are relatively inexpensive, costing only about $100,000 apiece. I am confident that, given 2 years' time, unmanned stations can be developed which are tamperproof in the sense that it is possible to know if they have been tampered with.

After we have been forced to discuss technical details about concealment for over a year, the next round, on the technical level, should now go to the improvement of detection systems. Several proposals have been made for improved detection schemes in the well-known Berkner report of March 1959.

But it is a great mistake to inject a demand for hundreds of stations in Russia into the negotiations at this point. This is a position to fall back on in a couple of years if there is no improvement in our techniques of detection. And that is not at all hopeless. The really important issues are not these technical details. It makes no sense at all to go for 100 percent security in this field while depending entirely on the good will of the Russians in much more important fields.

HERBERT JEHLE.

HIGH COST OF MEDICAL CARE CRUEL BURDEN TO AGED

Mr. PROXMIRE. Mr. President, the sincere and unsolicited letters we all receive on the question of medical care for our senior citizens go to the heart of the issue and, properly, to the hearts of us all.

I have here a letter that contains a simple but compelling lesson in arithmetic that cannot be denied and a plea that must be heeded. A couple receiving $96 a month on social security can not well afford $11.50 for health insurance. Millions of aged, of course, receive far less than this. What are they to do? I ask unanimous consent to have it printed at this point in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

MY DEAR SENATOR: With the tabling of the Forand bill it looks as though nothing will be done this session for aid to older people. This is a pity. There is no place where the need is greater. Let me give you an example:

A couple we know have a total social security check of $96. They have carried Blue Cross health insurance for more than 20 years. This week they were notified that the monthly costs have now risen to $11.50.

Also they cannot carry any other similar coverage without forfeiting their Blue Cross protection.

In addition a change has been made in their policy requiring them to pay 20 percent of the first $300. This is for 70 days hospitalization, unless 90 days have intervened.

$11.50 out of $96. just for health insurance is prohibitive. And of course it will go higher, as it does every year.

With our President and many other high-salaried members of Government beneficiaries of nonprivate systems it seems hardly fair that they should be indifferent to the tragic needs of millions of aged. There is nothing the aged fear more than what can happen in case of extended illness.

I am hoping you will exert your influence so that the present Congress will do something in this direction.

Sincerely,

——— ———.

EXPANDED AIR POLLUTION RESEARCH AND CONTROL EFFORTS NEEDED

Mr. KEATING. Mr. President, I call attention today to an editorial which appeared in yesterday's New York Times comparing the air pollution control programs of Los Angeles and New York City, and calling for greater efforts, at all levels of government, to curb and control the amount of harmful substances in the air above our Nation's major metropolitan areas.

I ask unanimous consent that the editorial from the New York Times be printed at this point in my remarks.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the New York Times, May 24, 1960]

SMOKE PROGRESS—ELSEWHERE

Officials of New York City's Department of Air Pollution Control have been advised that the new budget of the Los Angeles County Air Pollution Control District in California is $3,640,000, compared with the $674,380 budget for the New York department. Los Angeles has a staff of 458, and some private help in addition; the New York department's staff numbers 111.

Yet Los Angeles officials are not satisfied and are looking around for ways to improve matters. The county engineer's office out there has reported that in recent years air pollution control "has only maintained the status quo on smog, since State legislation to control the auto exhaust, the major contributor, has only recently been enacted."

Accordingly, the county engineer summed up, humbly and modestly we think: "In view of the small inroads thus far in actually reducing smog, our officials seek all information available on legislation and other control actions by the many jurisdictions that have attacked the air pollution control problem." We commend the Los Angeles diligence to our own city government, and point out that the effectiveness of New York City's antismoke efforts must be directly related to the availability of funds and facilities.

Mr. KEATING. Mr. President, the subject of air pollution control has increased markedly in importance over the past several years.

There is often a tendency to limit the discussion of air pollution problems to certain west coast metropolitan areas in which this matter is especially serious. My colleagues in Congress from the State of California have devoted a considerable amount of energy to the control and alleviation of smog conditions in the Los Angeles area and in other west coast communities.

I want to make it clear, Mr. President, that the consideration of this subject must not be limited to Los Angeles and the west coast. We need to analyze and deal with it in all of the areas in which smog conditions exist or in which there is even a potential danger that this problem will become serious in the future.

In my own State of New York, New York City, as evidenced by the above editorial, has an active air pollution control program. Buffalo is becoming increasingly concerned about smog conditions. Other large cities, such as Cleveland and Houston, are in the same position. Both Pittsburgh and St. Louis have launched intensive and highly successful programs to reduce air pollution.

In all, 250 American communities have some form of local or State air pollution control programs. New York's Air Pollution Act was enacted in 1957. It establishes a State Air Pollution Control Board, which has been devoting considerable effort to problems in this field.

Under the Air Pollution Control Act passed in 1955, the Federal Government, through the Public Health Service, has spent some $20 million for research on the causes and possible methods of curbing air pollution conditions harmful to the health and safety of the citizens of our Nation.

Mr. President, I was extremely pleased that the Senate Labor and Public Welfare Committee last week approved H.R. 8238, an act passed by the House on August 17 of last year, which provides for a study of the effect of motor vehicle exhaust fumes. The House bill calls for a 2-year investigation by the Surgeon General as a public health matter.

I am hopeful that this bill will be enacted and that the Surgeon General's research reports will indicate what, if any, type of governmental controls are necessary in this area and, if necessary, at which level of government they should be imposed. Basically, I believe that, whenever we can, it is desirable to deal with air pollution control matters relative to such factors as automobile exhaust fumes through voluntary action on the part of private groups. At the same time, I have personally looked into various legislative approaches to this problem, should it be found that such approaches are necessary.

Mr. President, on the matter of automobile exhaust fumes, I noted with interest that Secretary Flemming of the Department of Health, Education, and Welfare, in testifying on February 24 before the Subcommittee on Health and Safety of the House Committee on Interstate and Foreign Commerce, commented on the extent to which automobile exhaust fumes contribute to metropolitan air pollution conditions. This was in connection with the renewal of the Air Pollution Control Act, which is

presently pending before the relevant committees of Congress. Although Secretary Flemming does not feel that Federal action is presently needed in this field, he placed considerable stress on his opinion that automobile air pollution problems must be dealt with on a national basis.

Mr. President, I ask unanimous consent to have inserted at this point in the RECORD extracts from the testimony.

There being no objection, the extracts were ordered to be printed in the RECORD, as follows:

Emission of pollutants from automobile operations is a common phenomenon throughout the country. These are of concern in various areas because of irritative characteristics, their possible adverse effects on health, damage to vegetation, and interference with visibility. It does not appear feasible that this type of problem be approached on an individual community basis. The national character of automobile manufacture and distribution is such that consensus as to desirable actions should be obtained on a broader geographic basis.

Mr. KEATING. Mr. President, I am not prepared to discuss the more technical aspects of the various devices for reducing the amount of hydrocarbons in the air from automobile fumes in the air. I do, however, call attention today to an excellent and thoughtful article on this subject printed initially in Fortune magazine and reprinted in abbreviated form in the April issue of the Reader's Digest. I ask unanimous consent that the Reader's Digest article to which I just referred be printed at this point in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

AUTO FUMES—AND THE AIR YOU BREATHE

(By George A. W. Boehm)

A malodorous nuisance in many cities, these exhaust fumes can become a positive menace if they remain uncontrolled. There are practical solutions to the problem—California and the auto industry are edging toward them.

The automobile is now the only major source of air pollution in American cities that is not under some degree of control. Through the switch from soft coal to oil and gas in industry, and through the use of filters and precipitators on industrial chimney stacks, smoke and soot are now kept within bounds. But comparatively little has been done to reduce automobile fumes.

These are a growing nuisance, if not menace, in almost every big city. They are malodorous. In some cities they are the chief cause of haze and smog. Health experts suspect they may be partly responsible for the alarming urban rise in lung cancer.

The trouble comes from a small but potent fraction of gas vented through the crankcase or tailpipe. The modern internal-combustion engine is not 100-percent efficient. The gasoline it burns the way it is supposed to emerges from the cylinders as water and carbon dioxide—the harmless products of complete combustion. But even a perfectly tuned engine wastes a little fuel, about 2 percent on the average. This waste, unburned or partially burned, carries the hydrocarbons that worry pollution-control experts.

We need not banish automobiles to end the trouble. Since 1953, the auto industry has spent $6 million on air-pollution research and now has half a dozen feasible ways of reducing fumes. Engineers know that for perhaps $10 per car they can eliminate 50 percent of the hydrocarbons; for perhaps $300 they can do an almost complete job. What we need now is to decide officially that something must be done, and how much.

The smog in Los Angeles is notorious. Now other cities—Cleveland, Buffalo, and Houston among them—are beginning to complain about smog chiefly in downtown areas. To date, only California has been moved to act. At the legislature's order the State board of health set standards for exhaust purity to be considered as the basis for laws requiring control devices on California automobiles. Under the proposed program, every car manufactured after January 1, 1961, for sale in California must be equipped with an approved exhaust-control device. Any solution that proves acceptable in California may be applicable in other areas where auto exhaust is a serious problem.

Where air pollution is only a marginal problem, simple and cheap methods of reducing hydrocarbons may prove adequate. The simplest is a gadget that recycles gases from the crankcase vent back into the carburetor. Getting these gases burned in the engine can eliminate roughly 40 to 50 percent of the total hydrocarbon emission.

Another simple method of reducing hydrocarbons is to give a car regular maintenance. (How much hydrocarbon comes out the tailpipe depends largely on the condition of the engine. One fouled spark plug can double the emission of hydrocarbons.) Last year a group of Chrysler engineers compared the fumes from their engineering department's fleet of 40 service cars, which had had a tune-up every 5,000 miles, with the fumes from a sampling of privately owned automobiles in Los Angeles. The comparison was eye-opening. The carefully tended company cars gave off 60 percent less hydrocarbon and carbon monoxide than the average Los Angeles car.

But such halfway measures as crankcase recycling and regular maintenance don't satisfy California air-pollution officials. Smith Griswold, director of the Los Angeles County Air Pollution Control District, estimates that at least 90 percent of the tailpipe emissions will have to be eliminated if smog is to be rolled back to the level of 1940, when there was occasional haze but no eye irritation.

How?

After 6 years of work, Ford, General Motors, and Chrysler have each come up with a practical device which, doubling as a muffler, burns up the hydrocarbons on their way out the exhaust pipe. The Chrysler device does this by concentrating the normal heat of the exhaust and using it to heat the hydrocarbons to 1,600°, at which temperature they burn readily. The Ford and General Motors devices pass the exhaust gases over pellets of a ceramic-like catalyst which makes the gases burn at relatively low temperatures—as low as 700° in one Ford model.

The devices vary in effectivenes. They burn from 60 to 90 percent of the hydrocarbons, cost from $100 to $300, and require maintenance or replacement after anywhere from 8,000 to 25,000 miles.

Although the Big Three's burners are still only in the advanced development stage, any one of them can be made ready for production within less than a year. It makes little difference to the manufacturers which burner is chosen. All the companies—Studebaker-Packard and American Motors as well as the Big Three—are bound by a cross-licensing agreement to share patents and designs free of charge.

A more radical and direct proposal for eliminating hydrocarbons has come from Ralph M. Heintz of Los Gatos, Calif. Heintz, now retired, was the cofounder and engineering ace of Jack & Heintz, the Cleveland firm that makes aircraft and missile parts. He insists that the only really satisfactory solution to the exhaust problem is to burn the fuel completely in the engine. Installing afterburners to consume wasted gasoline, he holds, is "like inventing rubber gloves because your fountain pen leaks."

Heintz has modified automobile engines so that they emit about 70 percent less hydrocarbon than the conventional engine. Working with Prof. Alexander L. London of Stanford University and E. Finley Carter and Dale Hutchison of Stanford Research Institute, he has replaced the carburetor with auxiliary combustion chambers, one for each cylinder. From these chambers just enough burning fuel is fed into a large excess of air in the cylinder to satisfy the immediate power demand of the engine. The result is inherently more efficient combustion.

After 2 years of experimentation, Heintz has a sound engine which can probably be improved further. It clatters a little, like a diesel, and it cannot yet match the power of conventional carburetor-fed engines. On the other hand, it gets several extra miles to the gallon.

Since the proposed California legislation primarily affects new cars, there won't be much reduction in California smog for several years. (Turnover of cars is approximately 50 percent in 6 years, 85 percent in 12 years.) And the program will be costly. At, say, $150 per car, and at the present rate of turnover, Los Angeles alone will become a $40 million per year market for burners.

There will have to be inspection stations. To inspect each car twice a year, Los Angeles will need about 1,000 stations. An inspection instrument which may prove suitable has recently been put on the market at $1,475. This cost, multiplied by 1,000 stations, plus the pay of 1,000 technicians, amounts to a sizable sum.

But the nuisance of smog is sizable, too. Los Angeles and other American cities will have to weigh the intangible cost of that, as well as the possibility—still to be determined—that smog may play a deadly role in promoting lung cancer.

Mr. KEATING. Mr. President, I am very much concerned about the hazard to the health of our Nation created by harmful substances in the air. This problem cannot be tossed off lightly. The air we breathe must not become America's wastebasket.

WIRETAPPING LEGISLATION

Mr. KEATING. Mr. President, it was necessary for me to be absent from the Chamber yesterday when the distinguished Senator from Arkansas [Mr. MCCLELLAN] urged that we take action at this session to make it clear that wiretapping by State law-enforcement officials, under court order, did not run afoul of Federal law. I have since had an opportunity to read his statement and I want to commend him for his excellent analysis of the problem.

There is no doubt that the present law is seriously hampering law enforcement, is placing State district attorneys in jeopardy of Federal prosecution, and is establishing the telephone as a privileged instrument for criminal operations. The whole problem of eavesdropping, of which wiretapping is only one aspect, needs to be explored by Congress, and I have introduced a comprehensive measure for this purpose.

The immediate and urgent necessity, however, is to prevent the suppression of

evidence obtained against organized crime under State court orders. Enactment of S. 3340, which is modeled after a bill introduced by Senator McCLELLAN in the last Congress, would accomplish this limited but essential objective. Certainly, where State statutes require court orders before wiretapping can be done, the evidence thus obtained should be admissible in evidence and should not be held to violate any Federal law.

I am very grateful to the Senator from Arkansas for the very strong support which he gave to this point of view, and I am confident that his powerful influence will be helpful in advancing such legislation.

SUMMIT CONFERENCE WHICH WAS NEVER HELD

Mr. YOUNG of Ohio. Mr. President, last Friday at 2 o'clock many thousands of Government workers were given a holiday for the remainder of the week and told to greet President Eisenhower. Some schoolchildren were dismissed. Units of the Armed Forces including bands, were ordered to the National Airport and to places along the route selected for President Eisenhower's return to Washington. Newspapers editorially urged a grand welcome for President Eisenhower—in fact, even included printed maps showing the route, thus catering to the well-known American habit of loving a parade.

Mr. President, the cruel fact is that President Eisenhower should not have been greeted as a conquering hero. What did he conquer? What great accomplishment was his at the summit conference?

Were not American citizens and leaders of friendly nations shocked in the first instance over false statements issued by a panic-stricken administration official who should have remained silent? Heads of state of friendly nations may well have been shocked by the ineptness of officials in the Eisenhower administration in the varying statements following the time the U–2 was downed some 1,300 miles within the borders of the Soviet Union.

These officials suffered humiliation, along with the citizens of our Nation, over the mistakes made by officials in NASA and the State Department. They could well reason that if appointive administration officials failed in this emergency, how likely it is that they would likewise fail if even a greater emergency were suddenly thrust upon us by Soviet action or aggression.

President Eisenhower, and the entire country with him, sustained a humiliating rebuff. Due to this failure and to ineptness and mistakes, the summit conference never took place. Whatever hope there was among leaders of the nations of the free world that some good result might come from a conference at the summit, was destroyed.

Our appointed officials let the President down. They utterly failed to do anything other than to furnish Khrushchev with grounds for bombast, bluster, and uncontrolled vituperation.

Officials guilty of authoring the shockingly false and then conflicting statements and flagrantly failing, at a critical time, in the performance of their duties, should be downgraded or dismissed from the public service. Better yet, they should have been seated in an automobile directly following that of the President after his arrival at the National Airport. It would have been appropriate to have draped that automobile in mourning over the hopes that were dashed partly as a result of their failures. It is unfortunate that the one principally responsible was not installed as a dummy in that Soviet satellite now in orbit.

It is true that our President conducted himself—in the face of charges from Khrushchev and the disappointments of the heads of State of our allies—in a dignified manner. He showed he could take all the abuse Khrushchev was capable of giving. I wish he had retaliated with some sharp language. But it is unfortunate his own officials—by clumsy and confused mishandling—distorted facts, permitted officials of NASA to publicly state that our aerial observation plane was on an innocent mission gathering information on weather, and then followed this with State Department officials denying that the pilot of the plane was spying.

This is an incredible performance.

Khrushchev disclosed the evidence, and then these same officials who should have said "we are investigating the incident," or remained silent, issued the provocative statement that those whose responsibility it is to defend this Nation would be failures if they did not do everything necessary, including spying, to "overcome the danger of a surprise attack" from the Soviet Union. This language clearly applied to the future.

A State Department official, very unfortunately for us, said: "Well, I will leave it to your interpretation." Then, apparently without notifying Vice President NIXON—who publicly defended aerial reconnaissance spying as necessary to penetrate the Iron Curtain and secure for our Armed Forces and for our allies information as to missiles on launching pads and aggressive preparations behind the Iron Curtain, and asserting that it was necessary to continue these defensive actions—this same appointive official pulled the rug from under him and handed Khrushchev an additional propaganda weapon for his bluster and bombast. Our President announced discontinuance of such aerial flights, which had, a couple of days before, been declared so necessary. Both President Eisenhower and Vice President NIXON were let down by administration officials who proved inadequate to cope with an unexpected misfortune.

It is time for Americans to hold a postmortem. Their hopes died in a welter of contradictory statements which should never have been made and which led to insult of the leader of our Armed Forces and national humiliation.

It is due to our own failures that Khrushchev was given opportunities which he eagerly grasped, to stifle a conference which promised some hope to peace-loving peoples the world over. He did this, in a lusty manner, before it even commenced.

Then, to compound confusion, Secretary of Defense Gates, from Paris, called for an Armed Forces alert for Sunday, May 15. We rattled our sabers; Khrushchev menaced with his missiles.

The prestige of the United States has been lowered due to clumsy, embarrassed, contradictory, and frequently false statements and conflicting explanations. In truth and fact, Communist Russia has had its spies in America constantly during the past years.

There was no excuse for inept and inadequate failure of CIA and other officials to cope with an unexpected mischance. We, unfortunately, were placed on the defensive, where we should not be. Our President was insulted. Officials of his administration were at fault and caused his discomfiture and frustration.

The truth is that there is little indication—in fact, no indication—of any accelerated war threat, but the tension of the cold war has become more evident.

Our citizens have not, as yet, fully recovered from the shock to our pride and confidence. When we do, we should take to heart the lesson that in this 20th century, we must have in the White House a full-time President who does not delegate responsibility and leadership. In this grim period, the times demand that; and we should have confidence that following the coming election, we shall once again have a strong leader as President and Commander in Chief of our Armed Forces.

It is the irony of fate perhaps that President Eisenhower, following a period of years when Dame Fortune had smiled upon him, now finds the law of averages catching up. He sought a relaxation of warlike tensions. Increased warlike tensions resulted. He hoped, in the final months of his administration, his would be a constructive achievement in face-to-face conferences with a dictator, to stem the tide of aggression and promote permanent peace.

Our high hopes for that success were denied—not so much by Khrushchev as from the Eisenhower lack of leadership and failure of our own officials in high places of authority.

Now it is for us to tear aside this false facade presented in the carefully planned Presidential parade from the National Airport, and for us to rebuild—as painful and gradual as it may be—toward further face-to-face conferences, seeking, as a powerful nation, to end the armaments race but maintaining adequate safeguards.

To accomplish this we must have great and strong leadership, a President with vigor and industry, who devotes full time to his job.

PUBLICATION ENTITLED "DESIGN OF SMALL DAMS"

Mr. MURRAY. Mr. President, as chairman of the Committee on Interior and Insular Affairs of the Senate, I desire to call attention to a new publication being issued by the Bureau of Reclamation, Department of the Interior, entitled "Design of Small Dams."

This publication, it seems to me, is a substantial contribution to western water development. In fact, it should be of nationwide interest since the design of small dams concerns areas throughout the country. I desire to commend the Bureau of Reclamation for its foresight and ingenuity in this field.

Of course, much of the work on this publication was done under previous administrations like that of former Secretary Oscar L. Chapman and former Commissioner of Reclamation, Michael W. Straus, as well as the former chief engineer of the Bureau, Leslie N. McClellan.

I ask unanimous consent to have printed in the RECORD at the conclusion of my remarks a copy of a letter to me under date of May 20 from Hon. Floyd E. Dominy, Commissioner of Reclamation, and an advance copy of a news release from the Information Service of the Department of the Interior.

There being no objection, the letter and news release were ordered to be printed in the RECORD, as follows:

U.S. DEPARTMENT OF THE INTERIOR,
BUREAU OF RECLAMATION,
Washington, D.C., May 20, 1960.

Hon. JAMES E. MURRAY,
Chairman, Committee on Interior and Insular Affairs, U.S. Senate, Washington, D.C.

DEAR SENATOR MURRAY: Knowing of your deep concern over the need for nationwide conservation of natural resources and your familiarity with the Bureau of Reclamation's work toward this end, including our engineering structures in the Western States, we believe you will be interested in the new publication Design of Small Dams.

We believe the technical assistance offered in this publication will be of great value in the furtherance of the development of the water resources in this country. It should be of particular assistance in the development of small water resource projects in the West, where many small dams remain to be constructed, in that it will make available to private engineers and engineering firms that would perform the engineering services for such projects, the specialized technical knowledge and experience of the Bureau of Reclamation as applied to low dams. The demand for such assistance was so great that an earlier publication had been exhausted, and the technique of design and construction so advanced in 22 years that it would be a disservice to simply reprint the old book, which was sponsored by the Water Resources Committee of the National Resources Committee.

It is our belief that the store of knowledge and 50 years' experience of a Government agency in this field should be available to the public. It can be readily appreciated that passing on this technical knowledge to the public will benefit not only those directly associated with the Bureau of Reclamation program, but the thousands of conservation districts, engineers, and planners interested in water conservation and utilization. We believe it will provide a guide to the information and data needed for the hydrological and structural design of small dams, provide specialized technical knowledge in readily usable form for engineers who are new in the field of dam design, and greatly simplify the design procedures for low dams. From this should come economy in engineering and design costs.

No doubt this publication will be of interest to you and your committee. Should additional copies be desired for your use, do not hesitate to let us know.

Your interest in and continued support of the reclamation program are most appreciated.

Sincerely yours,
FLOYD E. DOMINY,
Commissioner.

NEW RECLAMATION BOOK PRESENTS DATA FOR USE IN DESIGN OF SMALL DAMS

A new technical book, "Design of Small Dams," has been published by the Bureau of Reclamation as a guide to small water resource organizations, public agencies, and private engineers engaged in the design and the construction of small dams and retention reservoirs, the Department of the Interior announced today.

In announcing the release of the new publication, Commissioner of Reclamation Floyd E. Dominy said that because of the Bureau's international reputation in the field of dam design there was a wide, continuing demand by the public for technical assistance by the Bureau's staff in the planning for and design of small dams. He said this demand was becoming more acute since an earlier Government publication, "Low Dams," published in 1938, had been out of print for several years during the current worldwide boom in water resource development.

Mr. Dominy explained that the public is entitled to the knowledge and experience amassed by the Bureau in a half century of dam building. "We believe," he said, "that making this information public is not only a substantial technical contribution to the water conservation program, but also that it will help bring about full upper-basin water development, with correlative benefits to large downstream storage reservoirs. Furthermore, by stimulating private and local initiative to construct the smaller dams, it will be contributing to the overall Federal policy of encouraging private capital and non-Federal agencies to assume a large and challenging public resource development task without turning to the Federal Government."

In the preface of the 611-page volume, Commissioner Dominy pointed out that the new book is intended to serve primarily as a guide to safe and economical practices for those concerned with the design of small dams in public works programs in the United States. "The book will serve this purpose in three ways," he said. "(1) It will provide engineers with information and data necessary for the proper design of small dams. (2) It will provide specialized and highly technical knowledge concerning the design of small dams in a form that can be used readily by engineers who do not specialize in this field. (3) It will simplify design procedures for small earthfill dams."

Only the more common types of small dams now being constructed are discussed. These include concrete gravity, earthfill (rolled type) and rockfill dams. Emphasis is placed on the design of the common, rolled earthfill type. Small dams are defined as earthfill and rockfill structures with heights less than 50 feet above streambed, and concrete dams on previous foundations whose "head" from headwater to tailwater does not exceed 20 feet.

In addition to discussions of the design of dams, spillways, and outlet works, the book contains chapters on project planning, flood studies, foundations and construction materials, diversion during construction, and maintenance and operation. Appendixes are provided on hydraulic computation, construction of embankment, concrete in construction, sample specifications, and other supplementary features. A total of 331 illustrations and engineering plates is included.

The book was prepared by Bureau personnel at the Commissioner's office in Denver, Colo., under the direction of Grant Bloodgood, Assistant Commissioner and Chief Engineer, and L. G. Puls, Chief Designing Engineer. More than 30 engineers and many technicians participated in the preparation of the book and in its critical review. Special recognition was given to O. L. Rice, Chief of the Dams Branch; H. G. Arthur, Supervisor, Design Unit, Earth Dams Section; and E. H. Larson, Head of the Manuals and Technical Records Section, all of the Denver engineering staff, and to other Federal agencies which provided technical material.

"We believe that 'Design of Small Dams' not only will provide guidance in the most common type of water storage development, but that it also will furnish a technical reference reflecting the knowledge and experience the Bureau of Reclamation has gained through extensive operations in this field during the past half century," Commissioner Dominy said.

Copies of the new publication may be obtained from the Superintendent of Documents, U.S. Government Printing Office, Washington 25, D.C., or the Bureau of Reclamation, Denver Federal Center, Denver, Colo., Attention 841. The price is $6.50, postpaid.

AERIAL RECONNAISSANCE

Mr. SALTONSTALL. Mr. President, I ask unanimous consent to have printed in the body of the RECORD an article entitled "The Business of Aerial Reconnaissance," written by Holmes Alexander, of the McNaught Syndicate.

The article is significant and helpful both because of its timing and its content, with particular reference to the events of recent days on the Eurasian land mass and in Paris.

Mr. Alexander discusses the Tactical Air Command's aerial reconnaissance function. He emphasizes the vital importance of TAC's photographic reconnaissance mission as distinct from similar strategic operations, and calls attention to certain technical limitations which we might largely remove by making available for this mission up-to-date processes and developments already in use in private industry.

The crucial role of this TAC function in our national defense, particularly as we enter a new phase of the cold war, and the ease with which we may be able to effect needed improvements make this article and its proposals important reading for all Senators.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE BUSINESS OF AERIAL RECONNAISSANCE

(By Holmes Alexander)

SHAW AIR FORCE BASE, S.C.—Unbeknownst to most Americans, something like 3,000 personnel and 288 aircraft of the Tactical Air Command are very much in the business of learning and practicing frontline, up-to-the-minute aerial reconnaissance.

This work should be distinguished from "spying" and from the gathering of "strategic" information about enemy capabilities. Our Tactical Air Command (TAC) deals with winning the battle, while Strategic Air Command (SAC) deals with winning the war. But by the very nature of midcentury facts of life, the first battle could be of more importance than ever before in history. Moreover, the potential of nuclear knockout punches on both sides means that dispersion of troops, concealment of weapons and especially the mobility of the new missiles take on a crucial significance. The ever expanding and ever refining science of airborne photography gives our side a chance to know not what the enemy can do, or

plans to do, but what the enemy has actually moved into a warlike position to do just a few minutes previously.

Between the time this piece is written and published, the Sino-Russian Communists may have cocked a fist for a surprise assault in the Far East against South Korea or Formosa, or in West Europe by intercepting our land or air access into Berlin; but it is most unlikely that the enemy could move so much as one missile launcher or one flight of planes without being caught in the act by TAC cameras.

There is a TAC reconnaissance unit officially located at Misawa Air Base, Japan, but it is roaming at will throughout the Far East commands. There are four squadrons of daylight reconnaissance planes, designated RF–101's, at Laon, France. There are two more such squadrons at Phalsbourg, France. In addition, there are four squadrons of night reconnaissance planes, designated RB–66's, based at Schulethorpe, England.

Apart from these oversea units, there are reconnaissance wings operating from three home base air forces—the 9th near Sumter, S.C., the 12th at Waco, Tex., and the 19th at Seymour-Johnson Air Base, N.C. These Zone of Interior TAC wings are, in fact, ready for duty anywhere in the world. Two summers ago they turned up in Lebanon and Formosa with less than 3 days' notice. On top of the regular units, there are four National Guard reconnaissance wings—operating out of 22 fields in 12 separate States.

These data are given in some detail because it may well be that the United States of America has passed into the cold war phase where tactical, frontline, instantaneous intelligence is more significant than any other kind. Today, the galaxy of Russian satellites in the sky, and the long-range plans of world communism to subvert and invade Latin America and Southeast Asia may not be nearly so vital as the enemy's intention to move troops or weapons down a highway, into a forest, or to shift a flight of aircraft from inland bases to the coasts and borders.

If the enemy does these things, we will have photographic proof—dropped by parachute for fast development—in a matter of minutes and hours. And we will have the chance—if we dare—to strike, rather than wait and be struck.

One of the prime purposes of your reporter on this trip was to learn what our tactical reconnaissance air units need to press their work toward a greater degree of perfection. I am told that the following methods exist in our photographic industry, but are not today as available as they should be for operational and training units:

1. A simple device within the navigational equipment to mark the exact geographical location of aerial pictures. At present, headquarters must rely largely on the memory of pilots who may be wounded or exhausted.

2. Infrared developments to improve night photography and bad weather reconnaissance.

3. Dry film processing.

4. High-resolution radar equipment of a more advanced stage than presently available.

5. The development and assignment of an airplane for day-night reconnaissance. At present, the RF–101 works at supersonic speeds by day and the RB–66 works at subsonic speeds by night.

Most of these improvements can and should be had almost immediately. We need to know—what's the enemy up to now?

DAVID E. LILIENTHAL ON POST-SUMMIT U.S.A.

Mr. JAVITS. Mr. President, I ask unanimous consent to have printed in the RECORD an article by David E. Lilienthal, first Chairman of the U.S. Atomic Energy Commission, and before that Chairman of the Tennesese Valley Authority. In an eloquent way Mr. Lilienthal has recognized the firm challenge facing our Nation for a long time and now, upon the dawn of what must be a new postsummit era of American consciousness of the world's situation, calls for action—action of which only freemen are capable because it results from their most profound personal convictions.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the New York Mirror, May 17, 1960]

LILIENTHAL POINTS A WAY TO SURVIVAL

May 1960, may be remembered as the month when we Americans returned to the harsh reality of the world as it is. Once again our feet are on the rough and long and painful road to survival. Two years of wishful thinking and fantasy about the approach of an era of peaceful coexistence and nuclear disarmament are about to come to a close.

Three recent events can be thanked for this awakening:

First, the demonstration of how little substance there is—in terms of survival—to all the fanfare over summit meetings outside the United Nations, and the essential hollowness of ceremonial visits of heads of state and lesser lights.

Second, the collapse of the technical, and therefore the political basis for an agreed ban on the testing of nuclear weapons.

Third, the furor over an American reconnaissance flight into Russia.

The barrenness of trying to slow up or halt the nuclear arms race by an inspection agreement on an issue so collateral and essentially remote from disarmament as a ban on the testing of nuclear weapons and the impending debacle of the summit conference are events that the free world may view as a turning point of historic proportions. Something graphic was needed to awaken the people of America and Britain to the facts of life.

The major significance of the crackup of one of our reconnaissance planes within Russia, it seems to me, is that this episode dramatizes for the average citizen what has, quite unwisely I think, been hidden from him by the words of many of the world's political and intellectual leaders, West and East—namely, that the not-so-cold war has not and cannot in fact be abated by wishful thinking or a verbal escape from the evidence of the Soviet's determination to dominate the world, and the free world's equal resolution to remain free of such domination, come what may.

Once again we may begin to live in the world of reality, which is a world of constant danger. It may continue to be just that for a generation or more.

To face up, as now I believe even the most optimistic must, to the realities of how wide is the chasm between the Soviet world and our own is, I think, the only hope for the avoidance of war, and for building a solid foundation upon which two basically opposite concepts of life can manage to live side by side.

The sure road to war is to live in a fantasy, in a world that does not exist. Neville Chamberlain at Munich demonstrated how tragic this kind of escape from reality can be. World War II was direct product of that kind of wishful thinking. The French confidence that the impregnable Maginot line made an attack by Germany impossible is the older equivalent of the current doctrine that nuclear weapons possessed by both antagonists have produced a stalemate that frees the world from the danger of a nuclear war.

It is through such a dream world that the West has been passing. During this incredible period, however, the hard-bitten, realistic, and aggressive Communists were softening up our American resolution—their prime target.

They flooded us with horror stories of mutual suicide by atomic warfare and alluring but empty offers of peaceful coexistence, total disarmament, and an end to nuclear weapons.

They realized that if by threats and promises our will to resist was eroded, freedom might perish without a single shot being fired. I think we must admit that their campaign was partly successful.

Now we are ready, I hope, to put aside the superficial hopes engendered by the spirit of Camp David, or the notion that visits of Russians to this country, and Americans to Russia, highly desirable and beneficial as they are in themselves, have any basic relation to survival. We are now ready, I hope, to recognize that these are only sideshows that to many have obscured the real and basic obstacles to getting along with the Soviet system.

We are, I hope, ready to put aside, too, the wishful thought that the Russian political leadership desperately wants disarmament because they must keep their people happy with consumer goods, and cannot do so unless their huge costs of armament are dismissed.

Perhaps now we can come to grips with the central problem. That is to return to our efforts, exhausting but essential, to learn, step by cautious step, case by case, the process of negotiation with political leaders whose concept of life is almost as far from ours as if they were being on another planet.

It is in the American temperament to be sanguine, to believe the best of others. It is also in the American temperament to face up to whatever must be faced, but only when some dramatic fact forces us to. The story of Pearl Harbor is a classic in this category.

There is a wealth of impressive evidence that the American people can face hard, cruel, and disappointing facts, and can act with vigor, toughness, tenacity, and firmness. Here, I think, is the hopeful side, and the saving grace of the rather sudden disillusionment of the past weeks.

It was American firmness and readiness to face up to facts that helped get the Red Army out of Iran, that rebuilt our Armed Forces and thereby kept the Chinese out of South Korea, that saved Greece and Turkey, that helped produce a peace treaty for Austria, that saved Berlin by the amazing airlift. On almost any of these acts of resolution, the Soviets might have gone to war. They didn't.

We are dealing with a revolutionary and highly successful enemy. We must be at least as realistic as the Russians have shown themselves to be. We do not want to compete with them by imitating their closed society, their lying to their own citizens. We need above all to be ourselves, Americans at our best. And at our best we do not flinch from facts, we do not insist that our public servants feed us only good and pleasant words, but that they tell us the truth, however distasteful.

Let us hope that the debacle of the summit and the maneuvers of the nuclear test ban negotiations will mark the beginning of a period of realism in our dealing with the Soviet.

A peace that is no peace, a "thaw" that is no warming up except in the most superficial ceremonial sense, a consequent lulling and deterioration of American resolve and will to stand firm for what we believe—this is not the road to peace. On the contrary, it is the road to disaster.

Stockpiled atomic and other weapons are inert machines. They have no deterrent

value whatever, unless there abides the will to use those weapons rather than surrender freedom.

There is as yet no evidence that facing up to reality in dealing with the Soviet adds to the risks that already exist.

My own opinion is that the greatest risk of all would be to continue to nurse the illusion that international tension is relaxed because we ourselves have been relaxing.

ANOTHER SUMMIT—LABOR-MANAGEMENT CONFERENCE

Mr. JAVITS. Mr. President, the past week has seen the complete collapse of a summit conference on the international scene and the failure of another summit conference on the domestic scene. The urgency of the threat to free institutions throughout the world was made clear by Chairman Khrushchev when he scuttled the meeting of the leaders of the free and Communist worlds. Let us not have any failure of a U.S. labor and management summit meeting now. This is the danger faced by and the pitfalls so far in the way of the President's labor-management summit meeting. See the attached affidavit from the New York Times of May 23, 1960.

It may be fruitful, too, it seems to me, to give an underpinning to a labor-management summit and to place the work of forging mutual confidence and labor-management cooperation into the hands of those on the plant and community level whose immediate interest resides in such confidence and whose daily efforts must make such cooperation a reality. Mr. President, last February I introduced S. 3121, to promote increased productivity, and foster peaceful labor-management relations through the establishment in the executive branch of a bureau of productivity councils. This Bureau, jointly administered by the Secretaries of Commerce and Labor, would stimulate and encourage the establishment of productivity councils on the community level through regional advisory committees, pilot projects in various communities, and the distribution of information and publicity. I believe that this approach contains much hope for practical results because the spirit engendered by face to face discussion of mutual problems among men whose daily work depends for its success on the solution of these problems removes many of the obstacles standing in the way of agreement at summit conferences which take place in the spotlight. After the bases for cooperation have been put down at the working level, summit conferences have a chance for success.

The urgent need for labor-management cooperation to increase the productive power of the United States has been highlighted by the darkening international scene. The decade of the 1960's will see a greatly intensified economic struggle between the free world and the Communist bloc. In this struggle, the United States cannot afford to repeat the loss experienced during the 1950's of 340 million man-days of work and more than $15 billion worth of production—all as the result of labor-management disputes. In terms of the economic struggle, this figure represents almost as much as the United States spent for economic aid to the underdeveloped nations and as much as the entire cost of our missile program, excluding research expenditures, during the 1950's.

Mr. President, labor-management cooperation is a matter entirely in the hands of the American people. In this matter, we are not at the mercy of foreign powers and inimical interests. Only we could answer for any failure to act in our own self-interest. I do not think that the American people will accept such failure.

Mr. President, I ask unanimous consent to insert in the RECORD an editorial in the New York Times of May 23, which represents an expression of profound concern on this subject.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the New York Times, May 23, 1960]

AN EMPLOYER-LABOR SUMMIT?

The first meeting of the union-management summit conference has not given as much promise as the soundness and urgency of its objectives deserve. The mere fact that it has taken about 6 months even to get the first meeting and to complete the conference personnel suggests a lack of enthusiasm on at least one side. This impression is reinforced by the postponement of another meeting for 6 weeks or 2 months on account of other commitments of the members—which presumably seem to them more important.

Then the proposed makeup of the two groups has already disclosed disturbing differences of views. AFL–CIO President Meany has appointed the top officials of two of the most important unions to serve with him—men with nationwide experience in labor-management negotiations. Mr. Meany doesn't feel that the management representatives chosen by President Bannow of the National Association of Manufacturers are of equal stature, with one a president of a company that has had a strike by the union headed by a Meany appointee. Regardless of the obvious general competence of Mr. Bannow's designees, Mr. Meany's reservations are not good omens for summit success. But Mr. Bannow has promised to add some others.

As for the agenda, it looks as if the conference hasn't got that far. But surely there must be genuine agreement in advance of a meeting schedule of what is to be discussed and how—with an emphasis on a better mutual understanding by each group of the other's point of view rather than agreement on specific policies. Anyway, we wish the undertaking well in spite of the difficulties and dangers that seem to lie ahead.

"TROJAN HORSE" RECOMMENDATION BY CHICAGO CONGRESSMEN THAT DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE UNDERTAKE POLLUTION STUDY IN LAKE MICHIGAN

Mr. WILEY. Mr. President, as my colleagues may recall, there is a bill, H.R. 1, pending before the Senate Foreign Relations Committee. The measure would propose to divert large volumes of water—dangerously large volumes, I believe—from the Great Lakes Waterway system, for sanitation purposes at Chicago, draining into the Illinois Waterway.

As of now, the effort to enact such legislation, contrary to Great Lakes interests, has been consistently either defeated in Congress, or vetoed by the President. Now, however, the pushers of this ill-advised legislation are trying for an "end run" under the guise of a proposal offered by Congressmen O'BRIEN and YATES, of Illinois, which would provide that the Department of Health, Education, and Welfare appropriate $12 million for a study of pollution in the Great Lakes area. The proposal would also authorize the Chicago Metropolitan Sanitary District to divert an additional 1,000 cubic feet per second of water from Lake Michigan as part of this study.

The sudden interest of the Chicago Congressmen in a pollution study was merely an excuse to enable Chicago to carry out unauthorized diversion of water from Lake Michigan, contrary to the wishes and welfare of all the other Lake States.

The issue of further water diversion from the Great Lakes is now properly before the Foreign Relations Committee of the Senate and the Supreme Court of the United States. It is, therefore, unfortunate that a new effort is being made to bypass the regular responsible consideration of this issue by the appropriate legislative and judicial agencies.

Now, I want to say this: I am fully in favor of carrying out necessary and effective antipollution studies needed in the Great Lakes. However, let us not be fooled by this ruse for attempting to increase diversion of water from the Great Lakes.

Believing that the proposed amendment to the HEW funds before the Appropriations Subcommittee is a "Trojan horse" operation, I have contacted Senator LISTER HILL, chairman of the subcommittee on this matter.

To give my colleagues in the Senate the benefit of the subterfuge, which I believe is contained in the proposal, I ask unanimous consent to have a recent letter I submitted to Chairman HILL, printed in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

DEAR SENATOR HILL: I am writing to you in connection with the testimony presented before your subcommittee on May 5 by Congressmen O'BRIEN and YATES urging a special appropriation for the Department of Health, Education, and Welfare in order to conduct a pollution study in the Great Lakes area. As I shall proceed to show, this request for a study of pollution in the Chicago area is intended to serve as a Trojan horse. The request for a study of pollution is merely a guise to enable Chicago to carry out further diversion of water from Lake Michigan—contrary to the wishes and welfare of all other riparian owners.

I believe it was unfortunate that Representatives O'BRIEN and YATES came before your subcommittee in an effort to bypass the regular responsible consideration of the issue of further water diversion from the Great Lakes by the appropriate legislative and judicial agencies. The subject of the Chicago diversion of waters from Lake Michigan is now appropriately before the Foreign Relations Committee of the Senate and the Supreme Court of the United States.

The subject of water diversion from Lake Michigan by the Metropolitan Sanitary District of Greater Chicago has been a subject of continuing controversy between Chicago, the State of Illinois, and the other States adjoining the Great Lakes for many years. As far back as 1928 the Supreme Court of

the United States was brought into the conflict in order to determine the equities involved. At that time the Court approved a temporary diversion of 3,300 cubic feet per second. In recent years there has been continuous effort on the part of the Metropolitan Sanitary District of Greater Chicago to divert additional quantities of water from the Great Lakes.

During this session of Congress, as in many previous ones, a bill was introduced by Representative O'BRIEN (H.R. 1) authorizing an additional diversion of 1,000 c.f.s. from Lake Michigan. A companion bill, S. 3, was considered by the Committee on Public Works, which, after long hearings, reported it to the Senate. There was much discussion on the merits of this legislation on the floor of the Senate—with particular emphasis on the Canadian opposition to such diversion. The bill was finally referred to the Foreign Relations Committee for its consideration. At the request of the Foreign Relations Committee, the Department of State has contacted the Canadian Government in order to ascertain the Canadian position on this matter.

Simultaneously, the Supreme Court of the United States, which assumed jurisdiction over this subject in 1928, again proceeded to look into the problem, and on June 29, 1959, appointed a special master to hear the evidence in connection with this controversy. The master, U.S. Senior Court Judge Albert Maris of Philadelphia, has been holding hearings on this subject in Chicago and in other places since August 4, 1959, and has not yet completed his study.

Primarily, the issue relates to the diversion of additional water from Lake Michigan for the benefit of the Chicago Sanitary District. The controversy arose from the fact that between the years 1892 and 1900 the city of Chicago and its suburbs carried out a plan to dispose of the sewage of the Chicago metropolitan area by cutting a canal across the low continental divide about 10 miles west of Lake Michigan and discharging the sewage of the entire metropolitan area into the Mississippi watershed.

Ultimately the States of the Great Lakes Basin, all the way from New York to Minnesota, brought action in the U.S. Supreme Court to enjoin Chicago from the continued abstraction of waters from the basin. After extensive hearings the Supreme Court, in 1930, issued a decree based upon the findings of Special Master Hughes, later Chief Justice, ordering the reduction of the diversion of water to its present level. It was the view of the Supreme Court that such diversion would be sufficient to maintain the navigation levels of the Chicago Canal and the Illinois River, and would be adequate to provide water circulation for sanitary purposes.

But in recent years, the Chicago Sanitary District has undertaken a tremendous program of expansion. From some 508 square miles in 1954, the District, through annexation grew to more than 920 square miles in 1958. Unable to cope with its sewage problem through sewage disposal, Chicago again desires additional water in order to flush its sewage down into the Mississippi watershed. To obtain authority for such additional diversion, Chicago has sought all possible excuses and has dragged the matter from one agency to another in a fashion somewhat reminiscent of the man who not being satisfied with one judge's determination, sets out on a shopping expedition to find a judge that would agree with him.

H.R. 1, which was introduced last year, sought to authorize additional diversion under the guise of navigational needs in the Chicago area. The amendment that Congressmen O'BRIEN and YATES are now seeking to the Health, Education, and Welfare budget would authorize diversion under the guise of a pollution study. But all these measures are designed to do the same thing: To provide Chicago with water for flushing down its sewage; and this contrary to the original Supreme Court directive to the sanitary district to treat such sewage in another fashion, through the establishment of sewage disposal plants and facilities.

Now that this matter is pending both before the Senate Foreign Relations Committee and the Supreme Court, I find it rather surprising that the two Representatives from Illinois have undertaken to bypass these responsible agencies. The other States adjoining the Great Lakes continue in their opposition to further diversion. Recent communications from the Canadian Government indicate that the Government stands by its earlier position that further unilateral diversions would be in violation of the 1909 Boundary Waters Treaty between the United States and Canada.

I believe that this difficult question is now properly dealt with by the Special Master appointed by the U.S. Supreme Court and the Foreign Relations Committee of the Senate. We must certainly await their judgment before further action in this matter could be undertaken. It would certainly be inappropriate for your committee, or any other committee, to bypass the careful and responsible consideration and decision of these other Government authorities which have jurisdiction in this matter.

Sincerely yours,

ALEXANDER WILEY.

The PRESIDING OFFICER (Mr. GORE in the chair). Is there further morning business?

SETTING OF FIRST COLUMN FOR EXTENDED EAST CENTRAL FRONT OF THE CAPITOL

Mr. JOHNSON of Texas. Mr. President, I have been asked by the Speaker of the House of Representatives, in his capacity as Chairman of the Commission for Extension of the U.S. Capitol, to invite the Members, officers, and employees of the Senate to witness the setting in place of the first large marble column in the portico of the extended east central front of the Capitol, at 9:30 a.m., Thursday, May 26, 1960.

This is a historic occasion in which I feel each Senator will be deeply interested. All are invited to enter the construction area at the door to the fenced enclosure just south of the entrance to the Senate Wing, from where they will be directed to a safe and appropriate vantage point.

The old records indicate that the original sandstone columns were erected in 1824 and that the stonecutters at the Capitol participated in a procession and exhibit celebrating July 4, 1824.

The new columns are duplicates of the originals except that they are of Georgia white marble instead of sandstone. They are monolithic, weigh about 18 tons each, are 24 in number, and are 24 feet 9 inches high. The columns are of the Corinthian order and taper uniformly from a diameter of 3 feet at the base to 2 feet 6 inches at the top.

The original columns were designed by Charles Bulfinch in carrying out the overall plan for the east portico prepared by his predecessor, Benjamin H. Latrobe. Mr. Latrobe and Mr. Bulfinch were the second and third architects of the Capitol, respectively.

The column to be set on Thursday, May 26, will be the one located immediately to the southeast of the main entrance leading to the rotunda.

LEGISLATIVE PROGRAM

Mr. DIRKSEN. Mr. President, I should like to query the majority leader about the program for the latter part of this week, inasmuch as next weekend will be Memorial Day weekend.

Mr. JOHNSON of Texas. Mr. President, I have checked with the Parliamentarian. I am informed that in recent years it has been the policy of the Senate not to meet on Memorial Day, so I am in the position to definitely inform the Senate there will be no session on Memorial Day.

Judging from the bills which have been reported to the Senate and which are available for discussion, I do not anticipate there will be a necessity for a session on Saturday. Therefore, I think we will go over from Friday until Tuesday.

As to whether we shall have any yea-and-nay votes on Friday, I shall have to wait until we see what progress we make on proposed legislation which is to be considered this week. We have before us the question of overriding the President's veto on the depressed areas legislation. We shall have a yea-and-nay vote on the Agriculture Department appropriation bill.

We shall have a meeting of the Policy committee for the purpose of considering the scheduling of the wheat bill, S. 2759, Calendar No. 1339.

The bill which relates to the disclaimer affidavit in the National Defense Education Act, S. 2929, Calendar No. 1411, may be considered. The Senator from Massachusetts [Mr. KENNEDY] has indicated a desire to have that bill considered this week. If it meets with the convenience of the other members of the committee and if it is agreeable to the policy committee, the bill will be scheduled for consideration as early as possible.

We hope to consider also the bill relating to the shrimp convention between the United States and Cuba, Calendar 1412, Senate bill 2867; the International Development Association bill, Calendar 1414, Senate bill 3074; and the bill enacting certain provisions of the Reorganization Act of 1959, Calendar 1417, House bill 7681.

In addition, there are a number of bills from the Finance Committee and the Labor and Public Welfare Committee on the calendar. Among the bills from the Labor Committee are those relating to nurse training, the extension of the Library Services Act, and special teachers for the deaf, Calendar Nos. 1473, 1474, and 1476.

None of those measures have been cleared for consideration, but I anticipate that all of them will be scheduled at an early date, and as soon as the committee has acted upon them, I will promptly make that announcement to the Senate.

Senators may expect the Senate to be out of session from Saturday through Monday, Memorial Day. Later in the

week I will announce whether any legislation which will require rollcalls on Friday is to be anticipated.

Mr. DIRKSEN. I thank the majority leader.

KEYNOTE ADDRESS BY HON. HOWARD W. SMITH AT DEMOCRATIC CONVENTION AT VIRGINIA BEACH, VA.

Mr. BYRD of Virginia. Mr. President, I ask unanimous consent to have printed in the body of the RECORD as a part of my remarks an outstanding address made by the Honorable HOWARD W. SMITH, chairman of the Rules Committee of the House of Representatives, as the keynote speaker at the State Democratic convention held at Virginia Beach, Va., on May 21, 1960.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

KEYNOTE ADDRESS BY THE HONORABLE HOWARD W. SMITH AT THE STATE DEMOCRATIC CONVENTION, VIRGINIA BEACH

My fellow Democrats, you are assembled here today as the chosen representatives of the Democrats of Virginia, the home State of Jefferson, the founder of the Democratic Party. The party that has survived the vicissitudes of political warfare throughout a century and a half. The party that could only survive because of the basic principles of government upon which it was founded.

Broadly speaking, those principles are that the best governed peoples are the least governed, that the closer the local self-government is to the people, the better. That the centralization of power in the Federal Government is an evil that will eventually strangle the sovereignty of the States and destroy the carefully preserved concept of free, sovereign, and independent States. Sovereign States with every right, duty, and power save only those specifically granted to the Central Government by the Constitution.

This was the universally accepted concept on which the Constitution was ratified by the States. Without that concept written into the Constitution and reemphasized in the Bill of Rights, the compact would never have been ratified by the States.

In other words, under the Constitution as written and adopted, the Federal Government has no power whatsoever outside of those specifically granted by the Constitution. All other powers of government are specifically reserved to the States, and when we speak of States rights it embraces every right of the sovereign government, with the exception of the limited powers granted to the Federal Government. The complaint so persistently and loudly voiced by those of us who believe in a strict interpretation of the limitations imposed by the Constitution which every Federal officer (legislative, executive, and judicial) is solemnly sworn to uphold.

Perhaps we have drifted away so far from the moorings that bound us to our forefathers' conception of our system of government that it is too late to return. Perhaps we have drifted so far into that conception of socialistic government that presently infests the whole world that we can never return. There are, however, those of us who will maintain until we die that the course we are now pursuing will lead this Nation, the greatest the world has ever known, into pitfalls of disintegration, deterioration, and ultimate disaster. We see in Washington today in the Congress a reckless disregard of fiscal responsibility and extravagant expenditures on almost every fanciful, do-good scheme that the mind of man can conceive to drain from the people of the States the taxes to feed the hungry maws of Federal expenditures. While, in spite of this unbearable burden of taxation, Congress passes—and the President approves—expenditures which over the past 20 years, have resulted in unbalanced budgets that have required annual and continuous increases in the Federal debt to meet deficiencies in Federal revenues. In these transgressions against financial responsibility, there is little difference between the Democratic and Republican National Parties.

As a result, the American dollar, which for decades had been looked upon as the soundest currency in the world, has been reduced to the purchasing value of 48 cents. The national debt has climbed to around $290 billion. World financial centers have been shaken in their faith in the soundness of our currency until the Treasury has found it impossible to float American long-term securities at the interest rates allowable by law. The astounding result is that American taxpayers are called upon to pay interest on the national debt of $9 billion a year, which is more than the entire budget for 1930 which was $4,665,236,678.04.

I selected the year 1930 because it was the year that I was first elected to Congress. At that time and in that year, the total expenses of the Federal Government including interest, debt retirement and operating expenses was a little over $4½ billion, while this year in interest alone we will pay $9 billion, twice as much as the whole expense of the Federal Government in 1930. With an annual budget now of around $80 billion a year and a public debt grown to $290 billion, is it any wonder that the public cries out for a return to fiscal sanity and a reduction in Federal expenditures. And in the face of that cry, a Democratic Congress and a Republican administration continue to find and promote, and pass and pay for, new and untried schemes of social welfare that you and I and the rest of the American taxpayers are called upon to pay.

From the time of the adoption of the Constitution to the year 1946, the total expense of the Federal Government was a little over $233 billion for the whole period of 152 years.

In 7 years of the Truman administration, from 1946 to 1953, the total expenditure in those 7 years was $335 billion—far more than the whole expense of the Government in the preceding 152 years.

In the 7 years of Republican administration, from 1953 to 1960, the Republican administration expended the enormous sum of $528 billion, more than twice as much as was spent in the 152 years preceding the Truman administration.

The platforms and the leaders of both great national parties have fastened upon the taxpayers of our country what is apparently a permanent expenditure of around $4 billion a year for foreign aid to other nations, who have more and more come to look upon this bonanza as the answer to their economic and financial difficulties. All in the name of world peace—and while we cry peace, peace—there is no peace. In a futile and timid attempt to buy the friendship of foreign nations, we have extended our socialistic, giveaway program to nearly every nation on earth. Our welfare programs at home have been extended to carry on the backs of our burdened taxpayers the woes and economic problems of nearly all the nations on the face of the globe.

While we meet here today the Congress is considering new schemes, new bills, new plans, for the new and additional extravagance that will further burden the American taxpayer and further increase the national debt, further increase the interest rates, and further burden the American taxpayer, and further reduce the value of the dollar.

If the things which I here decry lie outside of the proper and constitutional functions of the Federal Government, both of the great national parties are equally guilty.

Aside from our misguided fiscal policies, there are those well meaning individuals and organizations in our midst who believe that all the evils of the present world situation can be cured by a so-called world government.

The first step in this movement shows itself in the present agitation to repeal the so-called Connally amendment to the treaty of the World Court. That treaty sets up an international court with power to make determinations as to certain international disputes, but provides that each sovereign country reserves the right to determine everything relating to its domestic problems. The Connally amendment further provides that each country shall determine what are its domestic problems; the country itself to decide what is, or is not, a domestic problem. The repeal of the Connally amendment would leave it to the World Court to decide this vital question.

Thus, there would be placed in the hands of a foreign court in which we would have minority representation to determine whether our immigration policy, our tariff policy, and numerous other policies could be dictated by foreign countries against our will. It would be a fatal step in the altruistic dream of a world government. This proposal has the endorsement of important public officials in both the Democratic and Republican Parties.

Fundamentally, all of the things of which I speak arise from a disregard for the limitations of power placed upon the Federal Government under the Constitution. Nor can we confine these transgressions to any one of the three divisions of Government created by the Constitution. The executive department, the legislative department, and the judicial department all have contributed to the grasp for powers that they do not rightly possess under our system. All from time to time have sought to deprive the States of the Union of their sovereign rights guaranteed us by our charter of government devised by our forefathers out of bitter years of experience with misrule and oppression, and imitated throughout the world by peoples seeking new freedom.

We have seen the Chief Executive invade a sovereign State with the Armed Forces to impose the will of the Central Government on the people of that State in open and flagrant violation of the specific prohibition contained in the Constitution, unless done at the request of the legislature or the Governor of such State.

We have seen the legislative department of the Federal Government, the Congress, recklessly assume power to govern, control and rule in the exercise of the local functions of the government reserved to the people of the sovereign States.

Saddest of all have been the decisions of the U.S. Supreme Court, that vital and final bulwark against the encroachment of the Federal Government on the rights of the sovereign States and the individual liberties of our people.

Time permits only the mention of a few instances where that Court, guided by its own sociological ideals, has reversed previous decisions of that Court that have stood as the law of the land for generations.

By its decision in the school segregation case it changed the constitutional rights of the States to operate their public school systems and reversed decisions of the former courts that had stood the test of time and had been the law of the land for a hundred years. Basing its decision, not upon the law of the land, but upon the writings of a socialist Swedish author.

In the Girard College case where Stephen Girard a hundred years ago had established a fund of his own money in trust to the city of Philadelphia for the education of poor white children, and though it had been operated for a century under the conditions laid down by the donor, the Supreme Court substituted its own will for the will of Stephen Girard and held that Negro children must also be permitted to share the bounty of this benefactor against his will.

In the case where the Health Department of the State of Alabama under State law undertook to inspect unwholesome foods, the Supreme Court by its decision deprived the State of Alabama of its inherent right to protect the health of its citizens against impure food because of the mere fact that Congress had enacted a pure food law.

In New Mexico where State law prohibits license to practice law except to persons of good character, authorities of the State of New Mexico decided that a person with a record of subversive and treasonable activities was not of the good character that the State desired to license, the Supreme Court substituted its judgment of good character for the judgment of the sovereign State of New Mexico in dealing with a purely local problem.

In the city of New York where the State legislature, in enacting a city charter, provided that any schoolteacher who in any procedure took advantage of the fifth amendment automatically severed his employment with the city, and where the city authorities discharged a schoolteacher for violation of its charter provision as being a person not desirable as a teacher of the youth of that community, the Supreme Court substituted its judgment as to whom New York should hire for the education of their youth, for the judgment of the State legislature of that State.

In the famous Steve Nelson case where a known and active working Communist seeking to overthrow the Government by force was convicted under the law of Pennsylvania, the Supreme Court denied to the sovereign State of Pennsylvania, and all other States having similar laws, the inherent right to protect itself against subversive criminals seeking to overthrow the Government by force.

What we do here today, what we say here today, may be, I fear, an exercise in futility. A call for return to constitutional government as designed by the framers of this government; a call for a fiscal policy to restore the solvency of the government and relieve our people of the burden of taxation for improvident expenditures; a call to restore to the States their just rights of local self-government; a call for a Supreme Court that would confine its present exercise of unlimited powers to the functions prescribed in the Constitution; these calls may be a voice calling in the wilderness at the National Convention of the Democratic Party which will shortly assemble in Los Angeles. Such a call would be equally futile if addressed to the Republican Convention.

But we can at least voice to our friends and fellow Democrats who will assemble and assume to speak for the Democratic Party, our hopes, our desires, and our pleas for a moderate and sympathetic consideration of the hopes and aspirations of that great body of loyal and conservative Democrats throughout the Nation who view with the gravest apprehension the political motivations that have brought about the division in the great party of Jefferson. The Democratic Party that for a century and a half has carried the banner in battle after battle for good government, unselfish government, local self-government, and government in the best interests of the masses of the people, but never unmindful of the constitutional basis upon which foundation rests the success or failure of our efforts.

There are those among us who feel that we should divorce ourselves from the National Democratic Party. There are others of equal patriotism and equal apprehension as to the course of the party who feel we can be more effective in our efforts by remaining within the party. Certainly the National Republican Party offers no haven of refuge for unhappy Democrats. Southern Democrats should not forget that it was the Republican leader in the Senate who proposed in the recent civil rights legislation he introduced, to approve as the law of the land the infamous decision of the Supreme Court in the school desegregation case and was defeated only by the dogged and persistent opposition of those 18 Senators from the Southland, with the timely aid of the Democratic majority leader in the Senate.

It was the Republican civil rights bill, written and masterminded by the Republican Attorney General, that was finally passed and signed by the Republican President. No, my friends, there is no haven of refuge in the Republican Party for the beleaguered southern Democrats.

On the other hand, we have under Virginia law the power to reconvene this convention after the national convention if the Butlers, the Hoffas, and the Reuthers, and others fix upon us a situation that is intolerable.

It is my hope that this convention may proceed to its work in harmony and friendly understanding. Certainly the objectives of all gathered here are in accord. It is my hope that we endorse to the national convention a candidate of demonstrated ability and fundamental belief of our system of constitutional government, and with the courage to lead us in turning the tide of socialism back into the quiet channels of responsible constitutional government and fiscal sanity.

THE U–2 PLANE INCIDENT—EDITORIALS IN AVIATION WEEK

Mr. SYMINGTON. Mr. President, two penetrating editorials have appeared in Aviation Week, both on the U–2 situation, and both written by Robert Hotz, editor.

The first, entitled "Lockheed U–2 Over Sverdlovsk: A Study in Fabrication," appeared May 16.

The second, entitled "Fallout From the U–2," appeared May 23.

Both of these editorials merit the thoughtful reading of Members of the Senate.

Mr. President, I ask unanimous consent that these editorials be printed at this point in the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From Aviation Week, May 16, 1960]

LOCKHEED U–2 OVER SVERDLOVSK: A STUDY IN FABRICATION

(By Robert Hotz)

The whole truth of Francis Gary Powers' 1,400-mile penetration of the Soviet Union in a Lockheed U–2 on a Central Intelligence Agency mission of photo and electronic reconnaissance has not yet been told. It may never emerge from the welter of official lies pouring from Moscow and Washington.

Nevertheless, there are some points that have already emerged from this adventure that are worth examining. Let us start with the fabrications that have been bullroared from the rostrum of the Supreme Soviet by Nikita Khrushchev because they reveal much about his fears and problems over the current state of the world.

Mr. Khrushchev's most blatant lie is his statement that the U–2 was hit by a Red Army antiaircraft missile at an altitude of 65,000 feet near Sverdlovsk after it had penetrated the air defenses of the Soviet Union for some 1,400 miles. This lie was necessary because the citizens of the U.S.S.R. could understandably grow uneasy over the admitted ability of the U–2 and other specialized aircraft to penetrate Soviet airspace consistently with impunity. The spectacle of Soviet air defense system futility for the last 4 years in trying to stop these penetrations must provide a chilling counterpoint for Soviet citizens to the bellicose blustering of their leader over the aggressive strength of his military power.

The fact is, and Mr. Khrushchev undoubtedly knows it, that Powers' U–2 had an engine flameout at the altitude that it and other U–2 aircraft cruised safely beyond the reach of the Soviet air defense system. The flameout forced Powers to descend below 40,000 feet where the denser atmosphere made an attempt to restart his jet engine feasible. Either Powers failed to restart his engine or his plane was damaged at this relatively low altitude by the Red Army missilemen to whom Mr. Khrushchev awarded medals.

Another obvious lie was used to bolster this originally false claim for the Soviet air defense system. A picture of some badly battered scrap from an Aeroflot Tu–104 crash near Sverdlovsk last February was officially released by the Soviets labeled as the U–2 wreckage to convey an impression of terrible damage wrought by the antiaircraft missile. When this fake was exposed by Lockheed's U–2 designer, C. L. "Kelly" Johnson, the remains of the genuine U–2 were finally produced for an exhibition in Moscow's Gorki Park.

Further contradiction of the missile hit scored at 65,000 feet was the Soviets' own claim that they recovered most of the U–2 photo and electronic reconnaissance equipment in good condition, were able to examine the cockpit ejection system in detail and to retrieve miscellaneous gear from the cockpit intact.

Mr. Khrushchev has good reason to worry about the ability of the U–2 and other aircraft to skim over his huge air defense system. For it must come as a real shocker to Soviet citizens, fed a steady diet of propaganda on the superiority of Soviet military might, to hear the admissions from Mr. Khrushchev and Andrei Gromyko that these U–2 flights have been going on successfully for at least 4 years. The Soviet citizens must wonder, if this is true, how much credence they can place in the assurances they receive from Mr. Khrushchev that manned bombers are obsolete and cannot penetrate the Soviet air defense system. Even if his claim of a missile hit at Sverdlovsk was true, how does Mr. Khrushchev explain a 1,400-mile penetration from the Pakistan border to the Urals?

It is obvious that Mr. Khrushchev does not really believe his own claims about the difficulty of manned bomber penetration into the U.S.S.R. because he has been pushing a gigantic expansion of his air defense system for the past several years. This includes new improved surveillance, and ground control intercept radar, passive detection systems, new interceptors and a tremendous program of new antiaircraft missile installations around key military and industrial areas. If Mr. Khrushchev really believed the Strategic Air Command B–47, B–52, and B–58 fleet of manned bombers were as ineffective as he publicly blusters, he would hardly waste the vast resources that he has and is still putting into his air defense system.

Nor is Mr. Khrushchev telling the truth when he announces that the Soviets have switched completely from bombers to ballistic missiles and that they no longer are producing or developing or exercising bombers because they are obsolete for modern warfare. The U.S.S.R. is still producing long range jet bombers, although at far from maximum possible rates. It is developing

new supersonic bombers and a nuclear-powered bomber and it is exercising its current operational jet bomber fleet at an accelerated rate in long distance Arctic missions. Mr. Khrushchev would like us to believe his lies on the future of the bomber in the Soviet arsenal. This belief would encourage the trend, already started, toward cutting back our own air defense system.

Mr. Khrushchev is also ignoring some pertinent facts when he stresses the "provocative" nature of the U–2 flights. The Soviet espionage system in this country has been exposed in many aspects of its hydraheaded operation. The record from the atomic secret snitching of Klaus Fuchs to the cozy Brooklyn espionage nest operated by the Soviet Colonel Abel has offered ample provocation for anything this country cares to make of it.

The Soviets are fighting the reconnaissance war with every method at their disposal all around the periphery of the Iron Curtain, cutting transatlantic cables off Newfoundland, grappling for Caesar antisubmarine warfare stations, fishing for nose cones off Ascension Island, monitoring the Atlantic Missile Range communications, shadowing Polaris submarines and conducting electronic reconnaissance on our frontiers by trawler, submarine and aircraft. The Soviets do not require deep penetration of the United States for photo reconnaissance because of the availability of this information from public sources and their espionage system. Their prime need is for electronic intelligence and this they are gathering with every means at their disposal.

When we turn to the record of our own Government agencies involved in the U–2 adventure the record of deliberate falsification is equally bad. The series of interagency bungles gives us a queasy feeling over what might happen in a real emergency with survival or defeat hinging on the speed and acumen of the official reaction.

First, there are the ivory tower researchers of the old NACA now with NASA who had their hard-won reputation for scientific integrity shredded overnight by the exposure of their role as unwitting dupes of the Central Intelligence Agency. They saw no reason to sniff suspiciously at an offer of a free research program for high altitude weather and gust loading research from the military. This bailment of military aircraft to NACA was traditional, since NACA had no budget of its own for this purpose. NACA wrote the test program requirements, sporadically got back data from missions executed according to its specifications and apparently never did much analytical research into the geographic locations of the U–2's or the isolation of the agency from any contact with their personnel. NACA and later NASA, dutifully published three technical reports in 4 years on this work and worked happily in the traditional role of the piano player in a bagnio who was never told what was going on upstairs.

This coupling of CIA (which Washington wags are now saying stands for "caught in the act") with NASA in an international espionage venture will badly damage, if not altogether destroy, the fine foundation NASA was organizing for international cooperation in the scientific exploration of space. NASA can hardly blame foreign nations already solicited in this program for inquiring as to how much of a tracking station, launching site, or payload instrumentation is earmarked for CIA missions. Nor can they be blamed for politely declining to take a chance with an agency that apparently doesn't know all it should about its own activities.

This damage to NASA's scientific integrity may count for little in the calloused calculations of CIA supersleuths, but it will do irreparable harm in the international scientific community where this country has many of its stanchest friends.

Second is the spectacle of the State Department turning a complete slow-motion somersault from the flat lie that "there was no deliberate attempt to violate the Soviet airspace and there never has been," to a mousy admission that there might have been such flights but that they "were not authorized by Washington," to a final complete admission that the U–2 penetrations were in fact an integral part of U.S. national policy. What the State Department can command as a credibility factor in future roles as a U.S. spokesman will be interesting to see.

The official U.S. policy as finally stated by President Eisenhower some 10 days after Powers' U–2 hit the Siberian earth also carries some future forebodings.

It officially commits the United States to a continuous and deliberate policy of violating the Soviet airspace and formally makes espionage an integral part of U.S. policy. Although virtually every American citizen can see the need for continuous surveillance of the Soviet Union by whatever effective methods are available and will tacitly support these efforts, it is quite another matter to publicly announce that espionage and violation of another country's territory have become an official policy.

This policy, which is unprecedented in the history of nations, leaves our allies in an untenable position and forces the Soviets to carry this matter much further than they may have originally intended. It appears to be another one of those hasty, poorly thought out, improvised policies aimed at a quick fix with not much thought for future consequences or other implications.

Third, of course, comes the Central Intelligence Agency, in this incident stripped of all its protective secrecy, and standing nakedly exposed in an incredibly amateurish performance compounded from inadequate training, faulty execution and rather transparent cover operations. Apparently, all that was adequately provided in this operation was the $30,000-a-year salaries for the pilots. Whatever reasons impelled Francis Powers to decline to carry out the traditional self-destruction orders of the espionage agent apprehended redhanded by the enemy may never be known. Suffice to say his embarrassing survival was not in the best tradition of either USAF, the agency that originally trained him, or CIA, the agency that hired him without training him properly in its specialized requirements.

The need for a congressional or some other "watchdog" operation over CIA was never more apparent.

Finally the most important aspect of the U–2 episode is the illumination it must shed for most Americans on the simple salient fact that we are in fact fighting a war against the forces of communism. It is a far different war than we have ever fought before and it is being fought with weapons that we are not accustomed to using. The bungling, naivete and innocence our various Government agencies have displayed in the U–2 episode show clearly that we are not yet organized for this type of conflict nor do we yet really understand its scope and strategy.

Although too few Americans realize it, we are already deep into this struggle to determine whether the Soviet system or our own will prevail. If we hope to preserve the basic elements of this civilization we cherish, we must dedicate ourselves more thoroughly to this task and organize our national resources and policies more effectively to achieve this goal.

[From Aviation Week, May 23, 1960]

FALLOUT FROM THE U–2

(By Robert Hotz)

Last week we warned that the extraordinary statements of Secretary of State Herter and President Eisenhower making aerial espionage and violation of foreign airspace with the Lockheed U–2 an official U.S. policy would produce serious repercussions in the future. The presses printing these words had hardly stopped rolling when the first diplomatic fallout from these incredible statements began raining down. At this writing it is still continuing with no prospect of early abatement.

One of the extremely harmful effects of these statements has been the embarrassing position in which we have placed our allies on the edge of the Iron Curtain. By those statements this country formally implicated them in an official espionage effort against the Soviet Union and provided the Communists with more potent ammunition against the NATO countries than they themselves have been able to generate in a decade. The gravity of this allied position is indicated in the formal diplomatic protests already lodged with the United States by Norway and Pakistan and the cannonade of Soviet threats to rocket-blast these allied bases if any further U–2 operations are conducted from them. Denmark finds it necessary to make an official statement barring its airfields for unauthorized flights over countries not members of NATO. It is hard for people in this country to realize the courage required by our allies on the edge of the Iron Curtain to stand fast behind our cause in the face of the constantly growing Soviet military threat, economic and cultural exploitation and diplomatic pressure. Norway and Denmark by their very presence in the NATO organization provide proof positive of the free world's determination to resist Soviet aggression. Both these countries saw their neutrality shattered by Nazi Germany in World War II, lived under a despot's occupation and resisted it with every means at their disposal. They have learned that there can be no compromise with brutal aggression no matter what political label it bears. Norway has a common frontier with the U.S.S.R. Denmark sits on the shores of the Baltic, now practically a Communist lake, and is flanked by Communist Germany to the landward. Both have stood firm in the face of earlier Soviet bluster against their NATO role.

Both of these countries have made vital contributions not only to NATO's strength but to the over-all U.S. military position in the Western World. Norway's underground airfields carved from its rocky northern coast are practically impervious to destruction even by nuclear weapons. The giant radar on the North Cape looks down into the beehive of Soviet air activity on the Kola Peninsula and covers an Arctic flank. The Danish radar on Bornholm Island in the Baltic does a similar job on the Communist periphery from Lithuania to East Germany. The use of key air bases in Greenland along with the BMEWS site is another vital Danish contribution. Both Norway and Denmark maintain small but modern jet and missile forces at considerable expense to their modest national economies to back their determination to remain free and fly their own flags.

Now we have rewarded this loyalty and courage by ineptly pulling the rug from under their exposed position and providing the Soviets with the only valid evidence for diplomatic protest in a decade of searching. Turkey, which has a historic antipathy to the surge of Russian imperialism toward warm water and has never lacked the courage to fight invaders when they threaten, has made similarly important contributions to NATO and is now left in a similarly embarrassing position.

The next chapter in this unnecessary humiliation of ourselves and our allies will be staged in the great world sounding board of the United Nations. It is difficult to see at this time how a successful public defense can be made for our right to unilaterally penetrate other nations' airspace for the purposes of espionage. No matter how anybody feels privately about this matter it will be difficult, if not impossible, for any nation to

formally support such a position in an international forum.

But even worse than the position in which some of our firm allies find themselves because of our handling of the U–2 situation is the casual and thoughtless manner in which our top official spokesmen pulled the rug from under their carefully constructed and stoutly defended international position in relation to the Soviet Union. We cannot hope to retain the leadership of the free world unless we exercise it with considerably more intelligence, skill and effectiveness than has been displayed in the U–2 incident.

The belated anouncement by President Eisenhower that he had suspended U–2 flights for the duration of his administration came too late to do much good at the summit and if continued will leave this country in a position of losing its sharpest eyes inside the Soviet Union at a time when we need them most. For there is little doubt that the temperature of the cold war is rising. And the knowledge that no prying U–2 cameras will be roaming the Soviet airspace certainly makes the prospect for surprise military action more tempting than ever to Soviet leaders.

As predicted, President Eisenhower's assumption of responsibility for the U–2 flights closed the door on the exit provided for him in Khrushchev's original discussion of the incident and left the Soviet leader no further room for maneuver. It obviously stirred him to magnify the U–2 episode into a far larger issue than originally intended, if only to pacify a rising tide of domestic criticism.

Collapse of the summit was based on unresolved issues far deeper than the U–2 flights although the official U.S. handling of this episode provided Khrushchev with an unusually convenient escape hatch and an unusually fine opportunity to bellow equally well for both international and Russian consumption.

Perhaps the real value to this country of the sorry summit spectacle is that the artificial mask of friendliness slipped from Soviet leadership, revealing its true nature and the fact that its goals have not changed one iota since the days of Stalin's cold war. Mr. Khrushchev's brutal threat to the West of "peaceful coexistence or war" and his post-summit behavior should make it abundantly clear that by peaceful coexistence the Soviet leadership means peace on their terms with the naked threat of war to force compliance.

The spectacle of the summit should convince the American people that the basic problem of opposing Soviet imperialism has not changed one whit during the recent "palsy-walsy" era when this country's official policy was to pursue peace without defining the price we were being asked to pay.

It is worth while now to recall that there are many American leaders who warned against altering U.S. policy on the basis of this false front of Soviet smiles and who stoutly maintained that our best position for any negotiations would be a position of unchallenged military strength. In the historic light of the summit collapse and the policies that "summitry" stood for, the American people must think seriously on which type of leadership they should look to for future guidance.

The PRESIDING OFFICER (Mr. YOUNG of Ohio in the chair). Is there further morning business? If not, morning business is concluded.

Without objection, the Chair lays before the Senate the unfinished business.

AGRICULTURAL AND FARM CREDIT ADMINISTRATION APPROPRIATIONS, 1961

The Senate resumed the consideration of the bill (H.R. 12117) making appropriations for the Department of Agriculture and Farm Credit Administration for the fiscal year ending June 30, 1961, and for other purposes.

Mr. JOHNSON of Texas. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

NATIONAL AERONAUTICS AND SPACE ADMINISTRATION AUTHORIZATION ACT, FISCAL YEAR 1961—CONFERENCE REPORT

Mr. JOHNSON of Texas. Mr. President, I submit a report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H.R. 10809) to authorize appropriations to the National Aeronautics and Space Administration for salaries and expenses, research and development, construction and equipment, and for other purposes. I ask unanimous consent for the present consideration of the report.

The PRESIDING OFFICER. The report will be read for the information of the Senate.

The legislative clerk read the report.

(For conference report, see House proceedings of May 19, 1960, p. 10828, CONGRESSIONAL RECORD.)

The PRESIDING OFFICER. Is there objection to the present consideration of the report?

There being no objection, the Senate proceeded to consider the report.

Mr. DIRKSEN. Mr. President, I understand that this is a unanimous report.

Mr. JOHNSON of Texas. The Senator is correct.

Mr. President, there were only two amendments in controversy, involving certain positions of the Senate, with respect to which, after conferring with the chairman of the Senate Committee on Post Office and Civil Service, the Senate conferees agreed to the House position, with the understanding that that met with the approval of the distinguished chairman of the Post Office and Civil Service Committee.

The other position of the Senate was that $55 million should be added to the amount of money requested by the President, for two purposes: First, primarily to take care of any increase in cost that had developed since the President's budget estimate was submitted; second, to take care of any breakthroughs that had not been anticipated, or any developments that were not known at the time the budget was submitted.

It must be borne in mind that this is merely an authorization. The conferees unanimously agreed to the position of the Senate that the $915 million should be increased by an additional $55 million authorization. So in the event that, either by reason of cost increases or breakthroughs, a larger amount should be needed, the administration would not find it necessary to ask for an additional authorization, but could submit a request for a supplemental appropriation.

I believe that both of these positions are in the national interest. They are unanimously agreed to by Mr. OVERTON BROOKS, Mr. JOHN MCCORMACK, Mr. GEORGE MILLER, Mr. OLIN TEAGUE, Mr. JOSEPH MARTIN, JR., Mr. JAMES FULTON, and Mr. GORDON MCDONOUGH, on the part of the House, and the Senator from Texas [Mr. JOHNSON], the Senator from Mississippi [Mr. STENNIS], the Senator from Ohio [Mr. YOUNG], the Senator from Connecticut [Mr. DODD], the Senator from Nevada [Mr. CANNON], the Senator from New Hampshire [Mr. BRIDGES], the Senator from Maine [Mrs. SMITH], and the Senator from Iowa [Mr. MARTIN], on behalf of the Senate.

The PRESIDING OFFICER. The question is on agreeing to the conference report.

The report was agreed to.

Mr. JOHNSON of Texas. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. DOUGLAS. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

THE AREA REDEVELOPMENT ACT

The PRESIDING OFFICER. The hour of 11 o'clock has arrived; and, under the order entered on yesterday, the Chair lays before the Senate the enrolled bill, S. 722, the Area Redevelopment Act, returned to the Senate by the President without his approval.

The question is, Shall the bill pass, the objections of the President to the contrary notwithstanding?

Debate for 3 hours, to be equally divided, is permitted under the order entered on yesterday.

Mr. DOUGLAS. I yield myself such time as I may require.

THE SIGNIFICANCE OF THE VETO

Mr. President, for the second time in two successive Congresses—namely, the 85th and the 86th—the administration has dealt a cruel blow to the people in the labor-surplus areas of high unemployment in our country and in the low-income rural areas of underemployment.

For the second time, these people in industrial areas of high and persistent unemployment, spread throughout 28 of our States, and representing a labor force of approximately 1¾ million people, together with millions more in 500 struggling rural counties in 20 different States, have been led down the path of hope, lured by administration promises and expressions of interest in their problems, further encouraged by widespread congressional interest and positive legislative action, only to be finally rudely awakened in the most irresponsible manner by another shocking Presidential veto of the area development bill.

Senate bill 722 can, if passed over the President's veto, provide an effective approach to the solution of the economic problems of areas of chronic unemploy-

ment and underemployment in the midst of generally prosperous business activity in the United States. These areas, in the opinion of a majority of Congress, are entitled to a domestic point 4 program. The President has asked us for—and, indeed, has demanded from us—appropriations for all types of economic assistance abroad; yet he will not countenance a small—but effective—fraction of such aid for our own people here at home.

I repeat, this veto was a cruel blow to an important part of our society, men and women who want nothing more than a chance to help themselves and their communities by sound economic development, under private enterprise, of the areas in which they live.

This legislation is one of the most important domestic issues facing both Congress and the country. It will be a gage of the promises and performance of both political parties. It tests not only our concern for pressing human needs, but also our capacity to utilize the great idle resources of manpower, and thus add to the Nation's goods and services and productive facilities.

Sometimes we forget that perhaps the greatest waste in our society is the waste of human labor, of laborers who want to work, and are competent to work, but who cannot find employment. If means are found, through private enterprise, but with Government loans to provide these men with capital and industries to give them employment, this will add greatly to the productive wealth of the Nation, and can do so without inflation, because there will be increased production to match the increased investment in plants and equipment.

The vote which very shortly will be taken in the Senate will be an acid test of political responsibility.

Senate bill 722 and its predecessors have been before us since 1956, the first year in which an area redevelopment bill was presented to Congress. Since 1956, Congress has twice answered this challenge by passing constructive measures, only to be met, first, by the pocket veto, in 1958, of Senate bill 3683, and now by the present veto of Senate bill 722. Unless there is repentance by a sufficient number of the administration's supporters to override this veto, I believe this whole history will conclusively demonstrate the need for action at the polls in November. If my memory serves me correctly, the 1958 elections have already revealed the views of many people on this matter. The veto, the present debate, and the ensuing vote of this body will be important, and in some cases decisive, factors in the choices which the voters will make in November. This may be an issue which ultimately will be determined at the grassroots and the closed factory gates of our country if we have not the wisdom and the will to decide it here.

HISTORY OF CONGRESSIONAL ACTION AND OF PARTY LINEUPS

In order that the responsibility for what is done may be clear, let me briefly recount the history of Congress' action on this problem.

In the spring of 1955, I introduced the first comprehensive bill on this subject, and in 1956 it passed the Senate with a 2-to-1 majority. It was killed in the House, however, during the last days of the session. It was killed because of the efforts of the Secretary of Commerce, Mr. Weeks, and the Republican Members of the House and the Republican administration. This was hard to understand, for the President from the summer White House in Denver had called for a "bold" program to help chronically depressed areas and for congressional action. At the end of the session, during a press conference, the President was asked why his Secretary of Commerce had been opposed to the bill. The President said that he was not aware of that fact, and that he was sorry. That was in 1956.

The unsympathetic attitude of the administration toward this legislation, however, was further demonstrated at this time during the House consideration of the measure. I am advised that a last desperate effort to secure action was made by the House leaders working for the bill, who got in touch with the then Assistant Secretary of Commerce, Frederick H. Mueller—now the Secretary of Commerce—and made an offer even to accept the watered down administration bill in order to have some basic legislation. It was late in the session. Adjournment was imminent. The messengers reported that Assistant Secretary Mueller requested 24 hours to consider the offer. And what did he do? I am informed that he advised the House leaders that the administration did not want any bill—not even the one which ostensibly was its own.

In the meantime, the President in each of his economic messages to Congress in the 3 years 1956, 1957, and 1958 called for legislation to help solve this problem. And recently he referred to this Congress as a "do nothing Congress." These are reasons why it is so difficult to understand how and why he again vetoed this year's bill.

In 1958, the area redevelopment bill, which I had introduced—of which we made Senator Payne, of Maine, a coauthor—again passed the Senate. The vote was 46 to 36. Of the votes in favor of the bill, 29 came from Democrats—71 percent of the Democrats who voted, and 17 votes from Republicans—41 percent of those voting. Of those who opposed the bill, there were 12 Democrats—or 29 percent—and 24 Republicans—or 59 percent.

Although there was no yea-and-nay vote on the question of final passage in the House, the key vote was on the motion to recommit the bill. That motion, if adopted would have killed the bill. But the motion to kill the bill was defeated by a vote of 188 to 170. The party breakdown of the vote was as follows:

Motion to recommit (kill) the Douglas bill, 1958

Opposed to killing the bill, 188:	
Democrats (72 percent)	139
Republicans (30 percent)	49
For killing the bill, 170:	
Democrats (28 percent)	54
Republicans (70 percent)	116

In other words, the Democratic Senators voted 2½ to 1 for the bill; the Republican Senators voted 2⅓ to 1 against the bill. That was the bill which was given a pocket veto by the President.

On January 27, 1959, I introduced another area redevelopment bill (S. 722), with 38 cosponsors, from both sides of the aisle; and we made the Senator from Kentucky [Mr. COOPER] and the Senator from Maryland [Mr. BEALL], the joint authors of the bill, in an effort to get bipartisan cooperation. It is this third bill, with House amendments, which most recently was passed by the Congress, and which the President has vetoed, and which is before this body today.

After further lengthy hearings and full debate, the vote on S. 722 was as follows: The Senate first passed the bill by a margin of 49 to 46. On that yea-and-nay vote, 45 Democratic Senators and only 4 Republican Senators voted "yea," although we had made every effort to obtain Republican cooperation; and 30 Republicans and 16 Democrats voted against it.

In other words, we Democrats voted approximately 3 to 1 for the bill, and the Republicans voted 7½ to 1 against the bill.

Subsequently, the House passed the amended bill by a vote of 202 to 184. Those voting for the bill consisted of 179 Democrats, joined by 23 Republicans, while 115 Republicans and 69 Democrats opposed the measure.

The Democrats on the House side voted almost 3 to 1 for the bill. The Republicans on the House side voted precisely 5 to 1 against it.

On the final vote in the Senate a short time ago to accept the House-passed bill, which was 45 to 32, 40 Democrats and only 5 Republicans supported the bill, while 21 Republicans and 11 Democrats voted against the bill.

In other words, the Democrats voted approximately 4 to 1 for it; the Republicans voted approximately 4 to 1 against it.

The record of the votes in Congress on an effective area redevelopment bill thus makes it clear, by the action of the President, and by the actions of the Republicans, that this has become a party issue, despite all the efforts which we have made to make it a nonpartisan issue. It has become a party issue not by our actions but by those of the Republican Party.

The repeated acts of the President in using his veto power to deny to Congress the type of legislation which a majority believe should be enacted, range the Republican Party leadership clearly on the side of opposition to any effective measure to deal with this problem. If they wish to redeem themselves on this issue, there is still time for them to vote to override. They have one more chance to take this out of political controversy.

A final opportunity is now presented to this body to demonstrate to the Nation that the legislative branch of the Government accepts its responsibility to study and pass legislation according to its wisdom and the dictates of its conscience, and that, notwithstanding the unwillingness of the executive branch to permit this legislation to be enacted with its approval, and, indeed, notwithstanding the determination of the executive

branch to prevent this legislation by its veto, the Congress can nevertheless overcome these obstructions by voting to override that veto by a two-thirds vote.

I plead for the cooperation of the gentlemen on the other side of the aisle, and those on this side of the aisle who in the past have opposed this measure, to join with us in asserting the independence of the legislative branch of the Government in helping to promote the welfare of the people of the United States. There is a chance for redemption at the last minute for all of these men, and those who enter into the gate at the last hour will be as welcome as those who have borne the heat and the burden of the day during the long, hard struggle.

Mr. President, I ask unanimous consent that an analysis which I have made of Senate bill 722 be inserted in the RECORD at this point in my remarks.

There being no objection, the analysis was ordered to be printed in the RECORD, as follows:

ANALYSIS OF S. 722, A CONSTRUCTIVE PROGRAM

The program set forth in S. 722 will go a long way toward effecting a permanent solution to the national problem of chronic unemployment and underemployment. It establishes a program which will put wasted manpower and undeveloped resources to work not only to meet the pressing immediate needs of our unemployed, but also as an aid to developing an expanding economy.

WHAT THE BILL DOES

Section 1. The short title of the act is the Area Economic Redevelopment Act.

Section 2. Finding of facts: The purpose of the act is to help areas needing redevelopment to expand their economic activities so as to alleviate substantial unemployment and underemployment that prevails within such areas. This would be accomplished by assisting communities, industries, enterprises, and individuals in providing new employment opportunities and by expanding existing facilities and resources without reducing employment in other areas of the United States.

Section 3. Area Redevelopment Administration: An Area Redevelopment Administration would be established under the direction and control of an Administrator who is to be appointed by the President with the advice and consent of the Senate. The salary of the Administrator is to be $20,000 a year.

Section 4. Advisory Committees: The bill provides for the establishment of two advisory committees. Subsection (a) creates a Government Advisory Committee on Area Redevelopment. In addition to the Administrator, 11 heads of Federal departments or Federal independent agencies are designated as members of this committee. The committee is required to meet twice annually and is to make recommendations to the Administrator with regard to carrying out his duties.

Subsection (b) creates a National Public Advisory Committee to be appointed by the Administrator to consist of 12 members representing labor, management, agriculture, and the public in general. This committee is to make recommendations to the Administrator in carrying out his duties.

Subsection (c) authorizes the Administrator to call ad hoc industry committees representing the parties in interest when employment has dropped substantially over a number of years in such industry resulting in high levels of unemployment in various areas designated by the Administrator as redevelopment areas. The industry committees are to recommend plans and programs to the Administrator with reference to such industry.

Section 5. Redevelopment areas: The bill recognizes two types of redevelopment areas—industrial and rural—which are eligible to receive Federal assistance under this bill.

Under subsection (a) an area may be designated an industrial redevelopment area in either of the following two ways: (1) the Administrator may, at his discretion, determine that a given area has been subject to substantial and persistent unemployment for an extended period of time and designate the area an industrial redevelopment area; or (2) an industrial area must be classified an industrial redevelopment area if it meets any one of the following four tests and has 6 percent unemployment at time of application: (a) not less than 12 percent of the total labor force in the area has been unemployed for a period of 12 months immediately preceding the date on which an application for assistance is made; (b) not less than 9 percent of the labor force in the area has been unemployed for a period of 15 months out of the last 18 months prior to such date; or (c) not less than 6 percent of the labor force was unemployed during at least 18 months in the 2 years immediately preceding such date; or (d) not less than 15 percent of the labor force in the area has been unemployed for a period of 6 months immediately preceding such date.

Subsection (b) sets forth the criteria for designating a rural area as a rural redevelopment area. The Administrator is directed to designate as rural redevelopment areas those rural areas in which he determines that there exists the largest number and percentage of low-income farm families and a condition of substantial and persistent underemployment. In making these designations, the Administrator is required to consider, among other relevant factors, the number of low-income farm families in the various rural areas in the United States, the proportion such low-income families are to the total farm families of each of such areas, the relationship of the income levels of farm families of each such area to the general levels of income in the same area, the current and prospective employment opportunities in each such area, and the availability of farm manpower in each such area for supplemental employment. The Administrator shall designate the 500 counties in the United States ranked lowest in level of living of farm-operator families, or which have the highest percentage of commercial farms producing less than $2,500 worth of products for sale annually.

Subsection (c) provides that in making determinations concerning redevelopment areas, the Administrator is to be guided—but not conclusively governed—by the available information published by the various Federal agencies, State and local governments, universities and private organizations.

The Administrator may also request from the Secretary of Labor, the Secretary of Agriculture, and the Director of the Bureau of the Census special studies and such information and data as he deems necessary to enable him to make the determinations provided for in this section. The Administrator is required to reimburse these agencies for expenditures which they incur in connection with filling his requests.

Subsection (e) defines the term "redevelopment area" to mean any area within the United States which has been designated by the Administrator as an industrial redevelopment or a rural redevelopment area.

Section 6. Loans for industrial and rural projects: Section 6 of the bill provides two $75 million revolving funds, one for industrial projects in industrial redevelopment areas, the other for rural redevelopment areas. These revolving funds for loans were provided because witness after witness testified that in these urban and rural areas where unemployment and underemployment have been substantial and persistent, the communities own resources are not sufficient to make it possible for industrial development to proceed. These loans are intended to help provide for plant, equipment and machinery, but not for working capital or the purchase of raw material and payment of labor. These loans are to be for no longer than 30 years. Government participation is never to exceed 65 percent but may be less. Local and State authorities must put up at least 10 percent and at least 5 percent must be from nongovernment sources.

Section 6 expressly provides that loans made under it for industrial projects must not be granted to assist establishments relocating from one area to another when such assistance will result in an increase in unemployment in the area of original location. This provision reflects the declaration of purpose of the act, to create new employment opportunities by developing and expanding facilities and resources without substantially reducing employment in other areas of the United States.

Sec. 7. Loans for public facilities: The bill provides a revolving fund of $50 million for loans to States, Indian tribes, or organizations representing redevelopment areas to help in financing the purchase of development of land for public facility usage, and construction or alteration of public facilities, if the project will tend to improve the opportunities in the area for the establishment or expansion of industrial or commercial plants or facilities. These loans may run for a period up to 40 years.

A depressed area may have many of the assets sought by industry—buildings, labor, community facilities and the like—but it may lack one public facility without which all the others are useless, for example, adequate water for industrial use, adequate sewage facilities, or access to a navigable river or a railroad.

Interest rates: The bill authorizes appropriations of $251 million for the program. The Administrator is to pay interest on these loans at a rate determined by the Secretary of Treasury, but such rate shall not be greater than the current average yields on outstanding marketable obligations of the United States of comparable maturities as of the last day of the month preceding the issuance of such notes or other obligations.

Loans made to industrial projects must pay interest to the administrator at this same rate plus one-half of 1 percent. Of this, one-quarter of 1 percent is allocated to a sinking fund for payment of losses.

The interest rate in the case of public facility loans is a rate determined by the Secretary of the Treasury, but which shall be not greater than the average annual interest rate on all interest-bearing obligations of the United States then forming a part of the public debt as computed at the end of the fiscal year next preceding the year in which the loan is made and adjusted to the nearest one-eighth of 1 percent, plus one-quarter of 1 percent per annum.

Section 8. Grants for public facilities: The bill authorizes appropriations of $35 million for grants to States or their subdivisions, Indian tribes, or public or private organizations representing redevelopment areas for land acquisition or development for public facilities usage, or construction or alteration of public facilities in the area, if the project will improve the opportunities in the area for the establishment or expansion of industrial or commercial plants or facilities. Financial participation by the applicant is required to the extent financial ability will permit.

Some redevelopment areas have inadequate economic resources, either because of chronic unemployment or underemployment or a

generally low level of economic development, to borrow money to develop public facilities which would make the areas attractive to new industry. For this reason, the bill provides for grants to improve public facilities in these localities.

Sections 9 and 10. Information and technical assistance: The Administrator is directed to provide assistance, technical information, market research, and other forms of advice available from the Federal Government which would be useful in alleviating unemployment and underemployment in the areas. In addition, the Administrator is authorized to provide technical assistance to the areas including studies evaluating the needs of and developing potentials for economic growth for such areas. This may be done either through the Administrator's staff or by employing individuals, firms, or institutions. Appropriations up to $4.5 million annually are authorized for this program.

Section 11. Powers of Administrator: Usual corporate powers.

Section 12. Termination of eligibility: When unemployment ceases to meet the criteria set forth, the area is no longer eligible. Contracts, however, continue in force.

Sections 13 and 14. Urban renewal: The bill makes available to economically depressed areas the benefits of the Federal urban renewal program. Under this section, urban renewal assistance may be provided to a municipality designated as "an industrial redevelopment area" if there is a reasonable probability that with such assistance the area will be able to achieve more than a temporary improvement in its economic development. Such an area need not comply with the predominantly residential test and thus areas which are predominantly commercial or industrial and which will be redeveloped as commercial or industrial areas are eligible.

Sections 15 and 16. Vocational training and subsistence retraining payments: The bill provides that the Secretary of Labor shall determine the needs of the area for vocational training to meet the employment opportunities created by the bill and shall cooperate with the Secretary of Health, Education, and Welfare and existing State and local agencies to make these services available to the area. Authorization for an appropriation of $1.5 million annually is provided for vocational training.

In order to enable unemployed persons to get the benefits of this training, the bill also provides that the Secretary of Labor may make weekly retraining payments through State agencies to unemployed persons in the redevelopment areas of 13 weeks at the average weekly unemployment compensation rate in that State, but limited to those not receiving unemployment compensation. A ceiling of $10 million is placed upon this program.

THE ESSENCE OF S. 722

Mr. DOUGLAS. Mr. President, I may say that fundamentally what this bill aims to do is to provide loans at low rates of interest to help establish new industries in areas of high and persistent unemployment; to require local participation; to require participation by private parties, but to provide seed capital to help put the unemployed to work turning out goods which are needed by society under the private enterprise system. This would take men and women off relief, and help to prevent the progressive drying up of afflicted communities, and, in general, to raise the national product.

As I have again and again pointed out, this method is used by the Tory Government of Great Britain and by the conservative government of West Germany, and yet it is regarded as too radical by the Republican administration of this country.

This problem is far more serious than the administration believes. I have had a map of the United States prepared, which is in the back part of this Chamber. The areas designated with the red pins represent both the larger and smaller labor market surplus areas of the United States, those that would meet the qualifications laid down in Senate bill 722.

There are 40 of these major, large labor market areas, and 122 of the smaller.

We have just received word from the Department of Labor that there are approximately 1,770,000 unemployed people in those regions, or, on an average, 8.4 percent of the labor force of this area.

In some of these areas, unemployment is vastly greater than the average of 8 percent. In West Virginia there are areas where unemployment runs from 11 percent to 25 percent.

In my own State of Illinois, in the southern portion of the State, which was primarily a coal-mining area, there is unemployment in some areas of 12, 15, and 18 percent.

There is high unemployment in the textile centers of New England, New York, and Pennsylvania.

This is a problem which, as the map shows, and as the table shows, is not sectional. It applies all over the country, although, so far as unemployment is concerned, it is primarily confined to regions where formerly textiles were manufactured, coal-mining regions, areas where timber has been cut over or natural resources have given out.

The colored areas on the map represent the rural low-income areas of the United States. It will be seen that they exist primarily in the South and Southeast. The degree of severity of the rural low-income situation is shown by the colors, the areas with the most depressed rural income being shown in red, the next most depressed in blue, and those depressed, but not as badly as the others, in yellow.

Very frankly, I cannot understand why so many Senators and Representatives from those areas, which would benefit perhaps more than any others from starting new industry to help the low-income families who live there, seem to be opposed to this bill.

Mr. RANDOLPH. Mr. President, will the Senator yield?

Mr. DOUGLAS. I am happy to yield.

Mr. RANDOLPH. I would not want to break the continuity of the presentation of the distinguished Senator from Illinois, except to say that when he asks the question and answers it, that indicates, of course, as one looks at this map, that the reasons are overriding for assistance in area redevelopment legislation.

I desire to supplement the discussion on the current legislative situation by indicating that if we have an economic erosion in any area of the United States, it quite likely will become an erosion to the neighboring sections. So the damage does not stop at a line.

Mr. DOUGLAS. The Senator is correct.

Mr. RANDOLPH. It flows over in its tragic implications to affect people of other sections. Certainly, when there is an economic erosion there comes a lessening of the strength of the people—of all the people, not simply a few of the people—to help themselves.

All we are requesting in the proposed legislation is a strengthening of the total economy. We do not seek handouts from the Federal Government. We seek legitimate and, as provided in the pending bill, moderate assistance to States, to areas within States, and to people who find themselves unemployed throughout these chronically depressed areas of the Nation.

Mr. DOUGLAS. I thank my good friend from West Virginia, who has been a stalwart supporter of this proposal.

Mr. President, I ask unanimous consent to have printed in the RECORD at this point a table prepared by the Department of labor, which sets forth the history of the designation of these areas as labor surplus areas, and a list of counties which would be designated as rural redevelopment areas.

There being no objection, the table and list were ordered to be printed in the RECORD, as follows:

Initial dates of labor surplus area classification and subsequent classification experience,[1] July 1951 to present—Urban areas that may qualify for Federal assistance under various legislative proposals [2]

MAJOR AREAS [4]

Area redevelopment bill (S. 722 as passed by Congress) (40 major areas)	Douglas bill (S. 722 as originally passed by the Senate) (17 major areas)	Dates of labor surplus classification	Unemployment	
			Date	Rate [3]

[1] Dates areas listed were officially classified by the Department of Labor as "areas of substantial labor surplus."

[2] Listing of eligible areas is preliminary and tentative, and is based largely on bimonthly or semiannual data compiled from area labor market reports prepared in connection with the Bureau of Employment Security's program for the classification of areas according to relative adequacy of labor supply. Data used cover a 2- to 5-year period, generally extending through March 1960. Later data, now becoming available for some areas, could result in several changes in the above listing.

[3] Unemployment rates for major areas are as of March 1960. Data for smaller areas are for latest month available as reported in official area labor market reports prepared by State employment security agencies.

[4] Major areas are the 149 areas included in the Bureau of Employment Security's regular area labor market reporting and classification program. Unemployment and labor force data for these areas are generally available on a bimonthly basis.

[5] Smaller areas: Areas with a labor force of 15,000 or more which are officially classified as "smaller areas of substantial labor surplus" by the Bureau of Employment Security. Data for such areas are generally available on a semiannual basis. Information for smaller areas which are not classified, or for areas with a labor force of less than 15,000, are not available in Washington on a consistent basis.

Source: U.S. Department of Labor, Bureau of Employment Security, Office of Program Review and Analysis, Washington, D.C., May 23, 1960.

APPENDIX B. LIST OF COUNTIES WHICH MUST BE DESIGNATED AS RURAL REDEVELOPMENT AREAS

Alabama: Autauga, Barbour, Bibb, Blount, Bullock, Butler, Chambers, Chilton, Choctaw, Clarke, Clay, Coffee, Conecuh, Coosa, Covington, Crenshaw, Cullman, Dallas, De Kalb, Elmore, Escambia, Etowah, Fayette, Franklin, Geneva, Greene, Hale, Henry, Houston, Jackson, Lamar, Lawrence, Lee, Limestone, Lowndes, Macon, Marengo, Marion, Marshall, Monroe, Montgomery, Morgan, Perry, Pickens, Pike, Randolph, Russell, Sumter, St. Clair, Tallapoosa, Tuscaloosa, Walker, Washington, Wilcox, Winston.

Arkansas: Ashley, Baxter, Boone, Bradley, Calhoun, Chicot, Clark, Clay, Cleburne, Cleveland, Columbia, Conway, Crittenden, Dallas, Desha, Drew, Faulkner, Fulton, Grant, Greene, Hempstead, Howard, Independence, Izard, Jefferson, Johnson, Lafayette, Lawrence, Lee, Lincoln, Little River, Logan, Lonoke, Madison, Marion, Miller, Monroe, Montgomery, Nevada, Newton, Ouachita, Perry, Phillips, Pike, Polk, Pope, Randolph, St. Francis, Scott, Searcy, Sebastian, Sevier, Sharp, Stone, Union, Van Buren, White, Woodruff, Yell.

Florida: Baker, Calhoun, Gilchrist, Hamilton, Holmes, Jackson, Jefferson, Lafayette, Leon, Madison, Okaloosa, Suwannee, Union, Walton, Washington.

Georgia: Appling, Atkinson, Bacon, Baker, Baldwin, Brantley, Brooks, Bryan, Burke, Butts, Carroll, Charlton, Chattooga, Clay, Clayton, Clinch, Coffee, Coweta, Crawford, Dade, Decatur, Dodge, Douglas, Early, Echols, Elbert, Evans, Fannin, Fayette, Glascock, Gilmer, Greene, Hancock, Haralson, Hart, Harris, Heard, Henry, Jasper, Jeff Davis, Johnson, Lamar, Lanier, Liberty, Lincoln, Long, Marion, Meriwether, Montgomery, Murray, Newton, Oglethorpe, Pierce, Quitman, Rabun, Randolph, Rockdale, Screven, Stewart, Taliaferro, Tattnall, Taylor, Telfair, Towns, Treutlen, Twiggs, Union, Walker, Warren, Washington, Wayne, Wheeler, White, Wilcox, Wilkes, Wilkinson.

Illinois: Hardin, Johnson, Pope.

Kentucky: Adair, Allen, Breathitt, Breckinridge, Butler, Carter, Casey, Clay, Clinton, Cumberland, Crittenden, Edmonson, Elliott, Estill, Floyd, Grayson, Graves, Green, Greenup, Hopkins, Jackson, Johnson, Knox, Laurel, Lawrence, Lee, Lewis, Magoffin, Marshall, Menifee, McCracken, Metcalfe, Monroe, Morgan, Ohio, Owsley, Pike, Powell, Pulaski, Rockcastle, Rowan, Russell, Wayne, Whitley, Wolfe.

Louisiana: Avoyelles, Bienville, Beauregard, Caldwell, Catahoula, Claiborne, Concordia, De Sota, East Feliciana, Evangeline, Franklin, Grant, La Salle, Lincoln, Livingston, Morehouse, Natchitoches, Red River, Richland, Sabine, St. Helena, St. Landry, Union, Vernon, Webster, West Carroll, West Feliciana, Winn.

Michigan: Alcona, Clare, Iosco, Iron, Wexford.

Minnesota: Aitkin, Itasca.

Mississippi: Adama, Alcorn, Amite, Attala, Benton, Bolivar, Calhoun, Carroll, Chickasaw, Choctaw, Claiborne, Clarke, Clay, Coahoma, Copiah, Covington, De Sota, Franklin, George, Greene, Grenada, Hinds, Holmes, Humphreys, Issaquena, Itawamba, Jasper, Jefferson, Jefferson Davis, Jones, Kemper, Lafayette, Lamar, Lauderdale, Lawrence, Leake, Lee, Leflore, Lincoln, Lowndes, Madison, Marion, Marshall, Monroe, Montgomery, Neshoba, Newton, Noxubee, Oktibbeha, Panola, Perry, Pike, Pontotoc, Prentiss, Quitman, Rankin, Scott, Sharkey, Simpson, Smith, Sunflower, Tallahatchie, Tate, Tippah, Tishomingo, Tunica, Union, Washington, Walthall, Warren, Wayne, Webster, Wilkinson, Winston, Yalobusha, Yazoo.

Missouri: Bollinger, Butler, Carter, Dent, Douglas, Howell, Iron, Madison, Oregon, Ozark, Reynolds, Ripley, Shannon, Stone, Taney, Vernon, Washington, Wayne, Wright.

New Mexico: Mora, Rio Arriba, San Miguel, Sierra, Socorro.

North Carolina: Alexander, Alleghany, Anson, Ashe, Avery, Bladen, Buncombe, Brunswick, Burke, Caswell, Catawba, Cherokee, Clay, Cleveland, Columbus, Davidson, Duplin, Graham, Halifax, Haywood, Hyde, Jackson, Lincoln, McDowell, Macon, Madison, Mitchell, Montgomery, New Hanover, Onslow, Pender, Person, Polk, Rutherford, Scotland, Stanly, Swain, Transylvania, Tyrrell, Washington, Warren, Watauga, Wilkes, Yancey.

Ohio: Gallia, Guernsey, Noble.

Oklahoma: Adair, Atoka, Cherokee, Choctaw, Coal, Creek, Delaware, Haskell, Hughes, Latimer, Le Flore, Lincoln, McCurtain, McIntosh, Okfuskee, Okmulgee, Pittsburg, Pushmataha, Seminole, Sequoyah.

South Carolina: Abbeville, Allendale, Anderson, Barnwell, Beaufort, Berkeley, Charleston, Cherokee, Chester, Chesterfield, Clarendon, Colleton, Dorchester, Edgefield, Fairfield, Greenwood, Georgetown, Greenville, Hampton, Horry, Jasper, Kershaw, Lancaster, Laurens, Lee, Lexington, McCormick, Newberry, Oconee, Orangeburg, Pickens, Saluda, Spartanburg, Union, Williamsburg, York.

Tennessee: Anderson, Benton, Bledsoe, Blount, Campbell, Cannon, Carroll, Carter, Claiborne, Clay, Cocke, Cumberland, Decatur, De Kalb, Dickson, Fayette, Fentress, Giles, Grainger, Greene, Grundy, Hamblen, Hancock, Hardeman, Hardin, Hawkins, Haywood, Hickman, Houston, Humphreys, Jackson, Jefferson, Johnson, Lauderdale, Lawrence, Lewis, Lincoln, Loudon, McMinn, McNairy, Macon, Madison, Marion, Meigs, Monroe, Moore, Morgan, Overton, Perry, Pickett, Polk, Putnam, Rhea, Roane, Rutherford, Scott, Sevier, Sequatchie, Smith, Stewart, Sullivan, Sumner, Unicoi, Union, Van Buren, Washington, Warren, Wayne, White, Wilson.

Texas: Angelina, Anderson, Bastrop, Bowie, Burleson, Camp, Cass, Cherokee, Duval, Franklin, Freestone, Harrison, Henderson, Houston, Lavaca, Leon, McMullen, Madison, Marion, Morris, Newton, Panola, Polk, Rains, Red River, Robertson, Rusk, Sabine, San Augustine, San Jacinto, Somervell, Titus, Upshur, Trinity, Walker, Wood.

Virginia: Alleghany, Appomattox, Bath, Bedford, Buchanan, Buckingham, Carroll, Charlotte, Craig, Dickenson, Floyd, Fluvanna, Grayson, Greene, Greensville, Halifax, Henry, Highland, Lee, Lunenburg, Mecklenburg, Patrick, Prince Edward, Russell, Scott, Tazewell, Washington, Wise, York.

West Virginia: Brooke, Barbour, Braxton, Cabell, Calhoun, Clay, Doddridge, Fayette, Gilmer, Harrison, Jackson, Kanawha, Lewis, Lincoln, Mason, Marion, Mercer, Monongalia, Monroe, Nicholas, Pleasants, Pocahontas, Preston, Putnam, Raleigh, Randolph, Ritchie, Roane, Summers, Taylor, Tucker, Tyler, Upshur, Wayne, Wetzel, Wirt, Wood.

Mr. DOUGLAS. Mr. President, I wish to point out that some of the areas have had high unemployment, of more than 6 percent, for 10 years, at least. For instance, Lawrence and Lowell in Massachusetts, ever since the survey was started in July of 1951, although formerly great textile centers have had over 6-percent unemployment. The last figure, as of this year, shows an unemployment of 6.7 percent in Lawrence, and 9.8 percent, or almost 10 percent, for Lowell, Mass.

Atlantic City, N.J., has had continuous, chronic unemployment ever since November of 1951. At the last account the figure was 15 percent.

Altoona, Pa., has had continuous unemployment since July of 1951. At present the unemployment rate is 8.8 percent.

Providence, R.I., has had continuous high unemployment since July of 1951. At present Providence has unemployment of 8.4 percent.

There are large numbers of the so-called smaller areas which have had continuous unemployment for long periods of time. All of this will be revealed by a close study of this table, which is being printed in the RECORD.

I wish to point out that of the 102 smaller areas designated, 77 have been surplus labor areas for longer than the past 5 years, and this number represents 75 percent of the total of the 102 smaller areas.

The Department of Labor, as is well known, classifies these surplus areas into three groups, called D, E, and F. Group D represents areas of unemployment from 6 to 9 percent; group E areas of unemployment from 9 to 12 percent; and group F areas of unemployment over 12 percent. Groups A, B, and C have less than 6-percent unemployment and are not classed as surplus labor areas.

OUR NATIONAL RESPONSIBILITIES

Mr. President, I know that some will ask a question at this point, and it is a logical one. Why do these people stay in these places? Why do they not leave and seek work elsewhere? The answer is that they do. That is why unemployment rates are 12 instead of 25 percent, or 20 instead of 40 percent. But migration alone cannot solve the problem.

In the first place, many of the persons thrown out of work are over 40 or 50 years of age, and face discrimination because of their age when seeking a job. They leave their families only to return more defeated than before. Second, they lack training for the available jobs in other areas. Third, their roots and homes are in these areas, and they keep up their hopes for the future. It is hard for someone to give up all he has worked for in his home, neighborhood, church, and local groups, especially after investing most of his life in them. Fourth, some families have gone deeply in debt and do not like to "run out" on their obligations. Moreover, those who migrate and find jobs are, because of low seniority in their new employment, the first to be laid off in a recession. So they head "back home."

There are other reasons. But the basic answer to the question "Why don't more persons in these areas move?" is that they would if they could, but they cannot.

Mr. RANDOLPH. Mr. President, will the Senator yield?

Mr. DOUGLAS. I yield again to my good friend from West Virginia.

Mr. RANDOLPH. The Senator from Illinois is correct when he discusses the lessening of population in these areas, though the people still have roots in them. West Virginia, on the basis of a preliminary compilation of the current census, has lost, in some of the coal-producing counties, over a 10-year period, as many as 17,000 people. I say to the Senator from Illinois, that is the population loss within one county alone.

Mr. DOUGLAS. Yes.

Mr. RANDOLPH. We know now, on the basis of figures which are not yet official but which are substantially correct, that West Virginia will lose one

Member of its House delegation. We now have six Members of the House of Representatives. Beginning in 1962, with the election in that year, we are quite likely to have only five Members of the House of Representatives from our State.

This is a very serious problem. The Senator is presenting it in a very factual manner.

Mr. DOUGLAS. I thank the Senator very much.

Mr. President, the next questions, also logical, might be, "Well, what can we do about it? Why send good money after bad? What good would it do? Anyway, is this not a local rather than a national problem?"

In some cases, perhaps, little can be done, for the program envisaged by our area redevelopment bill is not a handout or a dole. It is not a relief measure. Rather, it is a program of long-term investment in repayable loans to help these areas to help themselves.

The fact is that many of these areas have natural resources, strategic locations, and an available labor supply. They are ripe for new industries, but private capital is not available. In such communities local capital is normally limited and less venturesome than in places where greater prosperity prevails. Moreover, outside capital is reluctant to enter. Credit on favorable terms and at low rates of interest is needed in such communities both to develop their public facilities so as to make them more attractive to new industry and to establish new enterprises to create new jobs in the area.

I wish to emphasize, this is not a handout or a dole. This is not a relief measure. Rather, it is a program of long-term investment in repayable loans to help these areas help themselves. The Federal Government can be most helpful in assisting such communities, with the cooperation of private lending institutions and State and local governments, to raise the funds necessary to expand the economic base. A long-term loan at a low rate of interest granted by the Federal Government in some cases may be exactly the added incentive necessary for the unleashing of other private capital to develop many of these areas.

Failing to aid badly distressed areas which might recover with a little help is a waste of valuable resources. A prolonged depression in an area means the gradual disintegration of community facilities—schools, stores, hospitals, banks, office buildings, homes, churches, paved streets, sidewalks, sewer and water supply systems, and all of the community services which were acquired at great expense and which are now wasting away.

These facilities will have to be duplicated if we have a mass, wholesale migration from these areas into other areas. Moreover, a successful area redevelopment program would serve to reduce public outlays for unemployment compensation, relief, and various other forms of public assistance—payments for which no current production is received in return. It would help to replace the dole by constructive work.

The Employment Act of 1946 declares that the Federal Government should promote maximum employment. But there is a limit to the effectiveness of broad-scale programs to alleviate joblessness. Many—probably most of the cities of the United States—are not badly depressed. Moreover, a blunderbuss nationwide program to alleviate joblessness and poverty at this time, which affects all areas alike, might create inflationary pressures by causing new investments where unemployment is small.

In these cases, there would be no slack for the additional expenditures and employment opportunities to take up, and pouring new money into such areas would tend to bid up prices instead of actually increasing production.

Channeling investments into areas of high unemployment or underemployment is a different matter. Large reservoirs of idle manpower would be put to work and production would increase. This added output would offset in whole or in large part the extra monetary purchasing powers added to the industrial sector of the country, and hence cannot be called inflationary.

Thus, the area redevelopment bill will reduce unemployment and poverty where it is the worst. It will attack joblessness with carefully aimed rifle shots instead of a sawed-off shotgun. It is not a program designed to cure great industrial depressions or seasonal unemployment—and we have never claimed it to be so. But would reduce the persistent and deep pockets of unemployed workers and hence decrease so-called structural unemployment, which general monetary and fiscal policy cannot reach.

To make this problem clear to the membership, I have, as I have said, prepared charts which show the history of the high and long-term unemployment in these areas which are available at the rear of the Chamber for your inspection. If you examine these, I believe you will agree they completely refute the charge of the administration that the distress in the areas covered by S. 722 is only temporary in nature. It is clear that the problem is not a local one or a regional one, but is a national one that demands our favorable attention.

STATED REASONS FOR THE VETO ANALYZED

Let me now examine the reasons set forth by the President for this most recent veto:

First. The President states that S. 722 would "squander the Federal taxpayers' money where there is only temporary economic difficulty, curable without the special Federal assistance provided in the bill." Those are his words.

To answer this argument I have had a chart, to which I have referred, prepared, which gives the history of each of the areas presently qualified for participation under the bill.

Shown on this chart are 40 major labor market areas which would qualify under the provisions of S. 722, and 102 smaller labor market areas which would also qualify. Of the 40 major labor market areas, 11 are shown to have been so designated since 1951; 30 of these major areas have been so designated for at least 5 years, and 77 of the 102 smaller labor market areas have also been so rated for over 5 years. All of the areas designated have at least 2 years of excessive unemployment experience.

Two years of excessive unemployment can produce dire effects upon the economic base of a community. And with three-quarters of the areas, both large and small, having over 5 years of such experience, the records show that there is just no truth in the statement that the areas that would be covered by S. 722 are only temporarily in these economic difficulties.

In these 142 labor market areas, obviously there are great variations in the severity and nature of the needs. But the Administrator is not bound to give every form of assistance to every area. Under sensible administration, therefore, there is no reason to fear that areas needing only urban renewal or technical or planning assistance will "deprive" more heavily hit communities of needed loan funds, as the President charges. The President's use of the word "squander" is also ill suited to a bill in which $200 million of the $251 million authorized are in the form of repayable loans—and two of the grant programs are in the administration's own bill.

Second. The President next states that the provisions of S. 722 would "inhibit" local, State, and private initiative, and further that the 65-percent maximum Federal participation provided in the bill is too high a Federal share for an effective redevelopment program. First let us note that a lesser percentage than 65 may be granted; the 65 percent is only a maximum limitation. But some of the hardest hit areas may need that much to get started. My colleague, the minority leader, once urged upon the committee an even higher ceiling.

One has only to read the full provisions of S. 722, moreover, to see the lack of understanding of this bill by the administration. Subsection (b)(2) of section 6 specifically provides that such assistance shall be extended only to applicants which have been approved for such assistance by an agency or instrumentality of the State or political subdivision thereof in which the project to be financed is located, and which agency or instrumentality is directly concerned with problems of economic development in such State or subdivision.

In the event there is no such State or local agency, which will be the exceptional case, there is the further provision in subsection (c) of section 6 that the Administrator appoint a local redevelopment committee, but it must be composed of not less than seven residents of the area—representatives of labor, commerce, industrial, and agricultural groups and of the residents, generally, of the area, to form the basis for the redevelopment program of the area.

These are specific requirements designed to stimulate, not to stifle, local initiative. The bill recognizes that the success of redevelopment of these areas is dependent upon the will and efforts of the local citizens.

Third. The President next objects to the inclusion of the provision for Fed-

eral financing of plant machinery and equipment for the stated reason that such expenditure is "unwise and unnecessary and therefore wasteful of money that otherwise could be of real help."

This provision was included in the bill as a result of the recommendations of several witnesses who appeared during three congressional hearings conducted during 1956, 1957, and 1959, and which hearings developed 3,520 pages of hearings before three Senate committees. The Labor and Public Welfare Committee conducted the hearing in 1956, and the Senate Banking and Currency Committee conducted the subsequent hearings during 1957 and 1959. This authorization will be especially helpful where the area has available buildings and public facilities, but needs only new and different machinery.

At one point during the committee consideration in 1958, Senator Purtell, himself a manufacturer from Connecticut, strongly expressed the opinion that the inclusion of a provision for the use of funds for plant machinery and equipment was wise and necessary to do the job that needs to be done in these areas. The committee was persuaded by his argument and the other testimony before it. Surely the Administrator in his discretion will deny unneeded or unduly risky loans for this purpose. But to meet the exceptional need, the authority seems desirable—and surely is not grounds for veto.

Fourth. Objection is next made to the public facilities loan and grant program set forth in S. 722, and the President states that there is available under existing Government loan programs sufficient money to cover these needs.

The hearings developed information that in many areas, notably areas of New England, Pennsylvania, West Virginia, and eastern Kentucky, where the communities are located in somewhat narrow valleys, new lands must be developed for industrial parks for industry location. A program of this type requires the development of all types of public facilities—access roads, powerlines, grading and ground clearing, sewerage systems, and water, often large requirements of water for industrial use. These facilities may be the essential key to redevelopment. I know of no Federal programs which cover all of these needs.

The President suggests the Community Facilities Administration under the Housing and Home Finance Agency, which has a general authority for loans for some of these types of public facilities. But in this administration, it is apparent that they are largely concerned with building sewerage and water systems for small communities. This in no sense meets the needs of these areas which require a variegated, sizable, and adequate provision of industry water and industrial parks. It would also take away from the desirable coordination of major redevelopment programs to have the public facilities assistance handled separately. I know of no Federal program which covers all this need.

The grant program set forth in S. 722 is also criticized. In this connection, I would like to say that the evidence before us clearly showed that unfortunately there are a number of areas in the United States which are unable to repay all the costs of loans for public facilities needed for an effective economic redevelopment program. To meet these exceptional but needy cases, grants are authorized. But S. 722 cautiously requires that the Administrator obtain from the area seeking assistance a contribution to the costs in proportion to the ability of the area to contribute.

Fifth. The President then states that the provisions for a Federal loan program for the development of our rural areas is "incongruous and unnecessary," and again states that there are in existence Federal programs, namely the Small Business Administration and the Rural Development Program, which are capable of giving the needed assistance for curing the problems of the low-income rural areas.

The problem of underemployment in our rural areas is just as great as the problem of unemployment in our industrial areas. I think it is quite clear and that the record shows that the rural development program administered by the Department of Agriculture is wholly inadequate to solve this long-term problem of our poverty-ridden rural areas. For the most part, the rural development program of the Department of Agriculture does little other than organize and counsel. It should be termed the conversation department. There has been some vague talk about increasing industrialization and nonfarm employment opportunities. But the program has no funds to implement that talk. The Small Business Administration, as shown by the hearings, is wholly ineffective in reaching a solution to this rural redevelopment problem.

We propose to help start new industries where the families of low-income farmers may be employed, and the farmers themselves may be employed in the off seasons. Of course, the Small Business Administration has virtually nothing to do with this.

It was the opinion of the Senate committee which considered this bill that a rural program as set forth in S. 722 was the most effective way to solve the problem of rural underemployment. Perhaps one of the most cogent statements made by any of the witnesses before both the House and the Senate Banking and Currency Committees was that of Mr. Herschel D. Newsom, master of the National Grange, and I quote:

> From the long-range standpoint, it (area redevelopment legislation) could be one of the most important pieces of agricultural legislation during the 86th Congress.

I might add that the rural program set forth in the bill was also supported by the Farmers' Union.

Sixth. The sixth and last objection made by the administration is that a new Federal agency is not needed. The Department of Commerce, the President asserts, should administer the program.

This point has received much consideration and has been the subject of much debate. We decided that the Department of Commerce should not administer the proposed legislation. The major reason is that the Department of Commerce is the agency in which the principal opposition to this bill has been found, and to give Secretary Mueller the power to administer this program would be like designating a fox to take care of the chickens.

Mr. President, today we pass on the question of overriding the President's veto. I do not think the administration has been wholly forthright in dealing with this issue.

The bill before the Senate is a broad bill which seeks to provide a number of ways of meeting this widespread, long-term economic blight that exists in the United States. The unemployment fact gathering of the Department of Labor, the vocational training programs of the Department of Labor, and the subsistence retraining payment program, all suggest a definite interest of the Department of Labor in administering some phases of the bill. The rural program set forth in the bill is foreign to the functioning of the Department of Commerce. But the most basic reason why the program should not be under its jurisdiction is the unsympathetic if not downright hostile attitude displayed by the Department of Commerce through these last 5 years toward redevelopment of these areas in the broad sense.

The stated grounds for the President's veto thus are without foundation in reason or in fact. When coupled, as they are, with renewed expressions of interest in some affirmative action—affirmative action which the veto, however, seeks to block and which the administration has steadily fought—these appeals of the President are contradictory and confusing.

Only Congress by a reaffirmation of its support for an effective program, with enlarged majorities, can give the clear lead that is essential to the meeting of this problem.

Let me turn briefly to some of the main, affirmative reasons why we should enact S. 722, notwithstanding the veto.

HOW MUCH DOUBLETALK CAN THE PEOPLE TAKE?

Each year the President has asked for an area redevelopment program, and each time when Congress passes such a bill the President vetoes it on one pretext or another.

His callous acts as compared with his soul-warming and solicitous words reminds me of Lewis Carroll's story of the walrus and the carpenter who lured a multitude of oysters into taking a little walk with them along the beach and then after some pleasant and soothing talk, proceeded to eat them all up.

> "I weep for you," the Walrus said;
> "I deeply sympathize."
> With sobs and tears, he sorted out
> Those of the largest size,
> Holding his pocket handkerchief
> Before his streaming eyes.

The hypocrisy of the walrus is well paralleled by the hypocrisy of the administration in dealing with this measure.

ARE WE TO HAVE MINORITY RULE? IS THE PRESIDENT TO BECOME THE LEGISLATURE AS WELL?

There is another principle involved in our action on this bill. It is whether we are to substitute minority for majority rule in this country. The President has boasted that through the veto, as long as he can command one more than a third of the votes in either House, he can stop anything the majority of the Nation, expressing themselves through their representatives, want, or dictate the terms of any legislation which is passed.

He has already vetoed the water pollution bill under these conditions, and he has twice vetoed this area redevelopment bill. He vetoed the housing bill twice, and has threatened to do it again this year, and he has the ax poised in a similar position for any school aid bill.

This is an assertion of minority rather than of majority rule.

Under the strict terms of the Constitution, the President, of course, has the power to do this. But is it wise and in the interest of the Nation, and in the interest of national unity for him to carry out this policy.

The President and his followers are demanding the most rigid obedience to their will and tactics in the field of foreign affairs. Even the most reasonable criticism of methods is bitterly resented and denounced as unpatriotic.

I believe that history will record that never has an opposition party holding the majority of Congress been so understanding and so cooperative in its relationships with a President of the opposite political faith than we Democrats have been during the last 7½ years. One need only to compare our behavior with that of the Republicans toward Woodrow Wilson in 1919–20, and toward Franklin D. Roosevelt from 1935 to 1945, and throughout the Truman administration, when an eminent Republican led the pack in referring to the Korean war as "Truman's war." The contrast is almost one between daylight and darkness.

Not only does the administration demand that we follow them to the last comma and numeral on foreign policy and foreign aid, but they resent and attack any suggestion from us as to how they might carry out those policies in a better fashion.

The bitter words which have been uttered by them during the last few days indicate that they would put a figurative gag in the mouth of every prominent Democrat who, although not questioning their motives, criticizes their competence.

COOPERATION SHOULD BE A TWO-WAY STREET

We are willing to cooperate in the field of foreign policy for the sake of national unity. I believe we have done that, and we will continue to do so. We will continue to cooperate. However, cooperation is a two-way street. It is a reciprocal affair. Should not the administration in turn cooperate with us in domestic affairs, instead of repeatedly trying to impose its will in the smallest degree in these matters as well as in foreign affairs? We have tried to meet the administration halfway. We have cut the total amounts included from $379 million to $251 million, or by $138 million. We eliminated the authorization for bond issues in order to require later appropriations. Apparently that is not enough. The President now demands complete and final submission. He wants to be the legislature as well as the Executive. He wants to prevent the majority from legislating, by the free use of his veto, and to heap scorn upon us, for partisan effect, that we have not accomplished much and have not passed much legislation. If he would cooperate we could pass the legislation but his stubborn vetoes are making this impossible.

The dignity of the legislative branch alone demands that we override the veto. But more than the dignity of the legislative branch is involved. The welfare of the Nation is involved, and that demands that we put into the hands of the unemployed the means for them to go back to ployed the means for them to go back to

The President of the United States is insisting that we spend billions of dollars for foreign aid, and in great detail. I have in my hand a list of some of the projects which have been compiled by the Senator from Alaska [Mr. GRUENING]. This book, which I hold in my hand, weighs 6 pounds 4 ounces. The projects are listed in great detail. They are in nearly every country of the world. The President is saying, "Do not cut a single cent from these foreign projects." Yet he refuses to permit a more-work program to go into effect for the people of this Nation.

I say for the sake of our dignity and for the sake of the country and for the sake of the people of the United States, we should override the veto.

Mr. CLARK. Mr. President, will the Senator yield?

Mr. DOUGLAS. I yield.

Mr. CLARK. I congratulate the distinguished Senator from Illinois. He is the author of the depressed areas concept. He carried the first depressed areas bill satisfactorily through the Senate, only to see it die in the House of Representatives. He carried the second depressed areas bill successfully through the Senate. It passed the House. Then it was vetoed. He undauntedly and untiringly arose again to lead in the passage through the Senate of a third bill, a better bill than the one the President has vetoed.

I congratulate him for his indomitable will and his strong feeling of urgent need to help those unfortunate people who are without jobs through no fault of their own. I only wish that his efforts had been more successful. However, he who fights and runs away will live to fight another day.

Mr. DOUGLAS. I am not running away.

Mr. CLARK. No. However, we can see the handwriting on the wall. To not let this matter be entirely serious, I notice that the Senator quoted from Lewis Carroll. In that connection I wonder if he does not recall these lines also from Lewis Carroll's "Through the Looking Glass," as appropriate and quite pertinent to the mess which the administration has created during 7 years of inaction in dealing with depressed areas. I am sure the Senator from Illinois will recall these lines:

> "If seven maids with seven mops
> Should sweep for half a year,
> Do you suppose," the Walrus said,
> "That they could get it clear?"
> "I doubt it," said the Carpenter,
> And shed a bitter tear.

Mr. DOUGLAS. I wish to thank my friend from Pennsylvania for his comment, which I do not deserve but which I appreciate. Ever since the Senator from Pennsylvania has joined the Senate, no one has been more faithful or more determined in pushing for the passage of a good bill as has the Senator from Pennsylvania. He deserves as much credit as I do in this whole matter.

Mr. CLARK. Would that it were true, but it is not.

Mr. DOUGLAS. I yield 5 minutes to the Senator from Pennsylvania.

Mr. CLARK. Mr. President, I rise in support of the effort to override the veto. I do so without much hope of success, but I think it is worth while to at least make the record of how many Senators disagree with the President in his veto message.

I do not even know if it will turn out to be a majority. I hope it will be a substantial majority. I am afraid it will not be the necessary two-thirds majority. However, I concur in the judgment of my colleagues that it is worth making the effort, anyway.

Let me point out that the bill which we are trying to pass, notwithstanding the action of the President, is not nearly so good a bill as the one which passed the Senate a year ago. It goes further in meeting the President's untenable objections than the bill we passed. Yet when all things are considered, it is clearly a better bill than no bill at all.

I should like to deal with the six unsound reasons given by the President of the United States for vetoing the bill. He says, first:

> S. 722 would squander the Federal taxpayers' money where there is only temporary economic difficulty.

Yet it is clear to the most casual observer that the bill does not provide 1 cent of money. How can the taxpayers' money be squandered when the bill does not call for an appropriation? Actually, one of the defects in the House bill was that it required appropriations for the loan funds instead of permitting them to be financed through borrowing from the Treasury. I think any junior high school student would know that the President was wrong when he said an authorization bill would squander the taxpayers' money. Surely a man cannot have served for 7 years in the White House and be unaware of the distinction between an authorization bill and an appropriation bill. Equally clear, if the President believes the bill calls for too much of an authorization, all he has to do is either to propose a smaller appropriation or not spend the money if Congress ignores his will. So the first reason given by the President is clearly untenable.

Second, he says that Federal participation up to 65 percent on industrial projects as a loan is excessive. Yet, again, this is not a requirement; it is a ceiling. The administrator appointed by the President would not have to make a loan of more than 5 percent, if he did not want to. The 65-percent ceiling, in my judgment, was desirable, as anyone who has taken the trouble to travel through the depressed areas, which the President has not done, would know.

So it should be equally clear to a student in high school that the objection to a 65-percent limit is not tenable, because 65 percent is not a requirement; it is a ceiling. Again, the President's own administrator could determine how far it was desired to have Federal participation go.

The President's third objection is to the inclusion of loans for machinery and equipment, in addition to lands and buildings. This provision he thought unwise and unnecessary. Again, this provision is not a directive; it is merely an authorization. Again, the President's own administrator could determine not to make a single loan for machinery and equipment, if he did not want to make it. Anyone who has traveled through the depressed areas of West Virginia, Pennsylvania, and Kentucky which the President has not done will realize the critical condition of the economies in those communities, and will, I believe, conclude that there will be many cases where loans on machinery and equipment would be not only wise but also sound. But, in any case, they would not have to be made.

So I say again that any junior high school student who studied the President's veto message carefully would see that there is no merit in the President's third objection.

The President's fourth objection is that loans for public facilities are unnecessary because such assistance is available under another program. That is not true. The community facilities program has run out of money. True, the President has asked us to replenish it, but there is no priority in that program for areas of heavy unemployment that would have been helped under this bill.

The PRESIDING OFFICER. The time of the Senator from Pennsylvania has expired.

Mr. CLARK. Mr. President, may I have 3 additional minutes?

Mr. DOUGLAS. I yield 3 additional minutes to the Senator from Pennsylvania.

Mr. CLARK. Mr. President, as I have said, the funds for loans for public facilities are not now available. Certainly the President must know this. Certainly he must also know that even if he got the funds he has requested, through the authorization process and then through the appropriation process, for the Federal loans for public facilities, there is no authority which is meaningful to assist depressed areas. Therefore, I believe that any reasonably intelligent teen-age boy or girl would recognize that this objection of the President is simply untenable.

Fifth, the President says that provisions for loans for the industrial development of rural areas are incongruous and unnecessary. I suggest that the President has not stopped shooting quail long enough to go out and look at some of the rural areas close to where the big plantations of some of his Republican friends are located, where the desperate need and the poverty-stricken condition of their inhabitants, together with their inability to obtain an income from the produce of their farms sufficient to support themselves in any standard of decency, constitute a shocking national disgrace.

Therefore, I say that anyone, regardless of his age, who undertakes to study this objection must come to the same conclusion: that the President's fifth reason for vetoing the bill is wrong.

Finally, the President objects to the creation of a new Federal agency. He says it is not needed and would delay the program. In this case, perhaps, theoretically, one could make a strong case for the President. Actually, there would not be any more employees. There would have to be the same number of employees if the program were conducted in an existing agency. There would be no saving to the taxpayer by having the program administered by the Department of Commerce. I believe most people in the administration know why a new agency was proposed in the bill. It was done because the whole administration, from the Secretary of Commerce through the Secretary of the Treasury to the Director of the Bureau of the Budget—and all down the line—is publicly opposed to any program of this kind. If it were placed in the Department of Commerce, that Department would kill the program. That is why a new agency was proposed.

However, there will be a new administration in January, and there will be a new Secretary of Commerce. I hope he will have a little more compassion in his soul than his predecessors had.

If this were the only objection to the bill, we might be able to meet the President on the ground that, organizationally speaking, this arrangement might be satisfactory.

So I think it must be abundantly clear that none of these six reasons given by the President for vetoing the bill would convince even a reasonably intelligent adolescent who wanted to study the problem.

I turn now, briefly, to that double standard, of which the Senator from Illinois and the Senator from Alaska have spoken so eloquently on the floor during the past few weeks. It is all right to take care of the depressed areas in Ceylon, in Formosa, in Vietnam, in India, and elsewhere. That is all right; it is patriotic. But to take care of people in the United States is socialistic and wrong. The cynical nature of this untenable position must be clear to all Americans.

I shall vote for the foreign aid program, in view of the current world crisis in world affairs. I shall vote for every cent the President asks for the foreign aid program. However, I believe it is utterly indefensible to say at the same time that we will not do anything for American citizens because of an alleged "squandering" of taxpayers' money particularly at a time when no real effort has as yet been made to bring in the billions of dollars of additional revenue which are available through adequate tax enforcement and for closeup of iniquitous tax loopholes.

Finally, let me speak about the President's somewhat—well, I will not use the adjective of which I was thinking. Let me talk about his profound hope that sound new legislation will be promptly enacted.

I do not want to question anybody's motivation, but, again, I think it is abundantly clear that any reasonably intelligent high school youngster would know that there will be no new legislation on this subject enacted at this session of Congress. Why? Because it is not possible to get one Republican vote in the House Rules Committee to report a bill in that body. Two conservative Democrats and the four northern Republicans are ganging up together to make it impossible to pass any bill of this kind in the House.

I see my colleague from Pennsylvania [Mr. SCOTT] on his feet. If he thinks I am not right, let him go over to the body, where he served with such distinction, and get a bill passed in the House. Then I will undertake, with the help of my friend from Illinois, to help get it passed over here. Let us not kid ourselves. It is the Republican Party in the House, headed by CHARLEY HALLECK, which is preventing the bill from going through that body at this session of Congress.

I take it my colleague [Mr. SCOTT] desires to speak on the subject, so I yield to him.

Mr. SCOTT. Mr. President——

The PRESIDING OFFICER. The time yielded to the senior Senator from Pennsylvania has expired.

Mr. SCOTT. Mr. President, I should like to have some time.

Mr. DIRKSEN. Mr. President, I yield 10 minutes to the distinguished Senator from Pennsylvania [Mr. SCOTT].

The PRESIDING OFFICER. The junior Senator from Pennsylvania is recognized for 10 minutes.

Mr. SCOTT. Mr. President, I understand that my colleague [Mr. CLARK] has yielded the floor.

Mr. CLARK. Yes. I thought my colleague wished to ask me a question.

Mr. SCOTT. I should like to direct a question to my colleague from Pennsylvania.

I think it extremely unfortunate that we inject politics into this issue, because the senior Senator from Pennsylvania and myself are arguing for the same thing.

Mr. CLARK. Of course, my colleague feels that way about the colloquy on yesterday also; does he not?

Mr. SCOTT. I shall confine my remarks to today's colloquy.

I said that the senior Senator from Pennsylvania [Mr. CLARK] and I are arguing for the same thing, namely, for the passage of an effective bill to aid

depressed areas and to relieve the problem of chronic unemployment. To me, the unemployed are not to be considered as either Republicans or Democrats. Instead, they are to be considered as unemployed.

Mr. CLARK. Unfortunately, most of them are Democrats.

Mr. SCOTT. Certainly, the passage of a bill to aid the unemployed is desperately needed.

With that fact in mind, my colleague has referred to my 16 years of service in the other body, some of it on the Rules Committee. He knows very well that if I were presently a Member of the House and a member of its Rules Committee, my vote would be in favor of a distressed areas bill.

Mr. CLARK. I am sure it would.

Mr. SCOTT. But in my considered opinion, my colleague has gone a little too far, as he is sometimes tempted to do—because he is an earnest and extroverted and intelligent gentleman—in suggesting that the present minority members of the House Rules Committee would automatically vote against any depressed areas bill.

Mr. CLARK. Will my colleague yield?

Mr. SCOTT. One moment, please.

I would suggest that the administration bill, which was sent here, and was introduced in this body and in the other body, was introduced in the other body, at the direction of the minority leader, by Representative WIDNALL, of New Jersey; and it bears the stamp of the approval of the administration. Although it is not, in the opinion of either Senator from Pennsylvania, precisely what we would like, I have no doubt that the minority members of the House Rules Committee would lend the necessary support to the reporting of that bill to the floor of the House. It would be my hope that in so doing, it would come under an open rule, and therefore would be subject to amendment.

But I do hope the senior Senator from Pennsylvania will revert to the position which both he and I have heretofore taken, namely, that the important thing is to get a bill. I am going to ask for hearings on my own bill and on the administration bill and on any other bills which may be introduced by Members on that side of the aisle; and I am prepared to support any bill that we can get out of committee, if the bill is pointed toward the areas of need.

I ask the senior Senator from Pennsylvania whether he is prepared to make as comprehensive a statement as that.

Mr. CLARK. Mr. President, the calm, judicious, and nonpolitical approach made by my distinguished junior colleague moves me, as it always does. Needless to say, I would support any meaningful bill, and would stand, if not shoulder to shoulder, at least at arm's length with my colleague from Pennsylvania in working to get such a bill through.

But, again, I say to my good friend that the place to get that done is in the other body; and I urge my good friend to use his good offices, as a former Member of the other body, with the quarreling factions over there, so we can get from the House a bill which we can accept over here, instead of going through the futile gesture of having the Senate pass a bill, and then have it die in the House of Representatives because the Rules Committee will not support it.

Mr. SCOTT. Mr. President, as a former Member of the other body, let me say that when one leaves that body and makes the journey down the long corridor to this body, he often is regarded in the other body as a stranger far from home, and does not have in that body any exceptional influence—and perhaps not in this body, either.

Mr. President, I rise to do something which I very much dislike to do, because I am caught between my loyalty to the President and my conviction that something must be done for the unemployed.

I do not accept the suggestion of my colleague from Pennsylvania [Mr. CLARK] that there is any absence of compassion on the part of the administration or the officers of the Cabinet. The Secretary of Labor, Mr. Mitchell, has visited the areas in Pennsylvania, and has indicated that he is aware of the problem, and that he fully supports as considerable aid as can possibly be obtained by the Congress to the depressed areas; and a committee headed by the Assistant Secretary of Commerce, Mr. Ray, has reached the same conclusion.

The fact that the President has compassion for these areas makes it almost incredible that anyone would suggest that President Eisenhower is not a compassionate man. His compassion has been demonstrated long before those who now make the most noise about the problem became aroused in the interest of this cause.

On several occasions the President announced that he would support and would approve a bill which would meet the needs of the depressed areas, which are concentrated largely in Pennsylvania, West Virginia, southern Illinois, Kentucky, and parts of Massachusetts.

The difficulty was that in the other body, in presenting such a bill, the House Members went far beyond the criteria employed in the Senate bill which had been passed by the Senate, after being introduced by my friend, the Senator from Illinois [Mr. DOUGLAS], and also went far beyond the criteria set forth in the bill which was offered here as an amendment, but was not accepted; and the House increased the number of regions to which such assistance theoretically would have been applicable.

Without impugning the motives of anyone, I think that in order to secure a broad area of support for the bill, elements of the pork barrel or the grab bag may have entered into the final bill which went to the President.

The President has submitted another bill.

Assuming that the veto will not be overridden today, I now urge that hearings be held on the President's message, which does go to meet these criteria and these needs; that hearings be held on the bills which may be introduced by Members on the other side of the aisle; and that hearings be held on the Scott bill, which is Senate bill 3568.

I believe that this body and the other body have equal obligations. I believe it is incorrect to say that the only way to get a bill is to have the other body act on it. The other body will have an opportunity to act following the introduction of the bill and its passage through the ordinary procedures. But, in my judgment, if the will exists on the part of both parties over there, we shall get a bill from the House.

Meanwhile, we should not wait and listen to the counsels of futility, which indicate that it is too late to get a bill. It is not too late for either body to take some action on things the people need and on a measure the President has requested. After all, it has not been too late for this body to indulge in all manner of oratory on all manner of subjects.

It is high time for us to get down to an agreement with the President on a bill which will meet the needs of the needy.

I have said that I am torn between my loyalty to the President and my conviction that something for the unemployed must be done. I think it is fairly well known that I got quite a few delegates for the President in 1952, at the convention—delegates greater in number than those represented by many a State. I think it is pretty well known that I love the President and that I support him wholeheartedly in matters of foreign policy, and usually in matters of domestic policy.

But on this issue, I wish to make crystal clear the fact that my support——

The PRESIDING OFFICER. The time yielded to the junior Senator from Pennsylvania has expired.

Mr. DIRKSEN. Mr. President, I yield 10 additional minutes to the Senator from Pennsylvania.

The PRESIDING OFFICER. The Senator from Pennsylvania is recognized for 10 additional minutes.

Mr. SCOTT. Mr. President, as I was about to say, I wish to make crystal clear the point that on this issue my support of depressed areas legislation can be made manifest here only by voting to override the President's veto.

This bill, as the President has rightly said, has many faults. This bill, which the President has vetoed, would give less assistance to the unemployed people of my State of Pennsylvania than my $200 million amendment would have given. It would even give less assistance than the $50-odd million bill first introduced by the administration. And that has not yet been successfully controverted by anyone.

Therefore, in passing a bill which was in effect a pork-barrel measure, the sponsors of the bill defeated the purpose of depressed areas legislation. And because they did, and because we must fight this issue out, and because I want my record to be clear, and not because I question the accuracy of the President's reasons, or the factuality of the President's reasons for vetoing the bill, but because I want to make it clear I have gone as far as I can on this bill to get out a good bill, I shall do as I have stated.

Then, when the veto is sustained, as, in my judgment, it will be, I am going to renew my efforts to get a good bill. In my judgment, we can get one, and get it without resort to politics. We do not need political references because, if the bill is passed, the people of the areas involved are going to know it has got to be passed with the support of both parties. The Democratic Party has a two-thirds majority in both Houses. However, the situation being what it is, the support of my party is essential to the passage of a good bill, and that support should be forthcoming.

Mr. JAVITS. Mr. President, will the Senator yield? If he does not have enough time, I shall get some time if it is needed. I have asked the Senator to yield at that point because I am interested in the question of whether any Republican should vote to override. I voted for the bill, and naturally, to be consistent, I would, in the normal course, vote to override. I should like to ask the Senator from Pennsylvania if he agrees with me that the reason why this matter is before us today is solely to make it a political issue, because everybody knows the veto is not going to be overridden. The theory is to say, "Well, the President did the wrong thing," in view of the fact that the administration has put in a bill now to get the legislative process started all over again, which the Senator from Illinois introduced, and of which I am a co-sponsor.

Is it not a fact that Republicans who voted for the bill and who vote to override the President's veto are affirming the fact that we are for depressed areas legislation, and that we are not allowing ourselves to become strictly partisan, and that we intend to follow through to get such legislation, therefore getting some of the political heat out of the issue on the question of overriding the President's veto?

Mr. SCOTT. I will say to the Senator from New York that if some of the Republicans wished to gain the maximum political advantage, the thing to do would be to vote to sustain the President's veto, to assert unequivocally that we support the position taken by the President without reservation, and then turn to the majority party and say, "You are wrong and you must bear full responsibility."

I think, on the other hand, when we feel it necessary to vote against action taken by our President, we indicate that we wish to keep the issue alive on a bipartisan basis, and that it is our duty to insist on hearings, rather than to do nothing and let this become a political issue.

Both the Senator from New York and I are aware of the fact that there are people who would prefer to have issues rather than laws. One of those people certainly is not the majority leader of this body, who has consistently asserted—and I agree with him—that the important thing is to get legislation rather than political issues. If we are going to play this straight down the line on the basis that the unemployed need help, in my opinion we are pursuing the right path.

Mr. JAVITS. Would another point served by a vote in favor of overriding be the fact that those who supported the bill know that a bill which involves approximately $250 million comes a lot nearer the mark, considering what needs to be done, than the measure proposed by the administration, starting with something in the neighborhood of $60 million?

Mr. SCOTT. Yes. The administration proposed something on the order of $55 million or $57 million. It is now proposing an ultimate expenditure of something like $180 million.

Mr. JAVITS. That is much nearer the mark; is it not?

Mr. SCOTT. That is much nearer the mark. I introduced a bill which would provide for the expenditure of in the neighborhood of $100 million, and on that I wish to have something to say.

Mr. JAVITS. I thank the Senator for yielding to me.

Mr. SCOTT. Mr. President, on Friday last I introduced without comment a new area redevelopment bill, S. 3568. At that time the Senate was working under a consent agreement which precluded a discussion of my bill.

At this point I desire to include a brief explanation of the bill and give the reasons for its introduction. I ask unanimous consent to have included in the RECORD, following my remarks, a comparison of the area redevelopment bill as vetoed, with revisions incorporated in S. 3568.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 1.)

Mr. SCOTT. Mr. President, I also ask unanimous consent that there be included in the RECORD following my remarks an editorial from the Harrisburg Sunday Patriot-News of May 15, 1960; an editorial from the Philadelphia Inquirer; an article from the Harrisburg Patriot of May 19, 1960; an article from the same newspaper of Saturday, May 14, 1960; and an article from the same paper of May 13, 1960.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 2.)

Mr. SCOTT. Mr. President, ever since becoming a Member of the Senate, I have been identified with legislation to secure relief for economically distressed areas in my State, and others similarly situated, where persistent unemployment and drying up of financial resources are of many years' duration.

When S. 722 was still in the Senate, and while it was delayed in the House Rules Committee, I urged that we enact a reasonable bill and one that would have a chance of avoiding veto. Efforts were made in the House, and by myself in the Senate, to substitute a revised version, prior to final action on S. 722.

The bill I introduced on Friday is another effort in this direction, in that it would meet the principal objections set forth in the President's veto message of May 13.

There is invitation and encouragement in the President's message to reintroduce a new bill on which the Congress and the Executive can agree.

Whether or not we can agree on all of the points at issue, I am sure most of us would rather see a revised bill acted upon than no bill at all. The latter would serve only our own annoyance or chagrin, and not the welfare of the people whom we try to serve.

There seems to me not much politics to be made out of the misfortune and misery of our fellow citizens.

I was not advised of the second administration distressed area bill presented. Perhaps if those of us who have fought for area redevelopment legislation—and that goes for those on both sides of the aisle—had been brought into the discussion of a compromise measure, the Scott-Van Zandt bill would not have been introduced; but a compromise between the administration bill and the Scott-Van Zandt bill might have been agreed upon.

However, I am inclined to feel that S. 3568 is the better of the two bills and that it offers a solution which will be acceptable to many of my colleagues. I point out that it relates directly to the areas in need and that the aid could be given promptly. The bill in large part would meet the President's objections to the other bills. I urge it be given prompt attention by the Senate Committee on Banking and Currency, of which my colleague, the senior Senator from Pennsylvania, is a member.

The PRESIDING OFFICER. The time of the Senator from Pennsylvania has expired.

Mr. SCOTT. Mr. President, will the Senator yield me 2 more minutes?

Mr. DIRKSEN. Mr. President, I yield 5 minutes to the distinguished Senator from Pennsylvania.

The PRESIDING OFFICER. The Senator from Pennsylvania is recognized for an additional 5 minutes.

Mr. SCOTT. Mr. President, I hope that my colleague, the senior Senator from Pennsylvania, with his active interest in this proposed legislation and his influence as a member of the Senate Committee on Banking and Currency, will in good part and in total absence of politics urge that hearings be held, as adequately as may be needed, on the administration bill and on any other bill which may be introduced, including the Scott bill. I assure my colleague I am prepared to testify at any time, and I am prepared to support any reasonable bill which will help to solve the problems of unemployment in Pennsylvania, in West Virginia, in southern Illinois, in Massachusetts or in Kentucky.

Every effort will be made by my colleagues in the House, I am sure, to secure similar action upon a companion measure.

Mr. President, in conclusion I make one more plea. I plead that we try to avoid politics on this issue. I am not a candidate for election in the coming election. Neither is the senior Senator from Pennsylvania. We are both, however, concerned and compassionate, I am sure, when the needs of Pennsylvanians are concerned. Those needs have been

too long neglected. Those needs have been neglected by both bodies of the Congress, despite repeated requests of the President of the United States for compassionate action.

If we are to act, there is ample control in both bodies, through the leadership and through the committee system, to see that an adequate bill is presented. I do not insist upon my bill. I do not insist upon the administration bill. I do not insist upon any one bill. I simply point out that if no bill is sent to the President reasonably along the lines he has suggested, the fault will be that of those who do not support the proposed legislation, no matter what may be their party and no matter in which House they may serve.

I thank the distinguished minority leader for yielding me the time.

EXHIBIT 1

Comparison of area redevelopment bills

Subject	S. 722 as passed and vetoed	S. 3568, H.R. 12290, H.R. 12291, and H.R. 12298
1. Organization	Separate Area Redevelopment Administration	Department of Commerce, with Administrator having Secretary status.
2. Division of redevelopment areas	Administrator to designate industrial and rural areas of persistent unemployment and underemployment.	Industrial areas only. No industrial loans for rural areas. (NOTE.—Technical assistance available to rural.)
3. Revolving fund loans:		
Industrial	$75,000,000	$75,000,000. (Reference to purchase of machinery removed.)
Rural	$75,000,000	None.
Public facilities	$50,000,000	$25,000,000.
4. Federal participation in loans	65 percent	35 percent (and not less than 15 percent participation by State, Agency, or instrumentality).
5. Maximum loan period	40 years	25 years.
6. Grants for public facilities	$35,000,000	None.
7. Retraining subsistence payments	$10,000,000	$5,000,000.
8. Vocational training grants	$1,500,000	No funds specified. Secretary of Labor to determine needs. Secretary of Health, Education, and Welfare to provide through existing institutions.
9. Technical assistance	$4,500,000	$3,000,000 (also available to rural areas).
10. Criteria of unemployment	At least 6 percent at time of application, and 12 percent for 12 months preceding, or 9 percent for 15 of 18 months preceding, or 6 percent for 18 of 24 months preceding.	An average of 6 percent, excluding seasonal, throughout qualifying period, and 50 percent above national average for 4 out of 5 preceding years; or 75 percent above national average for 3 out of 4 years preceding; or 100 percent above national average for 2 out of 3 years preceding.
11. Interest on loans	Maximum permitted 2⅞ percent	To be determined by Secretary based on going rates.
12. Cost	$251,000,000	$108,000,000.
13. Urban areas that may qualify for Federal assistance under these two proposals: [1]		
Major	40 areas	16 areas.
Smaller	103 areas	48 areas.

[1] Estimated upon current unemployment figures by Bureau of Employment Security, Department of Labor.

EXHIBIT 2

"NO" A SECOND TIME, ALAS

The $251 million depressed area bill, vetoed by President Eisenhower, is not nearly as bad as he made it out. It is, as Mr. Eisenhower's Secretary of Labor, James M. Mitchell, pointed out in a speech at Scranton less than 24 hours before the veto a bill "good enough so that any Senator or Congressman from a State with areas of chronic unemployment would have no alternative but vote for it"—even though it might not be exactly what the individual Senators and Representatives might want.

Secretary Mitchell spoke before an audience of prominent Scranton business and industrial leaders who had worked long and hard for passage of the depressed area bill and who had then appealed to President Eisenhower to sign it. The Secretary's audience was made up of members of the Scranton Chamber of Commerce. (Perhaps it hadn't been emphasized nearly enough that the chambers of commerce at the State and National levels are speaking strictly for themselves, and not especially for the organizations with the same name back in the home communities when, with such great fanfares of publicity, they brand a program of Federal loans and aid for depressed areas as such a terrible thing.)

What the President has done—again—is done.

It is probably impossible for the depressed area bill to be passed over his veto, in either House or Senate, although the majority Democrats probably will go through the motions just for the tremendous political talking point it will give them in the presidential-congressional campaign. For the same reasons the Republicans, too, will go through the motions of trying to get action on a new compromise bill that is somewhere in between the inadequate Eisenhower administration bill and the program the President rejected. With less than 2 months to go and with the makeup of this Congress what it is, it is doubtful that a new depressed area loan-aid bill can be achieved the second time around. Just the same, Republican Senator SCOTT and Republican Representative VAN ZANDT deserve all the "good luck" wishes they can get as they make the attempt. They deserve, too, the support of Pennsylvania's Democratic Congressmen, who, we are sure, are willing to put party partisanship second and Pennsylvania first on this issue. Pennsylvania, with its chronic unemployment, has a bigger stake in the depressed area legislation than any other single bill that will come before this Congress.

The President, when he gets back home, might support his own Republican Pennsylvania Congressmen—for a change—on this issue. When the Van Zandt-Scott bill is unveiled, the least the President can do is announce publicly whether he's for it or against it.

Secretary Mitchell, after getting a first-hand look at what Pennsylvania's depressed communities have been doing to help themselves, started out his Scranton speech this way:

"One thing I learned today is not to have a preconceived notion about an area. As a result of today, my point of view with relation to Scranton and the people in it has caused me to tear up my prepared speech."

It is a pity it was not the President instead who made the excursion into Pennsylvania's depressed areas. If he had, Mr. Eisenhower probably would have torn up his veto message.

TIME YET FOR AID TO DEPRESSED AREAS

Introduction of two new measures to provide Federal aid for redevelopment of economically depressed areas gives grounds for hope that in spite of politics something may yet be done by Congress this year to meet this urgent need.

President Eisenhower was right in vetoing the $251 million measure railroaded through Congress by legislators who for the most part were motivated by political considerations. It was an extravagant proposal, which could have opened the way to inexcusable waste, and probably would have been opposed by many of those who voted for it if there had been any real prospect of its becoming law.

The administration's move to introduce a new bill that would cost about $70 million less than the one vetoed, and a still less expensive proposal by three Pennsylvania Republicans, Senator HUGH SCOTT, and Representatives JAMES E. VAN ZANDT and JOHN P. SAYLOR, offer a sounder basis for providing help.

In many areas, this rates as the No. 1 problem. It is certainly high on the list in Pennsylvania, including not only such areas as Pottsville, Uniontown-Connellsville, Wilkes-Barre-Hazelton, and others, but Philadelphia as well.

The revelation the other day that even though job opportunities are high in this city, the relief rolls are more overburdened than ever, showing the longrun gravity of the problem. It isn't only that new industries must be found in regions where old ones have succumbed but that hundreds of thousands of workers whose old jobs have been eliminated by modern technology must be retrained; and that equally large numbers of totally unskilled jobless must be shown how to make themselves useful.

This is not a temporary economic difficulty. It is one, in fact, that could become increasingly burdensome to a vast number of communities as the pace of technological progress accelerates, unless a systematic program to speed retraining is set up.

In that respect, the administration measure could be strengthened by recognition that the needs of those being retrained must be met somehow until they are competent to find new employment. On one point those supporting the original depressed areas bill are right; it is as important for the United States to deal fairly with its own distressed as it is with those in lands overseas.

Congress should not let politics interfere with this responsibility.

[From the Harrisburg (Pa.) Patriot, May 19, 1960]

TWO AREA AID BILLS SUBMITTED BY GOP

(By Milton Jaques)

WASHINGTON.—Two Republican compromise area redevelopment bills were introduced in Congress Wednesday in a move to get action after President Eisenhower's veto last week of a $251 million measure.

The administration picked a New Jersey Congressman to offer a bill which asked $180 million, while three Pennsylvanians, led by Senator HUGH SCOTT, presented a $108 million program designed to meet White House objections. Previously the administration had held to a $53 million limit.

There was momentary confusion when the Pennsylvanians were confronted with the so-called administration bill at the same time they were going ahead with their own attempt at compromise. They had been given no advance warning that the $180 million bill was on its way.

Democrats had no immediate comment on compromise efforts in the wake of the President's stern rejection May 13 of their aid program.

The House meantime, Wednesday, was embroiled in the educational bill debate, with no prospects for an attempt to override the President's veto or to consider a new bill for area redevelopment.

In the House, Republicans JAMES E. VAN ZANDT, Altoona, and JOHN P. SAYLOR, Johnstown, introduced the Scott compromise version.

VAN ZANDT said he did not object to the administration bill but thought it would have been better for administration forces to consult with veteran backers of area redevelopment and with the Democratic leadership in the committees handling such legislation.

"It just shows the lack of political understanding of these (administration) people downtown," VAN ZANDT said.

"But the $180 million indicates the administration is weakening as far as the amount of money is concerned," he said.

VAN ZANDT said if a program is finally enacted it will come only through compromise "because the Democrats can't override the President's veto." It takes a two-thirds vote to override.

VAN ZANDT indicated his bill would not be necessary if the administration and the leadership of both Houses "could work out a bill acceptable to the President."

"They're playing politics with distressed areas," he charged, "and it's not going to satisfy these people who are living on surplus commodities."

Both the administration's version and that drafted by the Pennsylvanians are similar on provisions for administering and allocating Federal aid to community industrial redevelopment projects.

The administration bill, introduced by Representative WILLIAM WIDNALL, Republican, a member of the House Banking and Currency Committee, includes an additional $100 million authorization to be used by the housing and home finance agency for public facility loans to cities.

The loans would help hard-hit communities with industrial plant construction or "refurbishing" utilities and streets serving industrial sites.

Representative IVOR D. FENTON, Mahanoy City Republican and dean of the GOP State delegation, said he would support either bill "as long as it has a chance of becoming law."

The bills were referred to the House Banking and Currency Committee where a spokesman indicated they faced a chilly outlook.

One of the major differences between the Eisenhower administration's aid program and that passed by Congress is choice of agency for running it. The administration wants the Commerce Department to handle the program, while Congress sought a new agency similar to the HHFA.

The Scott-Saylor-Van Zandt bill includes $75 million for industrial loans and $25 million for public facility loans. It removes Federal aid for purchase of machinery to which the President objected in his veto message.

It also carries $5 million for subsistence for jobless workers during retraining, $1.5 million for vocation training and $3 million for technical assistance to depressed areas seeking new industries.

STATE DEPRESSED AREAS DEPEND ON WHOSE LIST YOU HAPPEN TO READ

(By George Draut)

When are the depressed areas in Pennsylvania under terms of the $251-million loan-aid bill just vetoed by President Eisenhower?

It depends upon whose list you accept.

The hard-hit coal communities are on everybody's list.

One list reports President Eisenhower's farm is in the "depressed area" of Adams County.

LISTS DON'T JIBE

The U.S. Labor Department has issued one tabulation at Washington.

The Pennsylvania Labor and Industry Department has issued another one here.

They don't jibe.

Various Congressmen involved in the controversy don't agree either.

There's even disagreement on whether Philadelphia and York of the State's main labor market areas would have qualified for depressed area aid under the Democratic bill, with unemployment of more than 6 percent for 18 of the last 24 months.

Yes, says the Labor Department at Washington.

No, says Labor-Industry here.

SEASONAL FACTORS

Philadelphia had 6.6 percent unemployment at last report and York had 6.5 percent, but this was due to "temporary and seasonal factors," the bad weather of March and April which held down construction employment, a Labor-Industry spokesman said. Both areas were under the 6 percent break point last year and probably will be again when this month's report is completed, he added.

But at nearby Scranton on Thursday night, Labor Secretary Mitchell declared in a speech:

"The most obvious fault with this present bill is the broadness of criteria for identifying areas that qualify for loan assistance. Certainly Scranton should not be in competition with New York or Philadelphia for Federal funds. Under the present criteria, that situation could easily occur because of a temporary, seasonal shift in monthly employment figures."

DIFFERENCE IN BILLS

President Eisenhower bore down heavily on the same theme in his veto message. He scored the most striking defect of the bill this way: "It would make eligible for Federal assistance areas that don't need it—thus providing less help for communities in genuine need than would the administration's proposal."

In Pennsylvania, the Democratic bill covered seven more areas than the administration proposal on the Labor-Industry Department tabulations. The seven: Pittsburgh labor market of Allegheny, Washington, Beaver, and Westmoreland Counties; Indiana County, Oil City-Franklin-Titusville, Sharon-Farrell, St. Marys-Emporium, Williamsport, and Wellsboro.

NEW AREAS

That leaves 30 Pennsylvania areas both bills would have included, Labor-Industry statistics show. For the first time, this listing includes as depressed areas, eligible for aid under administration or Democratic plans, these midstate districts:

Gettysburg and Adams County.

Marysville-Newport (Perry County).

Chambersburg-Waynesboro (Franklin and Fulton Counties).

Huntingdon County.

Labor-Industry refused to disclose the unemployment statistics upon which these tentative depressed area classifications are based. A spokesman argued it would only confuse the public and if they were made public for one area, all of the areas in the State would demand the same information.

OTHERS IN GROUP

Fifteen of the thirty-seven areas named by Labor-Industry as depressed on a tentative determination made on a basis of insured unemployment rates are in this "you'll just have to take our word for it" group. Others are: Bedford, Clarion, Forest City-Montrose, Punxsutawney, Tunkhannock, Waynesburg, Coudersport, Dushore-Laporte, Honesdale, Wellsboro, and Lehighton-Palmerton.

None of them are covered in regular labor market surveys and reports, but the percentage of covered workers drawing unemployment compensation is available for each place. It is this information which Labor-Industry refuses to announce. Total unemployment also includes the jobless who are not eligible for jobless benefits, and this is projected conservatively by adding 1 percent to the cold fact UC jobless total.

OTHERS ON ALL LISTS

The President's home county of Adams has substantially more than 6 percent unemployment right now, the Labor-Industry Department spokesman said, but he refused to reveal what "substantially" is.

It would take a month to 2 months to officially classify any of the areas, he reported.

Other areas of the State, besides those already mentioned, which are classified by all lists as depressed: Scranton, Wilkes-Barre-Hazleton, Pottsville, Uniontown-Connellsville, Erie, Johnstown, Berwick-Bloomsburg, Clearfield-Du Bois, Kittanning-Ford City, Sunbury-Shamokin-Ford City, Altoona, Butler, Lewistown, Meadville, New Castle, and Sayre-Athens-Towanda.

STATE REPUBLICANS READY WITH NEW AREA AID BILL

(By George Drault)

Pennsylvania's Republican Congressmen, fighting against the political disaster of another depressed area bill veto by President Eisenhower, have a substitute plan ready to go.

A compromise bill—in between the $251 million proposal now on the President's desk and the restricted $53 million administration program—will be flagged simultaneously in the Senate by Republican Senator HUGH SCOTT and in the House, probably by Republican Representative JAMES VAN ZANDT, of Altoona, when President Eisenhower announces his expected veto. The Presidential turndown, second in a row on the long-sought depressed area aid program, may come today.

With the congressional agenda already piled up because of the long civil rights fight earlier in the session and with only 2 months to go chances are very much against a second depressed area bill's clearing Congress. The Dixie Democrat-controlled House Rules Committee even refused to clear the present bill, and it was pried loose only with an extraordinary parliamentary maneuver that probably would not be successful a second time.

But the Republicans will have a campaign talking point to throw against the Democrats in the Pennsylvania campaigning. One GOP leader conceded privately that this

will be the only chance to salvage the candidacy of Republican William W. Scranton against the incumbent Democratic Congressman, STANLEY A. PROKOP, in the 10th District. PROKOP ousted the Republican Congressman 2 years ago, largely on the strength of the first Eisenhower veto of a depressed area bill.

The shape of the GOP answer to Democratic campaigning was lined up Thursday by SCOTT.

"We have a conviction," he said, "that the Democrats would rather have a Presidential veto than any program to help our depressed areas."

The new depressed area bill, to be pushed by SCOTT and the Republican Representatives from Pennsylvania, will call for $125 to $150 million program with requirements for a depressed area to qualify for Federal loans and grants more stringent than are now laid down in Senate bill 722, which the President will veto.

This will be largely in the pattern of proposals earlier urged in floor debate by SCOTT and VAN ZANDT, along with Representatives JOHN SAYLOR, of Johnstown, and IVOR D. FENTON, of Mahanoy City.

SCOTT insisted Thursday night that he is "sure" the President would sign a bill taking the "Van Zandt-Scott approach."

"Without attempting to quote the President," SCOTT said, "I am perfectly satisfied in my own mind that the President would sign a $150-million program tailored to meet the needs of the States and regions which have the really depressed areas."

What States or regions?

These would be Pennsylvania, West Virginia, Kentucky, Massachusetts, and southern Illinois, SCOTT said.

Democrats earlier made a point-blank issue of what the President would or would not sign during the debate on Senate bill 722.

At one point, Pennsylvania's Representative JOHN H. DENT asked VAN ZANDT and SAYLOR if they could "promise" that Eisenhower would sign a $150-million bill. The Republicans said they could not.

The Pennsylvania GOP Congressmen's new depressed area appeal will come in the wake of the unsuccessful appeal by State GOP leaders and Congressmen to President Eisenhower to sign the pending bill.

But at his press conference this week, the President said that the bill, takes a "shotgun" approach and is "getting to be a pork-barrel bill, as I see it."

Although the President said Wednesday he hasn't made up his mind yet, his decision to veto the depressed area bill is one of the worst-kept "secrets" in Washington.

Mr. DIRKSEN. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. Does the minority leader desire that the time be charged to him?

Mr. DIRKSEN. Mr. President, I ask unanimous consent that the time not be charged to either side.

The PRESIDING OFFICER. The Chair understands that cannot be done, under the previous order, for the vote must occur at 2 o'clock.

Mr. DOUGLAS. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. DOUGLAS. Mr. President, do I correctly understand that the unanimous-consent agreement calls for a vote at 2 o'clock?

The PRESIDING OFFICER. The Senator is correct.

Mr. DOUGLAS. Then, automatically, any time for the call of the roll would have to come from the time of both sides. I must therefore object to the request of my colleague from Illinois.

The PRESIDING OFFICER. The Senator from Illinois is recognized.

Mr. DOUGLAS. May I ask if the minority leader has any speaker at the present time?

Mr. DIRKSEN. There is a speaker present, but he is not quite ready to proceed.

The PRESIDING OFFICER. Does the senior Senator from Illinois desire to avail himself of any time?

Mr. DOUGLAS. Mr. President, this is an extraordinary situation. We have used approximately an hour of our time. Apparently the minority is not ready to proceed with a discussion in opposition.

The PRESIDING OFFICER. The Chair will state that this time must necessarily be charged to the minority leader or to the majority leader or to both.

Mr. DIRKSEN. Mr. President, I yield 10 minutes to the distinguished Senator from Florida [Mr. HOLLAND].

The PRESIDING OFFICER. The Senator from Florida is recognized for 10 minutes.

Mr. HOLLAND. Mr. President, I intend to vote to uphold the veto of the President and against the bill. I shall not recite the parts of the veto message of which I approve or disapprove. My objection to the bill has already been indicated, when I voted against the bill at the time of its passage. I think it is an unrealistic bill which does not deal properly with the subject matter. It seeks to set off the urban and industrial distress against agricultural situations which in many instances are merely fancied distress, as I shall show in a moment. It does not concentrate upon bringing help to the places where it ought to be brought, where I would be glad to participate in having it brought—such areas as those in West Virginia, in Pennsylvania, in Kentucky and in other States where there has been long, continued, and distressful unemployment. Such situations as those call for the sympathy of every good American.

Mr. President, without belaboring the matter at great length, I simply wish to say that those who are familiar with the bill know that substantially half of the total amount to be provided would be devoted to expenditures in so-called rural counties. The map which is displayed at the rear of the Chamber has been prepared by the Department of Agriculture, as shown by the text, in the effort to carry out the mandate of the bill. As I understand it, the map displayed is relied upon by the advocates of the bill.

Mr. President, I know something about the counties of my own State. I know something about the counties of the States of Georgia, Alabama, and other States shown on the map. I shall simply refer to certain situations in my own State.

Mr. President, this map shows in the most serious classification—branded as serious and shown in pink upon the map, with respect to low income and low living standards—counties in my State which are highly prosperous, which are doing well, which do not want and do not require any assistance. It would be a travesty for me to vote for a bill which pretends to bring relief to distressed areas, when these counties in Florida are listed among those requiring such aid.

Mr. President, in the bill we note there would be covereage for the County of Escambia, the county in which Pensacola is located, with the great naval air training station and numerous large and prosperous industries there located. Some of those are of recent establishment. That county is one of our fast-growing counties, one of our highly prosperous counties. Anyone who, with the faintest show of seriousness, could describe that county as one requiring aid as a depressed area simply does not know anything about the county.

Mr. President, I could mention several other counties. Let us consider Okaloosa County, where the great Eglin Air Force Base complex is located. In 1950 that was the fastest growing county in our State. It is still one of the fastest growing counties in our State. It is a highly prosperous county. Anyone who could ascribe to that county a characterization as a seriously depressed area simply does not know anything about it.

Mr. President, looking at the map a little further, the county in which our capital is located, Leon County, is indicated as one of the seriously depressed areas. Mr. President, Leon County is a highly prosperous county because, among other things, much of the State business of one of the fastest growing States in the Nation is concentrated in that county. The county and the city of Tallahassee have grown tremendously and are highly prosperous. In addition to the State personnel, Mr. President, two great universities are there located, Florida State University and Florida A and M University. There are many other activities which make that county a fast-growing and highly prosperous area. There is not any semblance of reason for classifying the county as a depressed area needing Federal help.

Mr. President, the county adjoining Leon County is Gadsden County, the county in which much wrapper-leaf tobacco is grown. Gadsden County is generally characterized as perhaps the most prosperous basic agricultural county in our State or in our whole area. That county is shown as a depressed area on this map.

Without laboring the question further I simply wish to call attention to the fact that the county of Alachua, where the city of Gainesville and the University of Florida are located, a highly prosperous and fast-growing county, is also shown as a depressed area requiring assistance under the terms of the bill.

Mr. President, no self-respecting Senator from the State of Florida, no matter how sympathetic he is with situations such as those which exist—and they are terrible—in parts of the State so well represented by the senior Senator from West Virginia [Mr. RANDOLPH],

who is seated by me, could agree that the counties which I have mentioned and others listed in our State are depressed or distressed counties. I do not know why we cannot bring up appropriate legislation which concentrates on the bringing of aid which should be brought and aid which is needed by human beings who are suffering.

I wish to say to my friends from West Virginia, Pennsylvania, Kentucky, and other States where there are actual hard pressed areas that I long for the time when we will have a realistic approach to the problem, and when I can in good conscience vote for a bill which would give them aid.

Without going into great detail, I notice that just above the Florida-Georgia State line, Thomas County, Georgia, is classified as seriously depressed. Thomas County is thriving—it is almost wholly occupied with great plantations which are known all over the Nation.

Thomasville is a city of rapid growth and prosperity, populated by fine people, and they would not appreciate being placed in a category of depressed areas which need the help of the United States to get on their feet.

Going to North Carolina, which I do not know so well, I notice that Henderson County, in which is located the city of Hendersonville, is labeled a depressed and distressed area. Hendersonville is one of the greatest resort cities in our whole southeast, and one of the most prosperous cities, a city teeming with visitors and people spending money, and a city of stable prosperity. In addition the county is a very fine vegetable producing area, which is almost without equal in our whole southeastern area.

Why we cannot be realistic I do not know. I do not think it is necessary to play politics with this venture. I do not think it is necessary to hold out bait to people who are not suffering to influence them to vote for people who are.

This Congress has been noted, and our people have been noted, for coming to the aid of human beings, whether in our country or elsewhere, but particularly in our country, when they are shown to be in distress and in need of assistance. The Senator from Florida wishes always to be counted among those who desire to do that kind of service which he thinks is not only good government, but is decent human consideration and good Christianity.

There cannot be any justification for the approach built into this bill. For that reason, much as I dislike to do so, I shall certainly vote to uphold the veto of the President.

Mr. JAVITS. Mr. President——

Mr. RANDOLPH. Mr. President——

Mr. DOUGLAS. Mr. President, I yield 8 minutes to the Senator from West Virginia.

The PRESIDING OFFICER. Does the Senator from West Virginia yield to the Senator from New York?

Mr. RANDOLPH. I wish to cooperate with the minority leader and my colleague from New York.

The PRESIDING OFFICER. The minority leader is recognized.

Mr. DIRKSEN. I yield 5 minutes to the Senator from New York.

Mr. JAVITS. Mr. President, I shall not talk for more than 5 minutes. I am grateful to the Senator from West Virginia [Mr. RANDOLPH]. I have an appointment for 12:45 in the radio section of the gallery.

Mr. President, like other Members of the Senate, I have been vexed as to what to do about this veto. It seems clear to me that the veto will be sustained. Certainly this is clear from the votes in the Senate and the votes in the other body. There are political overtones in the matter of bringing before the Congress this measure, and the delay—which has been symbolized by the cart before the horse—before the measure was brought up is significant.

Nevertheless, I have decided to vote to override for the following reasons: Having tried to work out a compromise on this very critical matter, and coming from the State which is the largest taxpayer in the United States, it would be ill-befitting now to part company with that effort to compromise. I feel I must lend by my vote support for the proposition that we need to stress area redevelopment legislation in about the magnitude which is incorporated in the proposed legislation.

I join in urging favorable consideration of the new administration bill, which I think comes very much closer to meeting the need, and I am very hopeful that after we are through with this proceeding, we shall yet have a bill in this session.

The essence of my position is incorporated in the following: When I voted against the original distressed areas bill because the amount of money involved was far more than was needed, due, I think, to the wrong inclusion of the opportunity for supplying machinery and equipment to the areas which were designated as distressed under the bill, I voted out of a conviction that we should not proceed wastefully. When the bill returned from the House to the Senate it was still in a form containing the machinery and equipment feature which I still thought was entirely wrong, but with the amount very much cut. I felt that with a reduced amount it was very unlikely that any administrator would have any money available for machinery and equipment.

I think the question now is not whether the vote will be large enough to override—I am confident that the veto will not be overridden—but will the vote be large enough to bring about action at this session?

I wish to contribute to that endeavor because I feel that in my State with its enormous business complex interested in the general prosperity of the country, there must be a spirit of generosity and understanding of the difficulties in States like Kentucky, Pennsylvania, and other States in which there are depressed areas.

Second, in representing a State which is thoroughly committed to the mutual security idea and to its critical importance to the future of freedom and peace in the world, I feel that I must at the same time take a sympathetic look at the distressed areas in my own country, and where it is possible to do something about the problem in a way remotely approaching a degree of size and effectiveness, I feel it is my duty to do so. So I am very hopeful that by some Republican votes upon this question we can remove the political colorations which, most unfortunately, I feel, are sought to be placed upon the measure, and that we can affirm by our vote, on this side at least, our desire to cooperate in seeing that there is depressed area legislation at this session of the Congress.

This is also of some importance to a good many communities in New York State. Not only places of lesser population are included in the bill—namely, Amsterdam, Auburn, Elmira, Gloversville, Jamestown-Dunkirk, Newburgh-Middletown-Beacon, Ogdensburg-Massena-Malone; Plattsburg and Wellsville—but also if unemployment goes up as high as 6 percent, it might conceivably encompass New York City. The bill relates also to the Buffalo, Utica-Rome and Albany-Schenectady-Troy areas.

For all the reasons stated, Mr. President, I shall vote to override the veto.

Mr. RANDOLPH. Mr. President, will the Senator from Illinois [Mr. DOUGLAS] yield some time to me?

Mr. DOUGLAS. Mr. President, I yield 8 minutes to the Senator from West Virginia.

Mr. RANDOLPH. Mr. President, there is a crucial need for the overriding of the President's veto of S. 722. Lengthy and exhaustive hearings have been held; the testimony of expert witnesses has been received; and both bodies of the Congress have deliberated fully the merits of this bill. Therefore, I will address my remarks to the logic and assumptions of the President's veto message.

Mr. President, during the past 2 years, the Democratic leadership in the Congress has compromised in meeting the administration's position on this issue—as well as on many others.

To go further would be to surrender the two-party principle of our Government, and even surrender of the equal status of the legislative with the executive branch. But the President has maintained unyielding opposition. He has recently enunciated his philosophy of representative government as "one-third plus one," and now he lectures the Congress of the United States to the effect that "The people are properly becoming increasingly impatient and are rightfully desirous of constructive action." In this respect, at least, I agree most heartily. Indeed, the people are becoming impatient. The people of West Virginia as well as the people of many other States are becoming impatient. But if there is still no constructive action on this measure, let us by our votes again today declare that the responsibility for inaction rests not with the Congress but with the executive opposition.

The veto message of the President maintains that the passage of S. 722 "would squander the Federal taxpayers' money where there is only temporary

economic difficulty." That is not a correct characterization of the reasons why this legislation is before us. When applied to chronic conditions of human suffering, this is stretching the term beyond the bounds of compassion and understanding. It will bring small comfort to the thousands of willing but unemployed citizens who wish to work, and to their families, in the distressed areas of West Virginia and the neighboring States of Kentucky and Pennsylvania, as well as in many other sections of the country, to be told that theirs is only a "temporary economic difficulty." That is not correctly appraising the situation. It causes me to plead—and I use the word advisedly—for an overriding of the veto.

The President then says that "local, State, and private initiative would be materially inhibited" by the passage of the bill. I can only say that that statement is predicated upon misunderstanding, because it is a misconception of the true character of the people of the State of West Virginia and of the other States. It flies directly in the face of all Federal experience in the use of matching funds. The people in the communities of our distressed areas are not asking for a handout. They are asking for and deserve the opportunity and the means to aid themselves.

I am reminded by the curious logic of the President's veto of one of the prevailing arguments against the establishment of social security during the early days of the New Deal, when I was privileged to be a Member of the House of Representatives. It was maintained then by some persons, in the most serious and lofty fashion, that if men and women had social security there would no longer be an opportunity for the beneficent act of Christian charity.

By the same logic, I presume that the President would find S. 722 sapping the rugged independence of West Virginia's unemployed. That is not true. These people are rugged folk. They desire only an opportunity for gainful employment, and also responsibility under a free government.

They ask for the necessary assistance with which they can help themselves. I know these people. I have more faith in the quality of the American character than those who declare Federal assistance in this instance is leading us down the road to economic instability.

Overreaching all the specific reasons in the President's veto message is the unacknowledged but all-pervasive one which lies at the heart of this message and of so many other vetoes during recent years. I speak of the tragic failure of this administration to acknowledge the meaning of "a more perfect Union." We are the United States, Mr. President, in which the effects of economic distress, of unemployment, of inadequate school facilities, and of insufficient care of our aged, are communicated throughout the length and breadth of our Republic.

These are not merely local issues. These are fundamental and chronic problems in many sections of the country which have sapped the strength and vitality of our entire Nation, not only of these particular sections.

I ask every Member of this body to give most careful consideration to the overriding of this veto, because our first obligation is to help maintain the respect of every loyal, law-abiding, hard working citizen of this Nation.

This means that we must give to him an opportunity to use his strength and skill and to put forward his intelligence in some form of constructive labor, to enable him to assume his role as a freeman and as a provider for his wife and for his children. No one can gage the dreadful cost in human terms and in the erosion of morale which is brought on by enforced idleness, which I must face in West Virginia, and which must be faced by other Members of the Senate in their areas, when we know these conditions exist in certain sections of our States and of our country.

We have ample statistics on the loss in the gross national product because of chronic unemployment. Indeed, the total cost of S. 722 would be a mere pittance as compared with the cost of the recession of 1958.

Who, I ask, can gage the psychological cost of thousands of skilled men forced into idleness by technological changes, not in the last few months or years, but over a long period of time? Who can gage the cost in self-respect and the dislocation of family life when men, in some instances, leave their families so that their wives—it is tragic, but true—may claim nonsupport and thereby qualify for public assistance? Yet these conditions exist even now as we begin to bask in the glow of the "Fabulous Sixties"— as the coming decade has been described by certain persons.

I hope it will not be considered untimely if I say that we should take a sterner look at the inventory of our national needs. At the present time I refer only to the area redevelopment bill, although there are others which the 86th Congress must face and which deserve our attention by affirmative action during the remainder of the year. The need for S. 722 is immediate and pressing.

Convincing testimony has been given before the committees of Congress, and the Senate and the House have acted favorably. The evidence is set down, not only in the written record, but more grimly in the dulled eyes of men who find no work for willing hands, and in the drawn and desperate faces of their weary wives and hungry children. This is the hour to aid those who deserve our assistance.

Mr. President, in urging that we override the President's veto, I am not taking partisan action for the purpose of creating a political issue, as some of our colleagues on the other side of the aisle allege. Rather, I seek the enactment of legislation—a vitally needed measure.

Neither was I taking partisan action when, on May 12, 1960, I sent a telegram to the President urging him to approve S. 722. In that sincere message to the Chief Executive, I said:

> Senate bill 722, incorporating House amendments and providing for a program of area redevelopment, is vitally needed legislation. Your favorable consideration of this measure is urgently and respectfully recommended. West Virginia and other States need the encouragement and assistance which S. 722 would provide citizens and communities in their efforts to help themselves.

Yes, Mr. President, I sent that telegram to the Chief Executive urging that he sign this second bill passed by the Congress since 1958 to aid distressed areas. But for the second time he maintained unyielding opposition. I urge the overriding of the veto.

Mr. DIRKSEN. Mr. President, I yield 6 minutes to the Senator from Massachusetts.

Mr. SALTONSTALL. Mr. President, I am deeply concerned over the plight of certain areas of this country which are chronically affected by unemployment. I believe strongly that action must be taken to alleviate the conditions in these so-called distressed areas and to achieve a healthier economic status of a continuing nature.

I am in agreement with the President that S. 722 does not do the job effectively and properly. I believe that the bill which he has not approved is wasteful in that it applies funds where they are not needed; harmful in that it would inhibit badly needed local and State initiative and resourcefulness; and unwise in its provisions for financing industrial buildings in rural areas, plant machinery and equipment, sewers, and access roads and the like.

With particular reference to my own State, S. 722 would encourage pirating of industries away from Massachusetts, which is one of the reasons for some of our depressed areas, in the first place. Federal funds must not be used for the stealing of industries from communities which already have and need those industries. I regret that the Senate rejected an administration amendment to S. 722 which would have prevented aid in cases where industries would be shifted between areas.

The fact that the bill which has been returned by the President would stifle local initiative is an important argument in itself against passage of this bill. Cities of the Commonwealth of Massachusetts have a proud record of resourcefulness, energy, and dedication in rebuilding themselves and improving their economic health. These worthy activities might even be penalized by Federal intervention under S. 722 which could aid less diligent areas, and thus discourage self-help and self-sufficiency.

The bill does not focus on the real basic causes of unemployment, and creates in my opinion a dispiriting illusion that simply by the construction of buildings and purchase of equipment jobs can be created on a continuous, deep-rooted and dependable basis.

Furthermore, I feel that S. 722 is discriminatory through unrealistic standards for determining aid. Conceivably, citizens of Massachusetts cities could be forced to aid other areas both inside and outside of the State when their own city itself is in need but does not happen to qualify. For example, a city with 8 percent unemployment might get no benefits while a neighboring city with 9 percent unemployment would get

benefits, as indicated in the minority views of the House Banking and Currency Committee report. Page 31 of this same report states that an area such as Kinston, N.C., would be considered a depressed area under this bill with unemployment of 4.5 percent. It is interesting to note that Pittsfield, Mass., with unemployment of 6.1 percent at the present time, would not be eligible for Federal aid under this bill.

A major provision of S. 722 would grant aid to 663 rural depressed areas. Massachusetts has none of these. This is clearly indicated on page 32 of the House Minority Report. Assuming that this kind of Federal aid is sound in the first place, Alabama would benefit with 55 out of 67 counties eligible for aid. Mississippi would also reap substantial rewards, as would other southern States—524 of the 663 rural areas scheduled for aid under the bill are found in the South.

The State which I represent, in part, would receive disproportionate treatment under the bill. Massachusetts taxes would support the programs established by this legislation without balanced returns, and the opposite ratio would be the case with certain other States. Therefore I believe that Congress should work to pass legislation which does not depend upon arbitrary standards which largely discriminate against already-industrialized areas of the Northeast.

The President has indicated his keen awareness of the need for area redevelopment legislation, and has submitted an administration bill which would fairly and realistically move forward to alleviate unhealthy conditions which we are concerned about—in his own words "truly sound and helpful legislation." He has urged the Congress to enact legislation in this area for 5 years, and expressed his sincere cooperation in obtaining a law within certain general standards, accepting the eligibility criteria originally set forth in the Senate version of S. 722.

I urge my colleagues in the Senate to rise to this challenge of constructive cooperation. I shall vote to sustain the President in his veto of S. 722 for the reasons which I have expressed.

Mr. DIRKSEN. Mr. President, I yield 2 minutes to the distinguished Senator from Connecticut.

Mr. BUSH. Mr. President, I shall vote to sustain the President's veto of S. 722, the area redevelopment bill, for reasons I outlined in a statement on the Senate floor on Monday, May 16.

I express again my hope that the majority party will abandon attempts to reap political capital from the plight of areas having chronic unemployment, and will accept the President's offer to cooperate in the enactment of sound legislation which can give genuine, not illusory, assistance to such areas.

I have joined with the minority leader, the able senior Senator from Illinois [Mr. DIRKSEN], and other Senators in introducing S. 3569. Although this is not an administration bill, it was drafted in an attempt to meet the President's major objections to S. 722, and to provide a sound, workable program to meet the problems of areas of chronic unemployment which are in need of special assistance.

I invite attention to the fact that the new bill flatly prohibits, as I have consistently advocated, the use of Federal funds to assist business establishments in relocating from one area to another. I am confident, Mr. President, that the President's veto of S. 722 will be sustained, and express the hope that the Committee on Banking and Currency will promptly consider S. 3569.

Mr. President, I ask unanimous consent that the text of Senate bill 3569 may be printed in the RECORD following these remarks.

There being no objection, the text of S. 3569 was ordered to be printed in the RECORD, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Area Assistance Act of 1960."

DECLARATION OF PURPOSE

SEC. 2. The Congress declares that, even during periods of prosperity for the Nation as a whole, some of our communities suffer substantial and persistent unemployment; that such unemployment causes hardship to many individuals and their families and detracts from the national welfare by wasting vital human resources; that to overcome this problem the Federal Government, in cooperation with the States, should help areas of substantial and persistent unemployment to take effective steps in planning and financing their economic development; that Federal assistance should enable communities to achieve lasting improvement and decrease economic vulnerability by the establishment of stable and diversified local economies; and that new employment opportunities should be created rather than merely transferred from one community to another.

AUTHORITY OF SECRETARY OF COMMERCE

SEC. 101 (a) The Secretary of Commerce, hereinafter referred to as the Secretary, may designate as an area of substantial and persistent unemployment any area certified as eligible for such designation by the Secretary of Labor.

(b) To assist areas in the United States designated as areas of substantial and persistent unemployment, the Secretary is authorized—

(1) to make grants for technical assistance for such areas in accordance with the provisions of section 106(a) of this Act; and

(2) to provide loans for such areas in accordance with the provisions of section 107 of this Act.

(c) The Secretary is also authorized—

(1) to extend the full cooperation of the Federal Government to all areas in the United States (including Puerto Rico) in promoting the more effective use of local resources, in the establishment of new industries based on local resources, and in the expansion of existing industries; such cooperation to be provided through technical advice and consultation and, when necessary, through the conduct of special studies.

(2) to decrease, through grants made in accordance with the provisions of section 106(b) of this Act, the economic vulnerability of (i) towns predominantly dependent on one industry, (ii) small towns which could serve as centers for economic diversification of low-income rural areas, and (iii) other low-income rural areas not subject to assistance as in (ii), by helping them to develop manufacturing, processing, and other activities calculated to diversify and improve their economies; and

(3) to coordinate his functions under this Act with those of the Secretary of Agriculture and other officials administering Federal programs affecting local economic conditions.

(d) As used in this Act:

(1) The term "United States" includes the several States and the District of Columbia;

(2) The term "State" refers to an individual State or the District of Columbia; and

(3) The term "loan" includes loans, immediate participation in loans, and purchase of evidences of indebtedness.

AUTHORITY OF SECRETARY OF LABOR

SEC. 102. (a) The Secretary of Labor shall from time to time, or upon the request of the Secretary, certify the existence of areas eligible for designation as areas of substantial and persistent unemployment whenever he finds, on the basis of available labor force data, or studies which he initiates when he deems necessary that—

(1) the rate of unemployment in the area, excluding unemployment due primarily to temporary or seasonal factors, is currently 6 per centum and has averaged at least 6 per centum for the qualifying time periods specified in (2) below; and

(2) the annual average rate of unemployment in the area has been at least—

(A) 50 percentum above the national average for three of the preceding four calendar years, or

(B) 75 per centum above the national average for two of the preceding three calendar years, or

(C) 100 per centum above the national average for one of the preceding two calendar years.

(b) In the case of labor market areas for which appropriate historical labor force data have not been complied, the Secretary of Labor shall certify as eligible for designation as areas of substantial and persistent unemployment those areas in which the unemployment rate and duration, based on a survey of available labor force data, generally equals or exceeds the rate and duration specified in section 102(a).

(c) The Secretary of Labor may also certify under subsection (a) or (b) of this section the existence of eligible areas upon request of any appropriate State government agency, instrumentality, or political subdivision.

(d) The Secretary of Labor is authorized, upon request and whenever he determines that such studies are needed, to undertake, or to provide assistance to others in studies of the size, characteristics, skills, adaptability, occupational potentialities, and related aspects of the labor force of an area certified under this section.

(e) When skills of the labor force in an area designated under section 101 are not such as to facilitate full utilization of the human resources in such area, the Secretary of Labor is authorized to provide advice and technical assistance in developing and carrying out a program to improve the utilization of such labor force.

(f) Whenever the Secretary of Labor finds a need for vocational education services in an area designated under section 101 and when such area has an economic development program as provided in section 107 (b)(9), he is authorized to assist interested agencies to determine the vocational training needs of unemployed individuals residing in the area, and he shall notify the Secretary of Health, Education, and Welfare of the vocational training or retraining requirements of the area. The Secretary of Health, Education, and Welfare, through the Commissioner of Education, is authorized to provide assistance, including financial assistance when necessary or appropriate, to the State vocational education agency for

the provision of such services in the area. There is hereby authorized to be appropriated not to exceed $1,500,000 annually for the purpose of providing financial assistance under this subsection.

AUTHORITY OF HOUSING AND HOME FINANCE ADMINISTRATOR

SEC. 103. Title I of the Housing Act of 1949, as amended, is amended by adding the following new heading and section at the end of title I:

"AREAS OF SUBSTANTIAL AND PERSISTENT UNEMPLOYMENT

"SEC. 113. (a) When the Secretary of Commerce certifies to the Administrator (1) that any county, city, or other municipality (referred to as 'municipality' in this section) is situated in an area designated by the Secretary of Commerce pursuant to the Area Assistance Act of 1960 as an area of substantial and persistent unemployment, and (2) that there is a reasonable probability that with assistance provided under the Area Assistance Act of 1960 and other undertakings the area will be able to achieve lasting improvement in its economic development, the Administrator is authorized to extend financial assistance to a local public agency in any such municipality under this title and the provisions of this section.

"(b) The Administrator may provide such financial assistance under this section without regard to the requirements or limitations of section 110(c) of this title that the project area be clearly predominantly residential in character or that it will be predominantly residential under the urban renewal plan.

""(c) Financial assistance under this section may be provided for any project involving a project area including primarily industrial or commercial structures suitable for rehabilitation under the urban renewal plan for the area.

"(d) Notwithstanding any other provisions of this title, a contract for financial assistance under this section may include provisions permitting the disposition of any land in the project area designated under the urban renewal plan for industrial or commercial uses to any public agency or nonprofit corporation for subsequent disposition as promptly as practicable by such public agency or corporation for the redevelopment of the land in accordance with the urban renewal plan: *Provided,* That any disposition of such land to such public agency or corporation under this section shall be made at not less than its fair value for uses in accordance with the urban renewal plan: *And provided further,* That the purchaser from or lessees of such public agency or corporation, and their assignees, shall be required to assume the obligations imposed in conformity with the requirements of section 105(b) hereof.

"(e) Following the execution of any contract for financial assistance under this section with respect to any project, the Administrator may exercise the authority vested under this section for the completion of such project notwithstanding any determination made after the execution of such contract that the area in which the project is located may no longer be an area of substantial and persistent unemployment.

"(f) Not more than 10 per centum of the funds authorized for capital grants under section 103 after June 30, 1960, shall be available to provide financial assistance under this section."

SEC. 104. (a) The first sentence of section 202(c) of title II of the Housing Amendments of 1955 is amended to read as follows:

"(c) In the processing of applications for financial assistance under this section, the Administrator shall give priority to applications of counties, cities, and other municipalities and political subdivisions for financing needed public facilities in areas determined to be areas of substantial and persistent unemployment under the Area Assistance Act of 1960: *Provided,* That the Secretary of Commerce certifies there is reasonable probability that with assistance made available under the Area Assistance Act of 1960 and other undertakings such areas will be able to achieve lasting improvement in their economic development; and equal priority to applications of smaller muncipalities for assistance in the construction of basic public works (including works for the storage, treatment, purification, or distribution of water; sewage, sewage treatment, and sewer facilities; and gas distribution systems) for which there is an urgent and vital public need; the Administrator shall give a first priority above all others to applications for financing needed public facilities in connection with, and that will directly serve, a project eligible under section 107 of the Area Assistance Act of 1960."

(b) The first sentence of section 203(a) of title II of the Housing Amendments of 1955 is amended to read as follows:

"(a) In order to finance activities under this title, the Administrator is authorized and empowered to issue to the Secretary of the Treasury, from time to time and to have outstanding at any one time in an amount not exceeding $100,000,000, notes and other obligations, which limit shall be increased by such amounts, not exceeding $100,000,000, as may be specified from time to time in appropriation Acts."

URBAN PLANNING GRANTS

SEC. 105. Paragraph (3) of section 701(a) of the Housing Act of 1954 is amended by inserting after "Cities, other municipalities, and counties which" the following: "(A) are situated in areas designated as areas of substantial and persistent unemployment under section 101(a) of the Area Assistance Act of 1960, or (B)."

GRANTS FOR TECHNICAL ASSISTANCE

SEC. 106. (a) In carrying out section 101(b)(1), the Secretary is authorized to make grants for technical assistance including studies evaluating the needs of, and developing potentialities for, economic growth of areas designated under section 101(a). These grants may be made without regard to section 3648 of the Revised Statutes, as amended (31 U.S.C. 529). Appropriations are hereby authorized for these grants in an amount not to exceed $1,500,000 annually.

(b) In carrying out section 101(c)(2), the Secretary is authorized to make similar grants for the benefit of towns and areas described therein. Negotiations taking into account the financial ability of the grantee and other relevant considerations shall be made for contributions to costs of projects undertaken hereunder. These grants may be made without regard to section 3648 of the Revised Statutes, as amended (31 U.S.C. 529), and appropriations therefore are hereby authorized in an amount not to exceed $2,000,000 annually.

LOANS

SEC. 107. (a) In carrying out section 101(b)(2) of this Act the Secretary is authorized to purchase evidences of indebtedness and to make loans (including immediate participations therein) to aid in financing any project within an area of substantial and persistent unemployment for the purchase or development of land and facilities for industrial usage, for the construction of new factory buildings, for rehabilitation of abandoned or unoccupied factory buildings, or for the alteration, conversion, or enlargement of any existing buildings for industrial use. Such financial assistance shall not be extended for working capital, for purchase of machinery or equipment, or to assist establishments relocating from one area to another.

(b) Financial assistance under this section shall be on such terms and conditions as the Secretary determines, subject, however, to the following restrictions and limitations:

(1) The total amount of loans and loan participations (including purchased evidences of indebtedness) outstanding at any one time under this section shall not exceed $75,000,000;

(2) Such assistance shall be extended only to applicants, both private and public, approved by the State (or any agency or instrumentality thereof concerned with problems of economic development) in which the project to be financed shall be located;

(3) The project for which financial assistance is sought is reasonably calculated to provide more than a temporary alleviation of unemployment or underemployment within the area of substantial and persistent unemployment wherein it is, or will be, located;

(4) No such assistance shall be extended hereunder unless the financial assistance applied for is not otherwise available from private lenders or other Federal agencies on reasonable terms;

(5) No loans shall be made unless it is determined than an immediate participation is not available;

(6) No evidences of indebtedness shall be purchased and no loans shall be made unless it is determined that there is a reasonable assurance of repayment;

(7) No loan, including renewals or extension thereof, may be made hereunder for a period exceeding thirty years and no evidences of indebtedness maturing more than thirty year from date of purchase may be purchased hereunder: *Provided,* That the foregoing restrictions on maturities shall not apply to securities or obligations received by the Secretary as a claimant in bankruptcy or equitable reorganization or as a creditor in other proceedings attendant upon insolvency of the obligor, or if extension or renewal for additional periods, not to exceed, however, a total of ten years, will aid in the orderly liquidation of such loans or of such evidence of indebtedness;

(8) Each loan shall bear interest at a rate equal to the interest rate currently payable under section 108(e) on advances from the Treasury, plus one-half of 1 per centum per annum for administrative expenses and a reserve for losses on loans;

(9)(A) Not less than 15 per centum of the aggregate cost to the applicant (excluding all other Federal aid in connection with the undertaking) of acquiring or developing land and facilities, and of constructing, altering, converting, rehabilitating, or enlarging the building or buildings of the particular project shall be supplied by the State or any agency, instrumentality, or political subdivision thereof, or by a community or area organization, as equity capital or as a loan repayable only after the financial assistance hereunder has been repaid in full according to the terms thereof and, if such loan is secured, its security shall be subordinate and inferior to the lien or liens securing the financial assistance hereunder;

(B) Of the remaining 85 per centum of the aggregate cost, 35 per centum of the aggregate cost may be loaned by the Secretary under the terms of this Act and security for such a loan may be subordinate and inferior to the lien or liens which secure any loan or financing other than funds required by section 107(b)(9)(A).

(C) Loans shall not be available hereunder unless other funds are available in an amount which, together with assistance provided hereunder and funds provided under section 107(b)(9)(A), shall be sufficient to pay such aggregate cost; and

(10) No such assistance shall be extended unless there shall be submitted to and approved by the Secretary an overall program

for the economic development of the area and a finding by the State, or any agency, instrumentality, or local political subdivision thereof, that the project for which financial assistance is sought is consistent with such program: *Provided,* That nothing in this Act shall authorize financial assistance for any project prohibited by laws of the State or local political subdivision in which the project would be located.

AREA ASSISTANCE FUND

SEC. 108. (a) There is hereby authorized to be established in the Treasury of the United States a revolving fund to be known as the area assistance fund (hereinafter referred to as the "fund"), which shall be available to the Secretary for the payment of all obligations and expenses in connection with the loans authorized under section 101(b)(2).

(b) When requested by the Secretary, advances shall be made to the fund from the appropriations made therefor. There is hereby authorized to be appropriated for the purpose of making advances to the fund, without fiscal year limitation, an amount not exceeding $75,000,000.

(c) Receipts arising from the loan program shall be credited to the fund.

(d) Any moneys in the fund determined by the Secretary to be in excess of current needs shall be credited to the appropriation from which advanced to be held for future advances to the fund.

(e) There shall be paid into miscellaneous receipts of the Treasury at the close of each fiscal year interest on advances to the fund at rates which shall be determined by the Secretary of the Treasury at the time the advances or commitments for advances are made after taking into consideration the current average market yields of outstanding marketable obligations of the United States having maturities comparable to loans made by the Secretary.

(f) Contributions shall be made from the fund to the civil service retirement and disability fund, on the basis of annual billings as determined by the Civil Service Commission, for the Government's share of the cost of the civil service retirement system applicable to employees (and their beneficiaries) performing activities authorized under section 101(b)(2). Contributions shall also be made to the employee's compensation fund, on the basis of annual billings as determined by the Secretary of Labor, for the benefit payments made from such fund on account of employees performing activities authorized under section 101(b)(2). The annual billings shall also include a statement of the fair portion of the cost of the administration of the respective funds, which shall be paid by the Secretary into the Treasury as miscellaneous receipts.

TERMINATION OF ELIGIBILITY FOR FURTHER ASSISTANCE

SEC. 109. Whenever the Administrator shall determine that employment conditions within any area previously designated by him as an area of substantial and persistent unemployment have changed to such an extent that such area is no longer eligible for such designation under section 101(a) of this Act, no further assistance shall be granted under this Act, with respect to such area and, for the purposes of this Act, such area shall not be considered an area of substantial and persistent unemployment: *Provided,* That nothing contained herein shall—

(a) prevent any such area from again being designated an area of substantial and persistent unemployment under section 101(a) of this Act if the Administrator determines it to be eligible under such section, or

(b) affect the validity of any contracts or undertakings with respect to such area which were entered into pursuant to this Act prior to a determination by the Administrator that such area no longer qualifies as an area of substantial and persistent unemployment. The Administrator shall keep the departments and agencies of the Federal Government, and interested State or local agencies, advised at all times of any changes made hereunder with respect to the designation of any area.

BUDGET AND AUDIT

SEC. 110. In the performance of and with respect to the functions, powers, and duties vested in him by section 107 of this Act, the Secretary shall—

(a) prepare annually and submit a budget program as provided for wholly owned government corporations by the Government Corporation Control Act, as amended; and

(b) maintain a set of accounts which shall be audited annually by the General Accounting Office in accordance with the principles and procedures applicable to commercial transactions as provided by the Government Corporation Control Act, as amended, and no other audit shall be required: *Provided,* That the Secretary with respect to the program of financial assistance authorized by section 101(b)(2) shall determine the character of and the necessity for obligations and expenditures and the manner in which they shall be incurred, allowed, and paid, subject to provisions of law specifically applicable to Government corporations.

AREA ASSISTANCE ADMINISTRATOR

SEC. 111. There shall be appointed by the President by and with the advice and consent of the Senate an Area Assistance Administrator in the Department of Commerce who shall receive compensation at a rate equal to that received by Assistant Secretaries of Commerce. The Administrator shall perform such duties in the execution of this Act as the Secretary may assign.

POWERS

SEC. 112. In the performance of, and with respect to the functions, powers, and duties vested in him under this Act, the Secretary may—

(a) adopt, alter, and use a seal, which shall be judicially noticed; and subject to the civil service and classification laws, select, employ, appoint, and fix the compensation of such officers, employees, attorneys, and agents as shall be necessary to carry out the provisions of this Act, and define their authority and duties;

(b) hold such hearings, sit and act at such times and places, and take such testimony, as he may deem advisable;

(c) under such regulations as he may prescribe, make such findings and determinations as may be required for the proper administration of this Act and such findings and determinations, together with those required to be made by the Secretary of Labor pursuant to section 102 hereof, shall be final and shall not be subject to review in any court by mandamus or otherwise: *Provided,* That with respect to the validity, effect, and enforcement of section 101(b)(2) hereof or security taken thereunder, statutes, rules, and regulations pertaining generally to suits by and against the United States shall be applicable;

(d) under regulations prescribed by him, assign or sell at public or private sale, or otherwise dispose of for cash or credit, in his discretion and upon such terms and conditions and for such consideration as the Secretary shall determine to be reasonable, any evidence of debt, contract, claim, personal property, or security assigned to or held by him in connection with the payment of loans granted under this title, and to collect or compromise all obligations assigned to or held by him and all legal or equitable rights accruing to him in connection with the payment of such loans until such time as such obligation may be referred to the Attorney General for suit or collection;

(e) deal with, complete, renovate, improve, modernize, insure, rent, or sell for cash or credit, upon such terms and conditions and for such consideration as the Secretary shall determine to be reasonable, any real property conveyed to or otherwise acquired by him in connection with the payment of loans granted under this title;

(f) pursue to final collection by way of compromise or other administrative action prior to reference to the Attorney General, all claims against third parties assigned to the Secretary in connection with loans made by him. Section 3709 of the Revised Statutes, as amended (41 U.S.C. 5), shall not be construed to apply to any contract of hazard insurance or to any purchase or contract for services or supplies on account of property obtained by the Secretary as a result of loans made under this title if the premium therefor or the amount thereof does not exceed $1,000. The power to convey and to execute in the name of the Secretary deeds of conveyance, deeds of release, assignments and satisfactions of mortgages, and any other written instrument relating to real property or any interest therein acquired by the Secretary pursuant to the provisions of this title may be exercised by the Secretary or by any officer or agent appointed by him for the purpose;

(g) acquire, in any lawful manner, any property (real, personal, or mixed, tangible or intangible), whenever deemed necessary or appropriate to the conduct of the activities authorized in section 101(b)(2) of this Act; and

(h) in addition to any powers, functions, privileges, and immunities otherwise vested in him, take any and all actions, including the procurement of the services of attorneys by contract, determined by him to be necessary or desirable in making, servicing, compromising, modifying, liquidating, or otherwise administratively dealing with or realizing on loans made or securities acquired under the provisions of this title: *Provided,* That no attorney's services shall be produced by contract in any office where an attorney or attorneys are or can be economically employed full time to render such service.

ADVISORY BOARD

SEC. 113. To advise the Secretary in the performance of functions authorized by this Act, there is authorized to be created an Area Assistance Advisory Board, hereinafter referred to as the "Board", which shall consist of the following members, all ex officio: The Secretary, as Chairman, the Secretaries of Agriculture, Health, Education, and Welfare, Labor, and Treasury, the Administrators of the Housing and Home Finance Agency and of the Small Business Administration. The Chairman may from time to time invite the participation of officials of other agencies of the executive branch interested in the functions herein authorized. Each member of the Board may designate an officer of his agency to act for him as a member of the Board with respect to any matter there considered.

DEPOSITARIES AND AGENTS

SEC. 114. The Federal Reserve banks are authorized and directed to act as custodians and fiscal agents for the Secretary in the general performance of the powers conferred by this title. Each Federal Reserve bank shall be entitled to be reimbursed for all expenses incurred as such fiscal agents. Any banks insured by the Federal Deposit Insurance Corporation, when designated by the Secretary of the Treasury, may act as custodians and depositaries for the Secretary.

PENALTIES

SEC. 115. With respect to financial assistance authorized by this Act:

(a) Whoever makes any statement knowing it to be false, or whoever willfully overvalues any security, for the purpose of obtaining for himself or for any applicant any loan, or extension thereof by renewal defer-

ment of action, or otherwise, or the acceptance, release, or substitution of security therefor, or the purpose of influencing in any way the action of the Secretary, or for the purpose of obtaining money, property, or anything of value, under this Act, shall be punished by a fine of not more than $10,000 or by imprisonment for not more than five years, or both.

(b) Whoever, being connected in any capacity with the Secretary—

(1) embezzles, abstracts, purloins, or willfully misapplies any moneys, funds, securities, or other things of value, whether belonging to him or pledged or otherwise entrusted to him, or

(2) with intent to defraud the Secretary or any other body politic or corporate, or any individual, or to deceive any officer, auditor, or examiner of the Secretary makes any false entry in any book, report, or statement of or to the Secretary, or without being duly authorized, draws any order or issues, puts forth, or assigns any note, debenture, bond, or other obligation, or draft bill of exchange, mortgage, judgment, or decree thereof, or

(3) with intent to defraud participates, shares, receives directly or indirectly any money, profit, property, or benefit through any transaction, loan, commission, contract, or any other act of the Secretary, or

(4) gives any unauthorized information concerning any future action or plan of the Secretary which might affect the value of securities, or, having such knowledge, invests or speculates, directly or indirectly, in the securities or property of any company or corporation receiving loans or other assistance from the Secretary shall be punished by a fine of not more than $10,000 or by imprisonment for not more than five years, or both.

(c) As used in this section, the term "Secretary" shall mean, with respect to the lending activities of the Housing and Home Finance Administrator authorized under this Act, the Housing and Home Finance Administrator.

USE OF OTHER FACILITIES

SEC. 116. (a) To avoid duplication of activities and minimize expense in carrying out the provisions of this Act, the Secretary shall to the extent practicable and with their consent use the available services and facilities of other agencies and instrumentalities of the Federal Government on a reimbursable basis.

(b) Departments and agencies of the Federal Government shall exercise their powers, duties, and functions in such manner as will assist in carrying out the objectives of this Act. This Act shall be supplemental to any existing authority and nothing herein shall be deemed to be restrictive of any existing powers, duties, and functions of any other department or agency of the Federal Government.

CONSULTANTS

SEC. 117. The Secretary is authorized to obtain services as authorized by section 15 of the Act of August 2, 1946 (5 U.S.C. 55(a)), at rates not to exceed $75 per diem for individuals.

ANNUAL REPORT

SEC. 118. The Secretary shall make a comprehensive annual report of his operations under this Act for the fiscal year ending on the preceding June 30, to the President, for transmission to the Congress as soon as practicable in each year, but in no case later than the third day of the following January.

AUTHORIZATIONS FOR APPROPRIATIONS

SEC. 119. In addition to appropriations specifically authorized by sections 106 and 108, appropriations are further authorized for the carrying out of other provisions and purposes of this Act.

The PRESIDING OFFICER. Does the minority leader desire to avail himself of additional time?

Mr. DOUGLAS. Mr. President, if the minority leader has a speaker ready, I shall be glad to defer to him.

Mr. DIRKSEN. Mr. President, I yield 10 minutes to the distinguished Senator from Kentucky.

Mr. COOPER. Mr. President, I thank the minority leader for yielding me time to speak on the President's veto of S. 722.

I shall vote to override the President's veto of S. 722. Since 1957, I have supported bills to provide assistance to the depressed areas of the United States; in fact, I am one of the original cosponsors of S. 722, the bill which has been vetoed and about which we are speaking today.

In 1959, the senior Senator from Illinois [Mr. DOUGLAS] asked me to join with him in sponsoring S. 722. The Senator from Illinois [Mr. DOUGLAS], the Senator from Pennsylvania [Mr. CLARK], the Senator from Maryland [Mr. BEALL], and I introduced S. 722. I have supported this bill and similar legislation as strongly as I could with my votes, in many speeches on the Senate floor, and in consultations with the President of the United States.

I do not intend today to speak at length or in detail concerning the reasons which have led me to support legislation to assist areas of chronic unemployment in the United States. In simple language, I have done so because I know that thousands of men and women are out of work in the depressed areas—some in cities, others in rural communities, many in semirural communities, such as the areas in which the coal industry operates. These people are out of work without fault of their own. Technological changes in industry, mechanization, automation, and the shift of industry from one section of the country to another, have put these people out of work.

The dynamism of our economy and the more effective use of tools—the very factors which have increased the wealth of most of our people in most of the areas of the Nation, have brought unemployment to thousands in the depressed areas.

It has been my position that the growing wealth and prosperity of the Nation, its increased production, its large increase in wages to the organized workers of the country, the increase in personal income and in corporate profits, the increase in investment, and the higher standards of living which have been enjoyed, yes, since 1953, by most of the people of the Nation, are reasons which make it more imperative that those who have prospered and that a rich Nation take action to assist their fellow countrymen who have been left behind in the march of progress.

I have never considered the area redevelopment bill the only means of providing help to these depressed areas and needy people, and I do not believe that my cosponsors have argued that the bill is the perfect answer. But the bill is one means, and it is the only instrument now before the Congress. For that reason, I was glad to cosponsor and to support the bill.

Today, because this bill is one instrument available to us to help those who are in dire need, and because of the prosperity of the great part of the Nation, I think it just, human, and decent to provide a means of developing the areas which have been left behind in the great march of progress in our country.

Therefore, Mr. President, I shall vote to override the President's veto.

Without further discussion of my reasons for supporting S. 722, for I have elaborated them many times in the last 2 years—I now turn to the future.

I think it is generally assumed that the Senate will sustain today the President's veto. The question which then will arise is, What will the Congress and what will the administration do about this problem? Shall we forget it? Shall we sweep it under the rug? Shall we treat it as a political issue? It is a political issue, and I am not so naive as to think it is not. But the fact that it is a political issue is not an argument for deferring until after the November election action to help those who are in need. It would be cynical and cruel if the Congress and, I may say the administration did not work together to produce, this year, a bill to give assistance to these areas. It would be cynical if the veto and the vote on this bill were used simply for politics alone—and no further effort made to secure a bill.

So, Mr. President, I shall appeal, as I have done before, to the majority leader of the Senate, to the majority leader of the House to the minority leader of the Senate, to the minority leader of the House, and to the President of the United States to consult and to see whether it is possible to agree and work out a bill which can be passed before this session of Congress adjourns.

During the last month I have talked twice with the President of the United States about this legislation. The President told me that he favored legislation, and that he hoped appropriate legislation to assist the depressed areas could be passed.

I find some comfort in section VI of the President's veto message, in which the President says:

> Moreover, during the process of developing a new bill I would hope that in other areas of past differences solutions could be found satisfactory to both the Congress and the Executive.

I would say to my cosponsors and to my friends on the majority side, with whom I have worked so hopefully for 2 years in an effort to secure the enactment of this bill—and they know that I have been loyal in my efforts—that the amount authorized by the bill should not be the decisive factor at issue, because it is hardly probable that a large amount could be allocated and put to work in the next fiscal year.

The PRESIDING OFFICER. The time yielded to the Senator from Kentucky has expired.

Mr. COOPER. May I have 3 additional minutes?

Mr. DIRKSEN. Mr. President, I yield 3 additional minutes to the Senator from Kentucky.

The PRESIDING OFFICER. The Senator from Kentucky is recognized for 3 additional minutes.

Mr. COOPER. On the other side, I point out that the proposal of the administration that the States or local communities advance 66⅔ percent of the cost of a project is, to my mind, unrealistic. The very fact that these communities are depressed and their tax bases are in consequence adversely affected, make it impossible for such communities to advance two-thirds of the amount needed to initiate business projects.

I hope the administration and the President of the United States will accept the provision of Senate bill 722 that only one-third of the cost shall be advanced from local resources.

Mr. President, while I stand firm in my belief that Senate bill 722 should have been approved by the President, I now urge my colleagues and the leadership on both sides of the aisle to consult with the President during the few weeks remaining in this session of Congress, to agree upon a bill which can be passed, one which will initiate a program that will bring help and relief to those who are out of work. Men and women are out of work, and they and their children are in need; surely they should be the objects of our thoughts today and in the remaining weeks of this session of Congress.

So, Mr. President, I shall not vote reluctantly to override the veto. I vote to override it because a program should be started, and to voice my concern that we take steps to help those who are unemployed and do not share in the general prosperity of the Nation.

I plead with my colleagues and with the leadership to do something in the days which lie ahead to produce a bill which can be passed and approved before this session of Congress adjourns.

At a later date I will speak again, as I have spoken several times during the session, on the elements of a Federal-State program to build up the basic resources of such coal mining areas as eastern Kentucky, West Virginia, and Pennsylvania.

Mr. DOUGLAS. Mr. President, I yield 2 minutes to the senior Senator from Tennessee [Mr. KEFAUVER].

The PRESIDING OFFICER. The Senator from Tennessee is recognized for 2 minutes.

Mr. KEFAUVER. Mr. President, the veto message sent to Congress by President Eisenhower when he returned the area redevelopment bill has little relationship to the needs the bill is aimed to meet.

I recommend to my colleagues the analysis of the President's veto message delivered in this Chamber on May 16 by the senior Senator from Pennsylvania. They will find it on page 10325 of that day's RECORD. I wholeheartedly agree with Senator CLARK that the six points made by the President beg the issue and miss the point.

The point of this dispute, Mr. President, is this: In this country there are hundreds of areas which need help. They are depressed through no fault of their own. The changing economy and the changing utilization of resources and automation have thrown many out of work.

One of our great national challenges is to increase our productivity. We must keep ahead of the Soviet Union, which we are told is increasing its output by something like 7 percent a year, as compared to our 2½ percent.

But, more than this, we must make our economy fit the needs of our people. It does not meet the needs when millions are unemployed and—worse—unemployable because of industrial changes and because they therefore need retraining.

A great national problem was created when changing industry, migrating industry, and displaced industry left areas full of willing workers no longer competent to contribute to their country's strength and well-being. The most notable example of this has been in the coal mining industry. But it is by no means solely confined to that industry.

This bill is a step toward meeting the national need in this regard. I do not say it is an adequate bill. But it is moderate and it is a step. To end up with no bill, should the President's veto be sustained, or to end up with one scaled down to meet the administration's pygmy requests, would be tragic in the one case and most inadequate in the other.

The vetoed bill would set up a small administrative organization to handle the problem.

It defines areas in need of redevelopment—both urban and rural—and proposes to assist them through loans and participation by the Federal Government.

It will provide low-cost loans and grants to local governments to develop badly needed public facilities.

It provides for gathering of information for depressed areas.

It provides technical assistance to determine needs and set up programs in distressed areas.

It continues the urban renewal programs which have been so successful in rebuilding blighted areas in cities and towns.

Most important, it provides for vocational training for persons who became unemployed by virtue of changing industry in their area.

The bill gives the depressed areas of the Nation an opportunity to retrain their people for new endeavors. It will help industries rebuild themselves. It will help communities rebuild themselves. Most of the cost of the programs—which the President finds excessive, but which I feel is quite the contrary—will be repayed.

I think this is sound national policy. Without it our efforts to keep abreast of Soviet strength will be badly crippled. Even the President recognizes that area redevelopment is sound national policy. But he says redevelopment should be accomplished locally, with local funds. Every expert on local scenes tells us this is impossible.

Even though I look upon this program as sound national policy, Mr. President, I want to add that few States are in as great a need for it as is my State of Tennessee.

We have two major areas in need of redevelopment help: the Chattanooga and Knoxville sections.

We have two smaller areas of great need: La Follette-Jellico-Tazewell and Bristol-Johnson City-Kingsport.

In addition, 41 of our rural counties are in need of help and would qualify under terms of the bill which Mr. Eisenhower has vetoed.

In all, a total of 1,500,000 Tennesseans reside in these areas. This is 44 percent of my State's population:

In last year's Senate Banking and Currency Committee hearings on this bill, three distinguished Tennessee officials appeared to urge enactment.

The PRESIDING OFFICER (Mr. RANDOLPH in the chair). The time of the Senator has expired.

Mr. DOUGLAS. Mr. President, I yield an additional half minute to the Senator from Tennessee.

The PRESIDING OFFICER. The Senator from Tennessee is recognized for an additional half minute.

Mr. KEFAUVER. Herbert J. Bingham, executive secretary of the Tennessee Municipal League; Hugh Heatherly, city recorder of La Follette; and Mayor Dwain Peterman of Livingston, told about the depression in the State, especially in the coal mining regions of eastern Tennessee.

They pointed out the staggering loss which the State has incurred in migration of young people—255,000 in the years 1950 through 1957 alone.

They pointed out the folly in the past of trying to finance redevelopment on strictly State and local bases.

They showed that the State of Tennessee and these specific communities simply have not got the resources to do the job alone.

Mayor Peterman summarized their presentation. He said simply: "We need help."

Mr. President, there are areas in every State of our Union which echo his words: "We need help."

We must meet this national problem by voting to pass this measure despite the President's objections.

Mr. DOUGLAS. Mr. President, I yield 3 minutes to the Senator from Missouri [Mr. SYMINGTON].

The PRESIDING OFFICER. The Senator from Missouri is recognized for 3 minutes.

Mr. SYMINGTON. Mr. President, as a cosponsor of the area redevelopment bill, I was much disappointed that the President saw fit to veto it again.

I cannot agree with the President that many of the economic difficulties covered by this bill are temporary.

Nor do I agree that the bill would impair local initiative. It would, in fact, increase it.

I have been in many distressed areas in the last few months, and have talked with many of the people concerned with their development.

They do not lack initiative. They lack money.

And that is precisely what this bill, vetoed by the President, would provide.

Experience has shown that if it is to attract industry, a community must offer good living as well as good business.

It takes more than a new factory building, ready for occupancy. It takes roads, schools, sewers, playgrounds, plus all the other things which make any town a good place in which to live and work.

One of the best investments we can make is in job security for working people.

A plan that will create jobs for American workers is a gilt-edged, blue-chip investment. This is true because the American worker outproduces every other in the world.

Since our Nation is now producing at the rate of $500 billion a year, surely we can afford to insure that no area of this country—and no family—need live under the cruel cloud of continued high unemployment.

Personal security is as important to our freedom as national security.

To attain this job security, every man and woman willing to work should be able to work—at a wage consistent with self-respect.

But the basic question is not whether we spend this money, but how we spent it.

Do we invest it in new jobs and prosperity, as this bill would do? Or do we give it out for relief, unemployment compensation, and the other medications of a sick economy?

Surely, every American would choose the prosperity of production to the emptiness of idleness.

This must be the choice, if ours is to remain the No. 1 economy, symbol of the good life to all the world.

Therefore, I urge we vote to override this veto, and get on with this redevelopment project, which has been stalled for so long.

Mr. DOUGLAS. Mr. President, I yield 4 minutes to the Senator from West Virginia [Mr. BYRD].

The PRESIDING OFFICER. The Senator from West Virginia is recognized for 4 minutes.

Mr. BYRD of West Virginia. Mr. President, I quote a United Press International News Service story, dated May 21, 1960:

PITTSBURGH.—West Virginia, as a result of the 1960 census, will lose at least one of its congressional seats because of declining population, it was revealed here today.

Regional census Director Edgar L. Bryan also said that when complete figures are in from all parts of the country, the Mountain State might lose two of its Representatives.

Although census figures are not expected to be completed for several weeks, Bryan said there was no doubt West Virginia would lose at least one of its seats in Congress.

To magnify this story, I point to the Fifth District of West Virginia. Three of the seven counties in this southern West Virginia district have lost a total of over 40,000 citizens in the past 10 years.

The basic reason for this population loss is the lack of employment opportunities in this particular area.

I use the loss of population in the State of West Virginia as an example of what is happening in some parts of the country.

The President objects to several aspects of S. 722. He says we should not have a program for rural areas in this country suffering from chronic unemployment. It would be well to note that during the tenure of the present administration farm income has fallen precipitately. On the average, income for the 4,600,000 farms in America was $32 a week. This is almost unbelievable; but last year the total farm income was only $11 billion. Take away the food grown on the farm and the rental value of the farm housing and that figure drops to $7½ billion. The picture would not be so dark were the rural areas to receive aid for industrial development.

The President does not agree with that section of the bill which provides for the retraining of workers. We must be farsighted enough to realize that unskilled workers, and those with specialized skills, are being displaced by machines. A worker may spend a lifetime learning a trade, and then see that trade, or skill, become obsolete overnight. Not only does this worker have to be retrained in another skill; but there are those workers who must be trained to operate in an automated factory or office. There must be a balance between the number of jobs available and the number of jobseekers. Jobseekers must be equipped to perform in new jobs.

This bill would not provide for Federal handouts, as some opponents say. This would be an investment in the future of the country. Benefits would redound to the people and also to the Federal Government.

Mr. President, we have been asked to provide in excess of $4 billion to help people overseas; yet, the President proposes an area redevelopment measure of $53 million here at home. He continues to call for an effective bill—Congress gives him this bill—he does an about-face and vetoes it.

The people of this country want depressed areas legislation. The people of this country wanted the President to sign the bill. Congress met its challenge. The President did not. It is up to Congress, therefore, to override the veto of Senate bill 722.

As of May 1960, there were 40 major areas and over 100 so-called minor areas which could have qualified for loans under this bill. For this reason alone there is certainly need for such legislation.

We are considered the richest nation in the world; yet, we do not meet this responsibility. The civil needs of this country must be met. Not only is Senate bill 722 a sound business investment, but it is also humanitarian in its results.

I urge that this Chamber override the President's veto of the depressed areas legislation.

Mr. DOUGLAS. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. DOUGLAS. May I ask how much time we have remaining and how much time the minority leader has remaining.

The PRESIDING OFFICER. In answer to the Senator from Illinois, the Senator has control of 14 minutes and the minority leader has control of 27 minutes.

Mr. DOUGLAS. I wonder if the minority leader would be good enough to use some of his time?

Mr. DIRKSEN. Mr. President, I yield 2 minutes to the distinguished junior Senator from New York.

The PRESIDING OFFICER. The Senator from New York is recognized for 2 minutes.

Mr. KEATING. Mr. President, I regret that I find myself in disagreement with the conclusions which the President has reached with respect to this legislation.

I voted against the original area redevelopment bill last year, because I felt it not only went too far, but also was not soundly conceived, and the formula under which the money would have been apportioned to the various States was not a sound one. The vetoed bill, speaking parochially for a moment, would affect and benefit 20 communities in the State of New York, which I ask unanimous consent to outline in the RECORD at this point.

The PRESIDING OFFICER (Mr. YOUNG of Ohio in the chair). Is there objection to the request of the Senator from New York?

There being no objection, the outline was ordered to be printed in the RECORD, as follows:

New York State communities which would qualify under the requirements contained in the pending bill, according to statistics supplied by the Department of Labor: Albany, Amsterdam, Auburn, Beacon, Buffalo, Dunkirk, Elmira, Gloversville, Jamestown, Malone, Massena, Middletown, Newburgh, Ogdensburg, Plattsburg, Rome, Schenectady, Troy, Utica, Wellsville.

Mr. KEATING. Mr. President, a most significant feature of the measure now under consideration is the fact that it would provide substantial help to these many harder hit communities in my State. In this respect it is thus a great improvement over the limited number of areas which would have benefited under the original bill considered by the Senate last year.

This bill is also a great improvement in terms of the formula under which funds would be supplied to New York State. Whereas most Federal programs are rigged in such a way as to give my State very much the short end of the stick, this bill provides a much more equitable means of apportioning funds. It gives my State a much better break than usual.

Mr. President, we are enjoying the greatest prosperity in our history. Every index of economic activity is up. Employment is up. It does remain a fact that there are certain areas where there are pockets of unemployment, pockets of poverty, in this country. I believe it to be a legitimate and necessary function of government and a matter of both local

and national concern if there is any single man or woman who wants a job—who is ready, able, and willing to work—who cannot find employment. I feel strongly that we should act to provide needed relief to these critical areas of our country.

I have toured through my own State in some of these areas and have witnessed at first hand the need for assistance, which is very real and very pressing. The most significant and fundamental problem which arises is the human suffering which results from having large numbers of persons out of work in limited areas of chronic economic difficulty. The dignity and, in fact, the physical well-being of the affected workers and their families are the real test of the need for this proposed legislation.

In a related sense, Mr. President, this measure is sound because it does not in any way contemplate that affected areas should become "wards" of the Federal Government. I could not for a moment dream of such an arrangement, nor would the communities involved.

We need above all to get these areas over the hump—to give them the technical assistance and loanable funds which will enable them to revitalize and revive their ailing economies. It is clearly both preferable and more economical to provide helpful loans than it is to pass out public relief checks in these depressed areas.

Of course, this bill is no panacea. It merely provides for a little wherewithal by means of which these areas can and should be better able to help themselves. It also contains protections against the pirating of industries between States. This is very important and is another reason why this legislation is a very definite improvement over the original bill submitted to us for action.

Mr. President, the doctor has been diagnosing the disease for many months. He has a pretty good idea as to the type of medicine which will help. But he knows that the real and long-run cure depends in the final analysis upon the spirit and desire of the patient.

I believe the measure before us represents a proper vehicle for promoting the economic well-being this Nation needs. It represents a way to do it in line with the proper diagnoses which have been made.

This measure is a moderate but substantial means for the Federal Government to live up to its national responsibilities to eliminate those pockets of unemployment where joblessness has become chronic and depressing. It is not a budget-busting measure. It does meet the human and economic realities of this problem.

I regret we are going through the motions through which we are going. I see no great purpose to be served by this, because it is obvious there are not sufficient votes to override the veto.

For this reason, I am far more concerned about further action on legislation in this field this year than I am about today's vote. I hope the relevant committees of Congress will now get down to work, taking the administration's new bill as the basis for action. What we need is a sound and effective measure that can be passed, that will be signed into law, and that will go into effect very shortly to help these tragic areas of chronic unemployment.

The PRESIDING OFFICER. The time of the Senator from New York has expired.

Mr. DOUGLAS. Mr. President, I yield 3 minutes to the Senator from Indiana [Mr. HARTKE].

The PRESIDING OFFICER. The Senator from Indiana is recognized for 3 minutes.

Mr. HARTKE. Mr. President, I thank the Senator from Illinois.

I was shocked and disturbed when I learned of the President's veto of S. 722. His ill-timed and ill-considered veto came on the heels of a legislative message in which the President asked for a bill to help economically depressed areas to help themselves.

This bill would do exactly that. It represents a bare minimum program. It is, in the first place, an authorization bill and not an appropriation measure. In the second place, $4 out of every $5 authorized are for loans and not grants. These loans would have to be repaid with interest by local communities which need these funds to augment what they have been able to raise themselves to rebuild sick economies.

Anyone who has availed himself of the opportunity to read figures knows, Mr. President, that there are 31 chronic and acute depressed areas in our country today. Unemployment is about 4 million—more than 5 percent of the available labor force. Regardless of honeyed words and slogans about prosperity and figures from profit statements of certain corporations, a great portion of our Nation is not sharing in this abundance. On the closing day of the first session of this Congress, we in the Senate adopted a resolution directing the establishment of a committee to study unemployment in this country and to report to the Senate. I was named as a member of this committee, which thereafter studied unemployment problems in many sections of the United States—North, South, East and West. It was my privilege to participate in more of the field hearings than any other member.

Certainly no one who heard the pleas of the jobless, who viewed the empty stores and factories, the abandoned mines and silent railroads, who listened to stark statistics and stared into eyes of men whose jobs no longer exist could vote to sustain such a veto. These people do not want handouts. They get surplus food, barely enough to keep their bodies functioning, but food all the same. They have had unemployment benefits. They have walked the streets in search of work. They seek no more handouts. They simply want jobs to be available. They are willing to do almost anything simply to be able to work for a living.

Now, the Committee on Unemployment Problems received a substantial appropriation to study the plight of the jobless, and then was given an additional sum with which to continue certain operations beyond its originally scheduled life. Meanwhile, it has reported findings to the Senate, many of which were agreed to by both majority and minority members. Among these unanimous findings was the need for an area redevelopment bill.

Was the establishment of this committee, a move supported unanimously by the Senate, a mere idle gesture? Was it merely sop for the 4 million unemployed? If it was merely that and nothing more, it was a waste of time, energy and money. When I sacrificed many days of a vacation period to gather information and to help prepare reports, I felt I was serving a great national need. If the veto is sustained today, there are many who will believe with some cause that our work was, indeed, in vain.

We learned as we traveled the country for these hearings that most of the chronic unemployment areas have tried mightily to help themselves. We learned that some have been successful. We learned that fierce local pride in a few areas among a few organizations resisted any Federal aid. But, by and large, we learned that aid from the Federal Government was solicited and needed.

In my own State of Indiana, there are 5 communities listed among the 31 of the Nation which are severe depressed areas. Many more barely escaped this list.

Permit me for a moment, Mr. President, to point out the particular plight of one city—my own hometown of Evansville. A series of events over which the community itself had no control resulted in the loss, during a comparatively short period, of some 20,000 industrial jobs in a city of 140,000 persons. This city then undertook a complete community evaluation survey. Following this, $1 million in private capital was raised for potential industrial expansion and $300,000 for small business risk capital. This has not been enough to solve the problem since workers must be retrained and since unemployment is a problem that knows no community or State boundaries.

It is obvious that the country has an obligation to assist those communities which need help. This is no less a crying need than that which the administration sees as an obligation abroad. It is difficult for me to see how we can justify assisting sick areas overseas while denying sick areas in this country a modest domestic point 4 program. Frankly, our own unemployed, our own suffering businessmen, see their own communities as underdeveloped and in need of assistance. In the name of decency and justice, we must help them.

I hope that all Senators will put aside their feelings of partisanship or their feelings of kinship for the President and will recognize that his veto has been ill-advised. I hope the Senators will support an authorization for loans and grants to needy American communities to help themselves.

The PRESIDING OFFICER (Mr. MANSFIELD in the chair). The Senator from Illinois is recognized.

Mr. DIRKSEN. Mr. President, we have only one speaker remaining on this side.

The PRESIDING OFFICER. The senior Senator from Illinois is recognized.

Mr. DOUGLAS. Mr. President, in the language of checkers, I think it is the move of the minority leader.

The PRESIDING OFFICER. The minority leader says he has only one other speaker.

Mr. DOUGLAS. Very well. Since I am forced to use up our time I yield 3 minutes to the Senator from Alaska [Mr. GRUENING].

Mr. GRUENING. Mr. President, in his message returning without approval S. 722, a bill of which I was happy to be a cosponsor, the President had this to say with respect to one part of the Congress-passed area redevelopment program.

S. 722 would authorize Federal loans for the acquisition of machinery and equipment to manufacturers locating in eligible areas. Loans for machinery and equipment are unnecessary, unwise and costly.

These were to be loans repayable in American dollars. Still the President was against them.

A week ago Monday I indicated what the Eisenhower-Nixon administration, operating under its double standard, is telling Congress it must approve to the last penny—or face a special session.

I mentioned two projects which the Eisenhower-Nixon administration said were not unnecessary—were not unwise—were not costly—even though they were for projects of exactly the same type as those contemplated under S. 722.

At that time I mentioned the loan of $1,350,000 for the Taiwan Aluminum Corporation, repayable in 5 years in New Taiwan dollars.

At that time I mentioned a loan of $5 million to India, repayable in 15 years in Indian rupees.

It puzzles me—this double standard. It also nauseates me.

I have been for some time now searching for the distinction between what the Eisenhower-Nixon administration opposes at home but not only proposes, but also insists upon abroad. What can be the basis for this distinction? Does a project take on some special aura because it is to be carried out in some far distant foreign clime?

What is the factor missing from domestic projects? Can it be, perhaps, that the Eisenhower-Nixon administration is opposed to loans repayable in American dollars but prefers loans repayable in soft foreign currencies?

A look at the steadily mounting public debt, at the mounting interest rates, at the Eisenhower-Nixon administration's hard money policies, would cause one to doubt that this can be the explanation for the double standard.

Let us look further. Perhaps an answer can be found if we can but examine another example or two.

Let us consider the loan, under the Development Loan Fund, of $2,800,000 to Turkey for the Koruma insecticide plant. This is repayable in 10 years at 5¾ percent in Turkish lira. What is the money to be used for? Information from the fund states:

This loan is to be utilized to import machinery and equipment needed to construct a chemical plant for insecticides and related byproduct chemicals.

This also is for a project which would be permitted under S. 722 but which the Eisenhower-Nixon administration has branded as "unnecessary, unwise, and costly" if it were to be carried out at home.

Even after examining this additional foreign project, Mr. President, I must confess that I can still find no reason for the distinction between domestic and foreign projects which would explain the strange attitude of the Eisenhower-Nixon administration favoring foreign projects.

The PRESIDING OFFICER. The time of the Senator from Alaska has expired.

Mr. DOUGLAS. Mr. President, I yield 1 additional minute to the Senator from Alaska.

The PRESIDING OFFICER. The Senator from Alaska is recognized for 1 additional minute.

Mr. GRUENING. Mr. President, I will further confess that after careful examination of the many projects contained in this book setting forth the fiscal 1961 estimates of the Development Loan Fund, a summary of which I inserted in the RECORD, Monday, May 16. I can still find no reason for the distinction which the Eisenhower-Nixon administration makes between what is needed at home and on what it insists must be given abroad. I for one can discover no reason for such a distinction and I think the American people, when this matter is brought to their attention, will come to the same conclusion.

I could go on indefinitely citing the contradictions of the double standard of the Eisenhower-Nixon administration.

Mr. President, the foreign aid program, is carried on by this administration, is essentially an area development program, but it is an area development program for 104 foreign countries, and we are enjoined by the administration not to cut that program a nickel. If we do, we are threatened with a special session of Congress.

The difference between the program which is sacrosanct in the eyes of the Eisenhower administration and the one before us is that few loans under the foreign aid program are repayable. It consists largely of grants, is badly administered, is gaining the United States few friends, and is 25 times the size of the program which we are considering for our own people at home. So I shall vote to override the veto, calling attention to the undeniable, unanswerable, and irrefutable fact that the Eisenhower-Nixon administration will go down in American history as the first administration to prefer the interests of the people of other lands to the interests of the American people.

Mr. DOUGLAS. Mr. President, since I understand I have only 7 minutes remaining and the minority leader has 24 minutes remaining, I suggest that he use some of his remaining time.

Mr. DIRKSEN. Mr. President, I shall use all of my remaining time at one time, and I respectfully suggest that the proponents of overriding the veto conclude their argument now, and then I shall conclude my argument to sustain the veto.

The PRESIDING OFFICER (Mr. MANSFIELD in the chair). Does the Senator from Illinois wish to be recognized?

Mr. DOUGLAS. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The Chair will state to the Senator from Illinois that a time certain has been set for the vote at 2 p.m. If there is a quorum call now, the time for such a quorum call will come out of his time. To rescind the order for the quorum call would require unanimous consent, which might possibly not be forthcoming.

Mr. DOUGLAS. Mr. President, we have been engaged in an extraordinary debate, in which the defenders of the President have really not tried to discuss the bill or justify his actions. Three of the Senators to whom time has been assigned by the minority leader have, in fact, spoken in favor of overriding the veto. I believe only two Republican Senators spoke in favor of sustaining the veto. We have been forced into a situation in which we are using up our time and our opponents are holding back, reserving their remaining time for a final speech. The Senator from Minnesota [Mr. HUMPHREY], who was to conclude the debate for us, is on his way to the Senate Chamber. I suggest, in the interest of good sportsmanship, that the minority leader use some time now and then allow the Senator from Minnesota to speak when he arrives, and then my colleague will have an opportunity to conclude the debate.

Mr. DIRKSEN. Mr. President, only one speaker will address the Senate on behalf of those who wish to sustain the veto, and that will be the minority leader. I prefer to make my remarks continuous and consecutive, and for that reason I respectfully insist that the proponents use their time and then I shall conclude the debate.

The PRESIDING OFFICER. What is the pleasure of the Senate?

Mr. DOUGLAS. The minority leader is pointing a pistol at our heads. He has so manipulated the discussion as to insist upon closing the debate. The Senator from Minnesota [Mr. HUMPHREY] is on his way to the Senate Chamber.

I wonder whether the minority leader would give us a philosophical discussion of the double standard followed by the Eisenhower administration?

Mr. KEATING. Mr. President, will the Senator from Illinois [Mr. DOUGLAS] yield to me?

Mr. DOUGLAS. I do not have the floor.

The PRESIDING OFFICER. The Chair wishes to inform the Senator that time is running. The Chair would like to suggest that the time remaining be split into two equal parts, if that is agreeable.

Mr. DIRKSEN. To that suggestion I must object.

Mr. DOUGLAS. Mr. President, since the Senator from Minnesota apparently will not reach the floor, I will say that this vote is the real test. Members of the Republican minority can talk all they wish about their desire to have an area redevelopment bill. They have balked at every turn, with the exception of a few very gallant and high-minded Senators on the other side, to whom I individually pay tribute. But these fine Senators have voted to work against the overwhelming majority of the Republican Party, which in this body and the other body has voted in overwhelming proportions against similar bills on every occasion. The President has vetoed such bills twice. Now we have a final chance, and we shall welcome 11th-hour and 59-minute converts. We will welcome them. But I do not wish to hear such talk as, "Oh, we are for a bill. We are for a good bill. If we do not override the President's veto, you must do what we want and agree to the bill that we suggest."

Such procedure is legislation by a minority, and I protest against it, not only for the sake of upholding the dignity of this body, but in the best interests of the people of the United States.

Mr. RANDOLPH. Mr. President, will the Senator yield?

Mr. DOUGLAS. I am glad to yield.

Mr. RANDOLPH. Is it not a fact that, in attempting to reach a compromise position, dollarwise, at least, the Senate has yielded to the extent of $137 million.

Mr. DOUGLAS. That is true; and we have also compromised in making these provisions mere authorizations instead of mandates for bond issues.

Mr. RANDOLPH. Is it not a fact that the legislation on which we shall vote within a few minutes, in reference to the President's veto, is in fact a moderate approach to an overriding problem in many sections of the United States?

Is it not also true that a cursory attention to this problem will not suffice? It is a full-time obligation of the Senate to act on a measure of the moderate proportions of the one which we embrace affirmatively in an attempt to override the veto.

I shall also ask the Senator from Illinois this question——

Mr. DIRKSEN. Mr. President, I rise to a point of order. I have 24 minutes remaining. The vote is scheduled for 2 o'clock. I did not yield any time. I am not accountable for the interplay which was indulged in a moment ago, and I must respectfully insist that I be given my allotted time. If the vote is to be at 2 o'clock, I am entitled to 2 minutes more than the clock presently shows.

Mr. RANDOLPH. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. RANDOLPH. I request the opportunity, under a parliamentary inquiry, to say that I did not realize I was transgressing on the time of my friend the minority leader; so if I have failed to observe the rules of debate, I wish to have him understand it was not my intention to do so.

Mr. DIRKSEN. I understand.

Mr. RANDOLPH. I thought I was contributing to the debate under time still remaining under the time controlled by the senior Senator from Illinois [Mr. DOUGLAS].

The PRESIDING OFFICER. The Chair considers himself at fault. The Senator from Illinois [Mr. DIRKSEN] is recognized for 21 minutes.

Mr. DIRKSEN. Mr. President, in the President's veto message he alludes to the fact that for 5 consecutive years he has asked Congress for legislation in the field of area redevelopment. A bill did get to him in 1958. The amount was rather astronomical. The President found it necessary to veto that bill. Now comes another bill, passed by the Senate and passed by the House, in a reduced amount of $251 million. The President finds a defect here, and I believe he clearly sets out in his veto message what he regards as defective in the bill.

First, he says the bill includes areas of only temporary need, and points out that the number of areas over and above the administration position were doubled.

Second, he says there is an excessive Federal share, and that about 65 percent of Federal funds can be spent under this program, and only 35 percent either from a proprietary interest of States or localities. He points out that that would diminish local initiative.

He says the bill includes machinery and equipment, and that might be considered a subsidy for those who might move into an industrial plant.

The distinguished Senator from Connecticut [Mr. BUSH] and also the distinguished Senator from New York [Mr. JAVITS] undertook to have that provision removed from the bill in the Senate. However, it remains in the bill now, and it was a proper subject for comment by the President.

Fourth, the President points out that grants and loans for public facilities are provided up to 100 percent of the cost, and he points out that there are a great many areas where, because of tax exemptions, it would be possible for them to finance facilities and projects of a public character.

He pointed out also that the facility loan program of the Housing and Home Finance Agency was under way and that an additional $100 million in credit had been requested in the form of an authorization to carry on that program.

Finally he said the bill makes 600 or more rural areas eligible for industrial loans, and then pointed to the authority of the Small Business Administration and also the rural development program to operate in that field.

Then he pointed out that it creates a new agency. That is true. It was the President's desire—and I believe also the desire of others—to have this authority located in the Department of Commerce, rather than to create another agency. Everyone knows the proliferating character of a governmental bureau once it is set up. I believe in that respect the President was on good ground.

He urged action on this Congress in his veto message, and he did say that he would set a broader definition of criteria.

There is a new bill, which has been introduced with cosponsorship, and among other things it includes broader eligibility criteria. It adds 1 major area and 11 smaller areas to the earlier bills. There are $75 million provided in loans for industrial plants. The limits in the bill are set at 35 percent for Federal assistance. Then it doubles the Housing and Home Finance Agency authority for public facilities from $100 to $200 million.

A million and a half dollars are provided for vocational assistance, and a million and a half for technical assistance. There is also an authorization of $2 million for technical aid to rural areas and so-called one-industry towns.

I believe that the President's veto should be sustained, first, because he clearly sets forth defects; secondly, because the attack on the veto thus far has been political in nature.

My distinguished colleague from Illinois, when the veto message was written last week, referred to the message as "ignorant, unduly unctuous, and hypocritical." That is fine language, indeed, to apply to a message from the President of the United States, no matter how one figures it.

It was also said in the course of the Senator's remarks that "in all probability the President did not write the message."

I could point out how many staff members come on the floor to assist Members of the Senate, and I might point out how much assistance is rendered with respect to other statements and speeches and messages that are prepared. Here is the President of 180 million people. I simply say it is in poor grace to say that the President did not write the message. Perhaps he did not. But clearly there was an innuendo in the very statement itself. It was on political grounds also. There was a reference in the speech of last week by my colleague that after the 1959 bill was passed in the Senate, Republican leaders in the House refused to consent to a rule. That puts is squarely on a partisan, political basis.

There is not any question in the mind of anyone who heard the remarks in the Senate this afternoon as to exactly what is being designed.

I sent to the Office of the Official Reporters so that I could quote a little from the remarks of the distinguished Senator from Pennsylvania [Mr. CLARK]. Perhaps I should send for him. However, we have other work to do, we cannot always be sending for Senators. I should like to read from the official transcript a portion of the Senator's remarks:

I do not want to question anybody's motivation, but again I think it is abundantly clear that any reasonable, intelligent high school youngster would know that there will be no legislation on this subject enacted at this session of Congress. Why? Because it is not possible to get one Republican vote in the House Rules Committee to report a bill in that body. The two southern Demo-

crats and the four northern Republicans are ganging up together to make it impossible to pass any bill of this kind in the House.

"They are ganging up." He does not question the motivation, so he says, but they are ganging up. What do we do when we gang up? Ganging has a peculiar, conspiratorial connotation, if I know anything about the law. However, I will not charge the Senator with the intention to make the implication. I merely say that he is setting the foundation, not I. They set it with a kind of unrestrained language that has been used on the floor. I do not mean to let it go by unchallenged.

My colleague from Illinois referred to the 1959 bill in his address last week, and he came here late in the evening. However I was here and I heard it. There were only a few other Senators on the floor. The Senate was practically vacant, and most of the galleries had been vacated. But with respect to the 1959 bill he said:

> There is a coalition of four Republicans and four southern Democrats to prevent a rule.

A coalition, Mr. President——

Mr. DOUGLAS. Mr. President, does the Senator deny the truth of my statement?

Mr. DIRKSEN. No; I do not yield. The language speaks for itself. It is in the CONGRESSIONAL RECORD. How does my distinguished friend from Virginia [Mr. BYRD] think about it?

I have never asked one southern Senator to vote for or against depressed areas legislation. I have never asked one of them to vote one way or the other upon the veto message. But there is my colleague's language. He talks about the message, calling it "ignorant, unduly unctuous, and hypocritical"; and then he talks about a coalition.

Then he goes on to discuss the 1958 bill. The vote was 216 to 170. What was the comment on that vote?

> Of the 170 who voted nay, 57 were Democrats—almost all of them southern Democrats.

That is not the language of the majority leader; that is the language of my colleague from Illinois [Mr. DOUGLAS] as it appears in the RECORD. Yes; a coalition; putting it on a strictly political basis, and making light of a serious message by the President of the United States.

Then finally came the vote on Senate bill 722, which passed this body in March and passed the House recently. What was the vote? 202 to 184. It got out of the House by 18 votes. Evidently a number of Members of the House were not persuaded of the merits and the virtues of the bill which was sent to the House and later modified by that body.

What was the vote in the Senate when this bill was passed? We voted on the 23d of March. The bill certainly did not overwhelm the Senate, because the vote was 49 to 46. It got through this body by 3 votes. It got out of the House by 18 votes, despite the frustrations, despite the limitations, despite all the activities at the wailing wall. Evidently there were many Members of the House and Senate who were not persuaded on this point.

The bill which is talked about contains major areas, 40 in number, and 103 smaller areas. What are the major areas? Louisville, Ky. It is no wonder that a distinguished Ohio Representative referred to Louisville as the sweepstakes depressed area.

Atlantic City is included. So are Detroit, Mich.; Albany and Buffalo, N.Y.; Newark, N.J.; and Terre Haute, Ind.

Among the smaller areas, if time permits, I shall refer to only one, in my State, the little town of Olney. The center of population is located at a point, according to the Census Bureau, just a mile north of this town—and it is a lovely town. In the Olney Daily Mail for May 10 a letter was published which refers to an article in the U.S. News and World Report. In the time remaining, let me see if I can read most of it. It is entitled "Well, Come Along," and reads as follows:

> At page 125 of the issue of May 16 of the U.S. News & World Report edited by David Lawrence, Olney is referred to as being among the "depressed areas." News to us, Mr. Lawrence. Along with Olney, is placed in the same category our neighbors, Centralia, Harrisburg, Herrin, Murphysboro, West Frankfort, Mount Carmel, and Mount Vernon.
>
> The writer not being too familiar with the prosperity of these neighboring cities, will not venture an opinion as to whether they are depressed areas (which he doubts) or that this designation is just the mouthing of political candidates for office who are trying to garner votes for themselves.
>
> For the information of Mr. Lawrence and any other politicians interested, the combined assets of the two banks in Olney and the Olney Loan & Building Association, as to their last report was $17,652,000 and of this $7,084,000 was in savings accounts.

And that is a little town, Mr. President.

I continue to read:

> Is this the earmark of a depressed area?
>
> When it became necessary to raze one schoolhouse and build a new one, to build and equip additions to four schools, repair and equip seven schoolhouses, we didn't go down to Washington and beg for Federal funds. Our citizens last fall voted by a big margin a bond issue of $572,400 and will pay for it out of general taxation.
>
> Is that the earmark of a depressed area?
>
> For several years Olney has been the leader in southeastern Illinois in sales tax collected.
>
> Is this the earmark of a depressed area?
>
> For the further information of the erudite author of the article, Olney has a branch of the International Shoe Co., the Carmi Ainsbrooke factory, both employing numerous people, and a branch of the Prairie Farms Creamery Co., which spends thousands of dollars weekly in payroll and the purchase of milk, the State accounting offices of the General Telephone Co. and many small industries. We could in addition list several oilfields supply and service companies, as well several drilling companies engaged in the drilling of oil wells.
>
> Our chamber of commerce through its activities, is now building a factory for Kex Products, to be occupied this coming fall, at which time it plans to start work upon another factory, which will employ several hundred persons. The money for this is being raised locally, and not by grants from Washington.
>
> Since 1936 the citizens of Richland County have been the recipients of large sums of money monthly for oil royalties, many of its citizens have been employed in the oilfield.
>
> Farmers of the Olney area have been industrious and prosperous, through soil conservation practices, bringing our soil to comparatively high fertility.
>
> Thank you, Mr. Lawrence and your political friends. We are not a depressed area, and we resent your insinuation that we are. We are red-blooded Americans, able to stand upon our own two feet, and we do not ask, seek, or want any dole from the Federal Treasury. If we have any problems, we are fully capable of handling them ourselves.

Mr. President, do they want a bill? The new bill has been introduced. It provides for $80 million. It has been changed in some respects. The machinery and equipment item, to which the Senator from New York [Mr. JAVITS] and the Senator from Connecticut [Mr. BUSH] objected, has been removed. The House version of the bill has been modified and made consistent with the Senate bill. The bill is in the Committee on Banking and Currency. I wrote the chairman of that committee a letter and urged that he summon his committee and take some action on the bill, because it is pending there at present.

I have pointed out what is contained in the bill. For the benefit of the Senate, I shall simply reiterate. It broadens the criteria. It adds 1 new major area and 11 smaller areas to the original administration bill on depressed areas. It provides $75 million in loans for industrial plants. It limits Federal aid to 35 percent. It doubles the authorization from $100 million to $200 million which will be available to the Housing and Home Finance Agency with respect to the program for public facilities.

The bill includes $1,500,000 for vocational training. It includes $1,500,000 for technical assistance. It includes $2 million for technical aid to rural areas and one industrial town.

The bill is pending before a standing committee of the Senate. There is the President's request in the veto message. There he says, "For 5 consecutive years I have asked for legislation, and I hope that before this Congress concludes its labors there will be legislation on this subject."

The bill now before the committee will do the job. Are we going to get action? We have no control of the committee. We have one-third of its membership. What happens finally will have to be energized by the majority. If there is no legislation on this subject, after all these repeated requests, then the responsibility is certainly not on this side of the aisle, because we have asked for legislation and we have refined the bill.

The bill is waiting for action. I earnestly hope that the Committee on Banking and Currency will meet at a very early date, and that the bill will be reported.

Mr. President, the hour of 2 o'clock having arrived, I have completed my statement. I earnestly urge the Senate to sustain the President of the United States, because I think he has made an

effective case in his veto message against the bill which is now before the Senate.

Mr. HUMPHREY subsequently said: Mr. President, I ask unanimous consent to have printed in the RECORD prior to the vote on the overriding of the President's veto, my statement on the subject, which urges that the Senate override the President's veto.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR HUMPHREY

Once again the President has vetoed legislation approved by Congress to bring new life and new hope to thousands of American families in economically depressed communities throughout the Nation.

In so doing, the President ignores the plight of almost 150 American communities with chronic unemployment and lagging economies. He ignores the plight of thousands of men and women without jobs in these depressed and declining communities.

The Department of Labor currently lists 142 areas with substantial unemployment. I have seen the heart-rending human suffering behind the statistics. I have seen this suffering in Duluth and northern Minnesota, and I have seen this suffering in West Virginia and many other communities throughout the Nation.

We have an obligation to assist in alleviating the economic difficulties of these areas. But this administration seems to be more concerned with balancing the fiscal budget than in balancing the budget of human needs. I want to see America's economy thriving. I want to see America's people happy and productive, adequately fed and well housed.

The President's veto is contrary to the desire of the American people that their government promote maximum employment. The Employment Act of 1946 pledges that the U.S. Government will follow policies to promote employment. It does not say that Duluth, Minn., or Charleston, W. Va., or any other city with serious unemployment is not covered by this law.

I say that this administration is ignoring the will of the people by imposing a veto straitjacket on carefully planned legislation to help depressed areas with persistent unemployment.

This administration argues that the Government of the United States cannot afford to help families and communities recover and develop their full economic potential. I say that we cannot afford not to give constructive aid to such communities.

What are we trying to do in this area redevelopment bill?

We are trying to stimulate economic activity with low interest loans for private industry and public projects. With grants for public facilities and technical assistance to help State and local governments and development groups we will increase the number of permanent jobs in depressed communities. And we are authorizing subsistence payments to unemployed workers who go into a training program to acquire new skills to help them find jobs.

How much would it cost?

Of the total $251 million cost of this program, $200 million is for secured loans which will be repaid with interest. These loans include $75 million for redevelopment in depressed industrial areas, $75 million for redevelopment in depressed rural areas, and $50 million for public facilities loans.

And I might add that these loans will be made only if there is State and local financial support for redevelopment projects.

Our redevelopment bill provides for direct grants of $35 million for public facilities and $4½ million for technical assistance, which includes economic studies and economic planning for economic development in depressed areas. The bill also includes $10 million for subsistence retraining payments to help the States support unemployed people as they prepare themselves for new jobs.

Let us briefly examine the President's objections to the area redevelopment bill.

First, he says this bill would squander the taxpayers' money where only temporary economic difficulties exist. If a community's economic problems are only temporary, the community will not be eligible for redevelopment assistance as soon as its unemployment rate drops below 6 percent.

Second, he says State, local, and private initiative would be inhibited by excessive Federal participation. Any one who has visited a depressed area knows that local initiative and local resources have been overtaxed and exhausted. If these poverty-stricken areas do not get Federal assistance, they will just not be able to break out of the demoralizing circle of unemployment, declining purchasing power, declining economic activity, and declining tax revenues.

Third, the President says that it is unwise and unnecessary to provide Federal financing for machinery and equipment. If the President is right, this authority will never be used, but I believe that many depressed communities will find occasions when they will have to provide financing for plant and machinery as well as for land and buildings to attract new industries.

Fourth, the President says that loan assistance for public facilities is unnecessary because such assistance is already available under existing Government programs. There is a public facility loan program of the Housing and Home Finance Agency, but there is almost no money available under this program. Furthermore, it seems reasonable to consolidate assistance for depressed areas in one agency, rather than dividing responsibility among executive agencies with differing purposes.

Fifth, the President says that Federal loans for creation of jobs in rural areas are unnecessary. I must disagree with such a conclusion. There are hundreds of rural counties which do need economic redevelopment and rehabilitation just as much as depressed urban areas. Low-income farm families suffer just as much as low-income city families, and usually there is much less opportunity for the rural families to get the welfare services which are available to city families.

Sixth, the President says that creation of a new Federal agency is not needed. Apparently he thinks the Department of Commerce should handle this program. Congress approved establishment of a new agency instead of giving area redevelopment authority to the Department of Commerce largely because of this administration's open lack of sympathy for the objectives of this program.

The area redevelopment bill is a sound constructive approach to economic blight and human suffering in the depressed communities of America. These is no excuse for these conditions being allowed to continue in our wealthy country.

The free people of America can mobilize the strength and their resources—but they cannot do so if the President's veto stops constructive action approved by large majorites in both Houses of Congress.

I urge my colleagues to override this veto.

It is time that our concern for people takes precedence over slogans about balancing the budget. It is time we restore prosperity and hope to those communities and those people who have endured too long the indifference of this Administration to their distress and suffering.

Mr. McCARTHY subsequently said: Mr. President, because of the limitation of time for debate on the depressed areas bill, I was unable to speak before the vote was taken on whether the President's veto should be sustained. Therefore, I ask unanimous consent that these remarks may appear in the RECORD prior to the vote on the veto.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. McCARTHY. Mr. President, at the end of the last session the Senate established a Special Committee on Unemployment Problems. The nine members were directed to investigate unemployment conditions in the Nation and to give particular attention to areas of chronic unemployment. We were also instructed to report back our recommendations for alleviating the effects of unemployment and for reducing this problem.

The members and the staff worked diligently, and I believe that the report which we submitted last March 30 represents an objective appraisal of the problems. Both the majority and the minority members were in general agreement that unemployment is a serious national problem and that the Congress should take a number of steps to reduce unemployment and to alleviate its effects.

Mr. President, after its study the majority members of the committee reached the conclusion, while a variety of programs are required, that "highest priority be given to the enactment of an effective area redevelopment program." I ask unanimous consent that pertinent paragraphs from the committee's study be printed at this point in the RECORD.

There being no objection, the extracts were ordered to be printed in the RECORD, as follows:

PRIVATE, LOCAL, AND STATE EFFORTS

At nearly every hearing the committee received evidence that local communities are trying to rehabilitate their own areas, to enlarge their economic base, and to provide employment opportunities. The spirit of determination and the vigor of these efforts certainly deserve commendation.

Several thousand industrial development organizations, usually begun as a project of the business community, have been organized in the United States. In labor-surplus areas these organizations often develop into community and regional enterprises, and represent a united business, labor, and civic effort. Funds are raised by individual contributions and by borrowing money and, in some instances, by issuing bonds.

The financial activities of the industrial development groups range from making outright grants to extending credit. The local development organizations often make plant sites and even plant "shells" available to prospective occupants. Some offer technical assistance in advertising campaigns describing community facilities, and detailed counseling in management, production, engineering, and marketing problems.

Every State in the Nation has an agency whose function is to promote economic development. During the past decade a number of States have sponsored statewide privately financed development credit corporations to stimulate industrial growth.

A COMPREHENSIVE FEDERAL PROGRAM

Postwar experience has demonstrated that existing local, State, and Federal programs are inadequate to deal with the serious problems of chronic unemployment and underemployment.

The committee received convincing testimony that communities subject to chronic unemployment cannot solve their problems alone. Most local leaders of business and labor agreed on the need for Federal action to assist distressed areas. The statement submitted by the Scranton, Pa., Chamber of Commerce is typical:

"While Scranton's industrial development program in itself has infused new life and new hope in its industrial economy and provided jobs for thousands of its people, it is felt, nevertheless, that by itself it is inadequate to overcome a continuing unemployment problem which has plagued the area for so many years that it has become intolerable. It is clear, therefore, that the time has arrived when the resources of the Federal Government itself should be mobilized in one nationwide effort to finally and completely eradicate these pockets of chronic unemployment from our national economy."

The president of the Northeast Pennsylvania Industrial Development Commission also asserted strong support for a Federal area redevelopment bill.

With few exceptions, the mayors and civic leaders of distressed areas testified to the inability of their communities to solve the problem of chronic unemployment. At the hearings in West Frankfort, Ill., five mayors and five representatives of local chambers of commerce asked for Federal action. One of the most effective industrial development groups is the Community-Area New Development Organization (CAN DO) of Hazleton, Pa., described in a special paper written for this committee. CAN DO has collected or borrowed $6 million from individuals, banks, and the Pennsylvania Industrial Development Authority to assist in locating new industry. But its problems are immense. Approximately 3,000 new jobs were created as a result of community efforts, yet unemployment in 1959 was estimated to be 16 percent of the area labor force. The author of the committee study concluded:

"Because of the magnitude of Hazleton's problem and because of the economic and social costs that accumulate as long as the problem remains (in 1958, for example, over $5 million was expended in Hazleton for unemployment benefits, and this is aside from the much greater cost in wasted manpower which can never be retrieved) any outside assistance which would accelerate the Hazleton program seems warranted."

The principal rural redevelopment efforts of the Federal Government have in the past been directed toward assisting individual farmers maintain parity of income and providing education and guidance through the county and State extension services. Little has been done on a community or regional basis. Greater economic interdependence and a sharing of social services and facilities have brought farmers and citizens of towns and smaller urban cities closer together, however, and many common problems would probably respond best to a rural-regional approach. The committee heard testimony on the success of the rural-resource development approach of the 15 counties in the Upper Peninsula of Michigan. The Michigan program, under the leadership of the Michigan State University Extension Service, indicates that the traditional roles of the county agent and the State extension services might profitably be reviewed.

A program to help economically distressed areas does not constitute a new area of Federal activity. Such a program is consistent with the spirit and intent of the Employment Act of 1946, and with established Federal policies of helping selected industries. Traditionally, the Federal Government has been active in developing and fostering industries through tariff, subsidy, and tax policies. The 1956 platforms of both major political parties called for Federal legislation to aid economically depressed areas.

No single remedy will cure the deep-rooted problems of chronic unemployment and underdevelopment. A Federal program must offer various forms of assistance adaptable to the varied needs of the depressed areas. These forms include direct financial aid, technical assistance, training and retraining facilities, urban renewal programs, homebuilding incentives, Government contract preference, a Youth Conservation Corps, and community facilities programs.

Mr. McCARTHY. Other Members of the Senate have pointed out the differences between the analysis of the special Senate committee and the veto message of the President. I should like to add an additional comment on one phase of the veto message, that concerning the rural redevelopment program.

The President stated:

The provisions for Federal loans for the construction of industrial buildings in rural areas are incongruous and unnecessary.

Later in the message the President added:

S. 722 would make a minimum of 600 rural counties eligible for Federal loans for the construction of industrial buildings in such areas. The rural redevelopment program and the Small Business Administration are already contributing greatly to the economic improvement of low income rural areas. Increasing the impact of these two activities, particularly the rural development program, is a preferable course.

Mr. President, I believe that members of the special committee were in complete agreement as to the need for a rural redevelopment program in addition to existing agencies.

The existing agencies are not able and were not devised to solve problems of chronic unemployment that exist in rural areas. Mr. President, this is not a partisan issue. It is simply a fact. In their minority views, the three Republican members of the committee, Mr. COOPER, of Kentucky, Mr. PROUTY, of Vermont, and Mr. SCOTT, of Pennsylvania, stated:

It is a matter of prime importance that an area redevelopment bill be enacted and that it contains means for stimulating local effort.

In specifying conditions for such a bill, the minority members wrote that the area redevelopment legislation should, among other objectives:

Provide for industrial development of rural areas suffering from chronic unemployment or underemployment. Many coal mining areas fall into this category.

I ask unanimous consent that the section of the minority members concerning rural redevelopment be placed in the RECORD.

There being no objection, the extracts were ordered to be printed in the RECORD, as follows:

I. AIDING DISTRESSED AREAS THROUGH AREA REDEVELOPMENT LEGISLATION

It is a matter of prime importance that an area redevelopment bill be enacted and that it contain means for stimulating local effort. Our task is to evolve a practical program which will be assured of approval at this session of Congress.

* * * * *

(k) Provide for loans for industrial development of rural areas suffering from chronic unemployment or underemployment. Many coal mining areas fall into this category.

* * * * *

RURAL AREAS

It is absolutely essential that assistance be provided for rural areas. Many of the coal mining areas are in this category.

Numerous witnesses testified to the gravity of unemployment and underemployment in rural areas. Moreover, studies by the Department of Labor and the Department of Agriculture indicate that the number of farm jobs required in the 1960's will decline further, as they have in the last three decades. If many of the people now living on farms, and especially the young people, are to find a livelihood without moving out of the area it will be necessary to develop industrial activity. This is widely recognized. Work is under way through the rural development program of the Department of Agriculture to improve the situation in these areas, but that program is primarily oriented to agriculture and makes no provision either for technical assistance or for loans for industrial development. Therefore, the minority believe that aid to rural as well as urban areas is essential to the attack on the problem of chronic unemployment.

We recommend that the Secretary of Agriculture and the Secretary of Labor be authorized to develop more effective measures for the identification of chronically depressed rural areas, within a broad provision indicating that they are to be selected from low-income areas with high levels of unemployment and underemployment.

The PRESIDING OFFICER. The question is, Shall the bill pass, the objections of the President of the United States to the contrary notwithstanding?

The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. BEALL (when his name was called). On this vote, I have a pair with the Senator from New Jersey [Mr. CASE] and the Senator from South Dakota [Mr. CASE]. If I were at liberty to vote, I would vote "yea," as would the Senator from New Jersey [Mr. CASE]. The Senator from South Dakota [Mr. CASE] would vote "nay." I therefore withhold my vote.

Mr. FULBRIGHT. Mr. President, on this vote, I have a pair with the Senator from Alaska [Mr. BARTLETT] and the Senator from Michigan [Mr. MCNAMARA], both of whom, if present and voting, would vote "yea." If I were at liberty to vote, I would vote "nay." I withhold my vote.

The rollcall was concluded.

Mr. MANSFIELD. I announce that the Senator from Alaska [Mr. BARTLETT], the Senator from Nevada [Mr. CANNON], the Senator from Idaho [Mr. CHURCH], the Senator from North Carolina [Mr. JORDAN], the Senator from Wyoming [Mr. MCGEE], the Senator from Wyoming [Mr. O'MAHONEY], the Senator from Florida [Mr. SMATHERS], and the Senator from Georgia [Mr. TALMADGE], are absent on official business.

The Senator from Michigan [Mr. MCNAMARA] and the Senator from Missouri [Mr. HENNINGS] are absent because of illness.

On this vote the Senator from Nevada [Mr. CANNON] and the Senator from Idaho [Mr. CHURCH] are paired with the Senator from Florida [Mr. SMATHERS]. If present and voting, the Senator from

Nevada and the Senator from Idaho would vote "yea" and the Senator from Florida would vote "nay."

The Senator from Wyoming [Mr. McGEE] and the Senator from Missouri [Mr. HENNINGS] are paired with the Senator from Georgia [Mr. TALMADGE]. If present and voting, the Senator from Wyoming and the Senator from Missouri would vote "yea" and the Senator from Georgia would vote "nay."

I further announce that if present and voting, the Senator from Wyoming [Mr. O'MAHONEY] would vote "yea."

Mr. KUCHEL. I announce that the Senator from Indiana [Mr. CAPEHART] is absent because of a death in his immediate family.

The Senator from New Jersey [Mr. CASE] is necessarily absent.

The Senator from South Dakota [Mr. CASE] is absent on official business.

The Senator from Hawaii [Mr. FONG] is absent on official business as a member of the official delegation to attend the 150th celebration in Buenos Aires.

The pair of the Senator from New Jersey [Mr. CASE] and the Senator from Maryland [Mr. BEALL] with the Senator from South Dakota [Mr. CASE] has previously been announced. If present and voting, the Senator from Indiana [Mr. CAPEHART] would vote "nay."

The yeas and nays resulted—yeas 45, nays 39, as follows:

[No. 199]

The PRESIDING OFFICER. On this vote, the yeas are 45; the nays are 39. Two-thirds of the Senators present and voting not having voted in the affirmative, the bill, on reconsideration, has failed of passage.

Mr. DOUGLAS subsequently said: Mr. President, during the discussion of the area redevelopment bill, the distinguished senior Senator from Florida questioned the classification of certain counties in his State as being major problem areas. There was not time at the moment to go into the statistics prepared by the U.S. Department of Agriculture from which the map which I presented was drawn. Since the vote has been taken, I have had the sources looked up. I ask unanimous consent that a statement which I have prepared on this subject be printed in the body of the RECORD at the conclusion of the vote on the question of overriding the veto of the President of the area redevelopment bill.

Mr. HOLLAND. Mr. President, I have no objection to the inclusion of the statement in the RECORD. My point was that there was no real distress in the areas which I mentioned, and there is none, and that the standards set up by the bill were not, in my opinion at least, sufficient to separate the areas of real depression and distress in the Nation which need help from those which do not, as was true in the case of the counties in my State which I mentioned, and with respect to other counties as well. I thank the Senator.

Mr. DOUGLAS. I thank the Senator from Florida for his very courteous comment. I do not wish to carry this discussion further. However, I will say that the list of 500 or 600 counties merely constitute eligibility under the area redevelopment bill. They do not require the administrator to make loans for new industries in any one county. They merely provided a panel of counties in which the administrator could use his discretion according to relative needs. Therefore the list was in no sense a mandate to the Administrator that remedial loans must be made.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR DOUGLAS

The Florida counties which are shaded pink on the map [not printed in RECORD] which is in the rear of the Senate Chamber were selected by the U.S. Department of Agriculture and listed among the major problem areas, in the study issued by the Department on April 27, 1955, and entitled "Development of Agriculture's Human Resources," now House Document No. 149, 84th Congress.

As reference to the study will show on pages 6, 7, and 8, the map in the Senate Chamber is a faithful and accurate reproduction of the map presented in the study.

In describing the selection of these areas the study states as follows:

"THE MAJOR PROBLEM AREAS

"Farms with low income are found in all parts of the country, but such farms are most numerous in areas of dense rural settlement with high birth rates, where there are few outside jobs, and where topography or other obstacles hinder the use of modern machinery. In some places the land is overcrowded, so to speak. The abundance of hand labor has tended to reduce the incentive for making adjustments which would give the farms higher earning power per worker.

"Problem areas are shown on the map. Of course the nature of specific problems and the range of possible adjustments vary greatly among and within these generalized areas.

"These areas were set up on the basis of three criteria: Net income of full-time farmers, level of living, and size of operation.[1] Thus areas with incomes under $1,000, or having a level of living in the lowest fifth of the Nation, or having 50 percent or more of the commercial farms classed as low production, were selected for study. The area colored red on the map shows where all three of these criteria are applied and represents those parts of the country where the problem is more serious.

"These problem areas, so-called, strikingly contrast with the rest of the United States. Within these areas in 1950 there were a million full-time farmers of working age who sold less than $2,500 worth of products. Out of this gross sum they had to pay expenses and rent as well as family living. They represented about 40 percent of all the farms in these areas. Another 40 percent also sold less than $2,500 of products but were primarily nonfarmers or were more than 65 years old. Less than a fifth of the farms in these areas produced and sold $2,500 worth of products.

It is clear from the more detailed statement of the criteria for the selection of these counties found in the footnote on page 8 of the study that the references are to levels of farm income, levels of living on farms and production levels on farms—and the statements of the Senator from Florida, Mr. HOLLAND, about other enterprises not related to farming thus do not contradict the data reported by the Department of Agriculture and shown on the map.

It is true that the data upon which the map was based by the Department of Agriculture are for the year 1949. But it is interesting to note that in the 1957 study by the Library of Congress, 15 of these same counties in northern Florida, including Leon County and Okaloosa County mentioned by the Senator from Florida, are among the 500 counties marked lowest in levels of living of farm operator families for the year 1954.

In addition three more of these northern counties marked pink on the map together with two more counties, Taylor and Valousa in northern Florida but not marked pink on the map, were included in lists of 500 coun-

[1] The criteria by which each State economic area in the low-income and level-of-living areas was delineated are as follows:

1. A residual farm income to operator and family labor in 1949 of less than $1,000 provided the State economic area had a level of living index below the average for the region and had 25 percent or more of its commercial farms classified as "low production." Residual farm income to operator and family labor represents the income (including value of home use) above operating expenses and a return to capital invested in land and machinery. See Strand, E. G., Heady, E. O., and Seagraves, James, "Productivity Levels in the United States," USDA, ARS, Tech. Bul. (in process).

2. A level of living index in the lowest fifth of the Nation. Items in the index include (1) percentage of farms with electricity, (2) percentage of farms with telephones, (3) percentage of farms with automobiles, and (4) average value of products sold. See "Farm Operator Families Level of Living Indexes," by Hagood, M. J., USDA, BAE, 1952.

3. "Low production" farms comprising 50 percent or more of the commercial farms. Low-production farms are those with sales of $250–$2,499 with the operator not working off farm as much as 100 days and farm sales exceeding family income from other sources. See "Low Production Farms," Agri. Inf. Bul. 108, by McElveen, J. V., and Bachman, K. L., USDA, BAE, 1953.

ties furnished to me by the Bureau of the Census in 1956 as among the 500 counties with the highest percentage of commercial farms producing less than $1,199 and $2,500 worth of products for sale in 1954.

By any authoritative information we can secure from appropriate governmental agencies, therefore, the data submitted on the map presented to the Senate seems fully supported.

MESSAGE FROM THE HOUSE—ENROLLED BILLS AND JOINT RESOLUTIONS SIGNED

A message from the House of Representatives, by Mr. Maurer, one of its reading clerks, announced that the Speaker had affixed his signature to the following enrolled bills and joint resolutions, and they were signed by the Vice President:

S. 2130. An act to authorize a payment to the Government of Japan;

H.R. 9465. An act to authorize the loan of one submarine to Canada and the extension of a loan of a naval vessel to the Government of the Republic of China;

H.R. 9818. An act to provide for the conveyance of certain real property of the United States to the State of Florida;

H.R. 10809. An act to authorize appropriations to the National Aeronautics and Space Administration for salaries and expenses, research and development, construction and equipment, and for other purposes;

H.J. Res. 502. Joint resolution authorizing the erection in the District of Columbia of a memorial to Mary McLeod Bethune; and

H.J. Res. 546. Joint resolution authorizing the Architect of the Capitol to present to the Senators and Representatives in the Congress from the State of Hawaii the official flag of the United States bearing 50 stars which is first flown over the west front of the U.S. Capitol.

LAUNCHING BY UNITED STATES TODAY OF 2½-TON MIDAS EARTH SATELLITE

Mr. BRIDGES. Mr. President, some very interesting news has just come over the wire. We hear so much criticism and so much talk about failures of the United States, about the missile race, the satellite race, the gap in the air, and so on, that I think the Senate should take due notice of this event.

I read from a news dispatch dated today:

CAPE CANAVERAL.—The United States launched a 2½-ton Midas earth satellite today to test a spy-in-the-sky system for detecting hostile missiles within seconds after they are fired.

An 88-foot, two-stage Atlas-Agena blasted from the cape at 12:37 p.m., e.s.t, (1:37 p.m. e.d.t.) with the limousine-sized moonlet. The rumble may echo in diplomatic halls.

The satellite, dubbed Midas II and essentially a repeat of a shot which failed February 26, was equipped with a super-cooled infrared sensor to spot missile launchings from an orbit about 300 miles above earth.

The space-borne alarm system, peering over thousands of square miles each second, would give America a 30-minute warning of an impending missile onslaught. This is about twice the warning time available with present radar systems.

The Air Force planned to test the satellite with flares fired at Edwards Air Force Base and Vandenberg Air Force Base, Calif., this week. It also was reported the Air Force might time the launchings of intercontinental ballistic missiles to coincide with a pass by Midas II.

Sources said the flares will be seen as a rosy glow over a radius of 50 miles. Scientists also said the satellite would be able to tell the difference between missile firings and other heat sources on earth.

Midas—short for missile defense alarm system—is the first step in a top-secret U.S. military plan for an international open skies arrangement of its own, hinged on space satellites circling in polar orbits above every inch of earth's surface.

In the three-part system, Midas satellites will pick up enemy missile firings almost instantaneously, Samos reconnaissance satellites will get television views of military installations and Advent communications satellites will relay the information to U.S. authorities.

Operational versions of the spy satellites may be in the skies in groups of about one dozen within 2 years.

Midas II—last of the series to be launched here—was a prototype designed to see whether the alarm system will work. It was aimed toward an orbit that would carry it over a comparatively narrow band around the Equator, but not over Russian territory.

The big rocket eased from its pad slowly at first as its 360,000-pound thrust engines built up power. This was the same propulsion system which drove an Atlas missile a record 9,000 miles last week.

The Atlas was to drop away after burnout. Then 10 minutes of coasting and after that, the firing of the bullet-shaped Agena section to drive the satellite into orbit.

During the coasting phase two small helium jets perform their task of getting the satellite into proper position with its nose pointing to earth and putting the payload into an orbit as nearly circular as possible.

The instrument package weighed more than 3,000 pounds, largest ever sent into space by a U.S. rocket. The instruments and the second-stage casing were designed to remain attached for a gross weight of about 5,000 pounds.

The planned orbit would carry Midas II 28 degrees north and south of the Equator—as far north as Cape Canaveral and the southern section of Red China and as far south as the southern tips of Brazil and Africa.

The complex satellite was secret but the key to its success lay in the performance of the deep-frozen "eye" which was designed to spot a missile by infrared radiations from its exhaust.

Mr. President, I think that is one of the most gratifying and one of the most successful things we have achieved since we have been part of the space age, and certainly since the Russians sent up the first sputnik in October 1957.

We hear a great deal about the failures of the United States of America. The minute a missile which is fired from Cape Canaveral fails, the information is hurled all over this country and all over the world. The Russians advertise only their successes, and conceal their failures.

All along during the last few months, and in the last 2 or 3 years, we have heard never a word about any failure of the Russians, but we have always heard of their successes. I think it is time to talk about some of the American successes. One of our successes was the 9,000-mile shot of the Atlas missile the other day. Today, Midas II, which is a tremendous step forward, a step of which all Americans can be proud, is another of our great successes.

QUESTIONS FOR RUSSIA TO ANSWER

Mr. LAUSCHE. Mr. President, when the Foreign Relations Committee hears representatives of the State Department and others on the developments which took place in connection with the contemplated summit meeting, I will wish to get the answers to the following questions:

First. To what extent has the Soviet Union been spying in the United States, West Germany, and other nations?

Second. How many times it has breached its commitments to other nations in the world—especially the captive nations?

Third. Is there a difference between spying by foot on land on the one hand, and by plane in the air on the other?

Fourth. Is it in the interest of our country that we abandon the general and traditional methods of acquiring intelligence?

Fifth. If we do so, what are the probabilities of the Soviet Union following a similar course?

Sixth. Why did the Communists break their treaty with the Poles in World War II and stab the Poles in the back while the latter were fighting the Nazis?

Seventh. What are the details concerning the brutal massacre of Polish soldiers by the Communists in the Katyn forests?

Eighth. Why, in World War II, did the Reds, while advancing westward and nearing Poland, induce the Polish people of Warsaw to heroically rebel against the Nazi occupiers and then abandon them to slaughter by the Nazis?

Ninth. Why did the Soviet break its pledged word that the people of the satellite nations, under free and open elections, would be permitted to choose the type of government they wanted?

Tenth. Why did the Soviet aid and induce the Red Chinese to use their military power against South Korea, resulting in death and injury to thousands of American boys?

Eleventh. Why did the Soviet encourage the Red Chinese in the bombardment and killing of innocent people at the Quemoy and Matsu Islands?

Twelfth. What is the explanation for the mass and merciless murder of the freedom fighters of Hungary, Poland, and East Germany, who were fighting for liberation in those respective countries?

I do not contemplate, as a member of the Committee on Foreign Relations, allowing a crafty leader of a Communist government to point the finger of suspicion and guilt toward our Nation, when the hands of that person are dripping with the blood of innocent people.

THE RIGHT TO CRITICIZE

Mrs. SMITH. Mr. President, it was almost 10 years ago on June 1, 1950, when I made what ultimately was referred to as the "declaration of conscience." In that statement I stated my disagreement with some segments of my own Republican Party on certain political tactics. In that statement I said that I believed in certain basic rights—among them being the right to criticize, the right to protest and the right of independent thought.

I still believe in those rights—and that the Democrats should have them in the fullest extent for criticizing the Republican administration. I do not believe that anyone should have to appear, out of loyalty, to condone behavior with which he takes issue.

I believe that the Republican administration is subject to criticism on the handling of the U–2 affair—and consequently fair game politically for the Democrats. I do not believe the Democrats should be silenced by a loyalty gag.

Instead I believe that full and open discussion is in the best interest of our country and our people. I believe that honestly expressed difference of opinion—constructively expressed difference of opinion—should never be smothered. I believe that the opposition party has the obligation to criticize that with which it does not agree.

I believe that private citizens are to be commended for speaking their minds whether by letters to the newspapers, publicly, or by letters to their Senators and Representatives.

Yes, Mr. President, I believe in speaking up when I disagree with the President of the United States even though he be the head of the political party of which I am a member. I have done it in the past. I have done it today in voting to override his veto of the depressed areas bill. I shall do it in the future.

But, Mr. President, in my belief in the full right to disagree and criticize, I do not believe that President Eisenhower has disgraced the United States, as was implied on the floor of the Senate yesterday.

I do not believe that the overwhelming majority of the people of Maine believe that President Eisenhower has disgraced the United States, as was implied on the floor of the Senate yesterday.

Nor do I believe in publicizing and upholding the slur made upon the President of the United States, as was done yesterday on the floor of the Senate, with the reading into the RECORD of the statement that "we had better start electing Presidents who are young enough to keep their wits until they finish their terms." Nor do I believe that the overwhelming majority of the people of Maine subscribe to such a slurring statement against the President of the United States.

I believe that the administration is subject to criticism on the handling of the U–2 affair. But I want no part of slurring statements charging the President with disgracing the United States, and reflecting upon his mentality.

AGRICULTURAL AND FARM CREDIT ADMINISTRATION APPROPRIATIONS, 1961

The PRESIDING OFFICER. The Chair lays before the Senate the unfinished business.

The Senate resumed the consideration of the bill (H.R. 12117) making appropriations for the Department of Agriculture and Farm Credit Administration for the fiscal year ending June 30, 1961, and for other purposes.

Mr. MORSE. Mr. President, if I may have the attention of the Senator from Georgia, unfortunately an emergency matter has arisen which will take me from the floor of the Senate, and I have a statement on the agriculture bill which I shall ask to insert in the RECORD. However, there happens to be one special question which I would like to have answered by the Senator from Georgia.

Mr. RUSSELL. I shall be glad to answer the question if I can.

Mr. MORSE. May I say now, as I said in my statement, that there is not a single Senator who does not appreciate the wonderful work which the Senator from Georgia [Mr. RUSSELL] has done on the agricultural appropriation, as he has done in so many years past.

Mr. RUSSELL. I thank the distinguished Senator from Oregon for that commendation.

Mr. MORSE. In the course of my statement I would have observed:

I am happy to see that the committee has seen fit to institute a pilot program for estimates on tomatoes and celery. In this connection I can only express my hope again to the distinguished chairman of the subcommittee that this action this year may break the logjam which has precluded the Department of Agriculture from submitting requests for funds to provide crop reports upon our cane and bushberry production. Can the chairman provide me with any suggestions as to how those of us who recognize the importance of these small fruits to the agricultural economy of our States, may further impress the Department with our needs in this area?

Mr. RUSSELL. The distinguished Senator from Oregon will recall that last year, I believe, we included some funds in the appropriation bill for this purpose.

Mr. MORSE. That is correct.

Mr. RUSSELL. The Department has taken a rather dim view of the proposal.

The department officials seem to be very dubious about the value and the necessity for it. All that we have been able to get from them is a statement that they would furnish us with a report as to the yearend production, and would begin developing a plan for a reporting service that they would submit if the Congress desired to adopt a more complete program.

Mr. MORSE. There is no question about the fact that the chairman of the subcommittee has made clear that he thinks we should have such reports.

Mr. RUSSELL. Last year the subcommittee added language in the committee report that within the amount provided in the bill, that the Department should institute this program. The matter was brought up in the hearings again this year, and we were told that they would make yearend reports as to the total production and would submit to us next year some plan for a reporting service.

Mr. MORSE. I thank the Senator from Georgia very much. I intend to continue to press for Agricultural Department approval of this request. In my State it is of importance.

The people in the fruit and berry industry of my State, in my judgment, are entitled to this service from our Department of Agriculture. Again I wish to thank the Senator from Georgia for the assistance he has been to us. I am pleased to repeat on the floor of the Senate what I have said to farm groups in Oregon, that we have not a better friend in the Senate Committee on Agriculture than the Senator from Georgia, the chairman of the subcommittee, and I am sure he will do everything he can to be of assistance to us in getting the reports we have been pleading for.

Mr. RUSSELL. I am grateful to the Senator for his remarks. Because of the condition in which the farmers of this country find themselves today, there is very little Congress can do for them. Therefore, I have felt a greater desire to assist them in such ways as I can in the appropriation bill in view of the fact that we have been unable to secure the two-thirds vote necessary to enact new legislation over the President's vetoes.

Mr. MORSE. I thank the Senator.

Mr. President, I ask unanimous consent that there be printed in the RECORD at this point in my remarks the statement I prepared to use in the debate this afternoon.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR MORSE

The distinguished Senator from Georgia and his colleagues have earned our thanks for having improved the agricultural appropriations bill in many particulars as the result of their study. Those of us who hail from the Western States particularly would commend the increases which have been provided for soil and water research and facility needs. The increase of $495,800 for this program for operating funds and the $200,000 for the development of plans and specifications for needed construction at existing facilities are sound expenditures.

The $25,000 for a further step-up in the sheep scabies eradication program and the $19 million provided for brucellosis eradication will both be welcomed by many Oregon farmers. Likewise the committee action to restore the full amount of the budget request for State experiment stations is laudable. Even though the increase for this purpose is over a million dollars more than allowed by the House, it is justifiable.

The Extension Service increase of $1.13 million over the budget reflects a confidence in the importance of this vital program which is shared by a great many of us who have profited by the advice and counsel of our own extension agents. I am particularly gratified that the committee is recommending $250,000 over the budget estimate to permit the staffing of 20 additional soil conservation districts. Letters from every part of my State have told me of the difficulty faced by existing districts as SCS personnel were spread thin to service the districts being newly organized. Small watershed protection funds, a million and a quarter over the

budget estimate, and $9,250,000 over fiscal 1960 will be of great help in protecting this most important natural resource.

The $18 million provided by both House and Senate for flood prevention work in the 11 authorized watersheds, is $3 million more than the Bureau of the Budget was willing to recommend. Here, too, in my judgment the committee took action in the public interest.

The Agricultural Marketing Service recommendations of the committee, especially those relating to accelerating the lamb-on-feed reports will be particularly important to many sheepmen of our Western area.

Both the Rural Electrification Administration and the Farmers Home Administration increases are to be commended highly. The services provided by these agencies to our farmers are among the finest contributions made by any of the farm agencies. Both agencies have in the past striven to help the farmer to help himself in the improvement and modernization of his farmstead. Both are based upon sound financial principles, and each needs to have its operations extended.

The soil and water loan program of Farmers Home Administration has been especially helpful to many of our farmers, in the past, and, in my judgment, as funds and personnel to administer them are made increasingly available, the productive use of this financial resource will again increase.

Mr. HUMPHREY. Mr. President, will the Senator yield?

Mr. RUSSELL. I yield.

Mr. HUMPHREY. I merely wish to join with the Senator from Oregon [Mr. MORSE], first in his well-merited commendation of the Senator from Georgia for his great work on this appropriation bill for the Department of Agriculture.

Second, I testified before the Subcommittee on Agricultural Appropriations in connection with the expansion of the crop reporting service, particularly for the crops which were mentioned, that is, the small fruits that are presently not given the reporting services that are required for good economic programming.

The State of Minnesota is one of the 17 States which we call the small fruit-producing States, which vitally need this service. The people have asked me to make representations to the appropriate committees, which I have done. As I understand, and as I have told our constituents, so far as new legislation is concerned, there is adequate authority right now to do this job, and the committees and the Congress have provided funds to make at least a beginning on this job, but the resistance is in the Department of Agriculture where, despite the authority and the funds, no effort has been made to adopt a program. Is that correct?

Mr. RUSSELL. The Department has not approved any part of this program even though it has had substantial support. The Senator from Minnesota [Mr. HUMPHREY] as well as the Senator from Oregon [Mr. MORSE] have both been before the committee on two different occasions, I believe.

Mr. HUMPHREY. The Senator is correct.

Mr. RUSSELL. They have urged some action, and the committee has been impressed to the extent that it recommended in last year's committee report that the Department make some start on reporting on these small-fruit crops.

We feel that in view of the attitude of the Department of Agriculture we are making as much progress as we can at the present time. We will get the year-end report this year—which we have not had before—and we will have submitted next year a program for a more complete reporting service for fruits and berries. I must say, however, that we have no assurance the department will approve such a program.

DIRTY WORK OF DOCTORS OF ALEXANDRIA, VA.

Mr. MORSE. Mr. President, I have received a copy of a letter from Mr. Guy L. Brown, grand chief engineer of the Brotherhood of Locomotive Engineers, which he has sent to Hon. Arthur S. Flemming, Secretary of Health, Education, and Welfare, in regard to a very sad case of an old person who is living in great misery these days because of a failure, in my judgment, on the part of the Government of the United States to carry out its moral obligation to the old people of America.

I think this case is what we can call a very fitting exhibit of our dereliction as a Congress in respect to a duty which we owe the old people of this country.

I ask that there be inserted at this point in my remarks a letter from Guy L. Brown, grand chief engineer, Brotherhood of Locomotive Engineers, to Hon. Arthur S. Flemming, Secretary of Health, Education, and Welfare, dated May 13, 1960, and a copy of the letter which this elderly person had sent to Mr. Brown, in the first instance, which caused Mr. Brown to write the letter to Mr. Flemming.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

BROTHERHOOD OF
LOCOMOTIVE ENGINEERS,
Cleveland, Ohio, May 13, 1960.

Hon. ARTHUR S. FLEMMING,
Secretary of Health, Education, and Welfare, Washington, D.C.

DEAR MR. SECRETARY: I am attaching a Verifax copy of letter addressed to me by a member of the Brotherhood of Locomotive Engineers living in Alexandria, Va., which as you will see describes one of the most pitiful conditions I have ever seen.

It does not seem possible that a condition such as this can exist in these United States, and my purpose in bringing this to your attention is with the hope that it is evidence that will in turn be helpful in progressing legislation to assist our older citizens who have through no fault of their own arrived in the position in which this man now finds himself. If anything can be done to relieve this specific case certainly it will be appreciated not only by the man himself but by us.

I am furnishing our national legislative representative, Mr. John W. Turner, room 816 Labor Building, 400 First Street, NW., Washington, (phone District 7-7936) with a copy of this letter and also a Verifax of the letter from Mr. Layman. If he can be of any assistance to you do not hesitate to call upon him.

I will appreciate any action you may take.

Sincerely yours,

GUY L. BROWN,
Grand Chief Engineer.

DIRTY WORK OF DOCTORS OF ALEXANDRIA, VA.

To All Members of Our Grand Lodge.

DEAR SIR AND BROTHERS: As I am a retired engine man, 70 years of age. Spent 35 years on engine out of Alexandria, Va., and now nothing but a wreck. I lost my wife in 1955 on Thanksgiving Day. At that time we were both in hospital for 2 months which the doctors, druggists, hospital and undertaker took all my life's savings, left me flat. Since then my health hasn't been any too good and at present time I manage to get to bathroom on two crutches. I draw $164.20 pension, pay house rent $107, water, light, and fuel so you see that doesn't leave much to live on, pay doctors and hospitals.

On April 8, 1960, I got down almost helpless in both legs which comes from bad circulation, legs were injured when on engine about 20 years past. Today I sit here unable to get a doctor to come to my home to examine me or try to give me a little relief, just sit for day suffering with swollen stomach, short of breath, pains in legs severe. And every doctor I call says they don't make any home calls, for me to meet them in the hospital. First place I can't walk on second floor, cannot get down steps and on $60 how can I get to any hospital, $25 a day, doctor $8, ambulance $10 each way, bottle of pills $5 or $10, then other expenses. It is impossible to get any help or relief. Therefore, I sit here and suffer day and night. I have carried hospitalization with American Assurance Society of Richmond, Va., for 30 years or more. When the hospitals jumped to $25 I was 68. I tried to increase my amount like the younger ones did but nothing doing, so I get $11 for so many days in hospital. This may not do any good now but do hope it may help some one in the future, or in making laws to help the disabled pensioned men. I have wrote my condition up to Senator BROYHILL and told or tried to show him the dirty work of the doctors in this city right in the shadows of the Capitol doors. I do know that there is cases of illness that requires the hospital and there is an untold number sent to hospital that are not able to pay, that can be treated at home by the doctor and traveling nurses. They are not treating the traveling nurse as they should yet every time you turn around or pick up a paper they are begging for donations to build another hospital. The doctors have a hospital here but a poor man cannot stand their fees.

It sure looks hard. I owe no man one cent, have no bills whatever and in my old age and crippled up I can't get a doctor to come in and wait on me. The doctors call at home all out through the country but nothing but colored doctors will call in Alexandria and but few of them only treats venereal diseases and the whites is afraid of them. About all they give you is a bottle of dope to numb you. I have one of them next door to me here.

If you see fit at any time to put this where it can cause laws to be made to give us disabled men some medical help you can use every word of this with my name signed to it as I can prove it. There sure must be a clique between the doctors and hospitals and half the time in Alexandria hospitals halls are full of maternity cases, and maybe a curtain around you a few minutes then move it to another one. And the hospitals here are after the city all the time as there

is an immense bill against the city that the city has to send there down-and-out destitutes.

I hope both or all pensions will soon form some kind of relief to help the poor and aged and force the doctors to help charity. All stop and think a doctor charging you $15 to $35 for a physical exam just because he has put a speciality to his name.

Brothers, I do hope that my few words here will be of some help to cut out the dirty work of the doctors as they are doing and try to give the people a little service. I pray to our God for help.

Yours fraternally,

A. J. LAYMAN.

AREA REDEVELOPMENT—VETO

Mr. HUMPHREY. Mr. President, I deeply regret that the Senate did not override the President's veto of the so-called depressed areas bill. I had hoped to participate in that debate, but because of the limitations of time, this was not possible. The arguments which I heard advanced to sustain the Presidential veto only further convinced me that there is an urgent need for the type of legislation which was passed in both Houses and sent to the President. It is my understanding that the so-called administration bill is before one of the committees of Congress, and I hope that that committee will act.

I hope that in the process of acting, it will add amendments which are a part of the bill that the President vetoed. I do not believe Congress should retreat 1 inch. I believe I have some personal knowledge from personal observation in several States of the Union as to the need for legislation along the lines of that we passed in Congress on two separate occasions, not this halfhearted, weak, and totally inadequate proposal advanced by the administration.

U.S. LEADERSHIP FOR PEACE—THE WORLD COURT

Mr. HUMPHREY. Mr. President, the Wichita, Kans., Morning Eagle has used the recent comments of an Indian diplomat to point up most effectively the basic contradiction between American statements and actions as the leader of efforts to secure peace with justice and the American failure to recognize the appropriate role of the World Court in this effort.

Mr. President I ask unanimous consent that an editorial from the Wichita Morning Eagle of May 9 1960 entitled "U.S. and World Court," be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

U.S. AND WORLD COURT

Indian Ambassador Chagla chides the United States for making a mockery of the International Court of Justice by restrictions on its jurisdictions. This refers to the so-called Connally amendment reserving to the United States the right to determine whether a dispute is essentially a domestic matter and not subject to adjudication by the World Court.

"You must not forget," said the Indian Ambassador, "that the United States claims to be the leader of the free world. She wants peace but peace with justice, and how can you ever have justice if the only forum which can settle international disputes is reduced to a humiliating position where it cannot entertain any disputes which ought to be properly decided by it?"

President Eisenhower, Vice President NIXON, the American Bar Association and many others have advocated repeal of this amendment. Senator HUBERT HUMPHREY, Democrat, of Minnesota, has a repeal resolution pending in the Senate. It is vigorously opposed by many powerful organizations as a surrender of U.S. sovereignty.

But the Indian diplomat is right in saying that the World Court will never amount to much until the United States, and all other nations supposedly adhering to it, use it as an instrument for the adjudication of international disputes. No doubt a few well publicized decisions by the court would accustom the peoples of many nations to the rulings of a body designed to promote world order.

RETENTION OF THE CONNALLY AMENDMENT—PRO AND CON

Mr. HUMPHREY. Mr. President, two distinguished American lawyers, both past presidents of the American Bar Association, debated in the columns of the Christian Science Monitor of April 28, 1960, the question: "Should the Connally Amendment Be Retained?"

This exchange between Frank E. Holman, arguing for retention, and Charles S. Rhyne, arguing for repeal as called for in my proposal, Senate Resolution 94, is a great service to the responsible discussion of methods for peaceful settlement of disputes among nations. The participants and the Monitor are to be complimented on presenting it.

Mr. President, I ask unanimous consent that this most interesting and valuable debate be printed in the RECORD.

There being no objection, the text of the debate was ordered to be printed in the RECORD, as follows:

SHOULD THE CONNALLY AMENDMENT BE RETAINED?

(At the request of the Christian Science Monitor, two prominent American lawyers have agreed to present this written debate on the question of whether to retain the Connally amendment. This is the amendment which specifies that the jurisdiction of the International Court of Justice shall not apply "to matters * * * essentially within the domestic jurisdiction of the United States as determined by the United States." Both debaters are former presidents of the American Bar Association.)

ARGUMENTS FOR

(By Frank E. Holman)

Nature of the reservation

The United Nations Charter, in establishing a World Court, accorded it no compulsory jurisdiction except as each nation agrees in a "declaration" deposited with the Secretary-General. The U.S. declaration reserved the right to determine when a particular matter is domestic and hence not properly a subject of international control.

Domestic questions protected by the Connally reservation

Immigration: The reservation prevents the Court holding that the United States, contrary to its immigration laws, must absorb nationals from overpopulated areas—China, India and elsewhere.

Tariffs: Traditionally a domestic matter; yet this affects world commerce. Without the reservation, the Court could treat tariffs as international, and regulate them.

Offshore rights: These involve fisheries, oil and other natural resources. The Court could internationalize offshore rights, holding they should be shared with other nations.

Panama Canal: Its control is essential to the safety and welfare of the United States. We paid for it. Without the reservation, the Court could internationalize this strategic waterway.

Foreign aid: The World Court has jurisdiction over breaches of international obligation and the nature and extent of reparation. The United Nations Charter contains many humanitarian obligations—committing nations to promoting full employment and social and economic progress for all peoples of the world. Undeveloped nations could complain we have not complied with such obligations, and the Court could grant reparations therefor.

It is said the Court can be trusted to treat such matters as domestic. This is unlikely, as demonstrated by the known activities of the Human Rights Commission.

Comparison between World Court and Commission on Human Rights

Actually, the World Court is not a court. No tribunal functions as a court where not bound or guided by definite rules of law. Formulating its own rules, it adjudicates according to the individual concepts and national interests of its members.

The Court is only an international commission of 15 members—one each from United States, Great Britain, and Australia—others from United Arab Republic, Nationalist China, Greece, Poland, France, Mexico, Panama, Argentina, Uruguay, Norway, Pakistan, and the Soviet Union.

The Human Rights Commission also had one member each from the United States, Australia, and Great Britain. Like the Court, other members came from countries having different historical and legal backgrounds not fitting them to appreciate what, to us, is domestic rather than international in character.

Why should the Court approach matters differently than the Commission, whose members were likewise distinguished citizens of their respective countries—a number also able lawyers? The Commission reflected their differing historical and legal backgrounds so that, regardless of charter prohibitions (like art. 2, subpar. 7), against intervention in matters essentially within the domestic jurisdiction, they formulated various conventions violating such charter provisions. The Court, man for man and in the aggregate, represents no different ability or integrity than did the Human Rights Commission.

The difficulty is inherent in both instances. Nations like Pakistan, United Arab Republic, Greece, Lebanon, Poland, South American countries, and the Soviet Union are grounded in systems of law not fitting them to understand what to us is a domestic matter.

Among many unbelievable results in the Commission's deliberations was that, after 400 meetings, the majority refused to include in the Human Rights Covenant any provision recognizing the basic American right to own private property and be secure in its enjoyment against arbitrary seizure by government.

In connection with many other American concepts like freedom of speech and of press, a majority of the Commission, in formulating covenants, so little understood our concepts that these freedoms, rather than being recognized and protected, were highly restricted to conform to a common denominator agreeable to the political systems of other counties.

Violations of the letter and the spirit of the charter

At first, Americans believed the charter provisions sufficiently protected our control over our domestic affairs. Soon, disillusionment followed.

John P. Humphrey, Director of the Human Rights Commission, stated (January 1948) that the Commission proposed to establish a supernational supervision over the relationship of a state to its citizens—a matter "traditionally within the domestic jurisdiction of nations."

Moses Moskowitz, of the United Nations staff, stated (April 1949) that, under the official view, any matter becoming the subject of a U.N. convention or even of a resolution ceased to be a "matter essentially within the jurisdiction of a member state."

The Acheson State Department (Publication 3972) stated: "There is now no longer any real difference between domestic and foreign affairs."

Following such pronouncements, without the Connally reservation, named for its sponsor, former Senator Tom Connally, Democrat of Texas, why would the Court hesitate to hold that domestic affairs are international and hence subject to adjudication by the Court?

Favorite arguments for repeal of the Connally reservation

These arguments assert that in making and retaining the reservation, we are guilty of an unworthy act which is a disturbing factor in the achievement of world peace. Such arguments are fallacious.

When we limited our adherence to the Court by the Connally reservation, we only exercised a right granted under the Court Statute (chap. 2, art. 36(5)).

Other nations filed declarations limiting their acceptance of the Court's jurisdiction. Our American internationalists do not consider those declarations as unworthy acts, disturbing to world peace.

The reservation does not prevent use of the Court for the settlement of truly international disputes. It does not occasion the paucity of litigation in the Court. How could it possibly deter the Court in trying international issues? Governments presently believe that genuine international questions should be settled at the diplomatic level through negotiations and conferences and not at the judicial level. Since Communist countries refuse outright to use the Court, settlement of international issues at the judicial level is not realizable. Moreover, the causes of wars are often political or economic, and not usually judicable by a court. As a result, not only has the Court been bypassed, but also other United Nations agencies. Major powers prefer conferences, regional, summit or otherwise, organized outside the United Nations.

The reservation has existed for 13 years. Until recently resurrected by Senator HUBERT H. HUMPHREY, a world-government-minded enthusiast, nobody was suggesting that its existence adversely affected world peace.

Conclusion

In any consideration of the matter, the background events connected with the activities of the United Nations—particularly the deliberations of the Human Rights Commission—must never be overlooked. The Commission had no hesitation in promulgating covenants and conventions interfering with the sovereignty of the United States as to its internal affairs. The only protection against similar interferences by the World Court is the Connally reservation.

Interference with our courts: In 1949, the United Nations entertained a complaint from one of its consultative organizations, condemning Judge Harold R. Medina for his trial, in the Federal court, of 11 Communists, as a violation of the Human Rights Declaration. Only a member state may file a complaint in the Court; but Uruguay or any other nation, under leftwing pressures, could file complaints criticizing our courts. Due to such pressures in Uruguay, our State Department interfered in Caryl Chessman's execution. Without the reservation, Communist and leftwing nations could complain against the United States for prosecuting Communists and other culprits.

ARGUMENTS AGAINST

(By Charles S. Rhyne)

Violence as decision method

The world today is poised between hope for total peace and fear of total war. Ending war is mankind's greatest need. A frenzied unchecked race is on to improve nuclear warheads and their delivery via intercontinental missiles—today's ultimate method for resolving disputes between nations. A new method is urgently essential to avoid atomic holocaust. President Eisenhower has said:

"Man's hope for world peace does not rest in opposing armed camps, but in an idea. That idea is the concept of a rule of law as the means for settling disputes among sovereign states."

Courts best nonviolent method

Finding facts and applying law in a court are the best nonviolent methods conceived since the dawn of history for resolution of disputes. A court is a worldwide symbol of peaceful decision. No one decisionmaking process is surrounded with such an aura of fairness or commands more public esteem, confidence and trust.

In the beginning of time disputes between men were settled in a fist fight; then with sticks, stones, spears, and guns. Today in civilized nations such disputes are decided in courts. But from the beginning until now, the primitive rule of violence is the ultimate resort in disputes between nations.

The creators of the United Nations knew this, and sought to substitute a courthouse for the battlefield. They established the World Court to decide:

"All cases which the parties refer to it and all matters specially provided for in the Charter of the United Nations or in treaties and conventions in force."

An empty Court

Speedy communications and transportation create more international contacts and disputes. Yet the World Court has remained almost empty—deciding only 11 cases on their merits in 14 years. For this our U.S. Senate is primarily responsible. In accepting the Court's compulsory jurisdiction it attached an amendment, sponsored by Senator Connally, of Texas, which makes that acceptance a sham. Senator Connally's amendment provides that when sued in the World Court, the United States itself will decide whether the case involves domestic or international issues. Since the United Nations Charter prohibits the Court from exercising jurisdiction over domestic affairs of any nation, Connally gives us control over whether a case against us may be decided.

No sovereignty can be surrendered

Eliminating Connally is not a surrender of sovereignty over our domestic affairs—the United Nations Charter prohibits the Court from accepting or exercising such sovereignty even if offered. The real question here is shall we keep power to bar a decision in those few close cases where a decision might go against our position on whether a matter is "domestic" or "international." Should the slight change of a wrong decision in such a close case be allowed to continue to render useless the best peaceful decision method known to man when even a wrong Court decision—if contrary to fact or law—can be changed, whereas the millions of gravestones the world over are mute evidence of the unchangeability of the results of war?

Connally violates the age-old maxim that "no person should sit as a judge in his own case." By it we are turned into a judge in every case to which we are a party.

Consent court won't work

Six of the seven complaints filed there by the United States (for damages through attacks upon our airplanes) have been dismissed because the Soviet Union, Czechoslovakia, Bulgaria, and Hungary refused consent that they be decided. This proves both Communist distrust of the Court and jurisdiction based on case by case consent will never work. The thousands of disputes decided by national course, however, prove that obligatory jurisdiction does work. President Truman has said:

"When Kansas and Colorado have a quarrel over the water in the Arkansas River, they don't call out the National Guard in each State and go to war over it. They bring a suit in the Supreme Court of the United States and abide by the decision. There isn't a reason in the world why we cannot do that internationally."

But Kansas would hardly sue if Colorado could cause summary dismissal of its complaint by refusing consent for a Court decision.

If traffic court jurisdiction depended upon each defendant's consent, traffic courts would have few cases to try. In fact the police would hardly waste their time arresting traffic offenders. And so it is with the World "consent" Court. Few nations sue other nations there. Nations do not really prefer war to the Court. The "blight of Connally" destroys their ability to get a decision there.

We need Court most

Because of our worldwide involvement we need the Court more than any other nation. But Connally closes the door to us. Under the Court's statute all rights are reciprocal. Any nation sued by us can rely upon Connally, refuse consent, and our complaint is dismissed. Connally is thus a two-way street with a boomerang effect.

If performance is proof, the fact that the Court never has exceeded its jurisdiction indicates Connally is unwarranted. Further, the Court's decisions in reasoning and result compare favorably with those of the best national courts.

The empty courtroom at The Hague is therefore not due to lack of a competent court or a lack of justiciable disputes.

Best informed urge Connally elimination

Those best informed on weapons available for international decision by violence support Connally's repeal. These include: President Eisenhower, Vice President Nixon, Secretary of State Herter, Attorney General Rogers, and many Senators and Congressmen on a bipartisan basis. Over 90 percent of the newspaper editorial comments urges repeal. The American Bar Association adopted a resolution in 1947 condemning Connally as "a serious backward step." The Catholic Association for International Peace, and the Board of World Peace of the Methodist Church are illustrative of organizations adopting similar recent resolutions.

Connally abandoned by others

Acquisition of the A-bomb by the Soviet Union, and its ever-increasing capacity to deliver it, has seemingly caused other nations who copied Senator Connally's idea to now abandon it. England, India, and France have led the way. Thirty-three nations now accept the Court's jurisdiction without a Connally-type reservation. President Eisenhower said in India:

"Plainly, one foundation stone in this structure (for peace) is the International Court of Justice (World Court). It is heartening to note that a strong movement is afoot in many parts of the world to increase acceptance of the obligatory jurisdiction of that Court. I congratulate India on the leadership and vision she has shown in her new declaration accepting its jurisdiction."

Law in a court is no "cure-all." It supplements other peace machinery whereby nonjusticiable disputes are resolved. We now exercise our sovereignty to maintain peace internationally through men, money, bases, and military might. Since disputes are inherent in the nature of men and nations, no more essential need exists today than a further exercise of our sovereignty to strengthen the World Court to avoid decision of disputes by atomic weapons.

Time has come to end war

In civilization's evolution the time has come when court justice must replace war violence if mankind is to survive. To speed that evolution few steps offer more in promise or potential than Senate repeal of Connally. Elimination of Connally is an imperative step forward out of the current balance of terror toward world peace which only our Senate can take. Our Senate will fail all mankind in the urgent quest for peace if it does not take that vital step.

REBUTTAL BY MR. HOLMAN

Many Americans are fooled today by internationalist phrase-makers. One current phrase is "world peace through law." Upon this, Mr. Rhyne largely bases his argument for repeal of the Connally reservation.

At the American Association of Law Libraries Meeting, July 2, 1958, Washington, D.C., Mr. Rhyne announced:

"There is no reason why peace through law cannot be sold with the same verve and enthusiasm that we sell soap and other products and programs."

The following day, no less an internationalist than Dean Acheson observed:

"While it may be that peace through law may be offered for sale with the same verve and enthusiasm as soap, the chances of a consummated sale seem to me infinitely less. If you think of yourself as ringing Mr. Khrushchev's doorbell with two packages in your hand, you can, I firmly believe, have no doubt as to which is salable and which is not."

Mr. Acheson then indicated why Mr. Khrushchev would not buy the Rhyne rule of law:

" 'Whose rule of law?' he (Khrushchev) would ask. You answer with verve and enthusiasm. 'Rhyne's grade A fancy, approved by the American Bar Association.'

" 'You have a nerve,' he shouts back as he slams the door. 'I'm the proprietor of Khrushchev's rule of Khrushchev, grade triple A, super-colossal. Guaranteed to bury you. Use it either as a tonic or embalming fluid, or both. Ask the Poles.' "

Mr. Rhyne, in selling peace like soap and other products, resorts to the patent medicine sales technique of casting epithets. He refers to Senator Connally's reservation as a "sham," as "generating distrust," as having a "boomerang effect," as the "blight of Connally" (although the Senate approved 51 to 12), as violating the maxim—"no person should sit as a judge in his own case."

The reservation does not violate this maxim. American law permits one to elect whether to submit his case to a particular tribunal. Relying on diversity of citizenship, he may remove his case from a State to a Federal court; or he may take a change of venue. Similarly, the World Court Statute permits a nation to elect not to submit to that Court the question of whether a matter is domestic. There is a basic difference between judging one's case, once in court, and, as of right, not submitting a particular question to that court.

Mr. Rhyne not only relies on epithets rather than argument, but also upon personalities and newspaper editorials. Space is insufficient to analyze all his statements, but it is denied that "over 90 percent of the newspaper editorial comment" urges repeal. Many oppose repeal—Los Angeles Times, Arizona Republic, Dallas News, Times-Picayune, Indianapolis Star, Chicago Tribune, and others. A majority of the Senate Foreign Relations Committee opposed repeal. A modern enigma is that President Eisenhower and some in his administration should approve any measure authored by Senator HUMPHREY, explainable only on the theory that they thoughtlessly succumbed to the Rhyne "soap sales" program for "world peace through law."

However much we favor settling matters by law instead of by force, we are still compelled (through no fault of ours) to deal at arm's length with the Soviet Union and other nations and are not ready for military disarmament nor for legal disarmament, by abandoning the Connally reservation and its protection of our domestic affairs.

The present nonuse of the World Court is occasioned, not by the Connally reservation, but by the refusal of nations, chiefly the Soviet Union, to use it, and by their preference for dealing with world affairs by negotiation and conferences.

To insure peace through law requires the following governmental powers: legislative (to establish law), judicial (to interpret law), executive (to enforce law). Without these, a rule of law is as impossible as is water without two parts of hydrogen and one of oxygen. In absolute monarchies, all three powers were merged in the monarch; in other governments they were partially merged; in ours there is a separation of powers. But to have effective government, national or worldwide, there must be legislative, judicial, and executive authority; thus the achievement of "world peace through law" inevitably adds up to world government.

Mr. Rhyne does not recognize this stubborn fact. His sales program is, therefore, based on cure-all phrases and vague unfounded hopes substituted for reality. Assuredly war is terrible. But Americans should not be panicked into world government where their lives and liberties, even their religious faiths, would be dominated by alien majorities, for we represent only 8 percent of world population.

Mr. Rhyne says: "The United Nations Charter prohibits the Court from exercising jurisdiction over domestic affairs." But the United Nations has nullified this supposed protection by official statements and overt acts, as shown in my principal article. Why trust the Court, itself an organ of the United Nations, to enforce this protection? The Connally reservation insures it.

REBUTTAL BY MR. RHYNE

Fear of the Court

Mr. Holman supports Connally because of fear the World Court may exceed its specified jurisdiction. He cites not one thing that the Court has said or done as a basis for his fears. He selects other targets, agencies, and people totally unconnected with the Court, and by farfetched innuendo seeks support for his fears. He favors existing dispute settlement methods internationally—methods which have never prevented war—to decisions in court, yet he gives no logical reason for this negative position.

U.N. Charter, not Connally, protects domestic areas

He erroneously claims Connally protects six domestic areas from World Court decision. Actually it is the United Nations Charter, not Connally, which prohibits World Court jurisdiction over domestic matters. Under universally accepted international law, immigration, tariffs, and offshore rights are clearly domestic matters outside the Court's jurisdiction. The treaty of 1903 with Panama confers all rights, powers, authority, and sovereignty upon the United States over the canal so the Court could not possibly internationalize it. Our domestic court cases and what we spend on foreign aid are irrefutably domestic matters which the World Court cannot pass upon. The extremity of Mr. Holman's six illustrations destroys the reasonableness of his fears. Connally and the World Court have no possible relation to our State Department's interference in Caryl Chessman's execution.

A false analogy

Finding nothing in the Court's record to support his position, Mr. Holman selects the record of the Human Rights Commission to assail. Realizing this glaring weakness, he seeks to strengthen his case by himself declaring the World Court is not a court but a commission. The U.N. Charter and the Court's statute flatly refute this legerdemain. They require the Court to follow fixed legal procedures and law principles. The Commission is a political body. Membership qualifications, functions, and work products of the Court and Commission are vastly different. It is interesting to note that Mr. Holman is unable to point out one instance where the World Court has exceeded its jurisdiction. Since he cannot do so, he attempts to impute to the Court the alleged shortcomings of an entirely different body. Use of such a technique discredits his position rather than the Court.

His claim that justices from other nations cannot recognize domestic issues is directly refuted by decisions of the Court. And other nations guard their domestic affairs as jealously as we do.

Illogical deductions

Reliance upon strained interpretations of statements made 12 years ago by John P. Humphrey, a United Nations official from Canada, and 11 years ago by a private person, Mr. Moses Moskowitz, plus lifting of one sentence out of context from a 99-page State Department publication demonstrates how desperately unfruitful has been the search for evidence to support his "fear the Court" position. Mr. Moskowitz, contrary to what Mr. Holman says, was in 1949 and still is an employee of the Consultative Council of Jewish Organizations—never "of the United Nations staff." Yet on the basis of these statements—by people never even remotely connected with the Court—Mr. Holman argues the Court would hold domestic affairs are international, hence subject to adjudication by the Court. Obviously, he would offer real evidence if any existed rather than that presented. The Court's record and the law governing its jurisdiction prove the opposite of Mr. Holman's thesis.

Trial by battle

To keep the record straight, it was President Eisenhower, not Senator HUMPHREY, who first suggested repeal of Connally.

Reliance upon settlement of disputes between nations by negotiation has resulted in many bloody battles. When Connally was adopted the Soviet Union had neither the H-bomb nor intercontinental missiles. Since then the arms race has accelerated. And every such race since the dawn of history has exploded into war. Trial by battle today is a negative backward step into extinction of mankind. If allowed a choice, mankind would certainly choose the Court over atomic holocaust. Disarmament according to Secretary Herter depends upon rules of law which prevent "nations from attacking other nations" plus "a world court."

Undecided

Mr. Holman concludes by another attack on the Human Rights Commission rather than the Court. These somewhat confusing arguments and targets of Mr. Holman are understandable when one realizes that he has changed his mind before on Connally. Perhaps he is on the verge of changing his mind again. We hope so. Fear of the Court is wrong in principle and experience.

I close with Mr. Holman's own words to the American Bar Association in 1947 vigorously urging repeal of Connally:

"We as lawyers ought to speak, and speak now, for the jurisdiction of the Court. * * * We should keep our consistent position as to the World Court, not lag behind with those who are afraid of it." (Quoted from 33 American Bar Association Journal 401.)

CONGRESS, THE UNITED STATES, AND THE WORLD COURT

Mr. HUMPHREY. Mr. President, although my proposal, Senate Resolution 94, calling for repeal of the self-judging reservation to the U.S. adherence to the Statute of the World Court has been temporarily postponed, there are certain practical steps which can be undertaken now to make a repeal a reality in the near future.

Mr. President, the distinguished senior Senator from Pennsylvania [Mr. CLARK] has clearly set forth these practical steps in an address before the section of international and comparative law of the American Bar Association in Washington, May 19, 1960. I ask unanimous consent that this excellent address be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

CONGRESS, THE UNITED STATES, AND THE WORLD COURT

(Speech by Senator CLARK at section of international and comparative law of the American Bar Association, Washington, D.C., Thursday, May 19, 1960)

The collapse of the summit conference, disclosures of illegal espionage flights, and threats to Allied air bases and to West Berlin—all appear to make sadly misdated this discussion of the relationship of the United States to the World Court.

What has U.S. participation in the infrequent and relatively unimportant litigation at the Court in The Hague got to do with the burning issues which divide East and West and endanger world peace today? Discouragingly little, it must be admitted by even the stanchest supporters of the Court.

And yet the errors, hostilities, fears, and disillusionments of the last 2 weeks demand stock-taking and reassessment. What better time than now to focus renewed attention on our relationship to one of the institutions known to be essential to the achievement of a just and lasting peace. What better time than now to concentrate on the limited but obtainable objectives in the continuing and vital effort to promote the rule of law in the world community.

The repeal of the self-judging Connally reservation to the United States ratification of the Statute of the International Court of Justice is such an objective—obtainable next year, if not in 1960.

We can take little pride in reviewing U.S. ties with the World Court over the last 14 years.

On August 2, 1946, the Senate adopted 55–12 Senator Connally's 8-word amendment to add the clause "as determined by the United States of America" to the reservation of U.S. jurisdiction over domestic matters after a brief and inadequate debate. Only three Senators spoke against the amendment. The three reasons given by Senator Connally in support of his amendment—that it was needed to prevent the Court from taking jurisdiction over immigration, tariff and Panama Canal matters—were all shown to be inaccurate in the excellent report filed last August by the Tondel Committee of this section.

And yet the damage was done. A number of other nations followed our example and enacted similar self-judging reservations, although it is encouraging to note that France, the United Kingdom, and India dropped such reservations in recent years.

The United States has invoked the self-judging reservation in one of the handful of cases brought against us to date, a complaint lodged by Switzerland in the Interhandel case, although the Court decided the case in our favor on other procedural grounds.

The substantive arguments for repeal are familiar to this section's members, who have taken such a commendable lead in advocating full U.S. participation in the Court's jurisdiction: (1) A recognized body of international law, a court system to administer such laws, and adequate enforcement sanctions are as essential to peace with justice on the international scene as they are in national and local community life; (2) While purely domestic questions are beyond the jurisdiction of the International Court under the terms of Article XXXVI of its Statute, the decision as to what is a domestic issue should be made by the Court rather than the litigant nation; (3) The Connally amendment permits the United States to determine unilaterally what is a domestic question and to decide whether we will let other nations take us to court.

We must indeed plead guilty, at least in part, to the charge leveled at us by our good friend, Ambassador Mahommedali Currim Chagla of India, when he stated recently that the Connally amendment "reduces the Court to a mockery and effectively prevents any rule of law from ever being established in the international field." The London Economist echoed this charge in an editorial earlier this month which stated that "the work of the Court has been hampered greatly because so many other countries follow the American example."

An analysis of the so-far unsuccessful effort to repeal the Connally reservation in the 86th Congress leading to suggestions as to ways in which that effort can be made successful in the future may be useful at this time.

The history of the repeal move to date is the old, old story of too late and too little. Although 12 of those who voted for the Connally amendment in 1946 are still in the Senate and only Senators FULBRIGHT and MORSE remain of those who voted against it, the approach to the repeal question has been entirely casual.

In December of 1958 the Washington press corps indicated that the President would ask for repeal of the Connally amendment. Accordingly it was no surprise when Mr. Eisenhower's state of the Union speech on January 9, 1959, included the following statement:

"It is my purpose to intensify efforts during the coming 2 years in seeking ways to supplement the procedures of the United Nations and other bodies with similar objectives, to the end that the rule of law may replace the rule of force in the affairs of nations. Measures toward this end will be proposed later including a reexamination of our own relation to the International Court of Justice."

Early in the first session of a new Congress with elections almost 2 years in the future is an ideal time to take up controversial issues. Committees have time for full hearings. Floor debates that take 2 or 3 days can be scheduled without upsetting adjournment plans. But during the first 2½ months of 1959 the 86th Congress received no further message or requests from the administration regarding the World Court.

On March 24, 1959, Senator HUMPHREY introduced his resolution (S. Res. 94) to repeal the Connally amendment, and it was referred to the Senate Foreign Relations Committee. On March 25, the committee asked the State Department and the Department of Justice for comment on the resolution. In the end of April an Assistant Secretary of State wrote to Chairman FULBRIGHT to advise him that State supported repeal. A similar letter from a Deputy Attorney General was received in early June.

The further message promised by the President in his state of the Union message was not forthcoming and Congress adjourned in September without taking further action on the repeal proposal.

It was not until late last November that the President's views in favor of repeal were elicited in response to a written appeal by Senator HUMPHREY. When Senator JAVITS and I spoke to Secretary Herter to urge Executive support of Senate Resolution 94 at about the same time, we learned that the Department still had no poll indicating whether the Senate would support the measure.

The President's state of the Union message on January 7, 1960, contained a few sentences reiterating the support for the repeal resolution stated in his letter to Senator HUMPHREY.

At this stage some proponents of repeal thought they could relax since so many formal statements of support had been obtained from the administration. The opponents of repeal were just beginning to roll.

Although my mail last year reflected a slight majority of opinion in favor of repeal, in the early weeks of 1960 I started to receive mass mailings directed against Senate Resolution 94, stirred up by the press of the right fringe, the American Legion, the DAR, and other self-styled patriotic organizations. The communications were violent and extreme and contained all the misconceptions you would expect: Our courts and Constitution would be subverted by passage of the resolution; proponents were guilty of treason.

Senator FULBRIGHT saw the storm signals and requested the Secretary of State and the Attorney General to appear personally in support of the repeal resolution when hearings were held in January to indicate genuine administration support. Both Cabinet members did testify in favor of Senate Resolution 94 on January 27. Many requests to be heard required a second day of hearings on February 17.

By the time the opposition mail campaign was in high gear and the earlier estimates that Senate Resolution 94 would receive the support of two-thirds of the Senate (necessary to modify a treaty reservation) began to look dubious.

On March 28 the Senate Foreign Relations Committee, much to the distress of Chairman FULBRIGHT, voted 9 to 8 to postpone indefinitely further consideration of the Humphrey resolution. Opposition to the measure and fear that it would be defeated if reported to the floor combined to produce the result * * *.

Senator AIKEN, of Vermont, was the only Republican on the Committee who voted against the tabling motion and in favor of reporting the repeal resolution to the Senate.

What more could the administration have done, you may ask, in view of the Administration's formal support which I have already referred to.

The answer is: "A lot." A few sentences in favor of a legislative proposal in a presidential address mentioning scores of proposals and indications of approval in routine statements of Departmental officers submitted on request by Congressional Committees present one type of support. Special pleas for legislative action in talks to the Nation, which characterized the President's interest in labor reform last summer, followed by phone calls and visits to the Hill to round up needed votes by the White House staff

and other Executive officials, present another type of support. Plainly Senate Resolution 94 rates only the former.

It has been reported that the repeal issue has not been the subject of any of the White House sessions with Republican congressional leaders. The subject was omitted from the list of legislative matters on which the Administration wanted action before the end of the session in the message transmitted to Congress by the President on May 3.

The exertion of real executive leadership will inevitably result in the votes of more than one lone party member on a large committee. Obviously the repeal proposal has been assigned a low legislative priority by the Executive. Apparently this is another instance where words replaced deeds.

Similar expressions of support for the repeal resolution by lawyers and others have been far from overwhelming. My mail this year has run 560–180 against repeal. Other Members of Congress have reported even higher opposition mail. If my own correspondence were a true reflection of attorney sentiment in the Commonwealth, there is far more interest in passage of the Keogh tax relief bill for worthy, self-employed members of the bar than in U.S. participation in the World Court. If the lawyers are disinterested in the World Court, imagine the apathy of other groups.

Clearly it will take a concentrated effort by the executive branch and public interest groups to reactivate and pass Senate Resolution 94 this year, and at this date there is no indication that such an effort will be made. Floor discussions and correspondence I have had with a number of my colleagues on and off the Senate Foreign Relations Committee lead me to believe that less than two-thirds of the Senate, and possibly not even a majority, are in favor of repeal at this time.

Certain steps will have to be taken to make repeal a reality, this year or next.

1. Interested groups and persons, especially attorneys, will have to demand by word and letter that the executive branch assign high priority to the repeal effort and that the President put the full weight of his office behind it. Of course, resolutions at yearly meetings are helpful, and I hope that at the coming convention the American Bar Association will be able to defeat those opposed to repeal by a larger margin than the 100 to 93 edge recorded at the midwinter meeting. Such resolutions, however, can never substitute for personal appeals.

2. The report prepared in August of 1959 by a special committee of the section of international and comparative law of the American Bar Association in support of repeal of the self-judging reservation is unquestionably the best paper that has been prepared on this subject. I hope that it will be supplemented and brought up to date to cover the hearings of this year and the latest actions at The Hague, and then distributed to all Members of the Senate with covering letters from attorneys in each of the States.

3. Senator Kennedy, Governor Stevenson, Senator Symington, and the Vice President, are on record as favoring repeal, but Senator Johnson is uncommitted. The successful candidates should be pressed to give the matter a high priority early in 1961.

4. Candidates for the Senate on both tickets should be briefed on this issue and commitments for repeal sought before November.

None of these suggestions may work. Even the extremely modest step of accepting the full jurisdiction of the World Court may remain too controversial to gain Congressional approval. The rule of law may never be more than a goal for lawyers to talk about. The unhappy events of recent days may place in the ascendancy forces who believe that security can only be achieved by armed might.

The nuclear arms race may have gone too far to be stopped. If so, the sooner we establish that fact the better, because the military effort we will have to make to keep the race in balance in coming years as well as the risks of failure will be stupendous.

But I submit that the rule of law is the only hope for the survival of civilization; the only practical goal for this Nation and others at this advanced date; that the isolationist goal of the 19th century ultranationalists is no longer tenable; that world peace through world law can and must be achieved in the 1960's—and the early 1960's at that—before it is too late.

INTEREST DISCLOSURE BILL

Mr. BUSH. Mr. President, I ask unanimous consent that there be printed in the RECORD following my brief remarks a news story from the New York Times of Sunday, May 22, 1960, headlined " 'Simple' Interest Isn't So Simple; Lending-Truth Bill Stirs Dispute."

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 1.)

Mr. BUSH. Mr. President, this news story is the result of a recent address in New York by our distinguished colleague, Senator WALLACE BENNETT, of Utah, and describes the difficulty which would ensue after the passage of the so-called interest disclosure bill in its present form.

I wish to make clear that I was one of the original sponsors of the bill, on the basis that I believed in the principle of disclosure, and also on the basis that I thought the bill had some desirable anti-inflationary aspects. However, the hearings we have held so far indicate to me that the interest rate disclosure requirements of the bill, as now drafted, cannot be made effective.

Furthermore, despite the fact that some 34 States have legislation dealing with this same subject, the committee has not heard a single representative of the enforcement agencies of any of these States. We have had no testimony at all from the States as to how these disclosure laws are working or how they have been enforced.

Furthermore, the enforcement provisions of this bill call for the policeman to be the Federal Reserve Board. The Board has testified through its Chairman, Mr. Martin, that it does not feel able to do the job, that it does not want the job, that it is not a credit matter, that it is a policeman's job, and they do not feel competent to take it on.

The Federal Trade Commission has been suggested as an alternative, but they have not been invited to testify before the committee.

Yet, despite the fact that we have these gaps in the testimony—and they are very important gaps—and we have not heard other witnesses who would have something to say on this important subject, the subcommittee reported the bill to the full committee not very long ago, and there the bill is.

In view of the remarks I have made and the reasons I have stated, I withdraw my support from the bill, although I was one of the original sponsors, until we can have more hearings and get testimony which I think is essential before Congress should consider such a measure.

EXHIBIT 1

"SIMPLE" INTEREST ISN'T SO SIMPLE; LENDING-TRUTH BILL STIRS DISPUTE

(By Albert L. Kraus)

How simple is simple interest?

Elementary, says Senator PAUL H. DOUGLAS, whose truth-in-lending bill would require that installment finance charges be stated in simple annual rates. The Illinois Democrat taught economics at the University of Chicago 28 years before being elected to Congress.

Beyond the comprehension of ordinary retail clerks, says Senator WALLACE F. BENNETT who asserts that the DOUGLAS bill would place an impossible burden on American businesses and Government enforcement agencies. The Utah Republican runs a department store and automobile agency in his hometown of Salt Lake City.

Behind these opposing views of the state of the Nation's arithmetic lies the latest debate over consumer credit. People have been buying too much, too fast on the installment plan, Senator DOUGLAS believes, because the cost of credit has been camouflaged.

Even the young, he says, have become targets of the creditmongers. Teenage credit, he said recently, is "aimed at a youngster too old to spank, too young to garnishee, who should be learning the savings habit."

Senator BENNETT, on the other hand, finds nothing alarming in the present levels of consumer credit. Economists, he notes, can't seem to agree on what constitutes a dangerous or unstabilizing level of consumer credit. And anyway, over the last 4 years, installment credit has held at a relatively stable 10 percent of disposable personal income and 7 percent of the gross national product, the total of the Nation's goods and services.

Few would deny Senator DOUGLAS' assertion that if the consumer got more information on the cost of credit, he should be able to decide better when to buy and when to borrow. To oppose such a view, Senator BENNETT has said, would be to favor sin.

But a number of lenders have questioned the ability of retail clerks, automobile salesmen and television dealers to express financing charges in simple annual interest.

Nothing to it, Senator DOUGLAS has said in effect. "Most people learn about rates early in grade school—in simple annual terms. As a saver in a bank or savings and loan association, he is paid in simple annual terms. As a homeowner he pays his mortgage in simple annual terms."

The lenders say there would be no problem if all contracts were to run for an even year, with payments made in equal installments at equal time intervals. But few contracts, they note, are written that way. They generally are written for periods shorter or longer than a year, with payments weekly, biweekly, or monthly, often with no payment for the first month or two of the contract, or with smaller payments at first and larger payments at the end.

Senator BENNETT tried out such a problem—the purchase of a $20 battery on which there would be a $2 finance charge—on a member of his staff who is an economist, on the Library of Congress, on a professor of marketing, and on several other persons, including a statistical expert.

The problem ran thus:

The battery was bought on a Monday, with four biweekly $5 payments beginning the following Friday and the final $2 payment made 2 weeks afterward. The finance charge was calculated variously at 129.5 percent, 118.9 percent, 80 percent, 117.7 percent and 125.33 percent.

The California Bankers Association tried out a simpler problem on seven mathematicians at three universities in the State. It asked them to calculate the effective rate of interest charged on a loan of $1,000 when a total of $1,060 was repaid over 12 equal montly payments. The mathematicians took five pages to describe the formulas they used in arriving at their answers. Even then, the answers varied.

One way out would be to figure the answers in advance—assuming the experts finally could agree—and supply store owners with the tables. But Senator BENNETT says that every merchant in the country would have to have a book of interest tables bigger than a Sears, Roebuck catalog. And their clerks would have to get special training to use them.

NO STATE HAS STATUTE

While an amended version of the Douglas bill would give enforcement to the States if they met minimum standards of disclosure, not 1 of the 31 States that have automobile installment sales laws would qualify because none require that finance charges be stated in simple annual interest rates. Senator DOUGLAS says he won't back down.

This reflects on States such as New York, where a fellow Democrat, former Governor Harriman, several years ago pushed through what he considered was model consumer credit legislation—with finance charges stated not in simple annual rates but in dollars of purchase price a year. The New York law says installment lenders may not charge more for credit than $6 a year for each $100 of purchase price.

It also reflects on the Congress. For, only several weeks ago, the Congress passed an automobile installment loan law for the District of Columbia that uses the same method.

CROWDED DOCKETS OF FEDERAL COURTS

Mr. ALLOTT. Mr. President, shortly after coming to the Senate, I began an effort aimed at providing more realistic recognition of the appalling problem facing our Federal courts. In my own State of Colorado, the backlog of cases has forced litigants to wait as much as 3 or 4 years before their cases come up for hearing.

This situation is not unique in the Nation. Everywhere we are besieged by jurists and lawyers, by bar associations, and private citizens to provide the necessary relief. Articles in all media of the press have appeared almost universally in favor of speedy action by this Congress to create the needed judgeships.

Mr. President, a very timely, clearly written article of this nature appeared in the May 15 edition of the Denver Post. Its author, Reporter Tom Wilson, who spent part of last year here as an intern in government with the Congress, documents the judicial logjam in our area in a manner I am sure will be of interest to all. So that all Senators may have the opportunity for study of this article, I ask unanimous consent that it be printed in the RECORD at this point in my remarks.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

JUSTICE IMPAIRED BY OVERLOADED DOCKET IN DENVER'S FEDERAL COURT

(By Tom Wilson)

Justice delayed is justice denied.

This legal axiom has a special pertinence for the U.S. Federal District Court for Colorado. In this court, justice is constantly delayed and therefore, in many cases, denied.

The delay is not deliberate. The court's two judges, Chief Judge Alfred A. Arraj and newly appointed Judge Hatfield Chilson, work long hours.

The court has no summer recess. Visiting judges are brought from other districts to hear Colorado cases. The pretrial conference and revised rules for filing and administering the legal actions have been instituted to speed justice.

But because cases are filed at a faster rate than they can be disposed of, the backlog continues—and grows.

At the end of July 1957 there were 314 civil cases and 57 criminal cases pending before the court. Last April 30 the court faced a backlog of 427 civil cases and 75 criminal actions.

In fiscal 1959 the average Federal judge held nine criminal jury trials. Colorado's 2 judges held 41. North and South Dakota, each with two Federal judges, held eight such trials.

The delay particularly affects civil actions. The Federal Constitution requires a speedy trial for those accused of criminal violations.

Criminal cases, therefore, have precedence over civil cases. Thus new criminal cases push existing civil cases further back on the court's docket.

The court's average of 3 to 4 months between the filing of criminal complaint and the beginning of trial is one of the best in the Nation, according to Judge Arraj.

The 2-year average for civil cases is one of the worst.

There are many ways a 2-year delay can work a hardship on a litigant.

A court trial is a search for truth. Most attorneys agree the major problem in a trial is keeping the evidence as factual and as distinct as possible.

Facts are presented by witnesses or by documents presented by witnesses. In 2 years, memories dim, witnesses move or die.

The litigant is often forced to pay for an expensive search for a witness. Sometimes he finds he cannot afford such a search or meet the cost of bringing the witness to Denver for the trial.

And for the lack of a witness the case may be lost.

Financial hardships suffered by the plaintiff in waiting for a civil damage trial may lead to an out of court settlement, at a figure less than just, because he cannot afford to wait for justice.

A man injured in an accident may have a just claim for damages. He usually will have large expenses in medical bills and loss of time on his job.

Though the case must wait 2 years for a hearing, the plaintiff's creditors often will not. Thus a settlement that may serve the creditors but not justice often takes place.

In tort cases, those not involving contracts, the defendant who must pay damages does not pay interest on them until they are awarded at the trial.

In Colorado cases, the defendant will thus have the use of his money for 2 years. The plaintiff gets no compensation for the delay.

A man who files suit in Federal court to compel a defendant to comply with the terms of a contract or lease may find the disputed agreement has expired before the trial is set.

The law that establishes the district of Colorado says that the court shall hold sessions in Denver, Durango, Grand Junction, Montrose, Pueblo and Sterling.

No trials have been held outside of Denver for 4 years, Judge Arraj says, because the court cannot afford the extra time the judicial trips would use.

Litigants have been faced with the fact that it would cost them more to bring their attorneys, witnesses, and evidence to Denver than they would gain in their suit, if they won.

Outstate attorneys must pass on clients to Denver associates because they cannot expect the clients to pay for frequent trips to Denver to handle the many preliminary actions that precede the actual trial.

If Colorado were to get a third judge, the court would resume outstate sessions to try cases in the area where they originated, Judge Arraj says.

This third judge solution has been before Congress for several years.

A bill to create 45 new Federal judgeships, including one for Colorado, has been approved by the Senate Judiciary Committee and is before the same committee of the House of Representatives.

But the pressure of the early adjournment date, necessitated by the coming political conventions, and the unwillingness to deal with a major patronage plum just before the voters designate the relative strength of the parties, will probably put the issue off until the next Congress.

Next year the bill's chances may improve.

Many attorneys believe that delay in the administration of justice is not only unfair to the persons involved, but may be eroding away this Nation's traditional respect for justice.

"The judicial branch of Government is designed to protect the rights of the individual citizen," U.S. Attorney Donald G. Brotzman says.

"The citizen should have confidence that this branch will assist him in obtaining his basic legal rights and it is important that this confidence is maintained.

"I fear that as the public experiences injustice due to delay, their confidence in our judicial system will be diminished to the detriment of our whole concept of justice."

Without a third judge, Judge Arraj believes the Colorado Federal docket can be kept little more than current.

This would involve the continued use of visiting judges—an expensive and inefficient expedient—and the continued pressure of the backlog on the whole court.

The 2-year delay for civil cases would remain.

THE U–2 SPY PLANE INCIDENT AND THE SUMMIT CONFERENCE

Mr. ALLOTT. Mr. President, I have in my hand an article which is of particular significance in view of President Eisenhower's recent return from Paris. With the overwhelming display of affection and national unity represented by the tremendous crowd here in Washington still fresh in our minds, with the clarity of purpose and statesmanship of Mr. Eisenhower becoming more evident every day, here is one more piece of evidence to add.

Many correspondents, many spokesmen, were quick to leap upon the trap baited by the Russians into which we were supposed to have fallen when the announcement of the U–2 spy plane was made. But the facts have tended to show a somewhat different picture in recent days in light of Khrushchev's vile performance, his almost maniacal tirade before the press in Paris, and his insistent hammering at a single, threadbare theme. How threadbare is shown in this article by Nicholas Blatchford which appears in the May 20 edition of the Washington Daily News.

Mr. President, in a point-by-point countdown, Mr. Blatchford gives the lie to Khrushchev's tale of the shooting

down of the U–2, of his double deceit during his visit to this Nation, and of the premier's obvious intention to sabotage the summit, no matter what the excuse.

Mr. President, I ask unanimous consent that the article be reprinted in the RECORD at this point in my remarks so that we may have its added weight as permanent proof of the Russian premier's deceit.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

KHRUSHCHEV AND THE CAT

(By Nicholas Blatchford)

Khrushchev made two serious errors in the raucous press conference he held after the summit collapse. The first could even cost him his hide.

Things were going along famously—bluff, bombast, threat, smile, snarl—when a correspondent for the National Broadcasting Co. cleverly baited a trap for him—proving that at least some radio-TV correspondents are on the ball. And Khrushchev promptly fell in—proving that he is not always as fast on his feet as he sometimes seems.

"Why," the NBC man asked, "since you knew about these (U–2) flights, did you not tell President Eisenhower about them and ask him to stop them when you visited the United States?"

It was a sneaky question—sneaky because the Russian leaders had not acknowledged, to their own people or to anyone else, that they knew of the U–2 flights until they'd brought one down.

Nevertheless, Khrushchev waded right in, saying, "I will answer that question with pleasure." He explained that when he was at Camp David with Ike "I almost opened my mouth to make that statement" but then decided "not to raise the matter with this friend of mine."

The cat was out of the bag. Here was a stark admission that:

Khrushchev had known about the U–2 flights ever since last fall and probably ever since we first started making them, some 4 years ago. Why did no one demand a public apology then?

He and his cohorts in the Kremlin had concealed these "aggressive espionage flights" from the Russian people. (For obvious reasons: They couldn't knock the U–2 down, probably because it normally flies too high.)

The big show of outrage, surprise, shock, indignation and horror at the ill-starred flight of Pilot Powers was, therefore, so much eyewash, a convenient way to scuttle the summit conference before it was launched.

We doubt that Khrushchev will be forgiven this slip by his stony-eyed friends back home.

The other blooper was made when Khrushchev told the assembled correspondents two true stores:

When he was a child and the family cat would try to mooch some cream, his mother "usually took the cat by the scruff of the neck and gave it a good shaking."

Apparently this left its mark on the boy, because we find Khrushchev coming back to the theme later in the conference.

"This recalls to my mind," he said, "what we used to do in the Donbass when I was the young boy. Whenever we caught a cat in the pigeon's loft, we would catch the cat by its tail and bang its head against the wall and that was the only way it could be taught some sense."

With that statement, Khrushchev probably lost twice as much ground as he had gained in all his travels. We don't just mean he lost the vote of all the nice, little old ladies in Dubuque, Iowa.

It is one thing for a boy to swing a cat against a wall by its tail. It is another thing for a grown man to boast of it.

AGRICULTURAL AND FARM CREDIT ADMINISTRATION APPROPRIATIONS, 1961

The Senate resumed the consideration of the bill (H.R. 12117) making appropriations for the Department of Agriculture and Farm Credit Administration for the fiscal year ending June 30, 1961, and for other purposes.

Mr. HILL. Mr. President, the pending bill is a good bill, a sound bill, and one which will continue support for many of the tried and proved programs of American agriculture. In this bill there is much of the ability, much of the knowledge, much of the experience, and much of the wisdom of the senior Senator from Georgia [Mr. RUSSELL], who has served as chairman of the Senate Agricultural Appropriation Subcommittee since he first came to the Senate in 1933.

Mr. RUSSELL. I might remind the Senator from Alabama that for 2 terms, unfortunately, the electorate brought about a Republican majority in the Senate.

Mr. HILL. That was unfortunate indeed. However, ever since the Senator from Georgia has been in the Senate he has served as chairman of the subcommittee when the Democrats were in control of the Senate.

Mr. RUSSELL. I thank the Senator.

Mr. MUNDT. Mr. President, will the Senator yield?

Mr. HILL. I yield.

Mr. MUNDT. There is a certain implication contained in the remarks of the Senator from Alabama, but I am sure that he did not mean to imply it was unfortunate that the distinguished Senator from North Dakota [Mr. YOUNG] was the chairman at the time there was a Republican majority in the Senate. Being a southerner, he may feel that it was unfortunate we had a Republican majority in the Senate. However, I am sure he will agree with me that it was good to have Senator YOUNG at the helm at the time.

Mr. HILL. I agree with the distinguished Senator from South Dakota that, since we had to have a Republican Senate, we were extremely fortunate to have the distinguished Senator from North Dakota [Mr. YOUNG], my good friend, the friend of the farmer, the very outstanding Senator from North Dakota, as chairman of this subcommittee.

Mr. MUNDT. I believe the reason that we had to have a Republican Senate—and it was certainly essential that we had one—had nothing to do with what the distinguished Senator from Georgia [Mr. RUSSELL] always does when he is at the helm of a committee.

Mr. RUSSELL. I thank the Senator.

Mr. HILL. Through the years, the distinguished Senator from Georgia has been a most eloquent spokesman in the battle to enable the farmers of our Nation to obtain a fair share of the national income and to enjoy the fruits of American prosperity.

As a member of the Senate Agricultural Appropriations Subcommittee, I have had the privilege, over a number of years, to witness at close range the ability, intelligence, and integrity, the fearless dedication and the absolute determination, of the Senator from Georgia to win justice and equity for our farmers.

The farmers and the farm families of America have no greater friend than DICK RUSSELL. His name stands in the forefront of any rollcall of Senators who have sponsored and worked and fought for price supports on basic farm commodities, rural electrification, soil conservation, farm credit, farm housing, the school lunch program, and many other great programs benefiting our farm families.

Mr. President, I take this opportunity to commend and congratulate my able and distinguished colleague from Georgia for his understanding, for his devotion, and for his magnificent leadership in the cause of agriculture and the farmers of America.

I am delighted that the good people of Senator RUSSELL's home State of Georgia had the richly deserved appreciation of him to again this year nominate him without opposition to a fifth full term in the Senate.

We all know that he is one of the great Members of this body, and we do hope that he may enjoy many more fruitful years of service to his State and to our country.

Mr. RUSSELL. Mr. President, I am overwhelmed by the very eloquent speech delivered by my beloved friend, the Senator from Alabama [Mr. HILL]. I am sure he must view me through eyes which are colored by glasses of friendship; otherwise he would never have made those statements. I am highly honored and deeply grateful.

Not in a back-patting attitude, I may say that I have often thought that of those who serve in the Senate today—and there are many great Senators here—the distinguished Senator from Alabama, through his great contribution to the cause of health in this country, through the Hill-Burton hospital program, and through his sponsorship of research to conquer the diseases that plague our people, is one of the few Members who will find a permanent place in the history of this country. That makes me all the more grateful for his very complimentary references to me.

Mr. RANDOLPH. Mr. President, it is my understanding that H.R. 12117, the fiscal 1961 appropriation measure for the United States Department of Agriculture, does not include new funds for fruit research in the Agricultural Research Service.

The commercial fruit industry—and I refer particularly to the production of apples and peaches—is most important to the economy of West Virginia. In 1958 and 1959, West Virginia ranked 7th

in the Nation in the production of apples, which, in 1959, amounted to 5,700,000 bushels. In 1958, the cash value of our apple crop amounted to $8,500,000.

In the matter of peach crop, West Virginia ranked 17th in the Nation both in 1958 and 1959.

The labor force required to produce, harvest, and market in the industry is also important because of its contribution to needed employment in West Virginia. However, conditions in marketing are subject to constant change, and these changes bring new challenges which must be met by intensified and expanded research.

By and large, when we appropriate a dollar for research and apply it to the specific purpose for which the money has been appropriated, there is not only a return of the 100 cents on the dollar invested, but, also, a further return in the form of a dividend to the industry, to the productivity of the persons, and to development within the industry. This is important to a State like West Virginia.

I have received two communications in recent days from the organization which is representative of the apple growers in the States of West Virginia, Virginia, Maryland, and Pennsylvania. Carroll R. Miller, who is the secretary-manager of the Appalachian Apple Service, Inc., and who is a citizen of West Virginia, residing at Martinsburg, set forth in his communication this language which I call to the attention of the distinguished senior Senator from Georgia [Mr. RUSSELL], who presents the appropriation bill this afternoon, for his consideration:

> In apples, as in many fruits and vegetables, most growers are literally battling for survival in this riptide of change that has been gaining momentum in the past 10 years or more—nationally and worldwide. These changes have brought new conditions—new facts that must be faced. Only systematic research can find these facts. Research is the prime necessity today.

Then Mr. Miller uses this expression:

> We seem to be about 20 years behind with the facts, and it is hurting.

Mr. President, I ask unanimous consent to have printed at this point in the RECORD the telegram dated May 12, 1960, from Mr. Miller, and his subsequent letter of May 18, 1960, both of them on the subject matter which I have been discussing during the last few minutes.

There being no objection, the telegram and letter were ordered to be printed in the RECORD, as follows:

MARTINSBURG, W. VA., *May 12, 1960.*

Senator JENNINGS RANDOLPH,
Senate Offices, Washington D.C.:

House agricultural appropriations bill seems to have denied all funds for vital new fruit research asked for repeatedly by the highly responsible deciduous fruit advisory committee. Bill also cuts vital pesticide research funds from requested 1½ million to only 250,000. Both funds are most important to applegrowers and fruit and vegetable growers just now. This four-State organization of 1,308 applegrowers earnestly asks your help in restoring these funds.

APPALACHIAN APPLE SERVICE,
CARROLL R. MILLER, *Secretary.*

APPALACHIAN APPLE SERVICE, INC.,
May 18, 1960.

Senator JENNINGS RANDOLPH,
The Senate Offices,
Washington, D.C.

DEAR JENNINGS: Thank you for your quick response to our May 11 wire about the slashes the House inflicted on fruit and vegetable research funds; for both this threatening pesticide problem and for our marketing problems.

In apples, as in many fruits and vegetables, most growers are literally battling for survival in this riptide of change that has been gaining momentum the past 10 years or more nationally and worldwide. These changes have brought new conditions: new facts that must be faced. Only systematic research can find these facts. Research is the prime necessity today.

New chemicals have brought problems not yet understood by anyone as yet; fearsome to many; and fodder for sensation-hunting publicists, with possible sudden and ruinous effects on the industry. Only quick, competent research can get at the facts. The House slashed the considered request for $1½ million for this to a quarter million.

This tidal wave of change is running also in marketing. A successful independent grocer told me the other day that over two-thirds of the items on his shelves now come from a double handful of the giant food manufacturing firms: Swift and Armour, General Mills, Pillsbury, and General Foods, and so on. Apples must sell in this highly organized competition—but how? The right answers to this are imperative. The National Apple Institute has asked the Department of Agriculture to help find the facts, since they have the authority and the trained research personnel. They are willing, but it takes funds not yet authorized. We seem to be about 20 years behind with the facts and it is hurting.

We will genuinely appreciate your continued efforts to repair the House's slashes.

Sincerely,

CARROLL R. MILLER,
Secretary-Manager.

Mr. RANDOLPH. Mr. President, I am in the position, in a sense, of being after the fact rather than before the fact. The House did not act in the manner in which my constituency and the constituency of the Senators from the other States in the apple belt feel it should have acted in reference to new research moneys, especially for apples and peaches. However, I understand—and I feel certain there will be a clarification by the able Senator from Georgia—that the money which was requested—the figure proposed is $100,000—is not available during fiscal 1961 for intensified research in the field of commercial fruit. I believe the need is not only in the specific area for which I plead, but is also national in its scope and application, if the funds were to be provided for the purpose I have indicated.

I had the privilege earlier this afternoon of conferring with the Senator from Georgia. I am sure it is his desire to clarify the situation for me, and also perhaps to make a comment on the possibility of having funds, if not included in the present appropriation bill, at least actively considered for incorporation in the bill next year.

Mr. RUSSELL. Mr. President, the distinguished senior Senator from West Virginia is always impressive and compelling in his statements. The approach to this subject is no exception to that rule.

I can reassure him as one of the matters which is dealt with by the telegram from his constituents. So far as concerns appropriations for needed research into pesticides and insecticides, and the residue therefrom, the Senate committee appropriated all the many funds which were requested by the Senator's constituents. We appropriated the full $1,500,000 which was asked for this very important study.

Mr. RANDOLPH. The Senator from Georgia is certainly correct and is helpful in this situation. I advised my constituency of the fact that the Senate had so acted, and we are grateful to the committee for the recognition of that need.

Mr. RUSSELL. I have listened with careful attention to the Senator's statement. As I said yesterday, and as I have indicated on other occasions, the subcommittee and the full Appropriations Committee have been most attentive to all requests for research which have been submitted to us. I do not know just what the Senator's constituent has in mind as to any specific area of research which would be beneficial to the fruit and vegetable interests of the Nation.

There is included in the bill some $500,000 for basic research in fruit—in apples, pears, peaches, and other stone fruits. Without knowing exactly what specific project the Senator's constituent has in mind, I cannot advise the Senator as to whether any of that money will be expended for that particular purpose or not.

But if the fruit producers will develop a specific program and will bring it to the attention of the committee, I can assure the Senator from West Virginia that next year we shall give it very sympathetic consideration.

Mr. HOLLAND. And perhaps this year, by means of a supplemental appropriation bill item.

Mr. RUSSELL. I may say that if the Senator can obtain a detailed statement, then—as suggested by my friend, the Senator from Florida [Mr. HOLLAND] who is such a valuable member of the subcommittee—we might be able to give it consideration in connection with a supplemental appropriation bill before the adjournment of this Congress.

But without more definite information as to the specific area of research which Mr. Miller has in mind, I cannot inform the Senator from West Virginia whether the bill provides an adequate amount of money for such purpose or not.

Mr. RANDOLPH. Mr. President, in response to the clarification the Senator from Georgia has given, which is helpful, and also in response to his assurance, which is, frankly, very pleasing, I wish to state that I believe the attitudes expressed by both the Senator from Georgia and the Senator from Florida are, indeed, most fair and much appreciated.

There rests upon me the responsibility to work with these apple growers, in reference to an intensification of research in the fruit industry which they believe to be necessary. I believe that

the hope of possible consideration of this subject in connection with a supplemental appropriation bill will give us an opportunity to move in the direction which these men have indicated should be taken.

Mr. RUSSELL. Let me say to the Senator from West Virginia that there is an old maxim that applies to these research items, as well as to many other areas of appropriations: "A squeaking axle gets the grease."

Over a number of years I have noticed that agitation which is carried on unremittingly for a number of years nearly always gets some results. So if the Senator from West Virginia will obtain detailed information and will press vigorously enough, I am sure that one of these days we shall be able to direct some research to the areas in which his constituents are interested.

Mr. RANDOLPH. Mr. President, if the Senator from Georgia will indulge me long enough to permit me to make an observation in connection with my friend's reference to the squeaking axle, I would turn for a moment to the words of the poet, Josh Billings, who said in reference to a wheel:

I don't believe in kicking; it aint likely to bring one peace.
But the wheel that squeaks the loudest is the one that gets the grease.

So, although I would not want the wheel to turn improperly in connection with a matter of this kind, I repeat that I am grateful to my friend, the highly competent Senator from Georgia; and I am also grateful for the suggestion in which he is joined by my equally good friend, the able and diligent Senator from Florida [Mr. HOLLAND].

Mr. MUNDT. Mr. President, I should like to direct the attention of the chairman of our subcommittee [Mr. RUSSELL] to one item in the bill, in order that we may ascertain, by way of a statement of the legislative history, the intention of the Appropriations Subcommittee in marking up the bill in reference to the conservation reserve program.

I think perhaps the report as it appears on page 10 is not completely reflective of what the subcommittee had in mind.

So I should like to call to the attention of the chairman of our subcommittee the language which appears on page 21 of the bill. On that page, the bill shows that the House of Representatives allowed $310 million for the conservation reserve program—for the expenses of liquidating and administering the program which now is under way. But to that item, our committee added $25 million, so as to make a total of $335 million, and added the following proviso:

Provided, That not to exceed $12,000,000 shall be available for administrative expenses, of which not less than $10,000,000 may be transferred to the appropriation account "Local administration, section 388, Agricultural Adjustment Act of 1938":

My reason for directing the attention of the chairman of the subcommittee to this item is that at times there is a feeling, when money is earmarked in this way and is lumped together, as funds for both Washington office expenses and State office expenses, that there is a tendency for the State office expenses to be curtailed, in favor of the administrative expenses incurred in the central office in Washington. But certainly that was not the intention of our subcommittee.

We recognized, from what we heard during the hearings and from our observations of the programs, that, basically, these programs are administered by the county committees; and next in priority are the State offices and the State committees, which must supervise the administration in the respective States.

So I wish to ask a question of the Senator from Georgia: Is it not true that what we had in mind in this connection, and in including the additional $25 million appropriation for this purpose, was that after the legitimate needs of the county committees are first met, our next concern is to see to it that the State offices and the State committees have sufficient administrative funds with which to work with the county committees in meeting the local problems?

Mr. RUSSELL. Certainly that was the committee's intention, as I understand it. As a matter of fact, this program has expired, insofar as the assuming of any new contracts is concerned; and no policies are to be formulated on the national level. The supervision on the national level is at a very minimum; and it seems to me that the only proper order of priority would be first to take care of the needs of the county offices which deal with the conservation reserve program; and second, to take care of the requirements of the State offices. And if there is to be any substantial reduction, it should occur in the Washington office, because of the fact—as I have stated—that the program has expired, and is now to be administered only in the field, in dealing with those who already have Government contracts in connection with the conservation reserve program.

Mr. MUNDT. I thank the chairman of the subcommittee. That certainly confirms the understanding of the subcommittee as I comprehend it, and what the chairman of the subcommittee has pointed out is emphatically correct. Since this program is expiring and new contracts are not to be entered into, and obviously no new policy is to be available, the funds for administering this particular program are not great. However, it is important that, at the State and county level, there be adequate funds to see that the contracts are fulfilled in conformity with the manner in which they were written.

I thought it was well, since the report did not go into these matters, specifically to add this statement as a part of the legislative history, so those administering the funds will know precisely and exactly what the subcommittee had in mind.

Before taking my seat, I should like to add my own words of felicitation to the wonderful services being rendered by the Senator from Georgia [Mr. RUSSELL] in the U.S. Senate as a whole, and specifically today in connection with his chairmanship of the Appropriations Subcommittee on Agriculture.

I can say, as one who has sat in that committee for some time, that he questions the witnesses with penetration, with sympathy, and with an eagle eye for economy and for making a dollar do a dollar's worth of work. He administers the committee and conducts it in a completely nonpartisan manner. I cannot recall at any time in the history of our committee when we have had a vote divided on party lines. We have had differences of opinion as individuals, as Senators should have, but never has there been any partisan or political maneuvering in the committee. I think it is good for the country as a whole, and the farmers in particular, to know they have a good friend in DICK RUSSELL as chairman of the subcommittee, who watches over their interests, as do the taxpayers who do not happen to live on farms, but who can be assured that the economic philosophy of the Senator from Georgia is not limited to the committee room.

Mr. RUSSELL. I wish to express to the Senator from South Dakota my profound gratification. "Praise from Sir Hubert is praise indeed." The distinguished Senator from South Dakota has been an active, intelligent friend of the farmers of this country since he first took the oath as a U.S. Senator. I am pleased that he has stated there is no partisanship in this committee. I can certainly bear testimony to the fact that partisan considerations on the part of the distinguished Senator from South Dakota have played no part whatsoever in his activities on the committee. His sole guiding star is the welfare of the farmers of the United States, and during my tenure of office the farmers of this country have had no truer, more diligent, or more determined friend than the distinguished Senator from South Dakota.

Mr. MUNDT. I thank the Senator.

Mr. BUSH. Mr. President, I hesitate to inject a discordant note at this time, but I shall vote against H.R. 12117, the Agricultural and Farm Credit Administration appropriation bill, 1961, in protest against the refusal of this and other Democratic-controlled Congresses to cooperate with President Eisenhower and Secretary of Agriculture Benson in the enactment of a farm program which makes sense.

The people of Connecticut are becoming increasingly outraged by the failure of this Congress to take action to solve the farm problem, and end a wasteful program which does not work, and never will work unless changes are made in existing law, as repeatedly recommended by the President.

Opinion in my State was accurately reflected in an editorial entitled "Three Thousand Seven Hundred and Fifty Dollars a Minute" in the Bridgeport Post of March 22, 1960, which points out that the taxpayers of the Nation "are paying a terrible price" for the present unsuccessful farm program and "are also paying a terrible price for the failure of our statesmen to develop a program that will work, or be big enough to scrap the one that doesn't."

Mr. President, I ask unanimous consent that the editorial to which I have referred may be included in the RECORD following these remarks.

The PRESIDING OFFICER. Without objection, it is ordered.

(See exhibit 1.)

Mr. BUSH. Mr. President, H.R. 12117 provides funds for programs which I heartily endorse, such as lunches for school children, watershed protection, State experiment stations, and emergency famine relief to friendly peoples. I wish it were possible for me to vote separately in support of adequate funds for these worthy purposes. However, of the $4 billion in the bill, approximately $3 billion is for the support of activities of the Commodity Credit Corporation. This agency administers the high, rigid price support programs insisted upon by the majority of this and prior Congresses. As a result, despite efforts to reduce CCC's inventories, the taxpayers' investment in surplus farm commodities is estimated to increase to $9.5 billion by June 30, 1961, from $8.6 billion at the start of the current fiscal year.

I cannot acquiesce in this continued waste of the taxpayers' funds. Consequently, I shall vote against the bill.

EXHIBIT 1

THREE THOUSAND SEVEN HUNDRED AND FIFTY DOLLARS A MINUTE

In a recent statement, President Eisenhower told the taxpayers that it costs them $1,500,000 a day for the Government's wheat program. That is at the rate of about $1,000 a minute. But that's only part of the story as the wheat bite is only a small part of the cost of agricultural stabilization, which costs the taxpayers more than $3,750 a minute, or about $5,400,000 a day.

A lot will be heard about this figure in the coming presidential campaign. There are only three brackets of taxpayers whose annual payments to the Treasury could pay for this program.

There are about 5 million citizens whose adjusted gross income runs from $5,000 to $6,000 a year. On the average they are heads of families, own one car and work hard. Each year they turn in to Uncle Sam about $3 billion. The stabilization program costs about $2 billion.

Then there are 3 million in the $6,000 to $7,000 bracket who pay about $2.4 billion a year. The third rich vein of income paydirt are the $10,000 to $15,000 people. There are about a million of these who turn in a little more than $2 billion annually.

The point is that the entire take of millions of taxpayers must go each year to pay for an unsuccessful farm program. The one undisputed fact about the program is that it does not work, never has worked, and it never will. The program is wasteful and ineffective and the taxpayers are paying a terrible price for it. They are also paying a terrible price for the failure of our statesmen to develop a program that will work, or be big enough to scrap the one that doesn't.

The farm problem is almost 40 years old and getting worse and more expensive.

But there is one thing the politicians never forget—the farm vote, and they are being just as careful about it today as they were in 1920, when the farm population was two and a half times greater than in 1960.

Mr. WILLIAMS of Delaware and Mr. KERR addressed the Chair.

The PRESIDING OFFICER. The Senator from Delaware is recognized.

Mr. WILLIAMS of Delaware. Mr. President, I was going to offer an amendment to the bill, but I am willing to withhold if the Senator from Oklahoma is in a hurry.

Mr. KERR. Mr. President, I am going to offer some amendments to the bill.

The PRESIDING OFFICER. The Chair recognized the Senator from Delaware, in an effort to be impartial in the recognition of Senators.

Mr. WILLIAMS of Delaware. Mr. President, I am willing to yield to the Senator from Oklahoma, if the Senator from Oklahoma is in a hurry. I can offer my amendment later, if that will accommodate the Senator.

Mr. KERR. Mr. President, I would be very grateful. I thank the Senator from Delaware.

Mr. President, I have at the desk three amendments. One relates to the amount in the bill for planning under the watershed protection program. One relates to the amount to be appropriated for the watershed protection program. The other has to do with the appropriation for the flood prevention part of the program.

I have given a copy of each one of these amendments, Mr. President, to the distinguished chairman of the subcommittee, the Senator from Georgia [Mr. RUSSELL].

I wish to say that I have listened with great interest to the kind things which have been said about the Senator from Georgia this afternoon. I know how well-founded they are, and I am happy to join in the spirit of what has been said in tribute to the Senator for the great work he has done as chairman of the subcommittee.

Mr. President, I arise in behalf of items in the agriculture and farm credit appropriations bill which, in my opinion, must be adjusted before this bill is finally acted upon by the Senate.

I refer Senators to page 7 of the Senate report, under the headings "Watershed Protection" and "Flood Prevention." The language in the report is as follows:

> The committee recommends an appropriation of $32 million, as proposed by the House, an increase of $4,250,000 over the budget request, and $9,250,000 over the appropriation for 1960. The committee recommends $3,500,000 for investigations and planning as proposed in the budget. This action provides an additional $1,400,000 for installation of works of improvement to be prorated proportionately between the pilot watersheds and those approved under Public Law 566.
>
> An appropriation of $18 million for continuing work in the 11 authorized watersheds is recommended. This is the amount of the House bill, $3 million over the budget request, and the amount provided for fiscal 1960.

As I understand the action of the Senate committee, they have appropriated $32 million for the watershed protection program. Only $3,500,000 of that can be used for investigations and planning for projects under this great program.

Mr. President, I was greatly in hopes that the Senate committee would see fit to raise the construction figure to $50 million and increase the planning funds to $5 million. These were the figures that the Oklahoma State Soil Conservation Board urged to be appropriated on the basis of current needs. In my opinion, their request was the minimum which should be considered at this time.

Senators will note that, under the flood prevention program, the Senate committee suggests $18 million for the continuing work in the 11 authorized watersheds. Again, I was in hopes that this amount would be increased to $25 million. This I believe to be the minimum amount consistent with the need for getting the work on these watersheds completed, in order that the benefits accruing from them can be realized.

This program has been under construction now for 14 years, and it is time that we are finishing up the job rather than stretching it out and delaying the benefits which flow from it. Each year that we delay means the cost is greater than if we go ahead and finish the program as originally anticipated.

Let me return now to the matter of the funds for the planning parties to work on the watershed protection programs. The present planning party organization was built up over a period of several years of recruitment and training in the face of strong competition for critically scarce engineers, hydrologists, geologists, and so forth. Failure to maintain this planning group at the present level will set back the small watershed program by several years.

Applications for assistance under Public Law 566 continue to exceed the planning assistance now available. Even the current $4.9 million of Federal planning funds supplemented by the current $1.1 million of State and local funds, there is a backlog of 733 unserviced applications, a number one-third larger than the total of 549 that have received planning help since 1954.

In Oklahoma there are 43 applications before the State soil conservation board and 8 which have already been approved for planning, making a total of 51 projects for which planning parties will be needed this year.

Under the present rate of planning in the State of Oklahoma, we can only plan six watersheds so, at that rate, if not one single application were to be submitted, it would be 8 years before the planning could be completed. This, I think, is a fair example of what we do to this worthy program when we fail to make adequate funds available for the planning of these projects.

Therefore, I would urge the chairman of the Agriculture Subcommittee on Appropriations to accept three amendments, one increasing the funds for planning of these programs to $5 million as a first priority, the second increasing the funds to $44,250,000 for watershed protection, and the third increasing the flood prevention funds to $20 million as a third priority.

I hope that the chairman may see fit to accept all three amendments.

Mr. President, I did not pull these amendment out of thin air. In the first place, the Oklahoma State Soil Conservation Board, after careful consideration of these matters, urged that I support even a larger amount for planning

and construction under the watershed protection program than I am proposing.

I did, however, contact the Department of Agriculture and asked them to supply me with figures to indicate what this program should be and I shall place in the RECORD a table which shows that, as a minimum requirement, $44,250,000 is needed for the watershed protection program and $20 million is needed for the flood prevention program for the fiscal year 1961.

In conclusion, Mr. President, I should like to read a statement from the House report which I believe fully justifies the action I am seeking, entirely aside and apart from the recommendations of the Soil Conservation Service, or my folks in Oklahoma.

Watershed protection and flood prevention: For watershed protection, the bill carries an appropriation for 1961 of $32 million. During the 1960 fiscal year, a total of $32,276,964 is available for this program, including an appropriation of $22,750,000 and a carryover of unused funds from fiscal year 1959 of $9,526,964. The amount of $32 million included in this bill, therefore, will make available approximately the same amount for fiscal year 1961. The amount is sufficient to restore the planning funds available in 1960 and to finance a total of 42 planning parties during the next year.

Testimony before the committee indicates that more than 1,200 communities throughout the Nation have requested help in developing watershed plans. It further shows that assistance has been authorized for about 500 of these, that some 200 plans have been approved, and that construction has started on about half of these. In view of the large number of applications still awaiting plans, and in view of the large number of approved projects awaiting construction funds, the committee has increased the watershed protection funds above the amounts requested. In the opinion of the members of the committee, the amount of interest in this program in all areas of the country, and the urgent need for increased attention to the conservation of the soil and water resources of this country, warrant even larger amounts than those recommended in the bill.

For the flood prevention work in the 11 major watersheds authorized by the Flood Control Act of 1944, the committee has included an appropriation of $18 million, the same as provided for fiscal year 1960.

Legislation just enacted authorizes additional works of improvement in accordance with the provisions of section 4 of the Watershed Protection and Flood Prevention Act in connection with the 11 watershed improvement programs provided for by the Flood Control Act of 1944. It also authorizes the making of loans to cover the local share of both the flood prevention and nonflood prevention features of these 11 watersheds. Therefore, language has been included to make the flood prevention appropriation available for these purposes.

As pointed out in last year's report, the work under this program has lagged far behind that envisioned when the program was initiated in 1944. It now appears that this flood prevention work, which was originally estimated to take 15 years to complete, will take 40 years or more to complete at the present rate of progress. If slowed down even more, as proposed in the 1961 budget, this time could be extended another 10 years.

Mr. KEFAUVER. Mr. President, will the Senator yield?

Mr. KERR. I yield to the distinguished Senator from Tennessee.

Mr. KEFAUVER. Mr. President, I wish to join the distinguished Senator from Oklahoma in support of the amendments which he has offered. I join the chairman and the other members of the committee in expressing appreciation for the watershed program. I think it is an excellent program. It is doing a great deal of good. There is much interest in it all over the Nation.

I know that in my own State of Tennessee many watersheds are being planned, but we do not now have the necessary personnel and teams to do the planning and engineering work. The head of our Watershed Association has called me, to urge that the $1.4 million particularly not be taken from the amount for investigation and planning.

Mr. President, I certainly join the Senator from Oklahoma in urging the chairman of the subcommittee and the Senate to restore the $1.4 million for investigations and planning. I think the other amendments of the Senator from Oklahoma are well-founded, and should also be agreed to.

Mr. KERR. Mr. President, I am grateful to the Senator from Tennessee for those remarks and his support.

I wish to invite attention to the fact that my distinguished colleague from Oklahoma [Mr. MONRONEY] is also a sponsor of these amendments.

In further support of the amendments, and in further urging consideration of this matter by the distinguished chairman of the subcommittee, I invite attention to the fact that on February 8, in response to a letter from the senior Senator from Oklahoma, the Department of Agriculture submitted a table of the requirements for these programs for fiscal years 1961, 1962, 1963, 1964, 1965, and 1966. In that table from the Department of Agriculture it is shown that for planning in fiscal year 1961, $5.5 million would be required; for watershed protection, including planning for 1961, $44,250,000, the amount asked for in my amendment, would be required; and for installations under the flood prevention program $20 million, as asked for in the third amendment which I have offered, and which I now urge the distinguished Senator from Georgia to accept, would be required.

Mr. HUMPHREY. Mr. President, will the Senator yield?

Mr. KERR. I yield to the Senator from Minnesota.

Mr. HUMPHREY. I asked the Senator to yield so that I might lend one extra voice to a plea for acceptance of these amendments. I can think of no programs which yield greater dividends for every dollar invested than the Soil Conservation Service program, the watershed protection program, and the flood-control program, all of which involve watershed protection and soil conservation. It is quite obvious that unless there are adequate funds for planning these great efforts cannot be undertaken in an economic and feasible manner.

The requests of the Senator from Oklahoma are modest. The watershed protection request, as I understand it, is for $44 million instead of the committee recommendation of $32 million. Is that correct?

Mr. KERR. $44,250,000.

Mr. HUMPHREY. Yes. The flood protection would have an additional $2 million, to raise the figure from $18 million to $20 million?

Mr. KERR. The Senator is correct.

Mr. HUMPHREY. The funds for work planning would be increased to $4.9 million?

Mr. KERR. The Senator is correct.

Mr. HUMPHREY. I surely wish to join in support of these amendments. These are areas in which I have previously indicated, in my testimony before the subcommittee, my interest, and also the interest of the people of the State of Minnesota. I had a number of letters and resolutions, as well as personal visitations, from members of the soil conservation districts in our State, and the people who are deeply concerned about watershed protection. These people came to call upon me. I forwarded the information to the committee.

Today I merely wish to state the great support which this program has in the State of Minnesota. I know that what I am asking for now, in support of the Senator from Oklahoma, is exactly what the people of my State would expect as a prudent and reasonable program in this area of soil conservation and watershed protection.

Mr. KERR. Mr. President, I thank the distinguished Senator from Minnesota.

I have only one further thing to say, which is that no man in the Senate has done more for this program than has the Senator from Georgia [Mr. RUSSELL]. That fact is reflected in the history of the proposed legislation. It is also reflected in the status of this work in the great State of Georgia.

It was my privilege to be in Georgia a few days ago, as well as in the State of South Carolina, where we were holding some hearings for the Senate Select Committee on National Water Resources.

One of my outstanding impressions in my visit to that part of the country was the great progress of this program which had been made in the State of my great friend from Georgia. In offering this amendment I know that I am doing so in connection with a program which is as near and dear to the heart of the distinguished Senator from Georgia as it is to any Member of this body.

The PRESIDING OFFICER. The Chair inquires of the Senator from Oklahoma as to which amendment he wishes to have considered first.

Mr. RUSSELL. Mr. President, will the Chair permit me to make a statement before the Senator from Oklahoma makes his election?

The PRESIDING OFFICER. Without objection, the Senator from Georgia may proceed.

Mr. RUSSELL. I thank the distinguished Senator from Oklahoma for the remark which he last made. I am and have been greatly interested in the entire program of soil and water conservation. I know of no other program within the entire farflung scheme of our Gov-

ernment that carries more promise for the future of this country than these soil and water conservation projects. It is difficult to realize that within a period of some 40 years we will have twice our present population. These people will have to be fed and clothed. That food, clothing, and fiber must come from these very acres, because we are not going to create a great deal more agricultural land in this country.

I have a direct, almost selfish interest in every phase of this program. It so happens that my own State has submitted a total of 74 applications under Public Law 566. We had two projects under the old pilot program, which are embraced within this appropriation. We have 1 project in Georgia among the 11 projects under the Flood Control Act of 1944 which have been under way for many years. Rising costs have postponed the scheduled date of completion, even though we have consistently increased the appropriation.

I have tried not to be swept away completely by my intense interest in these projects, and yet I have endeavored to carry them forward. For the last 3 years we have appropriated more money than was requested by the Bureau of the Budget in all three of these areas. I do not feel authorized to accept an amendment which would cut back the allocation which was made in the committee for the planning of new projects and for the surveys. However, I can assure the distinguished Senator from Oklahoma that I will not be adamant in a conference if the House desires to insist upon its position. It was thought in the committee when the subject was discussed that we were getting these projects planned a great deal faster than we were authorizing funds to complete them. For that reason the subcommittee voted, although not with any great determined position, to allocate more of the funds for construction rather than for planning.

For the 11 authorized projects, we are already carrying in the bill $3 million above the budget estimates; and I do not feel that, in the light of the action of the subcommittee that I would be authorized to accept any increase in the proposed amount, but we do have a great backlog on the small projects.

In an effort to confirm what the Senator has said, I would be willing, if no member of the subcommittee present in the Senate objects, to accept a $5 million increase for Public Law 566 watershed protection item, which would give us some room to negotiate on the surveys and would provide for a very substantial increase above the budget estimates for installation of works of improvement under that program. I do not feel authorized to go beyond that limit.

Mr. KERR. Mr. President, I am grateful for the statement of the Senator from Georgia, but in light of the fact that the $4,900,000 figure was the figure included in the House measure, would not the Senator be willing to accept that amendment and the $5 million addition on the watershed protection provision, which in reality would not change the total amount?

Mr. RUSSELL. Mr. President, I should like to agree with my distinguished friend, but I feel that in view of what transpired in the subcommittee, I would not be authorized now to accept the cutback in the operational funds. I have told the Senator I would be glad to consider the proposal carefully in conference, but I do not think I could accept the $4,900,000 now for planning. I think the $5 million additional for watershed protection work is as far as I feel justified in going.

Mr. KERR. Mr. President, I modify my amendment to conform with the suggestion of the chairman of the subcommittee as to what he would be willing to accept.

Mr. RUSSELL. The Senator from Oklahoma proposes, in his amendment No. 2, on page 11, line 10, to strike out "$32 million" and insert "$37 million"?

Mr. KERR. That is correct.

Mr. YOUNG of North Dakota. Would the proposed increase be exclusively for the pilot project?

Mr. RUSSELL. No; it would be for Public Law 566 and the pilot projects. We stated in the report that the fund would be distributed proportionately.

Mr. YOUNG of North Dakota. The increase, then, would go to both projects?

Mr. RUSSELL. Yes. I am frank to say the great bulk of it would go to the Public Law 566 projects, but the pilot projects would not be excluded. Is that agreeable to the distinguished member of my subcommittee?

Mr. YOUNG of North Dakota. That is satisfactory.

Mr. RUSSELL. I will accept that amendment.

The PRESIDING OFFICER. The clerk will state the amendment.

The LEGISLATIVE CLERK. On page 11, line 10, it is proposed to strike out "$32,000,000", and insert in lieu thereof "$37,000,000".

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Oklahoma.

The amendment was agreed to.

Mr. WILLIAMS of Delaware. Mr. President, I should like to direct my remarks to the attention of the Senator from Georgia in connection with the proposal on page 32 beginning at line 23, wherein it is provided:

> The Federal Farm Mortgage Corporation is authorized to make such expenditures, within available funds and in accordance with law, as may be necessary to liquidate its assets: *Provided*, That funds realized from the liquidation of assets which are determined by the Board of Directors to be in excess of the requirements for expenses of liquidation shall be declared as dividends which shall be paid into the general fund of the Treasury.

As the Senator from Georgia knows, this agency is a depression-born agency and one which has not functioned since 1947. It has not made a single loan since 1947 and in 1955 it disposed of all of its remaining assets under instructions from Congress. It then sold its remaining notes to the 12 Federal land banks.

I am advised that last year its outstanding accounts were reduced to eight notes, payable annually. It collects eight checks from the Federal land banks, which is a semigovernmental agency. It receives those eight checks and turns them over to the Federal Treasury, and last year that little bit of work cost about $5,000 or about $600 or $800 per check. I understand from the Senator from Georgia that the agency has advised the committee that it could probably operate with $600 or $800 next year, but even that is close to $100 for the handling of each check.

Remember this is just the transfer of eight checks from one agency to another.

This agency should be abolished and gotten off the taxpayers' backs.

Why not stop appropriating money to an abandoned agency? There is a bill before the Committee on Agriculture and Forestry which would abolish the agency.

This agency, the Federal Farm Mortgage Corporation, has no authority to make any loans. Congress repealed that authority 23 years ago. Nevertheless, the agency does have authority to borrow $2 billion in the name of the U.S. Government and to pledge the credit of the Government.

I agree that the bill to abolish the agency should be dealt with by the Committee on Agriculture and Forestry; however, I am hoping that the Senator from Georgia will accept this amendment to stop its appropriation. Its work is done; let us get it off the taxpayers' backs for good. In conference, if for some reason it were found necessary to protect the transfer of these checks temporarily, the matter could be worked out. However, I am advised that this appropriation is not needed. The eight Federal land banks can simply make their checks payable to the U.S. Treasury and mail them direct. Why have the Government pay $75 to $100 per check merely for transferring them? Last year it cost about $5,000 to process these few checks. That was an average of about $800 per check.

I am wondering whether the Senator from Georgia would accept the amendment to strike out that language of the bill dealing with this subject and thereby eliminate this appropriation. I realize that the amount involved is small, but it is the way to get this agency abolished. We cannot forget that the real danger here is that this agency has $2 billion in borrowing authority.

Mr. RUSSELL. Mr. President, there is a great deal of merit in the Senator's position, but I would not feel authorized to accept the amendment, because I do not know exactly what effect it would have. The Senator has a bill pending in the standing committee to abolish the corporation. It would be a much more orderly procedure to handle it through the enactment of that bill. It provides for an orderly transfer to the Secretary of the Treasury of all the cash, accounts receivable, and other assets which are owned by the Farm Credit Mortgage Corporation.

I understand that the bill has been approved by the Farm Credit Administration. I understand also it has been

approved by the General Accounting Office, and is not resisted by the Department of Agriculture.

The matter could be handled much more efficiently through the enactment of the bill the Senator has introduced. It would be much better to handle it in that way than by striking out the language from the pending bill.

I understand that it has cost only $600 per year for this, and it could cause some confusion with reference to the transfer of these funds. As of December 31, 1959, there was still outstanding $3,933,000 that was owing to this defunct Corporation from the Federal land banks.

Of course all the money belongs to the Treasury of the United States. The Senator's bill is the appropriate way in which to transfer these assets to the Department of the Treasury. I hope the Senator will not press his amendment to strike out this language in the bill, because I do not know what effect it will have.

I will be glad to join him in undertaking to pass his bill, which apparently has been drawn with great care, and which transfers all of the rights to these assets to the Treasury Department and provides for the proper handling of any suits or actions at law that may be instituted for the collection of any sums owing to the Federal Farm Mortgage Corporation. That would be a much more orderly way of handling it than by striking the item the Senator refers to from the bill. If the adoption of the Senator's amendment would result in a substantial saving, I would be glad to support the Senator. However, only a $600 saving is involved.

Mr. WILLIAMS of Delaware. I agree with the Senator that the bill itself should be enacted. However, I point out that the agency does not have any assets other than the eight notes. Those notes are due from the Federal Land Bank. The money all belongs to the Treasury. All the Federal Land Bank will have to do is write checks payable to the Secretary of the Treasury. At least we could save $600 if this language were stricken. Of course it is not only the amount of money that is involved. It has been my experience in the Senate that as long as we keep appropriating money to an agency, it keeps up their hopes that an emergency may arise again so that they can continue in operation. The adoption of this amendment would remove what little opposition there might be remaining, and we would finally be putting this agency to rest.

Mr. RUSSELL. I cannot agree that the adoption of the amendment would in any way remove or eliminate the powers and authority of the Farm Mortgage Corporation. The organization would still be in existence. It would be on the books, and could be revived at any time if an appropriation were enacted by Congress.

Mr. WILLIAMS of Delaware. That is true, but it would be a step toward its abolishment.

Mr. RUSSELL. The Senator's bill provides the only orderly procedure for handling the matter. In 1955 the Corporation owned papers valued at $11,600,000.

Mr. WILLIAMS of Delaware. But it cost $572,000 to handle that $11 million.

Mr. RUSSELL. I believe that is correct. However, now it has gotten to the point where it has only $3,933,000, and is now a quiescent agency, which is costing only $600. I believe that striking out the language would be a rather imprudent way of handling the situation. I hope the Senator will not press his amendment. He has received some favorable reports from all the Departments on his bill, and I hope the bill will soon be reported to the Senate. I am sure it will pass on the call of the calendar.

Mr. WILLIAMS of Delaware. I hope so. Nevertheless, I would still very much like to strike out the language in the pending bill. At least it would serve notice to these agencies that Congress expects them to get off the taxpayer's backs. It seems to me to be a ridiculous situation to pay a governmental agency between $75 and $100 for transferring a check from one Government agency to another. We could eliminate this agency and save the money.

This agency has not made a loan in 23 years. It has disposed of all its assets. Even its capital stock has been retired to the Federal Treasury. All of its assets except eight notes have been liquidated. Those eight notes represent balances due from the eight Federal Land Banks. The process for handling those checks costs $75 to $100 each—merely for the acceptance of those checks and turning them over to the Treasury.

Mr. RUSSELL. Unfortunately, the Senator does not know whether they can turn over those checks without this authority in the bill. If we struck out the language, there might be something in the law which would prevent them from doing that. The Senator has been a most valued Member of the Senate in pursuing useless agencies. This is the first time I have seen him level his lance on a $600 dragon. This is the smallest of all dragons in the Government's stable of dragons. He is getting very much exercised about this teenie-weenie little dragon. It is so small that he could hardly pursue it with his lance, it seems to me.

Mr. WILLIAMS of Delaware. It may be a teenie-weenie little dragon to the Senator from Georgia, but this little dragon in 1951 cost the American taxpayers $1,128,836. In 1952, it cost $989,810; in 1953, $834,731; in 1954, $691,945; in 1955, $572,539. Let us remember that all that now happens is that some people will be sitting around waiting for eight checks to come in. They had a few more accounts in those years but not many more.

They have this tremendous task of picking up the eight checks and forwarding them to the Secretary of the Treasury each year, when the checks could have been sent direct. Certainly, it should not cost $75 to $100 to handle each check.

Why keep an agency with a $2 billion borrowing authority alive with this $600 appropriation?

Mr. RUSSELL. I understand the $600 is used to pay a small part of the salary of someone who handles the machinery in the processing of these checks. I do not want these checks stopped. It may have cost a great deal of money in the years to which the Senator has referred.

It would be just as logical to say that because a war was carried on at a cost of $200 billion a year, therefore the Department of Defense ought to be abolished. That is about as sensible as the argument the Senator makes.

Mr. WILLIAMS of Delaware. No. When the war has ended, a peace treaty is signed. But when the service of an agency is no longer needed it is kept alive 20 years by these token appropriations.

Mr. RUSSELL. The Senator does not know whether checks could be issued under existing law. He is trying to use this bill to propagandize his bill in the standing Committee on Agriculture and Forestry. He has all the reports. I am sure that if he would attend the meeting of that committee, of which he is one of the most distinguished members—no; I believe he left that committee a short time ago to become a member of the Committee on Foreign Relations—if he would go before the Committee on Agriculture and Forestry, I am certain they would report the bill. That is the orderly way to proceed.

The Senator from Delaware did not come before our committee, where we could investigate and determine the effect of striking the language from the bill. Without having some knowledge of what the effect of striking the language would be, I could not accept the amendment.

Mr. WILLIAMS of Delaware. It is not simply the fact that we can save $600 next year. They did spend about $5,000 last year. This subject will still be in conference if we adopt the amendment. I have been advised that the adoption of this amendment would not handicap the Government in any way.

We should not lose sight of the fact that we are keeping alive an agency which has authority to borrow $2 billion and to pledge the credit of the United States in repayment thereof. That is a lot of authority to allow to lie around loosely and idly; and to continue to appropriate $600 or $800 to this abandoned agency only serves to keep it alive.

If this amendment is approved, the conferees could work out any language they thought appropriate to accomplish the purpose. I think it is time that we served notice on these agencies that when their useful life has been ended we expect them to be abolished.

Mr. President, I submit the amendment. I hope the Senator from Georgia will take the amendment to conference.

The PRESIDING OFFICER. The amendment will be stated.

The LEGISLATIVE CLERK. On page 32, beginning with line 23, it is proposed to strike out all the language to and including line 6, page 33.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Delaware.

The amendment was rejected.

Mr. FREAR. Mr. President, I should like to ask a few questions of the chairman of the Subcommittee on Agricultural Appropriations. First, I should state that perhaps my questions may not be in conformity with the bill itself, but they will be in conformity with an operation of the Department of Agriculture.

The first question is: Is there any amount of money provided in the bill for the administration of Federal milk marketing orders?

Mr. RUSSELL. There is the sum of approximately $300,000 under the Agricultural Marketing Service for the administration and policing of milk marketing orders.

Mr. FREAR. Is that by way of direct appropriation or by way of assessment?

Mr. RUSSELL. I am not too certain about that; we have not considered the matter of milk orders for some time.

Mr. AIKEN. Mr. President, will the Senator yield?

Mr. RUSSELL. I yield.

Mr. AIKEN. I think there must be an appropriation for the maintenance of the Washington office. However, the marketing area expenses, I am sure, are paid by assessments on the farmers who ship milk into the areas. That is true of Boston and New York and of other cities with which I am familiar, and I believe it to be true of all of them. There is a deduction of a certain amount per hundred pounds—2, 2½, or 3 cents.

Mr. RUSSELL. About $300,000 is provided for general administration; and that is for the activity in the Washington office. However, the direct cost of the supervision of the milk orders is, as the Senator from Vermont states, supported by something in the nature of a tax.

Mr. FREAR. I shall ask questions along that line in a moment.

Mr. AIKEN. I am trying to be helpful to the Senator from Delaware.

Mr. FREAR. I know the Senator is. I will let him be helpful in a little while. However, he is getting me out of line.

If the $300,000 was not appropriated, what would happen to the administration of the local milk marketing areas?

Mr. RUSSELL. Very frankly, I cannot answer the Senator.

Mr. FREAR. Then I shall ask the Senator from Vermont to answer, if the Senator from Georgia will permit him to do so.

Mr. AIKEN. I think that when there is any program requiring any Federal supervision at all, there must be a Federal appropriation for it. In the case of milk marketing orders, the Secretary is required to find a fair minimum price, and to fix the minimum price for each order area. However, the expenses of the area itself are taken care of by a deduction from the price of the milk which the farmer receives. In my own area, I believe it is probably 2 or 3 cents a hundred pounds, though I am not certain of that. However, that will pay the local administrator and his assistants, and will pay the cost of the salaries of clerks, secretaries, and so forth, in that area. The farmer himself pays that amount.

Mr. FREAR. I am certain the Senator from Vermont can answer the question I asked. What would happen to the administration of the milk orders, at the local level, if the $300,000 were not appropriated to the central office?

Mr. AIKEN. I am not sure. What would happen if there was no amount of any kind appropriated for the maintenance of the White House?

Mr. RUSSELL. I have been thinking over the matter since the Senator asked his question. I do not believe it would have any direct application, but it would prevent the formulation of any new marketing orders.

Mr. AIKEN. I never contemplated any such horrible thought as apparently runs through the mind of the distinguished junior Senator from Delaware. If he is inclined to take away the $300,000 which maintains an orderly marketing system for some 50 percent of all the milk production in the United States, I simply would not want to contemplate such a situation.

Mr. FREAR. Anyhow, it is reasonable to assume that if the $300,000 were not appropriated, the Department of Agriculture, in its central office in Washington, could no longer render assistance in the administration, at the local level, of the Federal milk-marketing orders in the local areas, could it?

Mr. RUSSELL. I am inclined to believe that they would not be able to lend any assistance. Certainly they could not formulate any new marketing orders or to embrace any new areas. It has been a long time since the passage of the bill providing for marketing orders. I doubt very much that the refusal to appropriate $300,000 would completely close the local administration of the milk-marketing orders.

Mr. FREAR. The most charitable thing I could say to the Senator from Vermont, and the most horrible thing I could think about the Senator from Delaware, is that he did not propose this a year ago, before the Order No. 127 went into effect.

Mr. AIKEN. The Dairy Division of the U.S. Department of Agriculture has other functions besides the administering of milk-marketing orders. I think practically the entire cost of the administration of the milk-marketing orders is borne by the farmers themselves. However, the Dairy Division has many other things to attend to.

Mr. FREAR. I believe the Senator from Vermont said that the entire cost of the administration of the area in which the milk-marketing order is issued by the Department of Agriculture is borne by the producers of that area.

Mr. AIKEN. I believe that practically all of the cost is borne by the producers.

Mr. FREAR. Where does the other money come from?

Mr. AIKEN. What other money?

Mr. FREAR. If all the cost is not borne by the producers, where does the remainder of it come from?

Mr. AIKEN. The Dairy Division of the Department of Agriculture existed long before the orders for the marketing of milk. The Dairy Division has the oversight of the dairy industry of the United States, just as there is a division for the oversight of cotton, grain, foreign agriculture, and so on.

Mr. FREAR. Then it comes from the Department of Agriculture, through an appropriation? Is that correct?

Mr. AIKEN. Undoubtedly it costs a little money to maintain the Dairy Division; and it may cost a few thousand dollars more because it has oversight of the dairy marketing areas. I would not be surprised to find that was so. But what part of the $300,000 is used for that purpose, I am unable to say.

Mr. FREAR. Do any of the funds which are used to pay the cost of administration for a local area, in connection with a milk-marketing order, come from the handlers?

Mr. AIKEN. The funds come from the farmers, the producers. I think the funds come indirectly; the deductions are made from the checks which go to the farmers, and are paid to the district area offices.

Mr. FREAR. Is it not a fact that when a Federal milk-marketing order is issued and is put into execution, demand is made on the handler or the distributor to pay whatever percentage per hundredweight is authorized by the order; and that is collected from the producer?

Mr. AIKEN. I think so. In the marketing areas with which I am familiar, the distributors themselves do not vote on the question of whether to have a milk-marketing order or not; and thus far it seems to have worked out fairly well for them.

Mr. FREAR. I am glad the Senator from Vermont has made that point, because I had it in mind, too.

Just how is a Federal milk-marketing order established?

Mr. AIKEN. A petition is made to the Department of Agriculture.

Mr. FREAR. By whom?

Mr. AIKEN. By the farmers of the area.

Then the Department of Agriculture, if it finally approves the formula which is set forth, submits it to the vote of the farmers. In my area, if two-thirds of the farmers vote for the marketing order, it goes into effect.

It so happens that in my area some 90-odd percent of them do vote for the marketing order. In fact, I think almost 100 percent of them vote for it. There may be a few who do not.

Then, since it has been approved by the farmers of the area, it goes into effect.

I understand that in some places a 75-percent affirmative vote is required.

I am sure the Senator from Delaware now has further questions.

Mr. FREAR. Yes, I have several.

Then, apparently the Federal milk-marketing orders are not established in the same way in all areas; that is to say, in Vermont, such an order can be established by the affirmative votes of two-thirds of the farmers; but in another area, the affirmative votes of 75 percent of the farmers may be required; and it is conceivable that in another area the affirmative votes of 100 percent of the farmers would be required.

Mr. AIKEN. If they so voted beforehand, yes.

Mr. FREAR. But the provision would have to be included in the order before it could be put into execution, would it not?

Mr. AIKEN. A two-thirds favorable vote is required, I believe, in all the New England marketing areas. A 75-percent affirmative vote may be required in some other areas; I am not sure.

Mr. FREAR. So there is no uniformity about it; is that correct?

Mr. AIKEN. I do not know that it is uniform throughout the country.

Mr. RUSSELL. Mr. President, I can cast a little light on that point. There are two types of orders. One is the marketing type of order; it requires a two-thirds favorable vote of those who participate in the referendum. The other type is a handler order. It requires a three-fourths favorable vote by the handlers.

I am not too familiar with this matter, because in my State we have a State law which deals with the subject. We have no Federal milk marketing orders in the dairy industry there.

Mr. FREAR. Again I say I think the State of Georgia is extremely wise in that respect and has used very good judgment. I think State control is much superior to the Federal control which is had in the States which have Federal milk marketing orders. Under State control, the respective areas have the right to determine for themselves.

Mr. AIKEN. From 85 to 90 percent of the milk produced in Vermont is marketed outside of Vermont.

Mr. FREAR. Did I correctly understand the Senator from Vermont to say that in the area which serves Vermont approximately 90 percent of the producers voted in favor of the order?

Mr. AIKEN. No other areas serve Vermont. Instead, Vermont serves other areas. Vermont exports almost 90 percent of the milk which is produced in Vermont. It is exported to Boston, Hartford, southeastern New England, Haverhill, Lawrence, and New York City areas.

Mr. FREAR. Did the Vermont producers vote on the question of whether they wanted to have a Federal milk-marketing order or not?

Mr. AIKEN. That is true, I think; nearly 100 percent of them—certainly more than 90 percent of them—voted for it.

Mr. FREAR. Then I correctly understood the Senator from Vermont. I know he has a fine background on this matter, on which I should like to be educated.

May I have the permission of the Senator from Georgia to continue a short time for that purpose?

Mr. RUSSELL. Indeed, so. As chairman of the subcommittee, I regret that for the first time I find myself with an almost complete lack of information on these milk-marketing orders. I do not think the question has been brought up during the 24 years I have presided over the subcommittee. No questions in regard to the Federal milk-marketing orders have been presented during that time. Of course, the legislation for them is handled in the Committee on Agriculture and Forestry, and thereafter is handled in the milksheds. So I am not too familiar with the matter.

Mr. FREAR. If the farmers in Vermont and whatever other area was covered by the milk-marketing order had voted 50 percent in favor of the establishment of a milk-marketing order and 50 percent against its establishment, would a milk-marketing order have been issued?

Mr. AIKEN. No.

Mr. FREAR. Then did the producers themselves decide that they wanted to have a milk-marketing order issued?

Mr. AIKEN. They did.

Mr. FREAR. In other words, each producer had one vote and each distributor had one vote; is that correct?

Mr. AIKEN. I do not know if the distributors vote. I think not. But each producer has one vote.

Mr. FREAR. Would a two-thirds affirmative vote or a three-fourths affirmative vote be required? Just now I understood the Senator from Georgia to say that in order to have a producer order, a two-thirds affirmative vote would be required. And in order to have a distributor or handlers order, a three-fourths affirmative vote would be required; is that correct?

Mr. AIKEN. The latter is a different kind of order.

It so happens that in the Boston area, which is the largest market, the producers only participate.

Mr. FREAR. So a producer can vote in either one of them—either in the one in which a three-fourths affirmative vote is required or in the one in which a two-thirds affirmative vote is required; is that correct?

Mr. AIKEN. Well, a producer could not vote in connection with the setting up of an order on a distributor basis.

Mr. FREAR. Yes. But a producer could vote in connection with either a producer order or a distributor order, could he not?

Mr. AIKEN. If the formula so provides.

Mr. FREAR. Who provides the formula?

Mr. AIKEN. The formula was approved originally in Boston in 1937. That was when milk was bringing $1 a hundred pounds, which is a very low price for it—2 cents a quart. The distributors did not like the order at the time; but it was put into effect, for the producers had to have something. The Department of Agriculture, under Secretary Wallace, approved it.

At that time, I was Governor of Vermont, and I approved it, and it worked out well. Then the price of milk began to reach a reasonable level.

At first, the distributors opposed it; but after a while they found that it stabilized their business, too; and in the last 20 years there has been no opposition from distributors, so far as I know.

Mr. FREAR. I think that was quite commendable, for certainly at that time the farmers were not being overpaid for the milk they produced; neither do I think they are overpaid today.

Mr. AIKEN. No, they are not.

Mr. FREAR. However, I am trying to obtain the answers to some of my questions.

My next question is as follows: If an order, however formulated, required the affirmative votes of two-thirds of the producers, in order to put the Federal milk-marketing order into effect, but if the affirmative votes constituted less than two-thirds of the total number of votes, such an order would not be issued, would it?

Mr. AIKEN. That is correct. In other words, if 34 percent opposed the issuance of the order, it would not go into effect.

Mr. FREAR. Thirty-four percent?

Mr. AIKEN. Yes, a little more than one-third.

Mr. FREAR. Yes.

Are there marketing cooperatives in that area?

Mr. AIKEN. Almost every dairy farmer in Vermont belongs to a marketing cooperative.

Mr. FREAR. How did the marketing cooperative count the votes of its producer members when they voted on the question of the issuance of a Federal milk-marketing order?

Mr. AIKEN. They voted en bloc. That is why the dairy farmers joined the cooperative—so their votes would count, and so they could get out of the difficulties they were in.

I would say that 98 percent of all the milk going out of Vermont to other States is shipped by cooperatives—and probably more than that, probably 99.9 percent. But I wish to be conservative in my statement.

Mr. FREAR. The Senator from Vermont is always conservative, and certainly I would not question his statement.

Mr. AIKEN. I am not always called too conservative.

Mr. FREAR. Well, I have read something of that sort, too; but I do not always agree with what I read.

In voting on the question of whether such an order shall be issued, they vote as a bloc, do they not? If there were 300 producers in one cooperative, and if a majority of them voted in favor of the issuance of the order, all 300 votes would be recorded in the affirmative, I assume.

Mr. AIKEN. That is correct.

Mr. FREAR. If 149 producers voted in the negative and 151 farmers voted in the affirmative, then all 300 votes would be cast by the cooperative in the affirmative; is that correct?

Mr. AIKEN. Yes, but that is not the whole story. If the 149 felt differently, they would not belong to the cooperative. There is no requirement to join in a cooperative. The reason why they do so is so they can vote together and work together, and pool their products, and ship their products together, and thus save their industry.

The Senator is right. If 151 voted for the marketing order and 149 voted against it, I think there would be 300 votes cast for it; but that cooperative would not last overnight if it was that evenly divided.

Mr. FREAR. I recognize that the people of New England and that area are a bit different, perhaps, from people in other regions of the Nation.

Mr. AIKEN. Not so much.

Mr. FREAR. I think they have many qualities that are very beneficial to this country, and we count on them for a lot of things to keep our country stabilized. They are pretty sound people, and I recognize it.

Mr. AIKEN. Almost all of them are.

Mr. FREAR. And the Senator is a fine representative of those people.

The Senator may have thought the question I asked was a hypothetical question.

Mr. AIKEN. No.

Mr. FREAR. The Chesapeake Bay marketing order went into effect 2 months ago, and is known as Order No. 127. To make that order become effective, a cooperative voted as has been stated. It voted for the entire membership in the affirmative. I do not know the figures exactly, although from a pretty official source we have had it told to us that approximately 40 percent of the producers voted against it and 60 percent of the producers voted for it. But it was voted 100 percent. Assuming there were 1,200 members of the cooperative, to use a round number, 1,200 producers were voted in favor of a marketing order by the Federal Government. Outside of this one cooperative, whose concentration of delivery is in the city of Baltimore, Md., there are other producers in the area circumscribed by the order, who are not members of the cooperative. Those producers had the right to vote and did exercise the right to vote. They voted in the majority against the marketing order. So when the number of votes against, on the outside, were added to those who voted against in the cooperative, those voting against the order amounted to more than 50 percent of the total.

Mr. AIKEN. The solution to that problem, of course, is that no one has to belong to the cooperative; and if they do not belong to the cooperative they cast their own votes as individuals rather than en bloc. They have to weigh one value against the other.

Mr. FREAR. Then the Senator would want to penalize a producer member of the cooperative by having him get out of the cooperative to get his vote counted as he voted.

Mr. AIKEN. Oh, no.

Mr. FREAR. Because he wants the advantage of belonging to a co-op, he joins, but, in order to get his vote counted, he would have to get out of the co-op.

Mr. AIKEN. No. The majority rules in a co-op, as it does in a town meeting, or in the Senate. The Senator from Delaware would not want to get out of the Senate just because he had lost a couple of votes.

Mr. FREAR. I have lost a few.

Mr. AIKEN. But the Senator is still here, and very likely, he will continue to be here for a long time.

Mr. FREAR. But I would not be here if a majority of the people of my State did not want me to come back again. I hope they do not feel that way.

Here is a situation in which a man who voted in the negative had his vote counted in the affirmative for something he did not want. That is why the milk order was put into effect, because the total vote of the cooperative was counted in favor.

Does the Senator from Vermont agree with that type of operation or voting?

Mr. AIKEN. Do I agree with majority rule in a cooperative? Yes.

Mr. FREAR. If the majority votes a certain way, the entire membership can cast all of their votes in the affirmative?

Mr. AIKEN. Yes; I would say that would be representative of the views of the cooperative members as such.

Mr. FREAR. I think, if that was the only co-op voting, I could agree with the Senator; but when they were put on the defensive—or on the offensive in this case—against those who were voting individually on the outside, it seems it was a bit unfair.

Mr. AIKEN. If I had not gone through this some 25 years ago, perhaps I would feel differently about it, but I vividly recall the time when dealers who wanted to come into my State, which had half of the producers in New England, would say, "We will give you an extra price if you do not do so and so, which will help the rest of the farmers." They worked it pretty well for a long time, until milk was worth but 1 to 2 cents a quart. They carried it too far, and they forced the farmers to get together in their cooperatives. They have been in them ever since. As I said, about 99 percent of the milk that is shipped out is shipped by the cooperatives, and the voting on the marketing orders is voted on by cooperatives today.

Mr. FREAR. The Senator has been diligent in answering my questions, and he has been quite persuasive, but not quite enough. I wish to ask a question or two. I would not want to impose too much on the time of the Senate, because it wants to vote on the bill, and my colleague has something to say that is perhaps more important than this.

The Senator is familiar with classification of milk under milk marketing orders, is he not?

Mr. AIKEN. I am. There are classes I and II.

Mr. FREAR. Class I and class II.

Mr. AIKEN. And in some cases there is a class C.

Mr. FREAR. What are the classes?

Mr. AIKEN. They are class I and class II. Class I is the milk which is sold for family consumption and to restaurants. It is sold as fluid milk. Class II represents the surplus, which is more than can be sold for direct human consumption in the form of fluid milk. That is called class II. It goes into powdered milk and cheese and into butter and powder.

In New England, I do not think they break even on class II milk. Nevertheless, for a dealer to be sure of enough milk to meet his trade on weekends and holidays, he has to have about 20 percent more milk than he needs, on the average—at least 20 percent of class II milk—in order to meet the demand, day in and day out.

Formerly there were dealers who would go to certain farmers and say, "We will take your milk. We will pay you this price, which we can afford to pay, because we will sell all of your milk for household use, and you will not have to take any of the loss on the surplus milk that is produced in the area."

They worked that fine for a while, by paying the best of the farmers a fair price, and paying all the rest of the farmers a low price. They were carrying all of the class II milk. However, after the farmers got together and organized cooperatives, all of the farmers got more than the best paid farmers had previously gotten for the fluid milk. All of the farmers then got a uniform minimum price, and they all had to bear their share of the surplus production of the area. It worked out very well.

After we got away from that $1 a hundredweight milk, or $1¼ a hundredweight milk, which was the price in 1937, the price gradually went up. It is not high enough today. The price of milk has not gone up anywhere near in proportion to costs of production. However, the price is definitely better than it would have been if the farmers had not organized, because otherwise they would all be getting a much lower price.

Mr. FREAR. I do not want the Senator from Vermont to get the idea that I am not in favor of producers joining together to obtain better prices for milk.

Mr. AIKEN. I know the Senator favors that.

Mr. FREAR. I am leading up to another question.

Mr. AIKEN. The Senator simply has in his State a higher percentage of farmers who have sales for class I milk than I have in my State. That makes for a difference of opinion.

Mr. FREAR. It is a fact that some States have more surplus milk than other States. There is no question about that.

Mr. AIKEN. Not for the same reason, however.

Mr. FREAR. It is also true that any producer is a pretty good producer if he can keep his flow of milk even for 365 days a year.

Mr. AIKEN. He cannot.

Mr. FREAR. And no distributor can keep his sales on a level for 365 days a year.

Mr. AIKEN. Neither can the farmer.

Mr. FREAR. There has to be some fluctuation, both in regard to production and distribution. I recognize that there has to be some tie-in to take care of the ups and downs on either side.

The Senator has told me that the class I milk is the fluid milk for human daily consumption. The class II milk is the surplus, and the class III milk has some other distinction.

Mr. AIKEN. In the marketing order areas the class II milk is usually of the same quality as the class I milk, only it is in a supply which is more than is needed on a particular day for fluid milk consumption.

Mr. FREAR. As a matter of fact, if the fellow is on a blended price, two-thirds of a can of milk would be class I milk and one-third of it would be the class II milk. I can recognize that. There is no difference in the milk.

Mr. AIKEN. Not in the marketing order areas. Where there is no marketing order area there could be a difference in the milk.

Mr. FREAR. Does the Senator mean that cannot happen?

Mr. AIKEN. In practically all of the areas the milk is subject to board of health requirements. There are certain sanitary requirements.

Mr. FREAR. I do not think the Senator quite understood me.

Mr. AIKEN. I think so.

Mr. FREAR. So far as the sanitary requirements are concerned, if the butterfat content is correct and the bacteria count is low enough and the temperature below a certain degree, the milk will come to the producer or the handler and will be class I or class A or whatever it may be called. That producer will have two-thirds of the sales in fluid milk and one-third of the sales in byproducts.

Mr. AIKEN. It is all of the same quality.

Mr. FREAR. Every can of milk that producer receives is class I milk.

Mr. AIKEN. It could qualify as class I milk, but if it is not all sold for fluid milk consumption the part which is left over in any area is the class II milk.

Mr. FREAR. We are basing this discussion upon the quality.

Mr. AIKEN. The class II designation does not change the quality.

Mr. FREAR. It does not make any difference whether it is the top half of the milk or the lower half.

Mr. AIKEN. That is correct.

Mr. FREAR. Does the Senator know of any class II milk which is purchased for the class II established price in a Federal milk marketing area and which is sold for fluid milk, without there being considered the blend price which is paid to the producer?

Mr. AIKEN. Oh, yes. That used to be done quite often. The class II milk was taken from one area into another market and sold as class I milk. That way the price received would be $6 a hundredweight instead of $3 a hundredweight.

Mr. FREAR. Very well.

Mr. AIKEN. That was done rather extensively in New England. The farmers were losing $1.5 million or $2 million a year as a result of that practice, so they petitioned to have the area to which the class II milk was being transported and sold for class I milk included in the larger marketing area. That was voted. Now the farmers really get a better price; and the distributors, I suppose, are doing very well, but not making their earnings quite so easily as they were before.

Mr. FREAR. Let us forget about the distributors and assume they are on a par.

Mr. AIKEN. We cannot forget them.

Mr. FREAR. Yes, we can.

Mr. AIKEN. Oh, no.

Mr. FREAR. If the producer is in a class I area and if he has a surplus and he sells it as class II milk, and it goes to another area as class II milk and is sold in that area as class I milk, at a much higher price——

Mr. AIKEN. That is a common practice, where it can be done.

Mr. FREAR. Then how would that producer be paid?

Mr. AIKEN. He would be paid the class I milk price for the overall production of the class I milk, but he would be paid the class II milk price for that which the distributor takes into another market, which he sells as class I milk or which is used for manufacturing purposes.

Mr. FREAR. Very well. I do not agree with all of that, but let us assume that is correct.

Mr. AIKEN. It is a fact. I can prove every word of it.

Mr. FREAR. Oh, no.

Mr. AIKEN. Yes, I can.

Mr. FREAR. No. I will contest with the Senator on that, because I can give examples.

Mr. AIKEN. I have particular areas in mind, where that has been done extensively.

Mr. FREAR. I agree with regard to the practice, as to what the Senator said has been done. I agree with that.

Mr. AIKEN. Of course, I do not know whether it is being done in Delaware, in Maryland, or in the Baltimore area.

Mr. FREAR. If a producer is in an area where the blended price is 95 percent class I, and that area is a class I area because of increased consumption of fluid milk in that area, the producer would get the advantage of the difference between two-thirds and 95 percent in that instance, would he not?

Mr. AIKEN. Well, if he sends the milk to market and two-thirds of it is sold as class I milk, we will say at $6 a hundredweight, he will get $6 a hundredweight for two-thirds of the milk. The other one-third will be the class 2 milk. He may get $3 a hundredweight for the other one-third of the milk.

Mr. FREAR. That is correct.

Mr. AIKEN. The blend price would be the composite price as between $6 and $3. It would come out about $4.50 or $5 per hundredweight.

Mr. FREAR. Four dollars and fifty cents?

Mr. AIKEN. Four dollars and fifty cents or five dollars a hundredweight.

Mr. FREAR. That is correct. If the producer is getting $4.50 or $5 per hundredweight on that basis and the distributor makes the area a 95 percent class I market, what would the producer get?

Mr. AIKEN. Well, if the distributor sells the milk as fluid milk in that marketing area——

Mr. FREAR. He has to, if it is class I.

Mr. AIKEN. Then he would have to pay the fluid milk price for what is sold as fluid milk. If he can ship to another market——

Mr. FREAR. That is not the question.

Mr. AIKEN. Then he can get the higher price. The farmer would not get that.

Mr. FREAR. That is not an answer to the question. That is not a solution to the problem. If the distributor makes the area a 95 percent class I market, he will have to pay the producer 95 percent class I prices, will he not?

Mr. AIKEN. I never heard of a distributor paying 95 percent class I price for class II milk. He will pay for about 50 percent of it as class I.

Mr. FREAR. Again I have a question for the Senator from Vermont. I can show to the Senator that there are distributors who do that.

Mr. AIKEN. If any area can get 95 percent of the class I price for the class II milk, it is a very fortunate area, I would add.

Mr. FREAR. I agree. There is an area like that. What the Federal milk marketing order is doing now is cutting down the price. The producers in the area, instead of getting 95 percent class I prices, are assessed so that they have to put the milk in a pool, so that the farmer in another area is going to benefit and the producer in the particular area is going to have the money taken from him.

Mr. AIKEN. It would all depend upon whether the 95 percent class I price which is received for the class II milk amounts to more than what the farmer and all of his neighbors would get if they cooperated and all of them went under an order.

Mr. FREAR. Well, there is an area laid out. It comprises two counties.

Mr. AIKEN. Yes.

Mr. FREAR. As a matter of fact, we can take the whole peninsula.

Mr. AIKEN. I am not questioning the situation set forth by the Senator from Delaware. It is entirely possible, because before we got the marketing order in New England we had certain distributors who would favor certain groups of producers, but the result was that the distributors kept down the prices for all producers, with the possible exception of those few.

They were used as a lever, and they would pay a high price when production was short. They would go out and steal each other's producers. But when the surplus season arrived, they would drop all the producers down to the bottom.

Mr. FREAR. Yes. I believe also there were people who used to put rotten apples in a basket.

Mr. AIKEN. I have seen that happen.

The Senator from Delaware has observed that the people of Vermont do not do that any more.

I will not admit that they ever did.

They are much better off now than they used to be.

Mr. FREAR. Yes. And that is due in no small part to the efforts of the Senator from Vermont. I will say that for him.

In response to an inquiry addressed to the Secretary of the Department of Agriculture, Mr. Clarence L. Miller, Assistant Secretary, in explanation of the

background of the Federal marketing program in Upper Chesapeake Bay, Order No. 127, stated in part:

Since the minimum prices which all handlers must pay are equal in each use, no handler is placed at a competitive disadvantage with respect to his sales of milk within the regulated marketing area.

I will take that for granted. He goes on:

The other major facet of the order program is the equal sharing among farmers of returns from sale of milk. In this way, all farmers have an equal share in the Class I market and also assume an equal share in any surplus delivered to the market. This method of sharing returns is an important stabilizing influence, for it removes the necessity for farmers to undercut each other in an attempt to retain an equitable share of the Class I market.

This equal sharing of returns is carried out through a so-called equalization fund. Handlers use different proportions of their receipts of milk as Class I and Class II. Hence, the utilization prices of individual handlers will vary from the marketwide average price. The attainment of uniform returns to all producers, therefore, requires that those handlers whose utilization price is higher than the market average uniform price pay the difference between such uniform price and their own particular utilization price into the equalization fund, and those handlers whose utilization price is lower than the market uniform price draw money out of the fund.

That statement struck me as a little curious, because it has not been too long ago when this administration was talking about some type of social order. To me that is taking money from a producer in one area and putting it in a pool so that a producer in another area can draw it out. To me that is economic equalization. Does the Senator from Vermont agree or disagree?

Mr. AIKEN. I will say that Mr. Miller is correct when he says each producer is required to carry his share of the surplus production of that area. He is not quite correct when he states they all get the same price for the milk, because under the Federal marketing order the Secretary fixes a minimum price for the milk. Conditions may be different in the Baltimore market from what they are in the Boston market or other markets. Distributors in the New England markets frequently pay premiums, and some of them pay premiums at certain times of the year which run up to 60 or 80 cents a hundred pounds. Others will pay a premium only a few cents per 100 pounds above the minimum price fixed by the Secretary under the marketing agreement. For example, for milk in bulk tanks, most of the companies up to now have given about 15 cents per 100-pound premium for the milk above the price paid for milk shipped in cans. So there is nothing in the marketing order which would prevent any distributor from continuing to pay a higher price to special producers if he saw fit. But they will have to carry their share of this surplus, and that will be based on the average price.

Mr. FREAR. I have a great deal of respect for Mr. Miller, but I have a little more respect for the Senator from Vermont because I think he knows a little more about what he is talking about.

Mr. AIKEN. I have seen people in the milk business for 40 years who have not learned all there is to know about the business. I have seen them get tripped up after spending all their lives in the business by someone who had outfoxed them. It is one of the most competitive businesses on the face of the globe.

Mr. FREAR. Yes. I believe the Senator is looking at one right now. There are a number of small producers and small handlers in our State. In my opinion, if some large distributors on the other side of the bay wished to take another area into their distribution system, they might use the milk order as a means of forcing those handlers and producers under a milk order, and the only result would be to put the small handlers out of business, and then the small producer would be at the mercy of the large operator.

Mr. AIKEN. Frankly, I do not know what the formula for the Baltimore marketing area is. I believe the situation on the Eastern Shore is undoubtedly as described by the Senator from Delaware, and if it is—and I expect it is—I would be doing exactly what he is doing here. I recall that 20 or 25 years ago in New England there were 18 auctions of dairies in 1 town in 1 week; small dairies going out of business. The milk producers just had to get together.

Mr. FREAR. I believe the producers have every right to get together in order to market their milk, and I believe the distributors have a right to have a fair margin of profit. But the ones I am most interested in are the producers of milk. I am frank to admit that. I do not wish to see the producers of milk in Delaware compelled to market 95 percent of their class I milk in the 66⅔-percent class. That is the whole object of the proposal.

I think the Senator from Vermont has taken care of his constituents in Vermont, and I know they are grateful to him for it. The senior Senator from Delaware and I wish to do a little something for our constituents in Delaware. I apologize to the Senator from Georgia and the Senator from Vermont for utilizing so much time, but I am grateful to both of them.

Mr. AIKEN. Mr. President, the people of Delaware are fortunate to have such able Senators as the senior and junior Senators from Delaware.

Mr. RUSSELL. The Senator from Delaware need not apologize to me. I expect Senators to represent their constituency with the same feeling and determination which the Senator from Delaware always displays. Again may I say that I discussed this subject at an earlier date with the senior Senator from Delaware, and I can say that the farmers of Delaware are mighty lucky they have representing them the two Senators who are presently with us.

Mr. WILLIAMS of Delaware. Mr. President, on behalf of the Senator from Illinois [Mr. DIRKSEN] and myself I send to the desk an amendment and ask to have it stated.

The PRESIDING OFFICER. The amendment offered by the Senator from Delaware on behalf of himself and the Senator from Illinois will be stated.

The CHIEF CLERK. It is proposed on page 14, lines 1 and 2, to strike out "$250,000,000" and to insert in lieu thereof "$100,000,000."

Mr. WILLIAMS of Delaware. Mr. President, the budget request for this particular item, which is for the ACP payments, is only $100 million. The testimony of the representatives of the Department of Agriculture clearly states that all that they are requesting or all that they think they need is $100 million. I talked with officials of the American Farm Bureau, and they recommended that this item be reduced to $100 million; and they stated emphatically in the testimony before the committee that they thought the money could better be used elsewhere so far as the American farmer was concerned.

The purpose of this appropriation is to finance a portion of the cost of lime and other types of fertilizers for farmers. The Government pays about half of the cost under certain conditions.

Thus we have a situation in which we are spending $4 billion to $5 billion a year to support the prices for American agriculture. We have about $9 billion worth of agricultural commodities on hand, and in the proposed legislation we would be giving $250 million presumably to enable the farmers to produce more surplus. The proposal is to give free fertilizer to produce more crops at the expense of the American taxpayer. This is a ridiculous contradiction. There may have been a use for these programs in the past, but I do not think they are needed at a time when we have more agriculture crops than we need.

There are many other features of the bill which deal with soil conservation that can be justified, but I think this is one item which can well be returned to the budget request, thereby saving $150 million. I know the Senator from Georgia will agree that we cannot reduce the amount of the appropriation this year. This is an item under which we appropriate one year in advance. Last year we had a similar debate in an attempt to cut the figure back, and we lost. Congress last year insisted upon the $250 million figure. As a result we are appropriating in this bill $242 million to pay last year's commitments.

I agree fully with those other Members of the Senate who say it will be unrealistic to try this year to cut the $242 million figure, although I did try to cut it last year. Last year when we rejected an amendment similar to the one which is now being offered, we in effect instructed the Department of Agriculture to make these contracts with the American farmers to the extent of $250 million annually. Once they are made they must be paid. We have no alternative.

By the same token if we reject the amendment today we will automatically increase the expenditures in the next fiscal year by $150 million over and above the amount which is recommended by the Bureau of the Budget. I repeat that the Department of Agriculture, the

American Farm Bureau, and many other farm organizations have endorsed this reduction.

I do not for 1 minute question the sincerity of the Senators who are opposing the amendment—they believe in the program—but it is significant that the strongest supporter for the $250 million in the bill is the National Agricultural Limestone Institute. As a matter of fact, they favor raising the amount to $500 million, which would be an increase to five times more than the request of the Bureau of the Budget. The membership of this institute sells most of the lime under this program. It maintains a Washington representative, Robert M. Koch, as a lobbyist. It realizes, of course, that its best customer is the U.S. Government and that all they have to do is to have the appropriations increased in order to sell more lime. All they have to do is sit back and sell the lime to the U.S. Government. In an effort to get larger appropriations they circulate millions of copies of letters throughout the various States calling the direct attention of the farmers as to how Members of the Senate voted on this appropriation. They pointed out in their letters how disastrous it would have been if the appropriation had been cut even a little bit.

Disastrous for whom? Disastrous for the organization which is selling the lime to the Government. Mr. Koch sent this letter over his signature as president of the organization throughout the country. Certainly I do not question his sincerity, because he has a nice thing, living in Washington as a lobbyist and getting an appropriation out of the Government under which the Government will buy his lime. All he has to do is sit back and let the Government pay for it.

I have before me what is allegedly a reprint from the CONGRESSIONAL RECORD that was circulated by this high-powered lobbyist. It even has the seal of the United States of America on it to make it look official.

It is labeled "Congressional Record" and is described as "proceedings and debate of the 86th Congress, 1st Session, June 2, 1959." It indicates that this was the entire debate on the amendment last year. However, even though it looks like a reprint from the CONGRESSIONAL RECORD, it is actually not a reprint at all. He has skipped around on several pages of the CONGRESSIONAL RECORD and taken excerpts from speeches of various Senators, and then assembled those excerpts as being the debate in support of his big appropriation. This is definitely and deliberately misleading.

Various Senators are quoted in this allegedly true transcript of the CONGRESSIONAL RECORD of June 2, 1959, but the quotes are taken out of context and reassembled to support his own argument.

I realize that everyone has the right to quote from the CONGRESSIONAL RECORD. It is public property once it has been printed. No one has the right, however, to go through the CONGRESSIONAL RECORD, take out of context statements by various Members of the Senate, assemble those excerpts, and then present them as a statement of a Senator's position, and further to indicate that he has reproduced the Senate proceedings and debate. That is deliberately being misleading.

Every Member of the Senate knows that if we wish to make a reprint from the CONGRESSIONAL RECORD we must print the transcript in its entirety or clearly state that it represents excerpts only. We cannot just eliminate the remarks of Senators who happen to be in opposition to what we advocate.

These letters with the alleged reprints of the CONGRESSIONAL RECORD were mailed to millions of farmers. They call the attention of the farmers to how the Members of Congress from their States voted and indicate that those who voted to cut the appropriation almost destroyed the American farmer.

I have here the letter that was sent throughout the State of Delaware. Its enclosure allegedly is a reprint of the debate last year when an effort was made to reduce this same appropriation. The letter states that Senator FREAR and Senator WILLIAMS voted against this program and continues by saying:

> Fortunately, they were in the minority, and the program was left at $250 million.

The letter further states that the vote was 51 to 26 to defeat the Williams amendment. Presumably they think it would have been disastrous if the amendment had been accepted. They even claim that 84 percent of the farmers in Delaware were against the vote cast by Senator FREAR and Senator WILLIAMS. Mr. Koch knows how to sell lime to the Government, but he does not know the Delaware farmers. I think the two Senators from Delaware know what we are doing when we represent our farmers. It might interest Mr. Koch to know that our farm organizations have strongly supported the position we have taken here on the floor of the Senate. Mr. Koch is just another lobbyist whose only interest in the American farmer is how much money he can make selling lime to the Government.

Whether a lobbyist is for or against a bill or proposal is his business, and I respect his right to represent his clients; but I raise serious question with respect to the propriety of any lobbyist's taking excerpts from the CONGRESSIONAL RECORD, assembling them in this fashion, and then circulating them throughout the country, representing them to be the complete Senate proceedings, in an attempt to obtain a larger appropriation. Unquestionably, this is a threat by a lobbyist to defeat the representatives in Congress who do not comply with his wishes by voting as he says.

I wonder whether Mr. Koch should not register the expenditure for circularizing what is supposedly an accurate reproduction of the CONGRESSIONAL RECORD and whether he should not also file with the appropriate elections committees the contribution he is making toward the election or defeat of various Members of Congress who do not knuckle down to what he wants.

I will ask the Department of Justice to review these letters to see if it is a proper lobbying activity for a registered lobbyist to take. I do not believe it is proper for him to take from the congressional proceedings excerpts from several pages and assemble them in such a fashion as to make them look like a continuous debate. Can this be charged off as expenses which would be indirectly attributed to lobbying?

The strongest supporters of this increased expenditure are those who stand to make the most money; namely, the Limestone Institute. It wants to sell $500 million worth of lime throughout the United States without the necessity of having salesmen go out on the road, as they ordinarily would have to do. They know that they can get a good price for it in this way.

I raise a question about the advisability of appropriating two and a half times as much money as the Department of Agriculture or the Bureau of the Budget recommends. Why should we spend $250 million to furnish free fertilizer or to subsidize lime for American farmers to produce more crops when we already have an overabundance of these agricultural products? We are already paying around $350 million under the bill to get farmers to take out of production some of their land.

This contradictory program will bankrupt the American taxpayers.

In the interest of the farmer and in the interest of the taxpayers I believe it is about time that Congress made up its mind in which direction it wishes to go. Do we want to curtail the surpluses or are we trying to increase them? If my amendment is rejected it will automatically increase the appropriation in the bill by $150 million above what is needed. In the interest of economy and in the interest of America the amendment should be agreed to. It may not be in the interest of the American Agricultural Lime Institute, but I am not concerned about the Lime Institute. It is about time that they realize that if we are going to have a free enterprise system in this country they had better accept some responsibilities. As one Member of the Senate, I do not hesitate to tell them that it is not their place to sell their lime here in Congress but to get out on the American farms and do it the way it used to be done.

Mr. LAUSCHE. Mr. President, will the Senator yield?

Mr. WILLIAMS of Delaware. I yield to the Senator from Ohio.

Mr. LAUSCHE. The Senator from Delaware has just mentioned the National Agricultural Limestone Institute. About 3 months ago I received an invitation to be present at a banquet sponsored by that association. The letter came to me about a week after I had received a letter from an Ohio constituent, a farmer, which enclosed a letter which the Limestone Institute had sent to Ohio farmers. The letter was written by the Limestone Institute, and in substance stated:

We call your attention to the fact that Senator LAUSCHE voted in favor of the Williams amendment, which would have reduced the appropriation for this program from $250 million to $100 million. We do not point this out to you for the purpose of prejudicing Senator LAUSCHE in his political position, but we want you to know that he voted against the amendment.

I wonder why they pointed out that I voted against it, if they did not intend that I should be prejudiced in the eyes of Ohio voters.

The Ohio farmer who wrote to me said, in effect, "Instead of being influenced by the letter, I have become fortified in the conviction that the position which you and Senator WILLIAMS, of Delaware, took is right." I do not know whether it has been disclosed on the floor of the Senate that letters of the type which my Ohio constituent referred to were sent out.

Mr. WILLIAMS of Delaware. I have just discussed that point and pointed out how they were being mailed to farmers in several States.

Mr. LAUSCHE. In what unprejudiced, objective, national-serving purpose is this institute engaged? Is it interested in the strength and the fiscal stability and the goodness of our Government? Or is it sending out letters of this type for the purpose of insuring that there shall be made available to them a large lime-purchasing public? The questions are rhetorical; they answer themselves. The interest of the Limestone Institute is the selling of lime, even though the taxpayers generally have to pay for it.

I want it clearly understood by the farmers of Ohio, in particular, and by all the taxpayers of Ohio, in general, that I will not vote for the spending of money to reduce farm production, on the one hand, and then for the spending of money for the purpose of increasing farm production, on the other hand. It is similar to the situation of a man who is building up the front of his house while the back of it is on fire.

I commend the Senator from Delaware for the position which he has taken in this matter. If we intend to reduce farm production to, in a measure, equal the consumption of farm products, the way to do it is not by spending this amount of money to provide fertilizer and other things which will increase farm production.

I commend the Senator from Delaware for the position which he took. I shall gladly support him in the amendment which he has offered today.

The time has come to declare the facts as they exist. It is argued that each farmer will get about $170. There are 1,100,000 of them—1,100,000 voters. How can we afford to pay each one $170? The farmer has rebelled against this. He does not want to be offended in that way. Yet that is what we are doing on the floor of the Senate. I will not be a party to it.

Mr. WILLIAMS of Delaware. I thank the Senator from Ohio for his statement. I fully agree with his statement. I say again that I know there are Members of the Senate who sincerely believe in the full appropriation for this program. I respect the right of any Senator to differ with the position I take and which I know the Senator from Ohio takes. But I join with the Senator from Ohio in questioning whether there is any degree of sincerity in the statement of Mr. Koch, the president of the National Agricultural Limestone Institute, so far as the American farmer is concerned. His only interest is in selling $500 million worth of lime to the U.S. Government. He is interested in what he can make on the farmer and not in what he can do for him.

I point out again that in the letter sent throughout Ohio and throughout Delaware as well as throughout other States he has noted that the amount involved is $250 million and has suggested that instead of cutting it to $100 million it should be increased to $500 million a year. He is strongly against the action of those who voted against the increase.

He was careful in the letters to point out and emphasize the fact that the institute is calling this to the reader's attention not with the idea of defeating a certain Senator; but that objective is certainly foremost in his mind. The letter was sent out for only one reason, and that was to be a warning to Members of the Senate that if we continue to vote against their recommendations for appropriations, they will circularize the farmers of our States in an attempt to defeat us in the election. There is an implied threat in every one of the letters.

Mr. LAUSCHE. Mr. President, will the Senator yield?

Mr. WILLIAMS of Delaware. I yield.

Mr. LAUSCHE. Does the Senator have a copy of that letter?

Mr. WILLIAMS of Delaware. Yes.

Mr. LAUSCHE. I have not been able to locate my own copy.

Mr. WILLIAMS of Delaware. It so happens that I have a copy of the letter that went to the farmers in Ohio as well as copies of the letters which were sent to the various other States including Delaware.

I call attention again to the fact that along with each of the letters that went to the various farmers was an alleged reprint from the CONGRESSIONAL RECORD. It was described as a part of the proceedings of the 86th Congress, 1st session, under date of June 2, 1959.

That enclosure was not the proceedings of the Senate of that day on the debate on this question. All contain excerpts from statements which various Senators made as they spoke on the amendment. It is made to appear that practically all the speakers were opposed to the amendment.

If a man wishes to distribute the proceedings of the U.S. Senate from the CONGRESSIONAL RECORD, they are supposed to be printed in their entirety. He does not have a right to take a paragraph from a man's statement at one place and another paragraph from another man's statement, assemble them, and send them out under the heading "CONGRESSIONAL RECORD Proceedings" without an indication that they are only excerpts from the RECORD.

I believe Mr. Koch has gone a little too far in his concern to sell lime to the U.S. Government. I wonder if it would not do him good to get out in the old-fashioned way, as many American farmers do, and work for a living rather than to sit back and gouge the American taxpayers as well as the farmers as he has been doing for the last several years.

I hope the amendment will be adopted, not as a repudiation of Mr. Koch, but on its merits. Certainly the taxpayers can well use the saving of $150 million, which would be saved, and it would bring the amount down to the budget recommendations.

COMPACT FOR APPORTIONMENT OF WATERS OF BIG BLUE RIVER BETWEEN STATES OF KANSAS AND NEBRASKA

Mr. HRUSKA. Mr. President, I ask that the Chair lay before the Senate the amendment of the House of Representatives to Senate bill 1605. After I make a short explanation, I desire to move that the Senate concur in the amendment of the House of Representatives.

The PRESIDING OFFICER laid before the Senate the amendment of the House of Representatives to the bill—S. 1605—granting the consent of Congress to the States of Kansas and Nebraska to negotiate and enter into a compact relating to the apportionment of the waters of the Big Blue River and its tributaries as they affect such States, which was, to strike out all after the enacting clause and insert:

That the consent of Congress is hereby given to the States of Kansas and Nebraska to negotiate and enter into a compact relating to the interests of such States in the waters of the Big Blue River and all its tributaries, and providing for an equitable apportionment between said States of the waters of the Big Blue River and its tributaries and for matters incident thereto: *Provided*, That one qualified person appointed by the President of the United States shall participate in such negotiations as chairman, representing the United States, and shall make a report to the President and to the Congress on the proceedings and on the compact. The person so appointed shall be chosen from among persons who are regularly employed full time by a department or agency of the United States and shall receive no additional compensation by reason of appointment under this Act. His travel expenses, including per diem in lieu of subsistence, shall be borne by the department or agency from which he is appointed. No compact, the negotiation of which is authorized by this Act, shall be binding upon the parties thereto until it has been ratified by the legislatures of each of the respective States, and approved by the Congress of the United States.

Mr. HRUSKA. Mr. President, the House has amended the bill, which was passed last year by this body, by inserting an amendment in the nature of a substitute. The effect of the amendment is to limit the appointment by the President of the United States of the person who will represent the United States to

a person who shall be chosen from among persons who are regularly employed, full time, by a department or agency of the United States, and it is provided that such person shall receive no additional salary.

The Senate version allowed the appointment of the Government representative to be made by the President from among persons either within the Government or outside the employ of the Government.

Before I move that the Senate concur in the amendment of the House, let me say that I consulted with the Senators from Kansas and also with my colleague from Nebraska [Mr. CURTIS]; and all of them are in agreement with the motion which I shall make, and are in support of it.

Mr. CARLSON. Mr. President, will the Senator from Nebraska yield?

Mr. HRUSKA. I yield.

Mr. CARLSON. I understand that the amendment relates to Senate bill 1605, which grants the consent of Congress to the States of Kansas and Nebraska to negotiate and enter into a compact relating to the apportionment of the waters of the Big Blue River and its tributaries as they affect such States.

Mr. HRUSKA. That is correct.

Mr. CARLSON. I also understand that, under the bill, the President will make the appointment; and I further understand that, under the amendment of the House of Representatives, instead of appointing any person, the President must appoint someone who already is employed by the Federal Government.

Mr. HRUSKA. That is correct; and no additional compensation will be paid to such person for his services on the Compact Commission.

Mr. CARLSON. Very well.

Mr. HRUSKA. Mr. President, having made that explanation—and let me say that the matter has been cleared by the leadership on both sides—I now move that the Senate concur in the amendment of the House of Representatives.

The PRESIDING OFFICER. The question is on agreeing to the motion of the Senator from Nebraska.

The motion was agreed to.

CONTINUATION FOR 2 YEARS OF EXISTING SUSPENSION OF DUTIES ON CERTAIN LATHES

Mr. BYRD of Virginia. Mr. President, will the Senator from Georgia yield to me?

Mr. RUSSELL. I yield.

Mr. BYRD of Virginia. Mr. President, I ask that the Chair lay before the Senate a message from the House of Representatives announcing its disagreement to the amendments of the Senate to House bill 9862.

The PRESIDING OFFICER laid before the Senate a message from the House of Representatives announcing its disagreement to the amendments of the Senate to the bill (H.R. 9862) to continue for 2 years the existing suspension of duties on certain lathes used for shoe last roughing or for shoe last finishing, and requesting a conference with the Senate on the disagreeing votes of the two Houses thereon.

Mr. BYRD of Virginia. I move that the Senate insist upon its amendments, agree to the request of the House for a conference, and that the Chair appoint the conferees on the part of the Senate.

The motion was agreed to; and the Presiding Officer appointed Mr. BYRD of Virginia, Mr. KERR, Mr. FREAR, Mr. CARLSON, and Mr. BENNETT conferees on the part of the Senate.

AGRICULTURAL AND FARM CREDIT ADMINISTRATION APPROPRIATIONS, 1961

The Senate resumed the consideration of the bill (H.R. 12117) making appropriations for the Department of Agriculture and Farm Credit Administration for the fiscal year ending June 30, 1961, and for other purposes.

Mr. RUSSELL. Mr. President——

Mr. COOPER. Mr. President, will the Senator from Georgia yield?

Mr. RUSSELL. I yield.

Mr. COOPER. Let me say that I can understand the feeling of the Senator from Delaware [Mr. WILLIAMS]; but I should like to suggest to the Senate that when Senators vote on the amendment of the Senator from Delaware, they should distinguish between the two issues.

The Senator from Delaware has been talking about the practices of a representative of the Limestone Institute, as I understand it. But when the vote is taken, Senators must vote on the ACP on its merits.

I know nothing about the matter of propriety to which the Senator from Delaware has referred. I assume that whatever he has said is correct. But I say that when the Senate proceeds to vote, it should consider whether it wishes to support the ACP.

I should like to point out to the Senate that the agricultural conservation program is a cost-sharing program. The costs are shared between the Federal Government and the farmers themselves.

As to the limestone used in the program, I believe I am correct in saying that a few years ago, in 1953 or 1954, because questions had been raised about the use of limestone to increase crop production, the Department of Agriculture changed the regulations so as to provide that ACP limestone could no longer be used on any farmland for any crop, but must be restricted to land already in grass or legumes, or land being put into permanent or rotation pasture. That is, limestone can now be used only on fallow ground, for green-manure crops, for soil-building and conserving practices, not for crop production purposes. In most cases, I understand, the land must remain in grass for 3 or 4 years. If limestone is being used on cultivated land to increase crop production in the State of Delaware, that is something about which the Senator from Delaware can inquire.

I think the ACP has been one of the best farm programs, reaching large numbers of small farmers at a relatively small cost per farm. It encourages a great variety of soil-building and water-conserving practices, and the farmers share the costs. The ACP makes it possible for thousands of farmers to build up their soil, establish and maintain vegetative cover, provide erosion control, follow better forestry practices, and engage in any number of other sound conservation practices. I have always supported this program, and I have seen the results it has brought to Kentucky.

I intend to support the action taken by the committee to provide the full regular authorization of $250 million for the ACP. With all due deference to my friend the Senator from Delaware, I call attention to the fact that when the vote is taken, Senators will not be voting on whether some representative of the Limestone Institute followed a practice which might not be proper. Instead, we shall vote on the agricultural conservation program on its merits. I shall oppose the amendment, and I hope it will be defeated.

Mr. President, I ask unanimous consent to have printed at this point in the RECORD, as an illustration of the worth of the ACP, a statement about the agricultural conservation program in Kentucky.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

AGRICULTURAL CONSERVATION PROGRAM IN KENTUCKY

Again for 1959 the owners and operators of over 40,000 Kentucky farms made use of agricultural conservation program (ACP) cost-sharing to make additional progress on their soil, water, and woodland conservation goals. These farmers, whose farms include about three-eighths of the cropland in the State, utilized over $7 million of ACP funds, and matched that amount by their own contributions.

The establishment and improvement of permanent vegetative cover for soil and watershed protection have continued in recent years to be the most used ACP practices. However, there has been some reduction in the percentage of Kentucky's ACP funds used for these purposes, while forestry and mechanical or earth moving types of practices have increased. The establishment of livestock water facilities as a means of protecting vegetative cover or making practicable the utilization of land for vegetative cover, is an important practice in the State, accounting for about one-seventh of the program. During the last 5 years, over 22,000 livestock water storage dams have been constructed in the State with ACP assistance.

For several years there has been a strong increase each year in the acreage of forestry practices. The latest annual report shows that 11,524 acres of trees were planted for forestry and erosion control purposes on almost 3,000 farms in 91 counties, and that 3,242 acres of timber stands were improved in 49 counties. The leading counties in tree planting were Perry, 763 acres; Clay, 548 acres; Floyd, 546 acres; Johnson, 457 acres; Knott, 449 acres; and Ohio, 443 acres.

During 1959, 1,735 farms in small watersheds organized by local groups in 20 counties, usually under the provisions of the Watershed Protection and Flood Prevention Act (Public Law 566), utilized $410,000 of ACP funds to carry out land treatment

measures in the 12 watersheds involved, which had been authorized for operations. When local groups are ready to move forward with organized watershed efforts, the ASC State committee gives special consideration to the allocation of ACP funds to the counties in which these small watersheds are located in order that the funds can be used as effectively as possible in advancing the farm and watershed conservation programs in the area. Additional amounts of ACP cost-sharing were used in several watersheds authorized for planning, but not then authorized for the construction of major works of improvement.

Mr. WILLIAMS of Delaware. Mr. President, will the Senator from Kentucky yield?

Mr. COOPER. I yield.

Mr. WILLIAMS of Delaware. In my remarks I made it clear that there can always be an honest difference of opinion among Senators and that many Senators and organizations are sincerely supporting this program.

Certainly I do not question their sincerity, but I do question the sincerity of Mr. Koch. I think he is primarily interested in selling lime regardless of what the farmers get out of its use; and furthermore I seriously question the propriety of the manner in which he seeks to generate support in having these appropriations increased. I think that is an entirely off-base activity by him and his organization.

In this country we have a system in which lobbyists have a right to submit their views to Senators—and certainly I respect the right of any organization to present its views to us—however, I believe that as a lobbyist, Mr. Koch has gone too far. When he tried to distort the RECORD by attempting to make the farmers believe that all Members of Congress, except a very few, are in favor of this proposal he goes too far.

Furthermore, I point out that it is definitely established that the material which Mr. Koch distributed as a reproduction of the CONGRESSIONAL RECORD was only excerpts from the RECORD. Obviously he did not include all of the congressional proceedings in connection with that matter. Nevertheless, the material which was sent out by him was handled in such a way as to give the impression that it constituted all of the congressional proceedings in connection with the debate of June 2, 1959.

I have offered the amendment on the basis that it will be better for the American farmers if my proposal is adopted.

In my opinion it is time to stop spending this extra $150 million to produce more crops when we already have more than we know what to do with, and I think the taxpayers can use the $150 million which would be saved.

But again I want it clearly understood that I desire to have the amendment voted on on its merits.

Mr. RUSSELL. Mr. President, I am delighted that the clarification has been made, and that it is now clear that the Senate will not vote on the practices or activities of Mr. Koch.

Mr. President, 1,114,459 American farmers are putting up their own money in order to participate in this great program to conserve the fertility of the soil of the Nation and to defend against erosion by wind or water.

Every Member of the Senate is familiar with this program, and it is not necessary to discuss it at any great length at this time.

For some incomprehensible reason, ever since Mr. Benson took over the Department of Agriculture, he has undertaken to weaken and, in fact, to defeat the agricultural conservation program.

I say for some incomprehensible reason; I would not say that if Mr. Benson had not equally urged the conservation phase of the soil bank program, under which the Government finances 100 percent, and which reaches only 300,000 farms, and costs 3 times as much per acre as the agricultural conservation program.

In my opinion, we get more conservation value per dollar from the appropriation for the agricultural conservation program than we do from any other activity for which we appropriate.

There are a great many different phases of the constant struggle to defend the fertility of our soil, in order that it may be handed down unimpaired to coming generations. We get more real value out of this program than any other. The farmers are all familiar with it. Plans are made 2 or 3 years ahead, sometimes, as to the practices farmers will employ on their farms.

The Senator from Delaware is correct in saying that this provision goes to the 1961 program. It does. But it would be a great tragedy to cut this program back to $100 million. I have said before, and I repeat now, that it would be better to cut it out altogether than to cut it back to that amount. Some $42 million of this amount goes to pay for the local county committees, and other agencies in administration of the program. It would be better to abolish it altogether than to undertake to carry on what would amount to a $56 million conservation program and spend some $40 million to administer it.

I think the Senator is familiar with this program. We have had this program before us time and time again. I think it would be a distinct step backward to adopt the amendment proposed by the Senator from Delaware.

Mr. HUMPHREY. Mr. President, will the Senator yield?

Mr. RUSSELL. I yield to the Senator from Minnesota.

Mr. HUMPHREY. I want to identify myself with this particular recommendation of the committee. I believe, as the chairman of the subcommittee has stated, that the ACP is the most constructive endeavor that we make in the field of conservation. To cut it back to the dimensions proposed by the Senator from Delaware would make it totally ineffective, and really highly discriminatory, because it surely could not cover the amount of programing for conservation which is contemplated. What is more, it seems to me that, rather than think in terms of a reduction of this particular program, we might well give serious thought to a greatly revised and expanded conservation program, in which there is farmer participation and cost sharing, because that kind of program lends itself to better soil management than pulling whole areas out of production and letting them stand idle.

If any Senator wants a demonstration of what happens when vast areas are taken out of production under the soil bank, all he has to do is travel around this country and see the great growth of weed patches. That is happening in area after area.

In my State we do not use much lime. After all, the use of lime relates to the condition of the soil. In some areas we use lime. In others we do not. If the soil is alkaline, lime is not used. If it is acid or rancid, lime is used. As has been indicated, under a previous order of the Department of Agriculture, lime is supposed to be used for soilbuilding, so it cannot be used, under the ACP program, on soil that is seeded for crops. The purpose of the program is to encourage soilbuilding practices, and is related to the long-term fertility of the soil.

I never have had any opportunity to associate with the Limestone Institute. It seems to me once I attended a banquet at the Statler Hotel and heard a good speech. That was about all. They do not spend much time on me. I was for the soil conservation program long before I heard of the Limestone Institute. I know, as a druggist, that lime is a reasonably good chemical. The institute has probably gotten a little free publicity here today. It seems to me that when these institutions are publicized on the floor of the Senate they are given undue attention. I prefer to publicize the agricultural conservation program.

Mr. CARLSON. Mr. President, will the Senator yield?

Mr. RUSSELL. I yield to the Senator from Kansas.

Mr. CARLSON. Mr. President, I did not want this opportunity to pass without at least expressing my approval of the soil conservation program. I concur in the statement that has been made by the distinguished Senator from Georgia [Mr. RUSSELL]. It is an annual program. It is a program in operation. I think it is the best farm program we have at the present time. Not only that; it is not a program to increase crop production, but a program for the conservation of soil.

There has been much discussion about lime this afternoon. Lime is being used, under the program, where it is needed. It is not a case of sending out for lime to be placed on soil. In my State there are areas where we do not need lime, but there are areas where it is needed. I am glad it is part of the soil conservation program. I am glad the Senate recognizes that we should not reduce an item which is a very important item in the bill.

Mr. WILLIAMS of Delaware. Mr. President, I recognize that one of the most unpopular things we can do is to try to cut appropriations. It is always easier to vote for increased appropriations. Nevertheless, it is the increases in appropriations that have caused the

deficits we have had for the past several years. This is one place where we can save $150 million.

Many Members of Congress have expressed concern over our inability to live within our national income. The reason for our inability to live within our national income is that Congress continues to appropriate more money than is collected from the American taxpayers.

This is another instance in which the bill provides for $150 million more than recommended by the Budget Bureau, by the Department of Agriculture, and by a great farm organization, the American Farm Bureau, as well as many other American farmers.

Certainly, the American taxpayers can use this $150 million saving resulting from the adoption of this amendment.

I think the amendment should be approved.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Delaware.

The amendment was rejected.

The PRESIDING OFFICER. The bill is open to further amendment.

Mr. HUMPHREY. Mr. President, I should like to call the attention of the chairman of the subcommittee [Mr. RUSSELL] to that portion of the bill which deals with brucellosis treatment.

On page 4, line 1, the committee figure of $52,236,000 represents the plant and animal disease and pest control program, of which a part will be for the brucellosis program.

Mr. President, I recognize that members of the Senate Appropriations Committee increased this item from the amount proposed by the Department of Agriculture, $15,582,000, to the more nearly adequate sum of $19 million. The committee members recognized that the Department recommendation would fall far short of the needs. The economics of the accelerated brucellosis eradication program have been discussed previously when the agriculture appropriation bill has been brought up.

Each year, the Department's own figures show that the sooner we bring this disease under control the sooner we can reduce this expenditure. And each year, the Department recommends a reduced appropriation. Last year this program was cut back almost 20 percent, even though Congress did not concur in a figure as low as that requested in the budget. Department expert witnesses have said that at the level of program activity permitted by an appropriation of around $16 million it would take 14 more years before we could attain a nationwide modified, certified brucellosis-free condition. However, the same expert witnesses state that under an accelerated program, this certified condition would be reached, not in 14 years, but in approximately 6 years. Following nationwide certification, another 5 to 10 years would be required to accomplish complete eradication.

It is a simple matter of mathematics that the go-slow program will cost the Nation more in the longer period of time it will take to reach a successful conclusion. I appreciate that the committee took this into account when it increased the appropriation to $19 million. I ask that we take the additional step which will bring the program operations almost to the level of the 1958 program, when the Federal contribution was $22,252,000.

Mr. President, I offer the amendment which I send to the desk and ask to have stated.

The PRESIDING OFFICER. The amendment will be stated for the information of the Senate.

The LEGISLATIVE CLERK. On page 4, line 1, it is proposed to strike out "$52,236,000" and to insert in lieu thereof "$55,236,000."

Mr. HUMPHREY. Mr. President, the amendment would restore the brucellosis funds to the level of operations which we had in 1958. The testimony of the Department of Agriculture shows that there is a great need for this money. Actually, the expansion or the spread of the brucellosis disease results in one of the most costly operations we have in this country. If we can strike a greater blow at the brucellosis condition—which means, of course, essentially, buying up the herds once they become infected—we shall have that much better chance of reducing the costs in the long run and getting our country in a so-called brucellosis-free condition.

As I recall the testimony before the committee, it indicates that the Department witnesses, as I have mentioned, were of the opinion that with a stepped up program we could reduce the time element by about 50 percent. I hope that the chairman of the subcommittee will not find it too difficult to accept an amendment which would restore the appropriations not to some new high figure but to the level of the 1958 program.

Mr. RUSSELL. Mr. President, the committee is fully aware of the great importance of the brucellosis program.

I regret that I cannot accept the amendment which the Senator has offered. This proposal was discussed in great detail in the subcommittee. The subcommittee agreed on the figure of $19 million. The figure we have allowed for this very important program is $3½ million above the budget estimate.

It is quite true that in years gone by the appropriation for this item has been as great as $25 million, I think, in 1 year.

Mr. HUMPHREY. The Senator is correct.

Mr. RUSSELL. We have made great progress with this program. There are a number of States which are practically free of this, and a larger number of States which have modified certification.

There is another reason why I would oppose increasing the appropriations for this item at this time. We have provided adequate funds to carry on the work in the States which are carrying their full share of the load. We have been endeavoring to get some equality of participation on the part of each of the States in this program for several years, without having succeeded in doing so. At present the participation runs from 85 percent in one State to as low as 16 percent in another State. If we continue to dole out and to shovel out Federal funds as requested we will maintain this inequality as among the several States.

I do not wish to be invidious by calling out the names of any of the States which have low participation, but the committee feels very strongly that the Department has failed in the effort to get some of the States to contribute as substantially as they should for this program.

The $19 million, when weighed against the job remaining to be done, is really more money in proportion than the $25 million was when that amount was appropriated, because we have made great progress in this campaign. There are entire States which now have been declared completely brucellosis free. There are 1,718 counties in the United States—including 21 entire States—which have received the modified certification of complete elimination of brucellosis.

This is undoubtedly a vital campaign. It is important to public health. It is important to the people who own dairy herds. However, we are making splendid progress with the program. I do not think we can justify increasing the appropriation by that great an amount above the budget estimate.

Mr. HUMPHREY. May I make one other observation?

Mr. RUSSELL. Yes.

Mr. HUMPHREY. I believe it was stated in the testimony that in the 1960 budget the appropriation was approximately $16¼ million. The Senate provided some $17½ million, while the House provided approximately $15 million, and the final amount, as the bill came from the conference, was $16¼ million. I believe that was the figure for 1960.

According to the testimony, within 30 days after Congress adjourned last year it appeared that the Department of Agriculture would be short at least $5 million of funds necessary for carrying on the brucellosis eradication program, and additional funds had to be requested of the Congress for the brucellosis eradication effort.

While there are some discrepancies in the level of State participation, and while I agree with the Senator that those wide variations ought to be narrowed down and it would be desirable if there could be some uniformity as to the amounts the States contribute, there is no doubt that the brucellosis program thus far conducted has been a great asset. While the $25 million, the high peak of appropriations, related to the need, was not as much in proportion, let us say, as $19 million would be now, the need for action is still very great.

Mr. RUSSELL. That is very true.

Mr. HUMPHREY. I have a feeling that, while there is, of course, a good deal to be said on behalf of trying to bring these programs along in an orderly way and on a more uniform basis, there is nothing in the bill to compel the Department to exercise its good influence upon the States.

Mr. RUSSELL. Yes, indeed. We did include a provision in the bill to be ef-

fective for the following year. We did not let the provision affect the appropriations for next fiscal year.

Mr. HUMPHREY. That relates to 1962?

Mr. RUSSELL. Yes. We did not think it was fair to make it applicable now, while the State legislatures are not in session. We did not undertake to put the provision in the bill for the next fiscal year.

We have stated in the committee report year after year that the Department should take steps to require a larger participation on the part of some States which were failing to participate properly, and the Department paid no attention to the request, so we have put a provision in the bill for the 1962 campaign.

Mr. HUMPHREY. Yes. I observe that has been done.

Mr. RUSSELL. We will get some results now. I have a deep feeling with respect to this program. I think it is a very important program. It might be true that $3 million or $4 million more could be spent to advantage but we are making fine progress and the incidence of this disease has been reduced by 50 percent in the past 5 or 6 years

Mr. HUMPHREY. That is correct.

Mr. RUSSELL. We are making fine progress. Let us have a chance to get the States participating on a more equal scale, and then I will go along with the Senator on bringing the program to a conclusion.

Mr. HUMPHREY. May I say most respectfully that I know the Senator from Georgia has been most helpful in respect to this subject all along. I might add that had the Congress not increased the appropriations, we would be so far behind now that the figure the Senator from Minnesota is indicating would be puny indeed.

Mr. RUSSELL. This is the third successive year in which we have suggested substantial sums above the budget estimates.

Mr. HUMPHREY. I believe those sums have lent themselves to wise economy, because there is nothing more expensive than the failure to get this disease under control.

Mr. President, I offer my amendment, and in the light of the discussion which the Senator from Georgia has stated in respect to the action of the committee, I gather that the opposition is rather strong. Nevertheless I feel rather strongly about the importance of increasing the appropriation of these funds, so I ask for a vote.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Minnesota.

The amendment was rejected.

Mr. HUMPHREY. Mr. President, I offer the amendment which I send to the desk and ask to have stated.

The PRESIDING OFFICER. The amendment offered by the Senator from Minnesota will be stated.

The LEGISLATIVE CLERK. On page 9, line 16, it is proposed to strike "$83,132,000" and insert in lieu thereof "$83,882,000."

Mr. HUMPHREY. Mr. President, the purpose of the amendment is to add additional funds in the sum of $750,000 for the technical services which are provided by the Soil Conservation Service to the farmers who are participating in the soil conservation program at the soil conservation district level.

The proposed amendment would increase the funds available for the technical assistance which would be available to the soil conservation districts. As reported by the committee, the appropriation is $250,000 more than the budget estimate. I had intended to offer an amendment which would request a substantially larger sum than that proposed in the present amendment, but I believe the most important consideration is to continue to make some recognizable progress in the expansion of technical assistance efforts for the Soil Conservation Service.

The increase provided by the committee of $250,000 is for the staffing of an additional 20 districts during fiscal 1961.

Mr. President, soil and water conservation is one of the most important subjects which ever comes before this body. We have discussed it considerably this afternoon. Actually only about one-third of the Nation's agricultural land today is adequately safeguarded, and I have listened to much discussion about how we spend the taxpayer's money on matters relating to conservation.

I have just returned from my home State. While there, I talked with some accountants who had figured the income tax returns for some of the farmers in the southern part of the State of Minnesota, which is one of the most productive agricultural areas in the Nation. One accountant after another told me that farm income in that area was down anywhere from one-quarter to one-third of what it was the year before. If there was as much concern in the Senate for the income of our farmers as there is for some of the so-called expenditures that we make for farmers, we would not have to make as many expenditures for farmers. I have never been able to agree with the philosophy that the way to protect the United States is merely to cut back its expenditures. I happen to believe in the increase of its income, because there is a basic minimum on expenditures below which we should not go. There is a time when we either must abandon a program entirely or make it effective.

I have gone very carefully into the matter of technical assistance for soil conservation districts. In my own State of Minnesota, which has a fine soil conservation program, farmers find themselves handicapped because of inadequate technical assistance. I am not talking about grants of money or payments to farmers. I am talking about employing trained soil conservation specialists who are needed for the soil conservation program. Our farmers are not able to progress with their plans to maintain the resources of their farm lands.

Recently, I received a letter from a constituent, Mr. E. F. Borgmann, of Sauk Centre, Minn., regarding the Soil Conservation Service personnel situation in his area.

Mr. Borgmann wrote to me as follows:

It is my understanding that the local Soil Conservation Service is running out of funds and the service unit at Sauk Centre will be hampered because of lack of personnel out of this office.

Will you kindly check into this matter as to reasons for this lack of funds and, if you will, kindly advise what we can do from this end toward counteracting this. We feel very strongly this office should expand rather than curtail their services.

Thank you for this consideration.

This letter was referred to the Administrator of the Soil Conservation Service, Mr. D. A. Williams, and I have an exchange of correspondence which I am going to insert in the RECORD in a moment.

I am sure the situation Mr. Williams describes is as true nationally as it is in my own State. In order to know the exact situation in the State of Minnesota, I requested that information be supplied showing how many farmers were denied the opportunity to share in the agricultural conservation program because there simply were not sufficient funds available. The reply I received from Mr. E. J. Person, an administrative officer of the Minnesota State ASC office, revealed that in 1959 the requests of 1,659 farmers for assistance were turned down. Mr. Person estimates that in 1960, 1,675 Minnesota farmers will be turned away.

Mr. President, I ask unanimous consent that the full text of these respective communications, the one from Mr. D. A. Williams, the Administrator of the U.S. Department of Agriculture Soil Conservation Service, the letter from E. J. Person, administrative officer, Minnesota State ASC office, and the letter from Mr. E. P. Borgmann, of Sauk Centre, Minn., be made a part of my remarks.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

BORGMANN IMPLEMENT CO.,
Sauk Centre, Minn., April 30, 1960.

Hon. HUBERT H. HUMPHREY,
Senate of the United States,
Washington, D.C.

DEAR SENATOR HUMPHREY: It is my understanding that the local soil conservation service is running out of funds and the service unit at Sauk Centre will be hampered because of lack of personnel out of this office.

Will you kindly check into this matter, as to reasons for this lack of funds and if you will kindly advise what we can do from this end toward counteracting this. We feel very strongly this office should expand rather than curtail their services.

Thank you for this consideration.

Yours very truly,

E. F. BORGMANN.

U.S. DEPARTMENT OF AGRICULTURE,
SOIL CONSERVATION SERVICE,
Washington, D.C., May 10, 1960.

Hon. HUBERT H. HUMPHREY,
U.S. Senate.

DEAR SENATOR HUMPHREY: This is in response to your communication of May 5, 1960, with an attached letter from Mr. E. F.

Borgmann, Sauk Centre, Minn., regarding a shortage of Soil Conservation Service personnel in the Sauk Centre area.

As you know, the primary responsibility assigned to the Soil Conservation Service by the Congress is to provide technical assistance to farmers in planning and applying conservation programs on their land through local soil conservation districts. The Congress appropriates funds for the Soil Conservation Service for this purpose.

The situation in Mr. Borgmann's area is a familiar one to us. We are currently assisting some 2,865 soil conservation districts throughout the country. District governing bodies from every State report urgently needed soil and water conservation work that cannot progress as rapidly as it should because of a shortage of technicians. The problem is that the resources available at this time will not permit staffing districts with the additional technicians which are needed. Therefore, technical manpower is the limiting factor in the amount of conservation work which can be done in many areas.

We are appreciative of Mr. Borgmann's evaluation of the services rendered by the Soil Conservation Service. His letter is herewith returned as requested.

Sincerely yours,

D. A. WILLIAMS,
Administrator.

U.S. DEPARTMENT OF AGRICULTURE,
AGRICULTURE STABILIZATION AND
CONSERVATION COMMITTEE,
St. Paul, Minn., May 12, 1960.

Hon. HUBERT HUMPHREY,
U.S. Senate,
Washington, D.C.

DEAR SENATOR HUMPHREY: We are enclosing the material which we stated in our letter dated April 26, 1960, would be furnished to you as soon as we received a report from our county ASC offices. A report was received from every county except for Martin County. In this particular county we did experience some difficulty in getting the SCS technician to accept additional referrals under the 1959 agricultural conservation program, and probably some farmers were denied cost sharing because of inadequate technical service by the SCS. However, we do not believe the number involved would be very substantial and, therefore, would not materially affect the totals for the 1959 and 1960 programs. It will be noted that we have listed only the names of those counties reporting that farmers' requests for practice approvals under the 1959 ACP were disapproved because of inadequate technical services by the SCS or where it is estimated that some of the farmers' requests under the 1960 program will be disapproved for the same reason. In the unlisted counties adequate technical services were available in 1959 and will, no doubt, be available for 1960 so that all approved requests will be serviced by the SCS. For your information we are also enclosing a copy of our communication to the county ASC offices requesting the data furnished herewith.

Under the 1959 program a transfer of approximately $271,000 was made to the Soil Conservation Service so as to provide for additional technical services to farmers who desired to participate in the agricultural conservation program. However, over 1,600 farmers were unable to participate in the 1959 program because of inadequate technical services from the SCS technicians. The same amount of transfer will be made for the 1960 program, but it appears that even a larger number of farmers will not have the opportunity to participate because of a shortage in the needed technical services from the SCS.

We appreciate having the opportunity to be of service to you. It is our desire that the information which we have submitted will be beneficial to you in resolving the problem which materially affects farmer participation in the ACP. This is especially true where we have available adequate funds to approve these farmers' requests.

Very truly yours,

E. J. PERSON,
Administrative Officer,
Minnesota State ASC Office.

County	Number of referrals not serviced in 1959	Estimated number of referrals that will not be serviced in 1960

Wilkin		30
Total (28 counties)	1,659	1,675

Mr. HUMPHREY. Mr. President, I gave some of my colleagues present in the Senate the contents of the Borgmann letter. I took this communication through channels. I went directly to the national office in Washington and to the State office in Minnesota. Let me report what the State office in Minnesota said:

> Farmers' requests for practice approvals under the 1959 ACP were disapproved because of inadequate technical services by the SCS or where it is estimated that some of the farmers' requests under the 1960 program will be disapproved for the same reason.

I have here a chart submitted by the Minnesota SCS committee showing that the number of referrals for technical assistance under the soil conservation program in 1959 not serviced was 1,659. The estimated number of referrals which will not be served in 1960 is 1,675.

These are farmers who live within soil conservation districts, and I believe I am correct in saying that the State of Minnesota has one of the better soil conservation district programs.

I read the third paragraph of the report of the National Administrator:

> The situation in Mr. Borgmann's area is a familiar one to us. We are currrently assisting some 2,865 soil conservation districts throughout the country. District governing bodies from every State report urgently needed soil and water conservation work that cannot progress as rapidly as it should because of a shortage of technicians. The problem is that the resources available at this time will not permit staffing districts with the additional technicians which are needed. Therefore, technical manpower is the limiting factor in the amount of conservation work which can be done in many areas.

Mr. President, the State of Minnesota has suffered another very serious flood. Every year I plead in the Senate for some flood control funds. Every time someone says we cannot afford it. Mr. President, we could have put 14-carat gold-plated levees along the Minnesota River for what this flood cost us this weekend, with 12½ inches of rain in 28 hours. I get a little tired of hearing that we cannot take care of this wisest and best investment in the world, namely, the United States of America. We are talking about the Soil Conservation Service. It is a great program. I do not believe it costs the taxpayers one penny. In fact, the Soil Conservation Service makes money for the Government of the United States. If we have any vision, if we can look ahead for more than 5 minutes, we must realize that we are not legislating merely for this afternoon. I certainly trust we are not legislating merely for this afternoon.

I have seen the rolling hills of southeastern Minnesota, which are some of the most beautiful areas to be found anywhere in the land, eroded from water erosion. I have seen the rolling plains of western Minnesota eroded from wind erosion. I have seen the Soil Conservation Service restore those lands. Today they are productive lands. They need technical assistance. They do not need merely payments. Important as payments are, we do need technical assistance.

The committee was wise in its judgment in adding an additional $250,000 over the budget estimate. However, the $250,000 over the budget estimate is only a drop in the bucket. Funds for technical service and technicians are not expenditures. They are investments. When we put competent technicians into a business, we should not consider the costs expenditures, we should consider them investments.

The $750,000 that I am requesting is only a thimbleful of what is needed, but it will make it possible for some of the soil conservation district programs to supply the required services to the farm people in these areas.

I hope the committee will see fit to accept the amendment. At least it represents a little more progress than represented by the small amount which has been granted by the committee.

THE KIWIS

Mr. KEATING. Mr. President, will the Senator yield so that I may make a brief comment on another subject?

Mr. HUMPHREY. I yield for that purpose.

Mr. KEATING. A very interesting organization is meeting in Washington this week. It is called the Kiwis. It is made up of former airline hostesses who retired from that profession when they were married. They use the name "Kiwis" because, as we all know, a kiwi is a bird that cannot fly.

It is an appropriate time to pay tribute to these fine young women who have so many of us in their care when we fly, as all of us do. It is appropriate that we welcome them to Washington. I appreciate my friend from Minnesota permitting me to make this intervention during his remarks.

Mr. HUMPHREY. I am delighted with the intervention, so to speak, because while I was speaking on a rather earthy subject, soil conservation, I want the Senator to know that I have an esthetic nature also.

Both the charm of these lovely young ladies and the atmospheric areas in which they work give me reason to be happy with the comment of the Senator from New York.

Mr. KEATING. The Senator from Minnesota travels about the country as much as any one of us. I know he appreciates, as we all do, the fine service which these young women have given every one of us.

Mr. HUMPHREY. I surely do. Although the Senator from Minnesota has not always been too successful in his travels, he nevertheless always appreciates the kind thoughts and gentle words of the lovely young ladies who serve as stewardesses on our airlines. I thank the Senator.

Mr. RUSSELL. I hope that Senators will not confuse the issue before the Senate with what has been said in commendation of the airline hostesses of the United States.

Mr. HUMPHREY. If it will help, that is all right.

Mr. RUSSELL. In such a case I would be completely eliminated in my attempt to defend against the amendment.

DEPARTMENT OF AGRICULTURE AND FARM CREDIT ADMINISTRATION APPROPRIATIONS, 1961

The Senate resumed the consideration of the bill (H.R. 12117) making appropriations for the Department of Agriculture and Farm Credit Administration for the fiscal year ending June 30, 1961, and for other purposes.

Mr. HUMPHREY. Now to get back to the soil conservation amendment——

Mr. RUSSELL. There is a great deal of merit in the position taken by the Senator from Minnesota. Technically speaking, in light of the amount that is involved and the number of districts which have been created, I suppose we could even justify a much greater increase in the appropriation than is suggested by the Senator from Minnesota. However, there is more money available for this purpose than the Senator from Minnesota has indicated. If he will look at page 10, line 20, of the bill, he will find that there is a reappropriation of $600,000, which is made available for transfer and merger with this appropriation.

I am sure that he is likewise familiar with the fact that two and a half million dollars are available for employment in the Great Plains area. Three and a half million dollars—and before the bill goes to the President this may go to $4,900,000—are available for surveys in the watershed areas. That is directly connected with the work which the Senator from Minnesota so eloquently depicts. In addition, the sum of $5 million is transferred from the regular agricultural conservation program for technical work by the Soil Conservation Service.

All in all, while more money would be justified—and I would like to see it provided—I believe we have gone about as far in increasing the appropriation as we can. I hope Senators will realize that we are voting on the amendment offered by the Senator from Minnesota to increase the appropriation by $750,000 over and above the amount in the bill, which is already an increase over and above the budget estimate. It has nothing whatever to do with the comment made by the Senator from New York [Mr. KEATING]. [Laughter.]

Mr. HUMPHREY. I think it is only fair that the Senator from Georgia should dissociate the comments of the Senator from Minnesota in that respect, if those comments should be prejudicial—even though I would like to have the comments be prejudicial slightly in my favor.

The comments of the Senator from Minnesota were made in the awareness of the soil conservation program for the Great Plains and for the regular soil conservation efforts. In fact, my letter to the Administrator, enclosing a letter from Mr. Borgmann, took into consideration that fact.

I believe I understood the Senator from Georgia to state that there is a need for additional soil conservation technical service, but he believes that we have made substantial progress in this bill, and therefore does not support the amendment.

Mr. RUSSELL. I do not believe that we shall ever close down this program. We shall never finish with the program of undertaking to preserve the soils of our country and to protect the water resources of the United States. As nature moves on, we shall have other problems, and we shall have to institute more intensive programs. Our increasing population will make it mandatory that we exercise the greatest care on each acre of land. However, I do say that in light of all that is involved in the bill we have a bill which deals fairly with the Soil Conservation Service as compared with the other activities. I hope the Senate will reject the amendment.

Mr. HUMPHREY. I hope the Senate will not reject it. We have voted $250 million for the ACP program, which I strongly supported. There is a direct relationship between ACP and SCS. The technical services for the ACP come from SCS, and the SCS is no better than the technical program. Therefore, the conservation programs are no better than the technical personnel. It seems to me that the importance of additional technical personnel cannot be overestimated, because they use the funds which have been made available for payment purposes for the different tools or works that are utilized in the soil conservation program. I hope the amendment will be adopted.

The PRESIDING OFFICER. The question is on agreeing to the amendment offered by the Senator from Minnesota.

The amendment was rejected.

Mr. HUMPHREY. Mr. President, I submit another amendment which I ask to have stated.

The PRESIDING OFFICER. The amendment will be stated.

The LEGISLATIVE CLERK. On page 18, line 9, it is proposed to strike out "$110 million" and insert in lieu thereof "$135 million."

Mr. HUMPHREY. Mr. President, the purpose of the amendment is very simple. It adds to the school-lunch program the sum of $25 million, which I think is required in order to maintain the school-lunch program on a basis which will meet the needs of the growing school population and the increased cost of food supplies which are needed for the school-lunch program.

The committee provided or recommended for the fiscal year 1961 the basic appropriation at exactly the same level as was provided for fiscal 1960—in other words, $110 million.

It seems to me that this program should be strengthened. The enrollment in the schools increases each year, and the number of schools which participate in the program increases. The cost of the food supplies increases. Therefore, to maintain the program at the same level is, in effect, reducing it.

In other words, Mr. President, if you have in your family six children, and the average food budget for the six children is $150, that is $25 for each child. Then you add 2 more children, the average for the year is still $150. You may be able to say that you are providing the same amount of money for food as you used to provide, and, therefore, you are a good provider. But I am afraid that having two additional children at the table to be fed will cause a realization that the same amount of money or the same budget will not provide the same amount of food as would have been provided for a smaller number of children.

In this instance, the Nation has a growing school population. In 1961 the school population will be larger by well over a million children—almost 2 million more—than there are in fiscal 1960. Therefore, the school-lunch program, so far as the Federal contribution is concerned, should take into consideration an elementary fact—the census.

When we take into consideration the school census, it becomes obvious that to provide the same amount of money for the next year as was provided for the last year is not holding the line, but is, in fact, retreating.

I also note that the administration recommended a reduction in the transfer of section 32 funds to the school-lunch program for the purchase of additional high protein foods. I note also that the Committee on Appropriations, in its wisdom, increased this item by $5 million, instead of decreasing it, making

$45 million available for the purchase of turkeys, ground pork, dried eggs, and similar high protein foods.

I hope the words dried eggs, which are constantly bandied around, might also be expanded to include fresh eggs, because the dried egg diet is hardly one which is conducive to happy living. It is conducive to survival, but not to joyful living. I have seen the time when the purchase of a few fresh eggs would do much good for not only those who would eat them, but also for the market.

I commend the committee for rejecting the attitude of the administration to attempt to reduce the transfer of section 32 funds. By the way, there is more than $400 million in section 32 funds. I cannot, for the life of me understand why the administration would want to reduce that amount of money for transfer to the school lunch program. That money was collected from tariffs; it is not a taxpayers' fund. Surely, it should be made available to those who are in need. A short time ago I saw the need for the use of some of this money by hungry people in this country.

Mr. President, I ask for the favorable consideration of my amendment, which would increase the direct appropriation for the national school lunch program to $135 million for fiscal year 1961.

Mr. RUSSELL. Mr. President, the distinguished Senator from Minnesota probes me in a sensitive spot every time he offers one of these amendments. He places me in the position of a hard-hearted father, who resists the efforts of the country salesman who comes in and implores the husband to buy a dress for his wife.

Mr. HUMPHREY. I would not do that, because the Senator from Georgia is not that type of person.

All I am attempting to do is to state what I believe, according to my conviction and my conscience, is necessary. When I see the growth of the school population, and I see that we are holding to the same amount of funds, I merely want the RECORD to be clear concerning the views of HUBERT HUMPHREY, U.S. Senator from Minnesota. I will be accused of being a spender, and I am willing to spend when it is necessary. I will be accused in my home State of trying to raise this budget item by a substantial amount of money. I welcome the accusation, because as the father of four children I have found that it costs more to feed four children than it does three; more to feed three than it does two; more to feed two than it does one. I have lived with children long enough to know how hungry they can get.

When there will be about 2 million more children in the schools next year, I do not want anyone to kid me by saying that $2 million more for the school-lunch program is holding the line. It does not take into consideration the increase in the school population.

I am willing, however, to stand the public test by voting for additional funds for school lunches.

Mr. RUSSELL. As I have said, I have long been interested in the program. It was my distinct honor and privilege to be the first to introduce in Congress the bill which is substantially the existing school lunch law. I wrote that bill myself. I did not have the help of any drafting service or of anyone from the Department. With very slight changes, that bill is still on the statute books, although it carries a House number. So I have great pride in the school lunch program.

I confess that the school population is greatly increasing. But the $110 million provided in the bill is not all the money we have for the school lunch program. We have $45 million of section 32 funds, which really makes $155 million of direct appropriations.

As the Senator from Minnesota has said, that is about $5 million over and above what was appropriated for the current year. In addition to that program, there is the surplus commodity program. There have been very few years when that amount has fallen below $70 million. For the current year, it is estimated to be about $75 million. It will be at least that much, probably more, in my opinion, in the coming fiscal year.

One of the most important parts of the whole program is the special milk program, which is very helpful, indeed, to the schoolchildren, particularly those who come from underprivileged families. That program will be increased by some $7 million next year, to a total of $95 million.

Mr. HOLLAND. Mr. President, will the Senator yield?

Mr. RUSSELL. I yield.

Mr. HOLLAND. The first step-up of that program was for the present fiscal year, 1960. It was stepped up from $81 million to $85 million. The second step-up, in the bill which we recently passed, was to $95 million for fiscal 1961, which is the next fiscal year.

Mr. RUSSELL. If that figure is correct—and that legislation came from the Senator's committee—that is a total of around $330 million of Federal funds for the school lunch and school milk program. That is a rather substantial sum of money. Of course, more money could be spent. There is practically no limit to the amount of money which could be spent on the school lunch and school milk program. It depends, in the last analysis, upon the local administrator properly applying the program and properly choosing those who are to receive their milk and their lunches free, and fixing the proper charge upon the great majority of children who purchase their lunches each day.

This program runs into a tremendous sum of money—almost a billion dollars in total—when we consider the amount paid by the children who are purchasing their lunches.

More money could be justified, but we tried to have a balanced bill. I think the allowances we have made for the school lunch and the school milk programs are in keeping with the general distribution we have made throughout the bill.

I hope the amendment will be rejected.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Minnesota.

The amendment was rejected.

Mr. HOLLAND. Mr. President, first I may say that unless one had served with the Senator from Georgia on the subcommittee handling the Department of Agriculture appropriations, one could hardly understand the fairness with which the school lunch and school milk programs were handled. While these are only two of the programs handled by the subcommittee, I think they constitute a fair test of the generosity of the subcommittee this year.

I commend the Senator from Georgia for having done so many things which are not only reasonable, but also generous, in our attitude to the whole school lunch program, including not only that part which is under the statute which bears that name, but also the milk program, which, by the way, the Senator from Minnesota [Mr. HUMPHREY] has supported, under the recent advance of that program, and the other programs which are included in the sum total of what makes up the program for the children of the Nation.

In the report, on page 7, will be found a new item added by the committee; namely, "$115,000 to initiate a pilot program of estimates for tomatoes and celery."

There is a particular reason why I mention this matter at this time; it is because the Department's report and recommendation, which really serve as a justification for this item, unfortunately arrived a day or two after the record had gone to the printer. So the able clerk of the committee had the report of the Department on this subject matter printed in the side slips; and therefore it will not appear in the permanent RECORD of this debate unless it is placed in the RECORD at this time, as a part of the debate.

Therefore, Mr. President, I ask that that statement be printed at this point in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT SUBMITTED BY THE DEPARTMENT, MAY 11, 1960

COMMERCIAL VEGETABLES FOR FRESH MARKET: PILOT PHASE OF PROPOSED PROGRAM FOR REPORTS ON SHORT-TIME SUPPLIES

The present program of reports on vegetable acreage and production for the fresh market is not filling the needs for timely information to guide the planting and aid materially in the marketing of the important vegetable crops.

The broad objective of the proposed program is to provide, through periodic inventories of acreage planted and frequent checks on progress of harvest, reliable and quick information on the supply of each important vegetable available, for short periods of time (monthly, semimonthly, or weekly) in each competing area of the country. Considerable experimental work has been done along this line on Florida tomatoes. A limited amount of such information also has been collected for Florida celery and California carrots and lettuce.

Before attempting to launch a full scale program of this type for nearly 2 dozen vegetables in the 27 important producing States, it seems desirable to work with a limited program in a few States. Such a program would provide operational experience under the different sets of cultural and marketing conditions existing in different sections of the country, and also would test the feasibility of quickly exchanging information between States for fast dissemination to growers, shippers, and marketing factors. To this end it is proposed to start with a modest program comprising tomatoes in Florida and Texas and celery in California, Florida, and Arizona.

For tomatoes, it is proposed to issue weekly reports on Florida plantings and to include other information relating to progress of the crop, rate of harvest, shipments, weather, etc. Tomatoes were selected in Florida because growers are keenly conscious of the marketing problems confronting them and are attempting to do something about these problems. Florida produces fall, winter, and spring crops of tomatoes. For Texas, which also grows fall, winter, and spring tomatoes, it is proposed to inaugurate a weekly program of reports for the Lower Valley and monthly reports for other areas in the State. Because of the large number of small growers in the other areas (Laredo-Winter Garden-Eagle Pass and Coastal Bend-East Texas), it seems best to start with a program of monthly reports in these latter areas. In the development of monthly reports from these areas, methods will be explored to apportion plantings after they have been completed into weekly or biweekly groups according to age. Florida and Texas grow 37 percent of the country's total tomato acreage for the fresh market.

From the basic information obtained on acreage, workable procedures will be developed to determine more accurate indications on inventories and future supplies in the producing areas involved. The principal factors in developing this moving inventory of acreage and supply information will be the number of acres harvested to a given date, the acreage remaining for harvest, the condition and yield prospects on this acreage, the probable rate of harvest, and the volume of supplies indicated for the monthly period.

For celery, the plan is to inaugurate monthly reports on acreage planted during the past month in California, Florida, and Arizona.

As with the monthly tomato reports, methods will be explored to ascertain, at monthly intervals, the number of acres harvested, the number remaining for harvest, condition and yield prospects, and the probable supply for the market the following month. These 3 States grow about four-fifths of the country's annual celery acreage, accounting for all of the winter and spring acreage, 36 percent of the summer acreage, and 76 percent of the fall acreage.

Emphasis will be placed on the quick distribution of information to growers, shippers, and other marketing factors. A system of exchanging acreage and supply information by telephone and telegraph between State offices of the Crop Reporting Board will be tested so that this information will be available to everyone within 3 days of its collection instead of 10 to 12 days, as is now the case with crop reports. A summary of the information by States, also will be released from Washington at the same time.

The attached table shows pertinent data concerning acreage, value and number of growers for the two crops covered in the proposed pilot project. The proposed project would cover, for the 2 crops concerned, a total of about 105,000 acres grown by approximately 12,600 farmers. In 1959 production from this acreage had a value of $82.4 million.

Cost per year $115,000.

State and season	Acres harvested in 1959		Value of production, 1959 (thousand dollars)	Number of growers, 1954 census
	Number of acres	Percent of season's total		
	Celery			
Florida:				
Winter	8,100	60	6,161	
Spring	5,200	63	3,059	
Total	13,300		9,220	77
California:				
Winter	4,600	34	6,515	
Spring	3,100	37	6,008	
Summer	2,500	36	4,563	
Fall	7,100	76	11,466	
Total	17,300		28,552	489
Arizona: Winter	750	6	531	12
3-State total	31,350	[1] 82	38,303	578
	Tomatoes			
Florida:				
Winter	16,100	100	16,298	
Spring	14,700	21	16,174	
Fall	8,600	29	6,708	
Total	39,400		39,180	1,798
Texas:				
Spring	34,000	48	4,854	
Fall	600	2	90	
Total	34,600		4,944	10,266
2-State total	74,000	[1] 37	44,124	12,064

[1] Percent of U.S. annual total.

Mr. HOLLAND. Mr. President, I wish to state, briefly, that the Florida Fruit & Vegetable Association, which is a very large organization in our State which represents the vegetable producers and others, but particularly the vegetable producers, has for some years been conducting experimental programs, helped by its own funds and by State funds and to some degree in the past, I believe, by small amounts of Federal funds, in order to ascertain what can be done in connection with the best handling of market reports to the producers of fresh vegetables, which not only are highly perishable and have a short season, but also compete with vegetables which come from offshore areas, such as Cuba and the Isle of Pines, as Senators know, and also with similar products from Texas, Arizona, and California.

We presented to the committee a request, on behalf of the Florida Fruit & Vegetable Association, which spoke not only for itself and its own members, but also was speaking for the producers in California, Texas, and Arizona, and covered the need to supply market information on these highly perishable crops.

According to the view of the Department at that time, as voiced by Secretary Peterson and Mr. S. R. Newell, the proposed program would have been too large; and they felt, as did we, that although all of us recognized the great need for such a program, it should be approached on a pilot program basis.

We therefore suggested that the Department's statement or justification be sent to the committee; and it has now been printed in the side slips.

I think it might be well for me to read two paragraphs from the statement. I now read from the Department's recommendation:

STATEMENT SUBMITTED BY THE DEPARTMENT MAY 11, 1960

COMMERCIAL VEGETABLES FOR FRESH MARKET: PILOT PHASE OF PROPOSED PROGRAM FOR REPORTS ON SHORT-TIME SUPPLIES

The present program of reports on vegetable acreage and production for the fresh market is not filling the needs for timely information to guide the planting and aid materially in the marketing of the important vegetable crops.

The broad objective of the proposed program is to provide, through periodic inventories of acreage planted and frequent checks on progress of harvest, reliable and quick information on the supply of each important vegetable available, for short periods of time (monthly, semimonthly, or weekly) in each competing area of the country. Considerable experimental work has been done along this line on Florida tomatoes. A limited amount of such information also has been collected for Florida celery and California carrots and lettuce.

Before attempting to launch a full scale program of this type for nearly 2 dozen vegetables in the 27 important producing States, it seems desirable to work with a limited program in a few States. Such a program would provide operational experience under the different sets of cultural and marketing conditions existing in different sections of the country, and also would test the feasibility of quickly exchanging information between States for fast dissemination to growers, shippers, and marketing factors. To this end it is proposed to start with a modest program comprising tomatoes in Florida and Texas and celery in California, Florida, and Arizona.

One of the two crops which the recommended program covers is tomatoes—that is to say, the winter, spring, and fall tomato crops in Florida and the spring and fall tomatoes in Texas, which, incidentally, supply 37 percent of the entire amount of table tomatoes that are used by the Nation.

As for celery, the program covers the year-round production in California, the winter and spring production in Florida, and the winter production in Arizona. The celery crop covered would be 82 percent of the national table supply of celery.

Senators will observe in the compilation which now has been placed in the RECORD how the program is broken down between the States of Florida, California, Texas, and Arizona.

I think this program is an exceedingly useful one. It is a pilot program which, supplementing the programs already carried out in part in Florida and in California, will give a general view of how much good can be accomplished in the case of these highly perishable and highly important crops, for which nothing as regards price supports or anything of the sort is being requested. But the program proposed may be of great use to the Nation as a whole, as well as to the growers in the particular States immediately concerned.

I wished to make this statement, because the hearings, as printed, unfortunately do not show what is involved in this program.

The PRESIDING OFFICER. The bill is open to further amendment.

Mr. CARLSON. Mr. President, before the vote on the bill is taken, I should like to refer to an item which many of the people of Kansas have called to my attention—namely, the importance of the conservation reserve and the necessity of providing adequate funds for it.

In connection with the conservation reserve and the 1,444,237 acres in Kansas which are used for it, it is interesting to note that 951,064 acres of the 1,447,237 acres comprise whole farms which have been taken out of production.

This matter is of concern to our people, first, because they are not able to take care of the applications for the program; and, second, because they feel that there are not sufficient funds to pay for the personnel needed in connection with the operation. So, first, I should like to ask the distinguished Senator whether he feels that sufficient funds are provided in order to take care of the applications for the acreage reserve.

Mr. RUSSELL. Does the Senator mean sufficient funds to pay the contractors the amounts due them?

Mr. CARLSON. Yes, and to take care of additional requests.

Mr. RUSSELL. There will be no funds to take care of additional requests, because no additional requests can be received. The program has ended, insofar as new applications are concerned. The only program now is to pay those who are operating under the old contracts.

Mr. President, I think the amount provided in the bill is adequate. As a matter of fact, the Department has consistently overestimated the amounts necessary, and from year to year there has been a carryover.

The Senate committee has increased by $25 million the amount recommended by the House; and it has developed that there will be a carryover of at least $20 million from the present year, and that it will be available.

We are within about $6 million of restoring the full amount requested by the Department of Agriculture; and I assure the Senator that we shall make good the amounts due under these contracts; and if it happens that not quite enough money is provided in this bill, the additional money needed will be the first money to be included in the supplemental bill.

The Senator knows there is also a question about the amount necessary for the contracts; and from year to year there is always a carryover.

Mr. CARLSON. Then, based on the statement made by the Senator from Georgia, I can assure the people of Kansas that their interests will be cared for.

Mr. RUSSELL. The Senator can assure them that so long as the Senator from Georgia is in the Senate——

Mr. HUMPHREY. And that will be a very long time, thank goodness.

Mr. RUSSELL. The Senator from Kansas can assure the people of his State that so long as the Senator from Georgia serves in the Senate, there will be sufficient funds to take care of what is due them under these contracts.

Mr. CARLSON. I thank the Senator from Georgia.

Let me ask whether I correctly understand that the $13,783,000 requested for the conservation reserve program, as recommended by the Bureau of the Budget, will be cut to $12 million?

Mr. RUSSELL. Yes, from approximately $13 million to $12 million.

Mr. CARLSON. $13,783,000 was recommended for 1961; and the committee has cut it to $12 million; is that correct?

Mr. RUSSELL. Yes.

Mr. CARLSON. Does the Senator from Georgia think that amount will be sufficient to carry on this program?

Mr. RUSSELL. I believe it will be adequate. Of course, that is a substantial reduction from the amount provided this year; and that reduction will be made because there will be no new contracts. The only question will be to police the existing contracts.

If the Senator from Kansas will read the language which appears at the bottom of page 21 of the bill, he will find that not less than $10 million of that amount will be available for local administration, and that is where the program is really administered.

We have undertaken, in the discussion with the Senator from South Dakota [Mr. MUNDT], today, to clear up the point that it was the intention of the committee that the county committees shall be first provided for, then the State committees, and that the principal reductions should be at the Washington level, because there are no more policies to be formulated, or matters of that kind. It is more a question of seeing that the contracts are complied with and also of conforming to the Government's share by seeing that these are paid.

I believe the agency will be able to function with this administrative fund.

Mr. CARLSON. The Senator from Kansas has such a high regard for the Senator from Georgia that he is going to go back to his people in Kansas and say they are taken care of.

Mr. RUSSELL. There may be a little pinching. There may not be the money they think they should have. But the agency should be able to administer the program with this money.

Mr. COOPER. Mr. President, will the Senator yield?

Mr. RUSSELL. I yield to the Senator from Kentucky.

Mr. COOPER. I should like to direct the attention of the chairman of the subcommittee to the appropriation for the Extension Service. I notice that the committee recommended an appropriation of $57,715,000, which represents an increase of $2 million over the figure provided by the House, and $4 million over the amount provided for fiscal 1960.

Am I correct in assuming that the State land grant colleges and the extension services in each State can determine, within the scope of the program, the use to be made of these funds? For example, could they use these funds to bring the salaries of extension workers and home demonstration agents up to a level that would be more nearly equal to the salaries paid in other States?

Mr. RUSSELL. Yes. We have assumed the money would be used largely for that purpose. However, of course, the needs vary as between the States. The State of Oregon, for example, pays its county agents a great deal more than any other State in the Union does. Oregon has a large State appropriation for that purpose. The State may desire to hire different specialists in some fields, such as for fruit production. However, generally throughout the United States, I think the funds will be used to increase the compensation of the county agents and home demonstration agents who work on the farm level.

Mr. COOPER. Recently the Kellogg Foundation made a grant of approximately $750,000 to the State of Kentucky, to be used under the supervision of the director of the State extension service, for research and activities toward the development of 30 counties in the eastern section of the State. Peculiarly enough, today we debated the depressed areas bill, which also was designed to give help to such areas. This $750,000 grant will be available to help build the agricultural and other resources of 30 counties in the depressed areas of Kentucky.

Under this appropriation for the cooperative extension work, would the extension service in Kentucky be empowered to use a part of those funds in the rural development program, or in the extension service program in those counties, to make it a more effective program?

Mr. RUSSELL. The Senator means to use the Kellogg funds——

Mr. COOPER. No, not the Kellogg funds.

Mr. RUSSELL. Yes, indeed. They could use the appropriated funds to increase personnel and, if necessary, select 20 counties in Kentucky and give them the rural development treatment. There is no question about it, if the State of Kentucky desired to do it. The only overriding requirment is that the States, or the local units thereof, shall match the appropriation dollar for dollar. As a matter of fact, most of the States spend a great deal more than they receive from the Federal Government; but that is the overriding requirement to obtain those funds.

Mr. COOPER. I know my State will be very appreciative of the fact that the committee retained the $250,000 item which had been placed in the bill in the House, and largely through the initiative of my colleague, Representative WILLIAM NATCHER, of Kentucky, to initiate a tobacco research center in Kentucky.

I wish to thank the committee and the Senator from Georgia for maintaining that appropriation.

Mr. RUSSELL. We hope and trust that the developments at that research station will not only be helpful to the

burley tobacco growers, but will also help the Flue-cured tobacco growers of Georgia.

Mr. COOPER. And the dark tobacco growers.

Mr. RUSSELL. Yes.

Mr. COOPER. I appreciate, as I know all of us do, the great interest of the Senator from Georgia in the farm programs and the fine work of the subcommittee of which he is chairman. We are grateful to him and to the other members of the committee for their good work.

Mr. RUSSELL. I thank the Senator.

Mr. President, may we have the third reading of the bill?

The PRESIDING OFFICER. The bill is open to further amendment. If there be no further amendment to be proposed, the question is on the engrossment of the amendments and the third reading of the bill.

The amendments were ordered to be engrossed and the bill to be read a third time.

The bill was read the third time.

Mr. RUSSELL. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. RUSSELL. Mr. President, I ask unanimous consent that further proceedings under the quorum call be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. RUSSELL. Mr. President, I ask that we have the yeas and nays on the passage of the bill.

The PRESIDING OFFICER. The question is, Shall the bill pass? On this question the yeas and nays have been ordered, and the clerk will call the roll.

The legislative clerk called the roll.

Mr. MANSFIELD. I announce that the Senator from Alaska [Mr. BARTLETT], the Senator from Nevada [Mr. CANNON], the Senator from New Mexico [Mr. CHAVEZ], the Senator from Idaho [Mr. CHURCH], the Senator from Wyoming [Mr. McGEE], the Senator from Florida [Mr. SMATHERS], the Senator from Georgia [Mr. TALMADGE], the Senator from New Jersey [Mr. WILLIAMS], the Senator from Michigan [Mr. HART], the Senator from Hawaii [Mr. LONG], the Senator from Oregon [Mr. MORSE], and the Senator from Montana [Mr. MURRAY] are absent on official business.

I also announce that the Senator from Missouri [Mr. HENNINGS] and the Senator from Michigan [Mr. McNAMARA] are absent because of illness.

I further announce that the Senator from North Carolina [Mr. JORDAN], the Senator from West Virginia [Mr. RANDOLPH], the Senator from Wyoming [Mr. O'MAHONEY], the Senator from Massachusetts [Mr. KENNEDY], and the Senator from Missouri [Mr. SYMINGTON] are necessarily absent.

I further announce that, if present and voting, the Senator from Alaska [Mr. BARTLETT], the Senator from Nevada [Mr. CANNON], the Senator from New Mexico [Mr. CHAVEZ], the Senator from Idaho [Mr. CHURCH], the Senator from Missouri [Mr. HENNINGS], the Senator from North Carolina [Mr. JORDAN], the Senators from Wyoming [Mr. McGEE and Mr. O'MAHONEY], the Senators from Michigan [Mr. McNAMARA and Mr. HART], the Senator from West Virginia [Mr. RANDOLPH], the Senator from Florida [Mr. SMATHERS], the Senator from Georgia [Mr. TALMADGE], the Senator from New Jersey [Mr. WILLIAMS], the Senator from Massachusetts [Mr. KENNEDY], the Senator from Hawaii [Mr. LONG], the Senator from Oregon [Mr. MORSE], the Senator from Montana [Mr. MURRAY], and the Senator from Missouri [Mr. SYMINGTON] would each vote "yea."

Mr. KUCHEL. I announce that the Senator from Indiana [Mr. CAPEHART] is absent because of death in his immediate family.

The Senator from New Jersey [Mr. CASE] is necessarily absent.

The Senator from South Dakota [Mr. CASE] is absent on official business.

The Senator from Hawaii [Mr. FONG] is absent on official business as a member of the official delegation to attend the 150th celebration in Buenos Aires.

The Senator from Pennsylvania [Mr. SCOTT] and the Senator from Illinois [Mr. DIRKSEN] are detained on official business.

If present and voting, the Senator from Indiana [Mr. CAPEHART] would vote "nay."

On this vote, the Senator from South Dakota [Mr. CASE] is paired with the Senator from New Jersey [Mr. CASE]. If present and voting, the Senator from South Dakota would vote "yea," and the Senator from New Jersey would vote "nay."

The result was announced—yeas 74, nays 1, as follows:

[No. 200]

So the bill (H.R. 12117) was passed.

Mr. RUSSELL. Mr. President, I move that the Senate insist on its amendments and request a conference with the House of Representatives thereon, and that the Chair appoint the conferees on the part of the Senate.

The motion was agreed to; and the Presiding Officer (Mr. McCARTHY in the chair) appointed Mr. RUSSELL, Mr. HAYDEN, Mr. HILL, Mr. ROBERTSON, Mr. ELLENDER, Mr. YOUNG of North Dakota, Mr. MUNDT, and Mr. DWORSHAK conferees on the part of the Senate.

PERMIT NAVY TO SERVE OLEO

Mr. JOHNSON of Texas. Mr. President, I move that the Senate proceed to the consideration of Calendar No. 921, Senate bill 2168.

The PRESIDING OFFICER. The bill will be stated by title for the information of the Senate.

The LEGISLATIVE CLERK. A bill (S. 2168) to amend the Navy ration statute so as to provide for the serving of oleomargarine or margarine.

The PRESIDING OFFICER. The question is on agreeing to the motion of the Senator from Texas.

The motion was agreed to; and the Senate proceeded to consider the bill.

RESOLUTION OF JOINT TEXAS LEGISLATIVE COMMITTEE APPROVES PADRE ISLAND NATIONAL SEASHORE AREA

Mr. YARBOROUGH. Mr. President, the beach study committee of the Texas Legislature, a joint committee of both houses of the Texas Legislature, headed by two very able and experienced legislators, Senator Robert W. Baker, of Harris County, and Representative Ben A. Glusing, of Kleberg County, has adopted, on May 20, 1960, a resolution favoring creation of an 88-mile-long national seashore area on Padre Island.

This expression of cooperation and support by our Texas legislators of the project already recommended by President Eisenhower, Secretary of the Interior Fred Seaton, and supported by Senate Majority Leader LYNDON JOHNSON, should in my estimation assure establishment of Padre Island National Seashore Park for the pleasure and benefit of all Americans.

Action of the Texas legislative beach study committee shows that leaders at the State and National level are working in harmony on this project, which will permit the improvement of national seashore recreation facilities on the longest, southernmost natural beach left in America. With this legislative beach study committee favoring enabling legislation on the State level for an 88-mile national seashore park, it is virtually certain that the Texas Legislature will pass such a bill next session. In 1959 the Texas Legislature passed a resolution favoring a 50-mile park and it would be simply a matter of increasing the designated park area.

Mr. President, that was a forward step, because in 1958, when I first introduced the bill to authorize the Padre

Island project, it was said that the Texas Legislature would never give its consent to the creation of a Federal seashore area on Padre Island, and the local interests bitterly opposed the project in the Legislature of Texas. The forces of conservation scored one of their biggest victories in enacting a statute in 1959 providing for a 50-mile-long seashore area.

The Secretary of the Interior has recommended an 88-mile-long seashore area. My proposal was for 100 miles of the 117-mile-long island, but the joint committee of both Houses unanimously recommended the 88 miles, and we have agreed to attempt to have amended the Texas law, which now provides for a 50-mile seashore, and to provide for 88 miles. That is one of the most forward steps in the conservation of recreational resources in the history of my State.

Mr. DOUGLAS. Mr. President, will the Senator yield?

Mr. YARBOROUGH. I yield.

Mr. DOUGLAS. I wish to congratulate the Senator from Texas on achieving a much needed development of the shoreline of the United States for park purposes. We are rapidly losing our shorelines on the oceans, the gulf, and the lakes, and the Senator from Texas has with others been trying to develop a whole series of national parks to conserve the shoreline and to enable the people to have access to the sea and to the lakes. We have met with many discouragements. I congratulate the Senator from Texas upon obtaining this much needed park for Texas and for the country, and to congratulate him upon the progress which he has made.

Mr. YARBOROUGH. Mr. President, I thank the distinguished Senator from Illinois for his very generous words. His interest in the conservation of our national resources and the recreational areas for the American people is long known. He worked at this project for many years before I reached the Senate. His fight for the Indiana Dunes is a national legend now. His great fight for the cleaning up of the pollution in our rivers and in every facet for the improvement of the habitat of the American people is well known. I wish to congratulate the Senator from Illinois for the leadership he has given to those of us who have come here since he laid out the pattern of work in that field.

The resolution passed by the Texas Legislature beach study committee is another vital and significant step toward establishment of Padre Island National Seashore Park. I ask unanimous consent to have printed in the RECORD the full text of this important resolution. I ask unanimous consent that the names of the State senators and State representatives who headed this legislative joint study committee and who signed the resolution be printed in the RECORD with the resolution.

There being no objection, the resolution with signatures was ordered to be printed in the RECORD, as follows:

Whereas the National Park Service, through its pioneer work has awakened our country to the urgency of the need to save our shoreline and has particularly urged the preservation of Padre Island, the longest unspoiled natural beach in the United States, as a national seashore area; and

Whereas Senate bill 4, introduced in the Congress of the United States by the Honorable RALPH W. YARBOROUGH, Senator from Texas, would authorize the acquisition by the Secretary of the Interior of the major portion of Padre Island, which legislation has the strong support of the Honorable LYNDON B. JOHNSON, Senator from Texas, and other members of the Texas congressional delegation; and

Whereas a lengthy public hearing held on this legislation in Corpus Christi, Tex., on December 14, 1959 by the Subcommittee on Public Lands of the U.S. Senate Committee on Interior and Insular Affairs, presided over by Senator FRANK E. MOSS, of Utah, indicated that the people of Texas are strongly in favor of the creation of a national seashore area on Padre Island; and

Whereas the Department of Interior has recently recommended to the Congress of the United States the creation of an 88-mile national seashore area on Padre Island; and

Whereas the Texas Legislature, at its last session, recognized the desirability of such a project and charged this committee with the responsibility of recommending to the next session of the legislature necessary legislation to implement the creation of a national seashore area on Padre Island: Now, therefore, be it

Resolved by the Texas legislative beach study committee, That it endorse the recommendation of the Department of Interior and that it recommend to the next session of the legislature the approval of the creation of the 88-mile national seashore area on Padre Island as recommended by the Secretary of Interior; and be it further

Resolved, That said committee commend the Honorable RALPH W. YARBOROUGH, the Honorable LYNDON B. JOHNSON, the Honorable JOHN YOUNG, the Honorable JOE KILGORE, and all other members of the Texas delegation to the U.S. Congress for their efforts to secure for the people of Texas and of this country a national seashore area on Padre Island; and be it further

Resolved, That a copy of this resolution be forwarded to each member of the Texas congressional delegation.

Passed at Galveston, Tex., on the 20th day of May 1960.

ROBERT W. BAKER,
State Senator, Harris County, Chairman of Texas Legislative Beach Study Committee.

BEN A. GLUSING,
Representative, Kleberg County, Vice Chairman of Texas Legislative Beach Study Committee.

THE CONNALLY RESERVATION

Mr. MUNDT. Mr. President, earlier today the distinguished senior Senator from Minnesota [Mr. HUMPHREY] inserted in the CONGRESSIONAL RECORD a discussion of the Connally reservation, as it appeared in the columns of the Christian Science Monitor.

I request unanimous consent to have inserted in the body of the RECORD two articles appearing in the May issue of the American Bar Association Journal, which I feel deserve the attention and consideration of every Member of the U.S. Senate.

These two articles present in eloquent yet dispassionate terms the pragmatic considerations which caused the Senate of the United States in 1946 to attach the six-word Connally amendment to the formal declaration of the United States accepting the compulsory jurisdiction of the International Court of Justice. Both authors recognize that in the continuing ferment of international affairs caused by the clash of the democratic philosophy of the free world with the totalitarian philosophy of the Sino-Soviet bloc that the Connally reservation remains as a vital and indispensable protection to the domestic sovereignty of the United States.

I am, indeed, proud that the author of the first of these articles is a fellow South Dakotan, Roy E. Willy, a distinguished practitioner of the law in South Dakota for the past three decades and the former chairman of the American Bar Association's house of delegates. Roy Willy has courageously taken up the cudgel in defense of the Connally amendment and is currently campaigning within the house of delegates, urging repeal of action taken 13 years ago, at which time the house of delegates favored the elimination of the Connally reservation.

The second article is authored by a scholarly and highly respected member of the Minnesota bar, Charles W. Briggs, of St. Paul. In a most erudite presentation Mr. Briggs traces the historical development of our Anglo-American concepts of the law, and he ably focuses attention on the one irrefutable lesson of history, that "law is the command of a sovereign power."

Before any action is taken in this legislative body with respect to the Connally amendment, I sincerely hope that all of my colleagues will read and carefully reflect on the contents of these two pragmatic discussions of the immediate prospects for peace through law.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

THE WORLD COURT AND THE CONNALLY RESERVATION

(By Roy E. Willy of the South Dakota Bar (Sioux Falls))

(References made for statistics quoted are largely taken from the report of a special committee of the House Judiciary Committee on the International Court of Justice and the International Criminal Police Organization made to the 1st sess. of the 86th Cong. on April 1959. (Reference to this report will be abbreviated H.J.C.).)

(Reference is also made to publication of the United Nations entitled "The International Court of Justice" in 1957, which is cited as "I.C.J.")

One of the principal purposes of the United Nations is stated to be: "To bring about by peaceful means and in conformity with the principles of justice and international law, adjustment or settlement of international disputes or situations which might lead to a breach of the peace."[1] This same object was also the purpose of the League of Nations. Peaceful settlement of international disputes which might, if not so disposed of, lead to the manifold horrors of war has long been the aim of many people and of many nations, including our own.

Unfortunately, in international affairs between nations, as in private transactions between individuals, it still requires two parties to make a bargain, and in the past it has not always been possible to secure the consent of the necessary parties to insure peaceful solution of international disputes. Certainly, in those cases in the not-

[1] ICJ, p. 1.

too-far distant past in which dictatorship has sought to enlarge its scope of influence by extending the territorial boundaries of its country, a peaceful solution could be secured only at the cost of abject and unconditional surrender.

Whether the United Nations can prove any more successful in preventing deliberate acts of aggression on the part of ruthless and predatory dictatorship than its predecessor, the League of Nations, still remains an open question. The issue was presented to the world in the recent Korean struggle where, although there was intervention by the United Nations, a major conflagration was avoided. Whether this same result would have been reached had the forces of the United Nations waged other than limited warfare was not determined.

As an adjunct to the League of Nations, there was created in 1920 a "Permanent Court of International Justice," [2] under provisions contained in the League Covenant. Its jurisdiction depended solely upon the consent and voluntary participation of the parties to a dispute. Its activities were interrupted by the outbreak of hostilities in World War II and in 1946, its existence terminated with the dissolution of the League of Nations.[3]

Historically, the first serious effort to create machinery for the settlement of international disputes by other than armed hostilities occurred in 1899 in connection with the First Hague Conference, at which time the powers who participated in this conference signed the "Hague Convention for the Pacific Settlement of International Disputes." [4] In 1907 at the second Hague Conference, a Permanent Court of Arbitration was created, a body that still remains in existence.[5] The extinction of the League of Nations carried with it the Permanent Court of International Justice. This gap in the world judicial organization was filled by the creation of a new judicial structure provided for in the Charter of the United Nations. The form and judicial substance of this organization is almost identical with the old Permanent Court of International Justice and at the first meeting of the new body, it adopted, with few changes, the rules of court of its predecessor.[6]

The present International Court of Justice consists of 15 judges who, under the provisions of its Charter, are elected by the General Assembly and the Security Council of the United Nations. The judges are chosen from lists of persons submitted by the various national groups who, as members of the United Nations, also belong to the Permanent Court of Arbitration, and in the case of members of the United Nations who do not belong to this court, separate lists are submitted. The General Assembly and the Council each holds a separate election and the successful candidates must obtain a majority of votes from each of these two separate bodies. Judges of the International Court are elected for nine-year terms and are eligible for re-election. Their terms are staggered so that five judges are selected every 3 years. Provision is also made that in any case before the court in which there is a judge of the same nationality as one of the parties, the other party may choose a person to sit as judge ad hoc and if the court contains no judge of the nationality of any of the parties, each party may select a judge ad hoc who will serve in that case with the right of participation and vote. Under the Charter, not more than one judge from any member nation can be a member of the court at the same time.[7] The yearly compensation of the judges is $20,000 each and the cost of its administration since its creation in 1946 has been $8,457,000.[8]

Since its organization in 1946, the Court has entertained 20 contentious cases [9] and 11 advisory questions have been submitted to it by the United Nations for opinions.[10] However, of the 20 cases presented to the Court, in 7 the Court did not have power to consider because either it lacked jurisdiction or the cases were withdrawn. One was a reconsideration of an earlier case, and 2 are still pending, making a net of 10 cases in which the Court has actually rendered a decision on the merits in the 13 years of its existence.[11] Of the 11 advisory opinions which were submitted to the Court, none were concerned with peaceful settlement of disputes.[12] In this respect, its record does not approach that of the old Permanent Court of International Justice created by the League of Nations. In the 17 years of its active existence, the Court dealt with 79 cases, of which 51 were contentious cases referred to it by states either by special agreement or by unilateral application, and 28 arose from requests for advisory opinions submitted by the Council of the League of Nations.[13]

Under article 93 of its charter, all members of the United Nations are automatically members of the International Court of Justice. However, no member nation is bound by the compulsory jurisdiction of the court without a specific declaration accepting such jurisdiction. To date 39 member nations have by declaration accepted compulsory jurisdiction by the court in specific areas of international law.[14] None of the Communist block of nations, including the Soviet Union, have accepted the court's compulsory jurisdiction.[15]

In connection with the work of the court, much has been said and much more written about the Connally amendment, which came about in 1946 when the United States recognized and accepted the jurisdiction of the court.[16] This acceptance of the jurisdiction of the World Court is subject to a six-word amendment to subparagraph (b) which reads: "Disputes with regard to matters which are essentially within the domestic jurisdiction of the United States." To this phrase Senator Connally added the words "as determined by the United States." Of 39 nations which have accepted the jurisdiction of the International Court, many of them have likewise placed limitations on the court's power with regard to its jurisdiction. In addition to the domestic jurisdiction reservation, several countries, including the United States have likewise restricted the applicability of their declarations to "legal disputes hereafter arising." Others have excluded disputes which affect their national security and others disputes arising out of events occurring at a time when they were involved in hostilities.[17]

The cold war was waiting in the wings in 1946 and had not yet made its appearance on the stage. The House of Delegates had been represented by an official group of observers at the birth of the United Nations. As lawyers, we were well aware of the fact that a feeling existed in the world that the failure of the League of Nations to accomplish its mission of insuring world peace might, in a degree at least, have been due to the failure of the United States to ratify its covenant. Peace and harmony appeared to prevail throughout the world. There was a strong sentiment to the effect that the Connally reservation might jeopardize this situation and that the failure of the United States to accept the full jurisdiction of the International Court of Justice without reservation would have an adverse result on the rest of the world. This sentiment in the American Bar Association was responsible for the resolution introduced in the Assembly at the 71st annual meeting at Atlantic City in 1946. The resolution contained a recommendation to the effect "that the Senate of the United States should reconsider the subject of the declaration of compulsory jurisdiction, and should eliminate therefrom the right of determination by the United Nations as to what constitutes matters essentially within the domestic jurisdiction." [18] The resolution was brought before the House of Delegates and action on the resolution was postponed to the midyear meeting of 1947.[19] At the 1947 midyear meeting, the House of Delegates adopted a resolution embodying the context of the Assembly proposal and recommended that the Senate of the United States "authorize the filing of a further declaration which shall not contain the reservation or condition to which the foregoing resolutions relate." [20] This amended resolution was approved by the Assembly at its 1947 annual meeting.[21] The Senate of the United States took no action toward repealing the Connally reservation and the matter remained more or less dormant until it was brought to attention by a number of prominent individuals, including the present Attorney General.

On March 24, 1959, Senator HUMPHREY introduced Senate Resolution 94, which reenacts the resolution of August 1946, but deletes the six-word amendment proposed by Senator Connally and adopted by the Senate. The matter did not again come before the house of delegates until the midyear meeting at Chicago on February 22, 1960. At that time a resolution was introduced, signed by 11 members of the house of delegates, the purpose of which was to ask the house to rescind the action taken in 1947 and urge upon the U.S. Senate the retention of the Connally reservation. This resolution was not debated before the house on its merits but on motion was referred to a special committee on world peace through law.

A report of a special committee of the House Judiciary Committee on the International Court of Justice and the International Criminal Police Organization presented at the 1st session of the 86th Congress uses this language with reference to the Connally amendment: "The Connally amendment basically is of good purpose. It seeks to safeguard matters which are essentially of domestic concern to the United States. Under the United Nations Charter, the International Court has jurisdiction only over questions of international law—not domestic matters. It therefore does not seem unwise, in the absence of treaties and any developed principles of international law, that such items of immigration and certain aspects of our postal or atomic energy laws which are essentially domestic matters be reserved to the United States for a decision." [22]

This same report further calls attention to the fact that so far as the special committee could determine, there are no clear-cut rules recognized in international law as to

what are and what are not domestic issues.[23] Therefore, the United States reserved to itself the right to decide this question in controversies in which it is involved. This possessed the advantage at least of preventing an encroachment on domestic jurisdiction. At the present time the United States is and for many years has been engaged in a worldwide relief program, under which billions of public funds have been expended in military aid, as well as in varied forms of economic assistance to less fortunate nations. Questions involving these voluntary gifts made by this country, made on an international scope, certainly involve questions of purely domestic policy which the United States would not wish to surrender to a Court of International Justice.

The future of the Panama Canal which is vital to the safety and security, as well as economic prosperity of the United States, might easily be determined to be a question of international law by an international court. Our security depends upon its remaining a domestic question, free from possible interference by a hostile international court.

Questions involving immigration have an international aspect but so far as this country is concerned, are purely domestic questions. The retention or discontinuation of the sugar subsidy which has bolstered the economy of Cuba for many years is, so far as the United States is concerned, purely a domestic problem and not one which should be submitted to an international court in the event this country should seek to change, alter, or discontinue the subsidies entirely.

The International Court as an instrumentality seeking to maintain world peace is deserving of the support of every lawyer and of every citizen not alone of this country but of the world. The consequences resulting from holocaust possible under an atomic war stagger the imagination. However, there are benefits and privileges which come to the citizens of the United States which we feel are worth retaining and should not be sacrificed as the price of membership in the present International Court. Less than 50 percent of the present members of the United Nations have accepted the compulsory jurisdiction of the World Court. Of those who have accepted, many have done so with one form of reservation or another. Neither Soviet Russia nor any of its satellites have accepted compulsory jurisdiction by the World Court. Until the world, or, at least, a substantial portion of it, including the principal great powers, have accepted compulsory jurisdiction of the World Court, the Court as such has but little influence in the settlement of disputes between powers, except as the powers themselves voluntarily consent to the Court's jurisdiction. If, as, and when circumstances should arise that would make it possible for a world court to be a true representative of a judicial structure as understood by the English-speaking world, the United States will be jeopardizing this domestic peace, tranquillity, and security by accepting without the reservation compulsory jurisdiction of the present International Court.

It is true that the scope of the Court's activities has been severely restricted by virtue of the fact that a majority of its members have never accepted its compulsory jurisdiction. It is doubtful if the Connally reservation and similar reservations by other complying members have had any material effect on the Court's activities. At least the United States and the 38 other nations which have accepted compulsory jurisdiction do submit their international disputes to the Court. However, there is no way of compelling noncomplying members to accept the Court's jurisdiction and no means exist other than by consent of the nonmembers to acquire jurisdiction over such nations. It is also worthy of note that even the General Assembly of the United Nations has made but small use of the facilities of the Court and in the 14 years of the Court's existence has referred but 11 questions to it for advisory opinions. It is unfortunate that the International Court does not have a wider recognition but certainly it is not the Connally reservation which has deprived it of the opportunity to be of service to the world.

The matter of the Connally reservation was again brought before the house of delegates at its midyear meeting because of the fact that the failure of the house to reverse the action taken in 1947 is continually cited by those who favor the repeal of the Connally reservation as representing the present sentiment of the American Bar Association. Those who favor the repeal of the Connally reservation continually use in their propaganda the fact that the American Bar Association has since 1947 favored its repeal.[24] It is self-evident that this attitude does not represent the unanimous sentiment of either the American bar or the house of delegates. The sponsors of the resolution which was presented at the midyear meeting and referred to the Committee on World Peace Through Law feel that the members of the house are entitled to an opportunity to consider again the matter fairly on its merits and are confident that this opportunity will be presented to the members at the Washington meeting.

THE CLOUDY PROSPECTS FOR "PEACE THROUGH LAW"

(By Charles W. Briggs, of the Minnesota bar (St. Paul))

There is danger that hopes for "peace and liberty under law" are being exaggerated.

From time to time great social and political explosions in the world produce strange philosophical fallouts upon the legal mind. One of these is the nature of law. Periodically fragments of strife descending upon men become so intense that they become notionate and wishful thinkers about peace on earth. There is a rush to the fetish of rules of law as manna from heaven, to the supreme disregard of practical matters involved. It is good that lawyers check their pragmatic bearings once in a while.

Today it is difficult for some skeptical and inquiring minds to avoid the conclusion that a close examination should be made of concepts back of such slogans as "the Rule of Law," "Peace Under Law," and "Liberty Under Law." Before we know it we are apt to become involved in occult revelations about the law after the manner of a spiritualistic medium.

Some such apprehension is created by an article entitled "Leader of the Few: A Royal Air Force Background of Law Day," appearing in the April 1959 issue of the American Bar Association Journal (45 ABAJ 355). The author, on page 370, quotes from Lord Dowding's "Leader of the Few" in part:

"The evidence for the conscious survival of death, and the possibility of intelligent communication between the quick and the dead is in my opinion quite convincing to the open mind * * * I confidently predict that all these ideas will be commonly accepted in a hundred years' time, when those who reject them will be classed with those who now believe that the earth is flat * * * the more we know the better are we qualified to cooperate with the unseen Forces of Light in helping distressed humanity on both sides of the Grave."

The author of the article goes on to say:

"To all skeptics Lord Dowding may well quote Hamlet: 'There are more things in heaven and earth, Horatio than are dreamt of in your philosophy,' and 'There's a divinity that shapes our ends, rough-hew them as we will.' "

Further this author says:

"The belief of Lord Dowding is not only significant and entitled to respect, but, as appears from the increasing number and variety of spiritual books in the Western World, has been spreading since the nuclear bombs appeared. Aside from the cynics, there appears to be a growing consciousness that the survival of the human race and the civilized part of it, depends on unseen spiritual forces. For all these reasons, if 'liberty under law' is the hope for a peaceful world, the 'Leader of the Few' deserve[s] for our sakes, to be known and remembered by the American bench and bar in connection with 'Law day' as a continuity."

The continuity here envisaged is with the school of natural law whose chosen votaries would extract the law from a supernatural authority.

Now, with what indemonstrable assumption is the "Rule of Law" concept to be associated? One answer comes in the May 1959 issue of the Journal (45 ABAJ 482). It is the dogma of natural law. In an article entitled "The Way of the Law" the author says:

"The question to be answered by philosophy is whether, on the one hand, law is only an accidental product of irrational forces. Or whether, on the other hand, law reflects and must seek to reflect a structure of justice established by the Creator of all things for the right relation of man to man and nation to nation.

"The classic phrase 'natural law' is a stumbling block for many thoughtful people. For others it has most satisfactory meanings, reflecting that structure of justice of which I have spoken."

Again:

"In American thought and feeling the rights of man are not derivable from physical nature nor from any Rousseauian theory of noble savage or social compact. The rights of man are derived from his Creator."

Also:

"What then is it, this rule of law? It is, as we have noted, a fundamental concept of political philosophy."

Then the author would wipe out the privilege of the United States to stay the compulsory jurisdiction of the World Court if in our judgment the matter in dispute involves domestic jurisdiction of the United States. He says:

"Meanwhile there is the World Court of the United Nations—the most unused court in history. This means that the Connally amendment must be repealed."

Within that jurisdiction as an adjunct of a world government we are supposed to attain liberty and peace under the law. And the law? It must be what to the judges is revealed as a structure of justice established by the Creator.

THE SLOGANS USED RAISE SEARCHING QUESTIONS

This business of the rule of law and peace under law raises very searching questions and points to some areas of serious misunderstandings. Some of these questions it is the purpose of this article in all candor to raise. But as a prologue let us lay down an approach. Most people favor peace as against war, but not peace at any price.

We are not too proud to fight for the defense of our land and the institutions liberty-loving men hold dear. We are not to be misled by emotionalism when we appraise a proposed method of attaining peace. We live in a hard world which gives little or no heed to weakness, humility, or unpro-

[23] HJC, p. 8.

[24] The American Bar Association has consistently opposed it since 1946: "Vital Issues." vol. IX, No. 6.

tected virtue. The practical aspects and workability of any formula for human happiness are always to be thoroughly explored.

First. What is meant by peace? Is peace freedom from war? Is it tranquillity enforced by war or the threat of military force? Does Hungary have peace? Do East Germany and the Balkan States? Does it concern civil wars? Do Cuba and Iraq have peace? Is Yugoslavia at peace? Is France? Were the Pax Romana and the Pax Brittania real conditions of peace, although made possible by legions and warships? Is there peace under law where the law is observed under compulsory processes? Very definitely peace to some does not mean the cessation of attempts at conquest nor the end of the class war.

Second. What is law? This is not a captious question as we shall see.

Mr. Webster says that law is a "rule of conduct which is prescribed or is formally recognized as binding and is enforced by the supreme governing authority," i.e., by a sovereign power.

Now this at first blush seems to be a rather simple matter. But it is that by no means. What is law has been the subject of violent controversy for centuries and centuries. Scholars, lawyers, clerics, philosophers, and even laymen with a flare for dialectics and scholastic mysticism, have divided themselves into two factions.

On the one hand, we have the school of natural law. On the other hand, we have the positivist school. These schools differ sharply and almost irreconcilably on the origin of law.

The naturalists teach that natural law signifies the laws for the direction of human conduct which proceed immediately and infallibly from the Deity. This law is asserted to be an essential and external code which the conscience and rational powers of man are capable of perceiving. We may well amplify the explanation of this concept by referring to the teachings of its devotees. St. Thomas Aquinas, a monk writing in the 13th century, founded his legal philosophy squarely and explicitly upon a theological basis. From there he proceeds to arrive at logical sequences and consequences in the field of law by the deductive method of scholastic logic. He taught that law operated throughout the universe as a complete and immutable system. In his system God is the supreme ruler; law is derived from Him, and that law is supreme in the state. Lord Chief Justice Coke lived in the 17th century. His philosophy of natural law is often referred to by the naturalists as an authority. He said:

The law of nature was before any judicial or municipal law and is immutable. The law of nature is that which God, at the time of creation of the nature of man, infused into his heart for his preservation and direction.

Blackstone belonged to the naturalists. He held this:

"When the Supreme Being formed the universe * * * He impressed certain principles upon that matter from which it can never depart. This, then is the general significance of law."

But he displayed feet of clay to them when he wrote:

"I know it is generally laid down more largely that acts of Parliament contrary to reason are void, but if the Parliament will positively enact a thing to be done which is unreasonable, I know of no power in the ordinary forms of the constitution that is vested with the authority to control it."

A quotation on the subject from the president of a modern university pretty well sums up the philosophy of the naturalists. He says:

"The natural law is not an ideal; it is a reality. It is not the product of men's minds; it is a product of God's will. It is as real and as binding as the statutes in the United States Code. It is not a mere ideal toward which all statutes and court decisions and systems of law should tend; the actuality is that any statute or court decision or system of law which does not conform to natural law simply has no valid, binding force; it is inherently vitiated. It lacks an element required for essential validity."

We find also in a report of the 1947 proceedings of the Natural Law Institute this statement:

"Nevertheless, all prescriptions of human reason can have force of law only inasmuch as they are the views and the interpreters of some higher power on which our reason and liberty necessarily depend."

Thus we have the dogma that all rules prescribed for the government of men must be derived from divinely revealed principles. This means interpretation by the human mind. Some Lord Coke is always ready to constitute himself the proper intermediator between divinity and the governed. If more than one Coke turns up, then there is the eternal conflict of lawgivers. No code of the natural law has ever been written; nor has anyone ever seen a treatise on how the vast body of modern rules of conduct can be traced to immutable principles of that law.

Mr. Felix Oppenheim, in the American Political Science Review (vol. 44, No. 4, December 1950), gives us this summation:

"The natural law doctrine is characterized by philosophical absolutism. This absolutism holds that there is such a thing as 'absolute reality' which can be communicated by or be understood by man through revelation, intuition, or 'right reason.' * * * Absolutism is not tolerant of competing ideas and opinions. So it would seem that the naturalist, being an absolutist, has a natural affinity for absolutist government, or totalitarianism."

Now let us take a look at the positivist school of law.

Inasmuch as Justice Oliver Wendell Holmes was one of the most illustrious and trenchant exponents of this point of view, we may present his views as typical. He stood at the end of a road surveyed by other positivists such as Francis Bacon, Thomas Hobbes, John Locke, Jeremy Bentham, Immanuel Kant, David Hume, John Austin, Hegel, James and Dewey.

In his book, "The Common Law," Justice Holmes drew the following conclusions:

"The life of the law has not been logic: it has been experience. The felt necessities of the time, the prevalent moral and political theories, intuitions of public policy, avowed or unconscious, even the prejudices which judges share with their fellow men, have had a good deal more to do than the syllogism in determining the rules by which men should be governed. The law embodies the story of the Nation's development through many centuries, and it cannot be dealt with as if it contained only the axioms and corollaries of a book of mathematics. In order to know what it is, we must know what it has been, and what it tends to become. We must alternatively consult history and existing theories of legislation. But the most difficult labor will be to understand the combination of the two into new products at every stage. The substance of the law at any given time pretty nearly corresponds, as far as it goes, with what is then understood to be convenient."

In this work he further says:

"A legal right is nothing but a permission to exercise certain natural powers, and upon certain conditions to obtain protection, restitution, or compensation by the aid of a public force. Just so far as the aid of a public force is given a man, he has a legal right, and this right is the same whether his claim is founded in righteousness or inequity."

THE POSITIVIST VIEW—MR. JUSTICE HOLMES

Holmes' positivist legal philosophy may be summed up briefly: He held that judges made law, as do legislators, for in substance the growth of the law is legislative. He never lost sight of the inductive method in declaring the common law. To him "the secret root from which the law draws all the juices of life" are views of what is salutary and feasible for the community concerned. He never questioned the privilege of men to indulge in legislative experimentation to regulate or improve their law. He believed that man, speaking collectively, made his own law; that law is a sovereign's command, and nothing else; that law in a democracy is necessarily the command of the majority of the social group. He maintained that force is the ultimate ratio of the law. Inalienable rights he never acknowledged.

In *Southern Pacific Company* v. *Jensen* (244 U.S. 205), Justice Holmes made the now famous remark:

"The common law is not a brooding omnipresence in the sky but the articulate voice of some sovereign or quasi-sovereign that can be identified."

In *Black & White Taxi Co.* v. *Brown & Yellow Taxicab & Transfer Co.* (276 U.S. 518), Justice Holmes said:

"'Law' is a word used with different meanings, but law in the sense in which courts speak of it today does not exist without some definite authority behind it."

Third. Which philosophy is apt to prevail in establishing rules of law, be they for peace or liberty or otherwise?

While we are still in the area of argument, it is pretty safe to conclude that the pragmatic approach of the positivists to the law will be accepted in preference to the approach of the naturalists.

The natural law is not meaningful nor useful in human society for evident reasons:

1. As a dogma it is purely subjective. Its truth can be tested by standards which can be applied only by the individual making the judgment. It can exist only in the individual mind. From it can be extracted all manner of rules of conduct to suit the interest of the interpreter.

2. The dogma is indemonstrable. It is a pure assumption and a double abstraction.

For most people the value and soundness of rules of conduct can be judged only in their operation as they concern actual facts. These rules are evolved by some sovereignty under whose power is the ultima ratio. A conclusion as to the propriety of a rule of law can be reached only by applying standards derived from the value of precedents and expected results.

3. The dogma is devoid of concreteness and determinateness, which are qualities found in the positive law.

It is used to characterize a set of rules of the most patent generality that are claimed to supersede manmade laws. The initial difficulty with the concept of natural law in respect of concreteness arises because (a) no lawgiver exists or is identifiable; (b) no organized power exists to enforce it; (c) it exists in a vacuum.

It is altogether inscrutable.

Fourth. Can we rely upon an assumption that there are absolute and immutable rules of law not dependent upon some sovereign power for promulgation and enforcement?

It would seem not.

If there are such rules they have never come to us except as formulated and expressed by a human mind acting as an interpreter. The question then arises: through what mind? Through a Moses, a Louis XIV, a James I, a Richelieu, or a Thomas Aquinas, proceeding, of course, on the basis of divine right or sanction? Or through multiple minds in a democracy?

If we assume that law must have supernatural sanction, then we cannot escape the conclusion that there have always been, and always will be, irreconcilable differences between interpreters of the divine will.

LAW PROCEEDS FROM THE FORCE OF THE SOVEREIGN

We are not at liberty to reject the teachings of history that rules of law have proceeded from the exercise of sovereign power. Such a power must evaluate, and pass judgment upon divergent human views. It must authoritatively decide what view shall prevail as a positive rule of conduct.

We must realize at the outset that there is no such thing as a choice between the rule of law and the rule of force. Force complements the law as the beginning and end of it—its ultimate sanction. So does history run.

The ancient Israelites put the sword back of the Torah. The judges of Israel never hesitated to use force when the commands of Jehovah were defied. The Ark of the Covenant was at home in an armed camp. In modern Israel, the rule of law as it is revealed there is maintained by military force. In ages past religious wars over interpretations of revealed law have drenched the earth with blood. The Crusades of the Middle Ages were hardly expeditions to establish peace under the rule of law alone. The prophets of Islam broadcast the rules of the Koran by fire and sword. Hindu and Mohammedan look to force to determine whose interpretation of the divine law shall prevail. When the Hindu philosophy crosses that of Islam, the next step is the crossing of swords and the arbitrament of war.

Today, all over the world, rules of conduct are laid down by sovereign power. The dove of peace once perched upon a spear; now she must ride in the atomic warhead of a ballistic missile.

The Nuremberg trials were a striking instance of positive law made for the occasion and administered ex post facto by sovereign powers to suit their convenience. Vengeance presided as law was improvised to accomplish "justice for the victors". Where is the peace that flowered from that rule of law?

The Founders of this Nation understood well that strife can arise over spiritual doctrines. Thus they erected in the first constitutional amendment in impenetrable barrier between theology and the law. They said: "Congress shall make no law respecting an establishment of religion or prohibiting the free exercise thereof." They learned well a sad lesson from endowing any man with power and authority to determine the law by the standards of his religious belief. They were in no mood to reestablish the "Divine Right of Kings" or any similar groundless abstraction. They had ample reason to mistrust judges who claimed to be vicegerents of God with assumed warrants from Him to declare the law. And they appreciated full well that these interpreters of the supernatural were always ready to invoke the desired amount of force to uphold the law they found to be natural.

Fifth. The question then arises: What sovereign power is going to decide what the law shall be and how and by whom it is to be enforced?

The choice is between a world sovereign and independent nations.

If a world government or federation is to discharge these sovereign functions, it must be vested with governmental powers, just as our national government is. If it meets our specifications, it must have a legislator, a court and a sheriff. If the United States becomes a party to such supranational authority, it makes itself subject to the compulsory jurisdiction of that legislator, that court and that sheriff. To the extent of the powers delegated, we should cease to be sovereign and self-governing. Think, if you will, of a world parliament to enact laws binding upon us against our will. Of a world court with compulsory jurisdiction to invade our domestic domain. Of police forces, including military components, to put us under the lash of rules of law, perhaps foreign to our concepts of justice and individual rights.

THE INSURMOUNTABLE PROBLEMS OF ESTABLISHING WORLD GOVERNMENT

Would it not be impossible to establish a supranational government? Impossible, because no one is able to formulate a workable structure for it. Right at the threshold we meet head on insurmountable problems:

1. How are the peoples of the world to be represented?

2. What powers are to be delegated?

3. How are military forces to be assembled, located and commanded?

4. What are to be the rules for immigration and citizenship qualifications?

5. What constitutional principles are to be established?

6. What is to be the philosophy and ideology behind such a government?

There are now and have been widely differing systems of national government throughout the world with equally divergent legal structures. We may enumerate just a few: Mohammedan, Chinese, Hindu, Slavic, Germanic, Anglican, Japanese and Romanesque. Before them came others: Egyptian, Mesopotamian, Hebrew, Greek, Maritime, Roman, and the Papal or Church. (See Wigmore's "The World's Legal Systems.") Now must be added the Soviet, or communistic. Each has or had its distinctive rules of law. From this welter how is a supranational legal system to evolve?

The roots of these systems differ. Ideas about moral and personal conduct are in conflict. Religious prejudices are insoluble. Racial backgrounds cannot be effaced. Traditional enmities persist.

Nationalism is ingrained in peoples. It has not lost but gained in fervor throughout the world. It has grown despite erasures of time and space, despite the improvements in transportation and communication. International rivalries have not been lessened. The swifter spread of knowledge concerning rival systems has served to intensify the struggle for national independence and supremacy. Our easier means of evangelism throughout the world have not brought converts to our system but belligerent enemies. Colony after colony has broken away from the mother country. National independence is a battlecry everywhere else. Why all of a sudden should it be feeble in the United States?

Attempts to codify international law have dismally failed. So have attempts at collective security. Plans for organizing, equipping, and commanding an international police force died aborning. NATO is a standing example of aversion to yielding sovereignty to a supergovernment. NATO, however, has been able to carry on through international agreements in pursuance of a common purpose. The signatories prefer to maintain their separate autonomies.

Engagements in armed conflicts since the great alliance of World War II have been carried on by individual sovereign nations, although on one side in the name of the U.N.

There is not even a faint hope that a world organization could be created with governmental power to declare or enforce the law.

There is little reason to expect that the nations of the world could establish a World Court with compulsory jurisdiction. How could it keep the peace? The longstanding and operative causes of war do not constitute justiciable controversies. Nations go to war over problems that no court can settle. Here are a few of them:

1. Expanding populations;
2. Commercial rivalries;
3. Unequal distribution of natural resources;
4. Conflicting ideologies;
5. Religious differences;
6. Traditional enmities;
7. Lust for power.

Most people prefer peace most of the time. At times they prefer war. They justify war where great principles are at stake. The issues involved in our Revolutionary and Civil Wars could not have been resolved by the peaceful processes of the law and judicial decision. In the Dred Scot decision and the hanging of John Brown the law was precisely followed; but they lit the flames of war nevertheless. Oftentimes the passions and prejudices of men are not to be subdued by a rule of law. The Boston Massacre was exonerated in a court of law but it aroused the people to a war for freedom. Recently the law as enunciated by our Supreme Court was enforced at bayonet point. What court could have decided the political issues involved in the outbreak of the First and Second World Wars? The law was silent. There is no international law to speak today effectively for peace.

National power ratings alone get a hearing. "How many divisions has he?" cynically asked the Russian dictator, when a great spiritual force for peace was mentioned.

LAW IS THE ORDER OF THE MASTER

Who is going to decide that there shall be peace under the rule of law? We may be sure that the wealthy, cultured and soft nation at its zenith will prefer peace and if it can will promulgate the law to attain it. Mature civilizations tend to wallow in pleasures and avoid the sterner virtues that raised them up. The urge to fight wanes. But the tough and growing nation is not averse to conquest in order to gratify its ambitions for wealth and power. The law rides with its armies. Law becomes the order of the master not the supplication of the conquered.

There is nothing in the natural law philosophy that guarantees peace or individual liberty. It can well be and has often been the concomitant of rule by force. This philosophy certainly is compatible with autocracy or the totalitarian state. Today we cannot safely rely upon a belief that liberty will not be lost and that peace will reign if only we hold to the assumption that natural rights to life, liberty, and property are inviolable. And surely democracy carries no absolute guarantee of individual liberty. We will preserve liberty only if the people in their sovereign capacity demand it.

The conflicts that array nation against nation today are not differences between systems of law. The controversies that disturb the peace of the world are not concerned with the law of property, of domestic relations, or estates, of tort liability. They are not concerned with the guilt or innocence of a few accused persons or with civil rights of individuals; not with procedural law. They are concerned with what sovereign power is to be paramount and supreme. We are skirting the borders of Armageddon while the real question at issue between nations is: Whose law is to be the law that governs? That law will not be established by good will, not by persuasions of justice, nor by purchase, nor by "right or reason"; but by predominant sovereign power. Did the Russians take their tanks into Hungary to protect a Hungarian rule of law? Are the Chinese Reds going to recognize the Tibetan rule of law? If Russia takes over in Iraq, does she intend to observe the

Iraqi rule of law? It ought to be clear that no communistic nation will ever yield to our system of law and its principles until the present ruling leadership is uprooted by force from within or without.

The plain fact is that the United Nations has been inefficient because it was not endowed with power to do anything either for the maintenance of peace or the conduct of war. Governmental power remains with the signatory nations. The U.N. must look to the exercise of sovereign power by these constituent nations. The sovereignty of each of these nations was left unimpaired. Nothing it does has the character or force of law. Unfortunately, there was created the impression that the U.N. was the perfect instrument for finding, interpreting and applying by moral force to all peoples that great body of immutable and absolute rules and principles of national and international law. Now the disclosure comes that law results from a meeting of minds. There is no concensus in the U.N.; and one independent nation scorns the legal system of the other and its principles. And then comes the imponderable and insoluble difficulty that the peace is broken by political, not judicial questions.

CONCLUSION

We must abide with independent sovereign nations. World government is only a dream, a fruitless venture into idealism. Think of giving power to a world government to make a declaration of war "to keep the peace" binding upon us and which might well be against our wishes and national interests. And how fantastic it is to think that the rising tide of human passions that break the peace can ever be resolved by a court of law.

Law is the command of a sovereign power. Force is its ultima ratio. Law is not a self-generating mechanism; nor is it self-enforcing, as the naturalists would have us believe. We are ruled by positive law which arises from considerations of public policy and social convenience.

Justice Learned Hand says this: "The law must have an authority supreme over the will of the individual, and such an authority can arise only from a background of social acquiescence * * *. In essence, law is the conduct which the government, whether it is a king, or a popular assembly, will compel individuals to conform to, or toward which it will at least provide forcible means for securing conformity."

Mr. Justice Holmes concludes: "Just so far as the aid of the public force is given a man he has a legal right, and this right is the same whether his claim is founded in righteousness or iniquity." And further: "The life of the law has not been logic: it has been experience. The substance of the law at any given time pretty nearly corresponds, as far as it goes, with what is then understood to be convenient."

Roscoe Pound epitomizes the philosophy of law as follows: "But I am skeptical as to the possibility of an absolute judgment. * * * Is the end of law anything less than to do whatever may be achieved thereby to satisfy human desires. * * * What I do say is, that if in any field of human conduct or in any human relation the law, with such machinery as it has, may satisfy a social want without a disproportionate sacrifice of other claims, there is no eternal limitation in the nature of things, there are no bounds imposed at creation to stand in the way of its doing so."

What Pound implies is that the hand of the supernatural cannot be discovered in the acts of legislatures, in the decisions of courts nor in the orders of administrative boards.

We may well quote here the trenchant words of Mr. Mortimer Adler used at the Notre Dame Law Institute in 1947:

"Nations, like individuals, who live together under natural law alone, are in a state of war, whether or not actual shooting is going on. However sound morally the precepts of international law may be as conclusions deduced from natural law they lack the coercive force of positive law. International law is not the kind of law which can keep peace. It is not sufficient to ask for a worldwide reign of law. It must be positive law. The doctrine of natural law does the human face a great disservice if it in any way obscures this fundamental truth by empty eloquence concerning international law as the foundation of international peace.

Our dire predicament today is due in no small measure to such eloquence and to advocating world government without even as much as blueprinting its framework and the code of positive laws under which it would be expected to operate among the heterogenous peoples of the earth.

Before any World Court can function in any area, common standards must be arrived at. What would be the source of its law? Is it to be of supernatural origin as the Justices see it? There must be an accepted language which will convey the meaning of the parties, one that will silence the communistic wordtwisting.

We must look to the will of the sovereign for the law, and in this country the people are sovereign and responsible. Tracing the rules of law to a supernatural authorship is a futile effort. There certainly is nothing celestial about a tax code, a tariff law, or a labor law, or in the legislative history, fostering inflation. What spark of divinity is observable in an order of the Interstate Commerce Commission, in an order of the Federal Trade Commission, or in a decision of a court at any level, for that matter? Is the Congress under the aegis of a brooding omnipresence in the sky? This whole business of the rule of law is unmistakably earthly and manmade. If we do not recognize it as such and instead restore a pallid faith in an automatic rule of law founded upon the absolutism of divine revelation, we shall repeat an old mistake. We shall again put on the shackles forged by theological assumptions from which we thought we had freed ourselves. We shall not save the peace and individual liberty, but again put them in jeopardy.

Peace and liberty under law will be with us only if we possess and are willing to exert the sovereign power to preserve them.

ENROLLED BILL PRESENTED

The Secretary of the Senate reported that on today, May 24, 1960, he presented to the President of the United States the enrolled bill (S. 2130) to authorize a payment to the Government of Japan.

ADJOURNMENT

Mr. JOHNSON of Texas. Mr. President, I move that the Senate adjourn until 12 o'clock tomorrow.

The motion was agreed to; and (at 6 o'clock and 44 minutes p.m.) the Senate adjourned until tomorrow, Wednesday, May 25, 1960, at 12 o'clock meridian.

NOMINATIONS

Executive nominations received by the Senate May 24, 1960:

U.S. COAST GUARD

The following-named officer who is serving as Commandant of the U.S. Coast Guard and whose term of office expires May 31, 1962, to be admiral in the U.S. Coast Guard, to be effective June 1, 1960.

Alfred C. Richmond.

The following-named officer who is serving as Assistant Commandant of the U.S. Coast Guard and whose term of office expires May 31, 1962, to be vice admiral in the U.S. Coast Guard, to be effective June 1, 1960.

James A. Hirshfield.

U.S. PATENT OFFICE

Hyman Freehof, of the District of Columbia, to be an Examiner in Chief, U.S. Patent Office.

IN THE MARINE CORPS

The following-named officers of the Marine Corps for permanent appointment to the grade of colonel:

William H. Junghans, Jr.	Paul B. McNicol
John L. Hopkins	George C. Axtell, Jr.
Henry W. Seeley, Jr.	Charles Kimak
Henry G. Lawrence, Jr.	Louie N. Casey
William C. Ward, Jr.	John J. Wade, Jr.
John T. Bradshaw	Karl N. Smith
Robert E. Collier	Horace C. Parks
Alexander A. Elder	Bernard W. McLean
Ward K. Schaub	Olin W. Jones, Jr.
Maurice L. Appleton, Jr.	Henry H. Reichner, Jr.
Alvis H. Allen	Edwin B. Wheeler
Clifford F. Quilici	John B. Sweeney
Victor R. Bisceglia	Grant S. Baze
Nathaniel Morgenthal	William T. Bray
Louis G. Ditta	George D. Webster
John T. O'Neill	George F. Vaughan
Arthur H. Haake	Henry S. Campbell
Oscar F. Peatross	David M. Danser
Frank E. Garretson	James P. Rathbun
Norman R. Nickerson	Arthur J. Rauchle
Norman Pozinsky	Paul H. Millichap
Stanley S. Nicolay	Edward P. Dupras, Jr.
James K. Dill	Louis C. Griffin
	Houston Stiff
	James E. Herbold, Jr.
	John S. Hudson

The following-named officers of the Marine Corps for permanent appointment to the grade of lieutenant colonel:

Joseph C. Fegan, Jr.	Edward L. Fossum
Neely D. Butler, Jr.	Adolph J. Honeycutt
Robert F. Foxworth	Gale B. Gibson
Theodore R. Boutwell	Claude R. La Plant
Emmett O. Anglin, Jr.	Albert M. Roebuck
Earl P. Carey	Paul C. Trammell
Robert E. Brant	Edson W. Card
Emmett R. Hiller	Stephen Horton, Jr.
Leo B. Shinn	Fred E. Kiehle, Jr.
Frederick C. Dodson	Raymond F. Garraty, Jr.
Russell E. Corey	Leo V. R. Gross
David W. Banks	William D. Porter
Richard C. Smith	Bertram S. Ryder
Nels E. Anderson	Robert E. McClean
William O. Cain, Jr.	Edward R. McCarthy
Richard L. Moore	Thomas B. Wood
Leslie E. Brown	Francis C. Hogan
Jay W. Hubbard	Ephraim Kirby-Smith
William F. Lane	Franklin J. Harte
Richard C. Bryson	Richard A. Brenneman
Bruce F. Williams	Gilbert D. Bradley
Walter E. Stuenkel	Robert M. Krippner
William J. Zaro	William K. White
Rufus B. Thompson, Jr.	William P. Vaughan
William M. Graham, Jr.	Clyde S. Stewart
William P. Nesbit	Wesley W. Hazlett
Roland H. Makowski	Wiley A. Green
Edward H. Greason	Anthony R. Nollet
William H. Clark	Marion C. Dalby
Harry L. Givens, Jr.	John E. Cosgriff
Frank R. Berrar	Theodore J. Horner
Charles H. Greene, Jr.	Robert M. Ervin

The following-named officers of the Marine Corps for permanent appointment to the grade of major:

Lavern J. Oltmer	Burneal E. Smith
George A. Brigham	John G. Theros
Francis C. Opeka	George A. Gibson
Raymond W. Mullane	Russel H. Stoneman
William J. Hinson, Jr.	Robert H. Emswiler
David P. Graf	Gus Robinson

Herbert E. Mendenhall
Robert E. Luther
Forrest E. Caudle
Eugene S. Kane, Jr.
Arnold S. Baker, Jr.
Mark A. Rainer, Jr.
Robert W. Taylor
Harvey E. Spielman
Wilmer W. Hixson
John W. Collier, Jr.
Gene M. Hoover
Maurice A. David
Angelo J. Sammartino
James F. Williams
Edwin S. Schick, Jr.
Gordon H. Keller, Jr.
Eugene Millette
Hiel L. Van Campen
Robert Lewis, Jr.
Robert G. Scurrah
Howard A. Blancheri
Leo G. Lewis, Jr.
Adolph G. Schwenk
James Landrum, Jr.
Samuel Taub, Jr.
Richard F. Peterson
Earl K. Vickers, Jr.
Emil M. Misura
Lyle B. Matthews, Jr.
Raymond McArthur
John H. Maloney
Charles S. Wilder
Joseph B. Harrison
Frank P. Stivers, Jr.
Loren R. Smith
Miller M. Blue
Patrick J. Dayson
Francis E. Finch
Jack Glenn
Melvyn H. Kerr
Richard H. Mample
Charles A. Arneson
William R. Affleck, Jr.
Thomas P. O'Callaghan
Ernest R. Olson
Mildridge E. Mangum
Wallace W. Crompton
David W. Graybeal
Don D. Ezell
Robert Zeugner
Joseph T. Odenthal
Theodore D. Hess
Thomas J. Horgan, Jr.
George E. Smith
William B. Creel
Willie J. Mixson
Stewart C. Barber
Albert W. Snell
Walter L. Hill
John B. Wilson, Jr.
John L. Hamilton, Jr.
Almarion S. Bailey
Charles E. Wydner, Jr.
George B. Woodbury
Chester V. Farmer
Daniel R. Evans
William D. Pomeroy
Theodore J. Mildner
Henry A. F. von der Heyde, Jr.
William H. Lanagan, Jr.
Paul D. LaFond
Jay V. Poage
William F. Koehnlein
Amo F. Judd
John Craig
Donald E. Watterson
Victor Stoyanow
Harry G. Robinson, Jr.
Louis J. Sartor
Frank A. Eldracher, Jr.
Marvin D. Volkert
Donald McGuire
Ralph D. Cail
William J. Beer

The following-named officers of the Marine Corps for permanent appointment to the grade of captain:

William P. Haight
Donald L. Gaut
Joseph A. MacInnis

POSTMASTERS

The following-named persons to be postmasters:

ALABAMA

Russell R. Sutley, Clanton, Ala., in place of L. P. Bean, retired.

ARKANSAS

Clarence E. LaCotts, De Witt, Ark., in place of F. E. Stephenson, retired.

Rex Hutchison, Evening Shade, Ark., in place of M. A. Graddy, retired.

Herman A. Tuck, Fayetteville, Ark., in place of A. D. McAllister, retired.

Clyde Byars, North Little Rock, Ark., in place of O. W. Neely, deceased.

Gus L. Sanders, Springdale, Ark., in place of R. O. Hannah, deceased.

Worrence Whitlow, Strawberry, Ark., in place of Marvin Taylor, retired.

CALIFORNIA

Walter H. Miller, Chino, Calif., in place of B. L. Phillips, retired.

John Pokorny, Jr., Clovis, Calif., in place of I. H. Arbuckle, retired.

William T. Sprague, Compton, Calif., in place of C. L. Veitch, deceased.

Alberta F. Kinne, Douglas City, Calif., in place of V. M. Davison, resigned.

Virginia M. Benedict, La Honda, Calif., in place of E. J. Willett, resigned.

Oral J. Potts, Ojai, Calif., in place of G. L. Busch, retired.

Jean F. Johnson, Proberta, Calif., in place of F. M. Mills, retired.

Keneth G. Drown, Ramona, Calif., in place of F. M. Raub, retired.

V. Earl Roberts, San Diego, Calif., in place of W. E. Krenning, removed.

Novel B. James, Santa Ana, Calif., in place of F. R. Harwood, deceased.

George G. Hollis, Jr., Sun Valley, Calif., in place of Fred Jacobsen, retired.

COLORADO

Joe Snepenger, U.S. Air Force Academy, Colo. Office established June 28, 1958.

CONNECTICUT

John J. Dilworth, Columbia, Conn., in place of L. W. Beck, retired.

Austin M. Ackerman, Jr., Durham Center, Conn., in place of A. M. Ackerman, retired.

FLORIDA

Harold E. Lyon, Hobe Sound, Fla., in place of P. E. Mahan, retired.

Ruth G. Long, Roseland, Fla., in place of D. C. Taylor, retired.

GEORGIA

Joseph W. Gardner, Patterson, Ga., in place of I. S. Walker, retired.

HAWAII

Phyllis Y. Takase, Kualapuu, Hawaii, in place of R. M. Shimizu, deceased.

IDAHO

Roy B. Fields, McCall, Idaho, in place of C. L. Burdett, retired.

ILLINOIS

Harold E. Ririe, Flanagan, Ill., in place of M. D. O'Brien, retired.

Robert V. Newell, Mattoon, Ill., in place of H. A. Lange, deceased.

Richard F. Moffitt, Reynolds, Ill., in place of B. W. Sharp, retired.

Beulah B. Reynolds, Russell, Ill., in place of E. V. Crittenden, resigned.

INDIANA

Arthur L. Meyer, Moores Hill, Ind., in place of L. H. Barkley, retired.

IOWA

Joseph N. Shaner, Glidden, Iowa, in place of F. W. Franzwa, deceased.

KANSAS

Eugene L. Foland, Almena, Kans., in place of J. H. Eckhart, retired.

Richard R. Simmons, Ashland, Kans., in place of J. E. Hardesty, resigned.

Ted W. Kyle, Erie, Kans., in place of C. E. Yockey, retired.

KENTUCKY

Billy G. Rose, Hazel Green, Ky., in place of D. C. Rose, retired.

Roscoe M. Bates, Sadieville, Ky., in place of R. F. Gillispie, transferred.

Randall C. Day, Jr., Whitesburg, Ky., in place of W. F. Gibson, retired.

MICHIGAN

Neva A. Dalton, Concord, Mich., in place of A. L. Hyliard, deceased.

Delia A. Bickham, Hessel, Mich., in place of Frances Lindberg, retired.
Turley N. Thompson, Ossineke, Mich., in place of H. E. Vredenburg, retired.
William W. Donaldson, Pontiac, Mich., in place of G. L Stockwell, retired.

MINNESOTA

Hugh O. Smith, Alexandria, Minn., in place of H. W. Long, deceased.
Clement F. Stromwall, Foreston, Minn., in place of A. E. Smith, retired.
Donald M. Lynch, Kasota, Minn., in place of J. O. Barklow, resigned.

MISSOURI

Beulah I. Wood, New Cambria, Mo., in place of J. M. Baker, retired.

MONTANA

Norman J. Wagner, Lewistown, Mont., in place of E. J. Coyle, retired.

NEW JERSEY

V. Edith Mixner, Goshen, N.J., in place of H. C. Shaw, deceased.
Calvin R. Patterson, Neptune, N.J. Office established November 16, 1959.

NEW YORK

Frank G. Shosenburg, Jamestown, N.Y., in place of O. K. Palm, deceased.

NORTH CAROLINA

Kelly M. Holmes, Bolton, N.C., in place of S. M. Blue, retired.
Charles W. Craig, Mount Holly, N.C., in place of J. W. Nantz, Sr., resigned.
Arthur C. Meares, Whiteville, N.C., in place of A. E. Powell, retired.

NORTH DAKOTA

Lester H. Paulson, La Moure, N. Dak., in place of A. F. Poehls, transferred.

OHIO

Harold E. Weikert, Covington, Ohio, in place of J. H. O'Roark, deceased.
Rolla L. Shoaf, Jr., London, Ohio, in place of G. G. Schlechty, retired.

OKLAHOMA

Jack M. Givens, Mangum, Okla., in place of R. K. Babb, transferred.
John L. Logsdon, Vici, Okla., in place of B. M. Skidmore, deceased.

OREGON

Lola F. Barclay, Crabtree, Oreg., in place of I. M. Brewster, retired.

PENNSYLVANIA

Adeline M. Waters, Gifford, Pa., in place of Elizabeth Shelley, deceased.
Francis J. Dillon, Glenside, Pa., in place of H. M. Ellis, retired.
Alice F. Burdick, Turtlepoint, Pa., in place of G. L. Carlson, retired.

SOUTH DAKOTA

Norman W. Helmer, Andover, S. Dak., in place of T. W. DeBilzan, retired.

TEXAS

Malcolm O. Daugherty, Cherokee, Tex., in place of Graves Burke, retired.
Norene G. Chaney, Ira, Tex., in place of M. S. Huddle, resigned.
Herman L. Almond, Kermit, Tex., in place of R. S. Marion, retired.
James E. Winder, Springlake, Tex., in place of W. C. White, retired.
Robert B. Richardson, Wylie, Tex., in place of Della Duncan, retired.

VERMONT

Myrtle V. Clemons, West Charleston, Vt., in place of J. E. Hunter, transferred.

VIRGINIA

M. Lester Agee, Floyd, Va., in place of Archa Vaughan, retired.

WEST VIRGINIA

Martha K. Hope, Hansford, W. Va., in place of O. G. Toney, retired.

WISCONSIN

Violet M. Taylor, Eau Galle, Wis., in place of H. T. Taylor, deceased.
Robert C. Fitzsimons, Ridgeway, Wis., in place of Celia Stapleton, retired.

WYOMING

Kenneth W. Birch, Cokeville, Wyo., in place of V. C. Bennion, resigned.
Alexandria C. Yokel, Wilson, Wyo., in place of Hazel Titus, retired.

HOUSE OF REPRESENTATIVES

TUESDAY, MAY 24, 1960

The House met at 12 o'clock noon.

The Chaplain, Rev. Bernard Braskamp, D.D., offered the following prayer:

Matthew 25: 40: *Inasmuch as ye have done it unto one of the least of these my brethren, ye have done it unto me.*

O Thou God of all grace, who alone can change and control the intractable hearts of men and nations, grant us an insight that is clear and calm as we seek to advance toward a new day of blessedness for our troubled world.

We earnestly beseech Thee that in striving to win the minds of men to a way of life that is more magnanimous and unselfish in spirit we may awaken them to the lofty principles of the Golden Rule and the Sermon on the Mount.

May there be a new beginning in our own hearts when those gracious words which came from the lips of the lowly Man of Galilee shall fill us with feelings of generosity and an eagerness to share our blessings with all who are living in misery and in want.

Hear us in the name of the Master who went about doing good. Amen.

THE JOURNAL

The Journal of the proceedings of yesterday was read and approved.

MESSAGE FROM THE SENATE

A message from the Senate by Mr. McGown, one of its clerks, announced that the Senate had passed without amendment bills, joint resolutions, and concurrent resolutions of the House of the following titles:

H.R. 9818. An act to provide for the conveyance of certain real property of the United States to the State of Florida;

H.J. Res. 502. Joint resolution authorizing the erection in the District of Columbia of a memorial to Mary McLeod Bethune;

H.J. Res. 546. Joint resolution authorizing the Architect of the Capitol to present to the Senators and Representative in the Congress from the State of Hawaii the official flag of the United States bearing 50 stars which is first flown over the west front of the U.S. Capitol;

H. Con. Res. 558. Concurrent resolution providing for printing additional copies of the panel discussions entitled "Income Tax Revision";

H. Con. Res. 579. Concurrent resolution authorizing the printing of additional copies of a Veterans' Benefits Calculator;

H. Con. Res. 586. Concurrent resolution authorizing the printing of additional copies of the hearings on civil rights; and

H. Con. Res. 607. Concurrent resolution authorizing the printing as a House document of the pamphlet entitled "Our American Government. What Is It? How Does It Function?"

The message also announced that the Senate had passed bills and concurrent resolutions of the following titles, in which the concurrence of the House is requested:

S. 2681. An act for the relief of Yi Young An;

S. 3036. An act to authorize the distribution of copies of the CONGRESSIONAL RECORD to former Members of Congress requesting such copies;

S. Con. Res. 90. Concurrent resolution authorizing the printing of additional copies of the final report and indexes to hearings and reports of the Select Committee on Improper Activities in the Labor or Management Field;

S. Con. Res. 91. Concurrent resolution authorizing the printing of additional copies of hearings before the Subcommittee on Agreements for Cooperation of the Joint Committee on Atomic Energy on Amending the Atomic Energy Act of 1954 with respect to exchange of military information and material with allies during the 2d session of the 85th Congress;

S. Con. Res. 94. Concurrent resolution authorizing the printing of additional copies of a committee print containing the reports of the States to the Senate Select Committee on National Water Resources on their water resources and problems;

S. Con. Res. 96. Concurrent resolution authorizing the printing of a revised edition of the Internal Security Manual as a Senate document, and providing for additional copies;

S. Con. Res. 97. Concurrent resolution authorizing the reprinting of additional copies of the Joint Committee print entitled "Summary-Analysis of Hearings, June 22–26, 1959, on Biological and Environmental Effects of Nuclear War," printed for the use of the Joint Committee on Atomic Energy during the 86th Congress, 1st session;

S. Con. Res. 99. Concurrent resolution to print as a Senate document a compilation of studies on United States-Latin American relations; and

S. Con. Res. 100. Concurrent resolution to print as a Senate document a compilation of studies on U.S. foreign policy.

The message also announced that the Senate agrees to the report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H.R. 10809) entitled "An act to authorize appropriations to the National Aeronautics and Space Administration for salaries and expenses, research and development, construction and equipment, and for other purposes."

The message also announced that the Vice President had appointed the Senator from Florida, Mr. HOLLAND, the Senator from Virginia, Mr. ROBERTSON, the Senator from Kansas, Mr. CARLSON, and the Senator from Utah, Mr. BENNETT, as members on the part of the Senate of the Commission To Formulate a Memorial to James Madison.

COMMITTEE ON THE JUDICIARY

Mr. LANE. Mr. Speaker, I ask unanimous consent that the Committee on the Judiciary may sit during general debate tomorrow.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

QUESTIONS ABOUT THE SUMMIT

Mr. STRATTON. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from New York?

There was no objection.

Mr. STRATTON. Mr. Speaker, so much attention has lately been focused in the press on the eight questions released by several members of the Democratic Party in this body on last Friday that there is a growing impression in the country that those who propounded these questions are speaking for all of the Democratic Members of this body.

Mr. Speaker, I for one want to issue a disclaimer. I was profoundly disturbed by the timing of these questions. However great may be the need for a responsible investigation of the events that led up to the fiasco at Paris, I for one believe that it was most important that the world and particularly the Communists should have been informed last Friday that we were all united in this country when it came to resenting insults directed against the President of our own country.

And, Mr. Speaker, there is a further note that disturbs me greatly in these questions. They suggest somehow a belief that there is something wrong with a country trying to protect its borders against surprise attack and avoid a repetition of the disaster that once struck us at Pearl Harbor.

Mr. Speaker, I for one believe that we in the Democratic Party ought first of all to make it crystal clear—as I do not believe we have yet made it clear—that we do not think there is any future for our party in trying to outdo anyone else in not upsetting or disturbing or angering the man who ordered the brutal suppression of the Hungarian revolution, who keeps the brave people of Poland in subjection, and who insulted and humiliated our country last week when he insulted and humiliated our President in Paris. In my judgment, the issues involved in the collapse of the summit are far too serious to be made the subject for rhetorical questions propounded in an effort to gain a narrow, temporary, and tenuous partisan advantage.

SETTING OF FIRST COLUMN EXTENDED EAST CENTRAL FRONT OF CAPITOL

Mr. RAYBURN. As chairman of the Commission for Extension of the U.S. Capitol, I wish to invite the Members, officers, and employees of the House of Representatives to witness the setting in place of the first large marble column in the portico of the extended east central front of the Capitol, at 9:30 a.m., Thursday, May 26, 1960.

This is a historic occasion in which I feel each Member will be deeply interested. You are invited to enter the construction area at the door to the fenced enclosure just north of the entrance to the House wing, from where you will be directed to a safe and appropriate vantage point.

The old records indicate that the original sandstone columns were erected in 1824 and that the stonecutters at the Capitol participated in a procession and exhibit celebrating July 4, 1824.

The new columns are duplicates of the originals except that they are of Georgia white marble instead of sandstone. They are monolithic, weigh about 18 tons each, are 24 in number, and are 24 feet 9 inches high. The columns are of the Corinthian order and taper uniformly from a diameter of 3 feet at the base to 2 feet 6 inches at the top.

The original columns were designed by Charles Bulfinch in carrying out the overall plan for the east portico prepared by his predecessor, Benjamin H. Latrobe. Mr. Latrobe and Mr. Bulfinch were the second and third Architects of the Capitol, respectively.

The column to be set on Thursday, May 26, will be the one located immediately to the southeast of the main entrance leading to the rotunda.

PUBLIC WORKS APPROPRIATION BILL, 1961

Mr. CANNON. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 12326) making appropriations for civil functions administered by the Department of the Army, certain agencies of the Department of the Interior, the Atomic Energy Commission, the Tennessee Valley Authority, and certain study commissions, for the fiscal year ending June 30, 1961, and for other purposes; and pending that I ask unanimous consent that general debate be limited to not to exceed 2 hours, one-half the time to be controlled by the gentleman from Iowa [Mr. JENSEN] and one-half by myself.

The SPEAKER. Is there objection to the request of the gentleman from Missouri?

There was no objection.

The SPEAKER. The question is on the motion.

The motion was agreed to.

Accordingly, the House resolved itself into the Committee of the Whole House on the State of the Union for the consideration of the bill, H.R. 12326, with Mr. BOGGS in the chair.

The Clerk read the title of the bill.

By unanimous consent, the first reading of the bill was dispensed with.

The CHAIRMAN. Under the unanimous-consent agreement, the gentleman from Missouri [Mr. CANNON] will be recognized for 1 hour, and the gentleman from Iowa [Mr. JENSEN] will be recognized for 1 hour.

The Chair now recognizes the gentleman from Missouri [Mr. CANNON].

Mr. CANNON. Mr. Chairman, the bill appropriates a total of $3,914,798,985. This is $86,217,195 below the budget estimates but $41,070,671 above appropriations for fiscal year 1960.

Mr. Chairman, I yield to the gentleman from Iowa [Mr. JENSEN].

Mr. JENSEN. Mr. Chairman, we bring this bill to the floor of the House many million dollars under the budget. The budget request for the Civil Functions Department of the Army, that is, the functions under the Army Engineers, was $936,749,000. The committee reduced that figure by $45,550,000. We did that by reducing the number of projects to the point where we felt, after lengthy hearings that the amount of money left in the bill for those projects—most of them quite large projects—was all the Army Engineers could properly and judiciously use during the fiscal year 1961.

For the Interior Department, Bureau of Reclamation, the budget request was $301,314,000. The committee reduced that in the amount of $23,951,295, again, we had very lengthy hearings. We reduced the budget to where we felt it should properly be reduced.

The budget request for the Atomic Energy Commission was $2,675,300,000 which the committee reduced by $16,240,000 where it cannot possibly effect our national defense in the slightest degree.

Over 1,000 people appeared before our Public Works Committee this year, from every State in the Union, with few exceptions. Many of them asked for more money than was in the budget, all of them defended at least the amount that was in the bill for their respective projects. It is very natural they do that because the projects in their respective areas, of course, are very important to their people from the standpoint of flood control and from the standpoint of saving life and property. Harbor dredging, hydropower, irrigation, reclamation, and so forth.

Last winter, as we all know, was a very severe winter which extended over almost the entire United States.

The ground froze deeply; then came much snow, more snow than had fallen in many years. Then this spring came the fast thaws, the water from that heavy coat of snow did not soak into mother earth. Most of it ran off into the streams and tributaries, finally into the main rivers, causing much damage and much loss of property and great anxiety among the people who suffered from those floods, which overall were greater than ever before experienced.

The budget, of course, was made up early last fall. These great floods could not be anticipated at that time. So here before our committee came people from hundreds of areas of our Nation asking that we put survey funds and construction funds in this bill to control the floods that are bound to come in the future.

Our committee saw fit to include 39 of those new projects. I feel we were completely justified in doing so because certainly a devastating flood is damaging not only to the people of the respective areas but, in the final analysis, to all people of the Nation. So I feel that the committee was completely justified in including these 39 projects which it did in this bill. Please remember this is an American bill for America.

It must be said the President's budget for fiscal year 1961 included 32 new starts of every nature scattered over the United States of America for which I commend him. May I point out in closing that all the public works funds requested in this bill are less than 1½ percent of our total Federal budget.

SUBCOMMITTEE ON PUBLIC WORKS APPROPRIATIONS

CLARENCE CANNON, Missouri, chairman.
LOUIS C. RABAUT, Michigan.
MICHAEL J. KIRWAN, Ohio.
JOHN E. FOGARTY, Rhode Island.
JOHN J. RILEY, South Carolina.
JOE L. EVINS, Tennessee.
EDWARD P. BOLAND, Massachusetts.
DON MAGNUSON, Washington.
BEN F. JENSEN, Iowa.
JOHN TABER, New York.
IVOR D. FENTON, Pennsylvania.
H. CARL ANDERSEN, Minnesota.
JOHN R. PILLION, New York.
Carson Culp, staff assistant to the subcommittee.

Mr. GROSS. Mr. Chairman, I make the point of order that a quorum is not present.

The CHAIRMAN. The Chair will count. [After counting.] Seventy Members are present, not a quorum. The Clerk will call the roll.

The Clerk called the roll, and the following Members failed to answer to their names:

[Roll No. 100]

Alexander	Farbstein	Machrowicz
Alger	Flynn	Moeller
Anfuso	Fogarty	Nix
Ashley	Fulton	Pfost
Bailey	Garmatz	Powell
Barden	Gilbert	Preston
Belcher	Granahan	Reece, Tenn.
Bentley	Gray	Rostenkowski
Blatnik	Healey	Scott
Bonner	Hébert	Siler
Buckley	Inouye	Spence
Cahill	Jackson	Staggers
Cederberg	Jennings	Steed
Davis, Ga.	Kasem	Taylor
Davis, Tenn.	Kearns	Teller
Dawson	Keith	Wallhauser
Dooley	Kilburn	Watts
Dorn, N.Y.	King, Utah	Willis
Dowdy	Kluczynski	Winstead
Doyle	Lafore	
Durham	McDowell	

Accordingly, the Committee rose; and the Speaker having resumed the chair, Mr. BOGGS, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the bill H.R. 12326, and finding itself without a quorum, he had directed the roll to be called, when 369 Members responded to their names, a quorum, and he submitted herewith the names of the absentees to be spread upon the Journal.

The Committee resumed its sitting.

The CHAIRMAN. The gentleman from Iowa had consumed 8 minutes and the gentleman from Missouri 1 minute. Does the gentleman from Missouri require additional time?

Mr. CANNON. Mr. Chairman, I yield 3 minutes to the gentleman from Massachusetts [Mr. BOLAND].

Mr. BOLAND. Mr. Chairman, I take this time to answer a few questions that have been raised.

Mr. BOLLING. Mr. Chairman, will the gentleman yield?

Mr. BOLAND. I yield.

Mr. BOLLING. The gentleman is familiar with the interest that I and other Members have had in flood control in the Missouri Basin. Particularly, I have reference to Milford Dam. I note that the committee changed the status of Milford Dam as recommended in the budget from $1 million for construction to $250,000 for completion of planning. I gather this is because the committee felt that the commitment made by certain beneficiaries of water supply storage was not adequate. I wonder if the gentleman would explain a little more fully the reason for the committee action.

Mr. BOLAND. What the gentleman says is true. This is part of a comprehensive flood control program for the Missouri River Basin. The committee did reduce the budget amount to $250,000 solely and only by reason of the fact that there were no local assurances for repayment of water supply. The Water Supply Act compels this committee to obtain assurance before construction is started. The construction has not gotten started. It would have been started had we had such assurances, and up to this time we have provided $522,000 for planning. The $250,000 which we have allowed in the budget will complete the planning.

Mr. BOLLING. I am sure the report goes into this matter rather fully. On page 18 it discusses Milford Dam specifically.

Mr. BOLAND. It might be well to include some of the language in the report. It states on page 18:

> The State of Kansas has requested the corps to include in the project a substantial storage for water supply. To meet this request, it is necessary to change the site of the previously contemplated project and substantially increase its capacity, with a resulting cost increase of something over $15 million.

Originally the cost was $45 million. Because of the change in site and request for water supply, the cost has increased to $60 million.

> There is no firm commitment on the part of the State or any of the possible local beneficiaries that the cost of providing this water supply storage will be reimbursed as is required under the Water Supply Act of 1958.

Mr. BOLLING. I thank the gentleman, and I want the gentleman and other members of the committee to know that we are most anxious to comply and move forward as rapidly as possible with this important flood-control program.

Mr. BOLAND. I thank the gentleman.

Mr. AVERY. Mr. Chairman, will the gentleman yield?

Mr. BOLAND. I yield.

Mr. AVERY. I want to assure the gentleman from Massachusetts and the other members of the subcommittee of the Appropriations Committee that the State of Kansas is not trying to escape its full responsibility for the cost of this supplemental storage. I can speak, I think, with force by saying that the Governor of Kansas and the Kansas Board of Water Resources have given full assurances to the Chief of Engineers; but since we are dealing in an area here where we have not had very much experience to go on, apparently the assurances that were given to the Chief were not considered sufficient by the committee. All the State of Kansas wants to know is what is wanted. We want to cooperate in every way possible to expedite the construction of this project.

Mr. BOLAND. The gentleman states the case exactly as it is.

Mr. FASCELL. Mr. Chairman, will the gentleman yield?

Mr. BOLAND. I yield.

Mr. FASCELL. The committee recommended on page 20 of the report relating to the central and southern Florida flood control project, and I ask the gentleman: Is it the committee's intention in making this recommendation to approve and direct the proposed action of the Chief of Engineers on the project as expressed in his letter of April 25, 1960, to me, a copy of which was submitted to the committee for its consideration and in which the Chief proposes specified works in Dade County, Fla., to aid in the emergency which exists and which he proposes to finance out of his authority to transfer to a program up to 15 percent of the funds immediately available?

Mr. BOLAND. That is exactly right. There is $10 million provided in this budget for the central and southern Florida flood control project. That is one of the most important and one of the most expensive flood control projects in the Nation.

The gentleman from Florida made an excellent case when his office appeared before our committee.

There is an emergency down there. We think the committee has provided for it, and it was provided for at the request of the gentleman from Florida. There will be no objection if the Corps of Engineers finds it possible to transfer an additional $1,500,000 under the transfer authorization.

Mr. FASCELL. As I understand, it was not specifically appropriated but the transferability authorization can be taken advantage of.

Mr. BOLAND. That is exactly right. As a matter of fact the language in the bill is here because of the gentleman's amendment.

NEW ENGLAND GRATEFUL FOR ADEQUATE FLOOD CONTROL FUNDS

Mr. Chairman, this public works appropriation bill for fiscal year 1961 contains sufficient funds to enable the Army Engineers to carry on with an orderly program of flood control planning and construction in New England.

I want to take this opportunity to thank my colleagues of the Public Works Appropriations Subcommittee, on which I sit, for their sympathetic consideration of the flood control needs of the Connecticut Valley and all of New England. We in New England are grateful to members of the Public Works Legislative Committee and the Appropriations Committee for patiently hearing our pleas since 1955 when this region of the country suffered millions of dollars in damages as a result of the hurricane-floods of that year.

THIRTY-ONE PROJECTS CONSTRUCTED OR IN PLANNING SINCE 1955 HURRICANE FLOODS

Since that time the Public Works Appropriations Committee have been generous to New England. Brig. Gen. Alden K. Sibley, the New England division engineer, told the Subcommittee on Public Works in his testimony that since 1955 the Army Engineers have completed and now have under operation in New England 15 flood control dams at a cost of $35 million, have 11 under construction today at a cost of $90 million; and 5 more are in the design stage at an estimated cost of $42 million.

This is 31 flood-control projects at a total cost of $167 million in just over 4 years, whereas in all of New England's history before August of 1955 only 23 projects had been built. I am quite proud of this record, and I deem it an honor to have been serving on the Appropriations Public Works Subcommittee during the last 5 years when these sums of money were appropriated for these worthwhile and much needed flood-control projects. Members of the subcommittee have supported me in my efforts to have these New England projects planned and constructed as soon as possible, in the orderly manner recommended by the Army Engineers, so that the lives and property of the people of our region can be better protected from the ravages of floods in the future.

VITALLY NEEDED CHICOPEE RIVER BASIN PROJECTS RECOMMENDED

Mr. Chairman, there are more projects in the survey and planning stages, including Littleville Dam and Reservoir, and Conant Brook Reservoir, both affecting my congressional district in western Massachusetts. In the northern sector of the Connecticut River Valley four projects, Ball Mountain, North Hartland, Townshend and North Springfield Reservoirs in Vermont, will be completely or nearly finished with the funds appropriated in this bill.

The flood-control project recommendations for the Chicopee River Basin include the Conant Brook Dam and Reservoir in Monson, to be constructed at an estimated cost of $2 million, and the local protective works in Chicopee Falls, at an estimated construction cost of $1,860,000. My bill, H.R. 11470, incorporating these projects is now before the Public Works Committee. These projects have been approved by the Board of Engineers for Rivers and Harbors.

In closing, Mr. Chairman, let me again thank the members of the Public Works and Appropriations Committees for supporting my efforts to control New England's past flooding conditions.

Mr. FASCELL. I want to express my appreciation to the gentleman for his part in this matter and also to the other members of the subcommittee and to the full committee for their interest in helping us meet this problem.

Mr. CARNAHAN. Mr. Chairman, will the gentleman yield?

Mr. BOLAND. I yield.

Mr. CARNAHAN. I want to express my appreciation to the gentleman and the subcommittee and especially to the distinguished chairman of the full committee, Mr. CANNON, for including in this bill the $50,000 for the Meramec Basin. Will the gentleman tell us briefly what the money will be used for?

Mr. BOLAND. This is for a resurvey of the Meramec Basin development.

Mr. SELDEN. Mr. Chairman, will the gentleman yield?

Mr. BOLAND. I yield.

Mr. SELDEN. Mr. Chairman, the members of the House Committee on Appropriations have shown great foresight by recommending funds that not only will continue on schedule the complete modernization of the Warrior-Tombigbee Waterway, but will enable the full development of the Coosa-Alabama River system to proceed.

WARRIOR-TOMBIGBEE

Although the Warrior-Tombigbee is a historic artery of commerce and is now one of the busiest and fastest growing inland barge channels in the Southeast, its modernization did not actually begin until 1949. The system of 17 dams and 18 low-lift locks constructed on the waterway prior to that time were completed in the early part of the 20th century. The only major improvement on the river prior to 1949 came in 1940 with the completion of the William B. Oliver Lock and Dam—formerly the Tuscaloosa Lock and Dam—near Tuscaloosa, Ala. This installation eliminated locks and dams 10, 11, and 12.

By 1949 the existing installations that were constructed early in the 20th century had greatly deteriorated and, of course, had become progressively inadequate as commerce increased. Not only had these structures become obsolete, but in many cases they were extremely dangerous to navigation.

During the past 8 years it has been my privilege to work closely with congressional committees, with the Warrior-Tombigbee Development Association, with Alabama's two Senators, and with other members of the Alabama congressional delegation in efforts to carry out the phases of the modernization program recommended by the Corps of Engineers.

The first step in this modernization program involved the construction of the $19 million Demopolis Lock and Dam just below the confluence of the Warrior and Tombigbee Rivers. In 1949, Congress appropriated funds to begin the construction of this important installation which replaced four antiquated locks and dams. Additional funds were appropriated for the ensuing 5 fiscal years, and this new modern structure was dedicated in 1954.

During my second year as a Member of Congress, funds in the amount of $1,800,000 were appropriated to begin construction of the Warrior Lock and Dam located in Hale County. Additional appropriations for fiscal years 1956, 1957, and 1958 enabled construction of this facility to continue on schedule. This installation, which was built at a total approximate cost of $13,385,000 was opened to traffic in the fall of 1957. Its modern facilities replaced two outmoded structures and, in addition, the new installation effects a saving to navigation of approximately 5 miles.

For fiscal year 1957, Congress appropriated funds in the amount of $750,000 to begin construction of the third major replacement structure on the Warrior-Tombigbee—the Jackson Lock and Dam. The bill now before the House of Representatives includes an appropriation of $4,230,000 to enable completion by 1961 of this $21 million facility that will improve a 98-mile reach of the waterway below the Demopolis Lock and Dam.

The final replacement structure in the modernization of this great waterway is the Holt Lock and Dam that is to be constructed above Tuscaloosa to supplant four locks and dams that were built between 1905 and 1915. When in operation, this facility will greatly increase the operating speeds of barges and towboats above Tuscaloosa.

While construction of the Holt project is yet to begin, significant progress has been made toward its realization in a relatively short period of time. It was just 3½ years ago that the Army Engineers at my request made funds available for an authorization report on the proposed facility. That report, compiled by the Mobile District and South Atlantic division engineers, showed the improvement to be needed and economically justified. Their recommendation that it be built by the Government for navigation benefits was concurred in by the Board of Engineers for Rivers and Harbors.

Seventeen months ago the Secretary of the Army authorized construction of the Holt installation under the River and Harbor Act of 1909. It was most fortunate that authorization could be obtained in that manner, for had it been necessary to submit the project to Congress for specific authorization, it could have been delayed by from 2 to as much as 4 years.

In spite of our best efforts, however, the Holt project was not authorized in time to be included in the budget which President Eisenhower sent to Congress last year. Because of the need for early construction of the Holt Lock and Dam, I was joined last year by members of the Alabama congressional delegation and officers of the Warrior-Tombigbee Development Association in an appeal to the Appropriations Committees of the House and Senate planning funds. Our request was answered when Congress appropriated $146,250 to enable the Corps of Engineers to initiate the advance planning.

Together with officers of the Warrior-Tombigbee Development Association, I appeared before representatives of the Bureau of the Budget last August to urge that adequate funds for the Holt project be included in the budget for fiscal year 1961. Further planning funds in the amount of $378,000 were incorporated in the President's budget that was submitted to Congress in January. An additional $171,000 was added by the Appropriations Committee.

If the $549,000 recommended by the House committee is approved by Congress, engineering and design work for the important Holt facility can be completed. Should the Senate earmark for construction purposes the amount added

by the House Appropriations Committee, actual construction could begin in calendar year 1961.

The Demopolis, Warrior, and Jackson locks and dams, replacing a total of nine obsolete structures, will create an efficient water artery between Mobile and Tuscaloosa. With the completion of the Holt Lock and Dam, the long-cherished dream of extending the benefits of a modern river channel above Tuscaloosa will be realized.

COOSA-ALABAMA SYSTEM

The other major river system in Alabama for which the Appropriations Committee has recommended funds is the Coosa-Alabama system. Second in size in the Southeast only to the Tennessee River, it is one of the greatest undeveloped waterways in the entire Nation.

For more than a century, efforts have been made to develop the Coosa River. As early as 1872 the Federal Government instituted the first improvement program that called for the development of navigation on the Coosa from Rome, Ga., to Gadsden, Ala., by the building of 31 low-lift locks and dams. However, only four locks were built on the upper end of the rapids below Rome, and in 1890 the Government abandoned its program.

Later the Alabama Power Co. obtained permission from the Government to build three dams—Mitchell, Lay, and Jordan—on the Coosa River. The last dam was completed in 1926, and the three of them have been operated as sources of hydroelectric power since their construction. They are the only dams on the Coosa River at the present time.

In 1945 Congress authorized the development of the Coosa-Alabama system for navigation, flood control, and power purposes. Overall planning by the Corps of Engineers was undertaken from 1945 through fiscal year 1952, but construction was not begun on any specific project.

With other members of the Alabama congressional delegation, I introduced legislation in 1954 to suspend the authorization previously granted by Congress for Federal development of the river system for hydroelectric purposes. The enactment of this legislation made it possible for the Alabama Power Co. to secure a license to construct four additional hydroelectric dams on the upper reaches of the Coosa River and to raise the level of one of its existing dams. The first of these, the Weiss Dam, is scheduled to be completed in 1961. With the construction of additional dams by private enterprise, the overall cost to the Federal Government for the development of the Coosa-Alabama for other purposes will be lessened considerably.

However, until the Government adds locks to the proposed and existing dams built by private interests and then constructs three additional locks and dams on the Alabama River, the Coosa-Alabama system cannot be used as a traffic artery.

With this in mind, I joined in 1955 with my colleagues from Alabama and Georgia and with the Coosa-Alabama River Improvement Association in urging that sufficient funds be made available for a traffic survey of the Coosa-Alabama River system. The sum of $180,000 was subsequently appropriated for that purpose. In 1957, the Corps of Engineers reported that the traffic survey of the Alabama River below Montgomery indicates that the three authorized structures on that river are economically justified. They recommended that the Millers Ferry lock and dam be constructed first.

Although the Senate for the past 2 years has designated $200,000 for planning the Millers Ferry facility, this amount has been eliminated from the public works appropriation bill each year by the House-Senate conference committee. We are very pleased, therefore, that this year the House Appropriations Committee has included $200,000 for planning and designing work on the recommended installation. If that amount is approved by Congress, 70 percent of the planning can then be concluded.

With the beginning of construction by the Alabama Power Co. of additional dams on the Coosa River, the development of this water artery has at last been resumed. To continue this orderly development, it is vital that the planning of the Millers Ferry installation also be recommenced as quickly as possible.

CONCLUSION

The improvements on the Warrior-Tombigbee and Coosa-Alabama River systems will be beneficial to the people of Alabama because they will provide increased employment, more and better products at a lower cost, new recreation facilities, and adequate hydroelectric power. At the same time, they will encourage the acquisition of industries through the abundance of water supply and power facilities. But the improvements will also extend benefits to the Nation as a whole, particularly in the form of water transportation, reservoirs, and hydroelectric power for national defense.

Therefore, Mr. Chairman, I commend the members of the Appropriations Committee for their foresight in recommending funds for the proper development of these two great river systems, and I respectfully urge the approval of these funds by the House of Representatives.

Mr. JENSEN. Mr. Chairman, I yield 10 minutes to the gentleman from New York [Mr. PILLION], a member of the committee.

Mr. PILLION. Mr. Chairman, I would like to reinforce what has been said here by the ranking minority member of the committee, the gentleman from Iowa [Mr. JENSEN] in support of this bill. No member of this committee considers the bill to be a perfect one and, of course, it is not subject to mathematical exactness. I suppose there are many projects here that should not have been placed here and perhaps some projects that should be here have not been included in the bill; but, nevertheless, overall, this bill is a sound bill, it is a good bill and a practical solution to our problems in this field for the next year.

Mr. Chairman, the bill contains well over 500 different items and projects throughout the country. The job of examining into these projects with their many complications and mathematics was a tedious job. I would like to commend the chairman of the committee, the gentleman from Missouri [Mr. CANNON], and the ranking member, the gentleman from Iowa [Mr. JENSEN], for their patience in considering and encouraging a most exhaustive examination into the merits of the various projects.

It has been a privilege to be associated on this committee with the members of the committee. They are a hardheaded, practical group of men, and I say that in a complimentary way; at the same time they are also somewhat softhearted because I know that when any Member of this House presented their case to the committee, their case not only received full consideration but the benefit of any reasonable doubt. I might add that the members of the staff are most competent and performed a very valuable service in helping the committee to arrive at this sound and practical solution of our problems.

Mr. Chairman, I would like to address myself at this time to a project contained in this bill which is a major one, the Kinzua project, in Pennsylvania. This project is a single purpose flood-control project. It proposes to construct a 180-foot dam at Kinzua for the purpose of protecting the communities in Pennsylvania from recurring floods, especially the city of Pittsburgh.

I sympathize with the communities and the people of Pennsylvania who have been subjected to these recurring floods, I realize their anxiety in obtaining a project of this sort to give them relief from serious damage that occasionally results from the floods. The bill here contains $4,530,000 for the construction of this dam. I would be one of the first to vote for this bill and support the project if I thought it were the proper solution to the problems faced by the communities in Pennsylvania; however, I believe the Kinzua dam project is a serious mistake. It is not the proper overall solution to the situation in Pennsylvania. An amendment will be offered by the gentleman from New York [Mr. GOODELL] to eliminate this item pending the study of an alternate site, the Conewango site, which we believe will be a much better solution to the flood control situation in Pennsylvania. Conewango is by far the most practical solution to this problem.

I would like to briefly explore and present a comparison of the different features of the Kinzua project and the Conewango project. First of all, the Kinzua project, as I said, is a one-dam project 180 feet high. It would form a reservoir for these flood waters, backing up to the city of Salamanca, about 20 miles away. The water level in that reservoir would fluctuate about 60 feet between high water and low water. On the other hand the Conewango Dam in New York State, draining the same area, would consist of a series of low dams covering lands that are today mostly swamp lands of very little value, and in that project the water level would only

fluctuate 10 feet between high and low water marks, and, of course, would furnish a better site and an area that could be used for recreation, whereas Kinzua would be of very little recreational value.

Now, let us examine the cost of these two projects. The Kinzua project is estimated to cost anywhere between $125 million to $150 million. On the other hand, the Conewango Dam is estimated to cost between $100 million and $125 million. So, right there, initially, the saving would be $25 million for the Conewango Dam over the Kinzua Dam.

But our prime interest is not a question of cost. Our prime interest is whether the benefits of one project exceed the benefits of another project. In the Kinzua Dam the floodwaters would be stored to the extent of about 600,000 acre-feet. In the Conewango Dam the floodwater storage would be triple that of the Kinzua Dam. The Conewango would store something like 1.7 million acre-feet of water and, of course, give three times the flood control benefits that we could expect out of the Kinzua Dam.

Mr. Chairman, the Kinzua Dam is not the solution to the serious damages that occur in Pittsburgh from these floods. Kinzua would reduce the high floodwater level at Pittsburgh by only 2½ feet and at Wheeling, W. Va., the reduction would only be 3 feet, and so on down the line, down the Ohio Valley. It is not a complete solution to the problem at all. It is a reduction, yes, in damages, but it does not do the complete job. It does not do the job that we in this Nation and in this House ought to expect from a job this large and from the amount to be invested in this project. The fight here is not between the State of New York and the State of Pennsylvania with respect to these two projects. This project is part of the Ohio Valley project, and the Conewango Dam would not only increase the benefits for the State of New York, it would greatly increase the job to be done for the State of Pennsylvania.

Mr. MOORHEAD. Mr. Chairman, will the gentleman yield?

Mr. PILLION. Surely.

Mr. MOORHEAD. Mr. Chairman, would not the gentleman agree that the Kinzua Dam was first authorized in 1936 and that money was actually appropriated for construction work last year by the Congress?

Mr. PILLION. That is true.

Mr. MOORHEAD. And that actual physical work has already commenced at the site?

Mr. PILLION. That is true, except that I understand the physical work is very slight and that of the $3 million that has been appropriated, a great deal of it has not been expended and there would be no serious damage done by a stoppage of the construction at this time. Actually, this item today is the item that would really seriously start this construction.

Mr. GAVIN. Mr. Chairman, will the gentleman yield?

Mr. PILLION. I yield to the gentleman from Pennsylvania.

Mr. GAVIN. I just wanted to call to the attention of my distinguished friend that $625,000 has been spent on the project report. All phases of the Conewango Dam have been studied. I also want to call to his attention that this the third time that an attempt has been made to delete the money for his project. An additional report was to be prepared 2 years ago at the request of the chairman. Such a report was prepared at a cost of $75,000. So $700,000 has already been spent in the study of the project that the gentleman refers to. Let us not mislead by saying that adequate study of all phases has not been given to this proposed project.

Mr. PILLION. The gentleman knows that I have the highest regard and esteem for him. No one here is attempting to mislead anyone.

The CHAIRMAN. The time of the gentleman from New York [Mr. PILLION] has expired.

Mr. RABAUT. Mr. Chairman, I yield 10 minutes to the gentleman from Tennessee [Mr. EVINS].

Mr. EVINS. Mr. Chairman, this is a big bill yet a very important one. As has been indicated, this bill carries appropriations for the civil works functions of the Corps of Engineers, the Bureau of Reclamation of the Department of Interior, and several power agencies, including the Tennessee Valley Authority, the Bonneville Power Administration, the Southeastern and Southwestern Administrations, the Atomic Energy Commission and funds for two new water study commissions; namely, the U.S. Study Commission for the Southeastern States and the U.S. Study Commission for the State of Texas.

The bill carries an appropriation of $3,914,798,985, and represents a reduction of $86,217,195 below the budget estimates.

Certainly this is a large amount—a big bill—but the funds appropriated are for capital investments in our own country.

Mr. Chairman, this bill properly should be called the National Resource Development appropriation bill because this is indeed a bill concerned with the development of our natural resources.

A great deal of the misunderstandings that sometimes arise about this bill comes from the failure to realize that appropriations for civil works of the Corps of Engineers and services of other allied agencies are indeed concerned with the development of our Nation's resources.

There are some who continue to think of this bill as a measure to provide employment. Others like to refer to the public works bill as a pork barrel bill. Nothing could be further from the truth.

Here we are dealing with investments—capital investments—for all our country. This is indeed an all-American bill.

I am sorry to say that the Bureau of the Budget and the President at times have tended to take a mistaken attitude about appropriations for the great programs of the Corps of Engineers. In preserving our resources we are building a foundation for the future growth and strength of our Nation. Such an investment is vital.

Any productive concern, whether it is a private business or a powerful nation, like our own, has to keep its productive capacity up to date.

This bill is concerned with keeping our productive capacity up to date, developing our natural resources and investing in the future of America.

Every region and area of our country wants to share equally with all the other regions in the growth of our Nation. However, it is impossible to develop all at once and simultaneously all of the water resources of our country.

Our committee has endeavored to reconcile the need of all areas and to maintain a balance between all the areas. The fact that this is a difficult task is evident from the printed hearings which this year filled five volumes.

Our committee has tried to effect a reasonable balance and as indicated appropriations are made for projects in all sections and all areas of our common country.

I want to pay a special tribute to our distinguished chairman, the gentleman from Missouri [Mr. CANNON], who personally carried on these hearings and labored with much of the details of this bill. His great knowledge and experience and his fairness and objectivity were, as usual, invaluable.

I deem it a great privilege to serve on this subcommittee with the gentleman from Missouri and the other distinguished members of our subcommittee—Hon. LOUIS C. RABAUT, of Michigan; Hon. MICHAEL J. KIRWAN, of Ohio; Hon. JOHN E. FOGARTY, of Rhode Island; Hon. JOHN J. RILEY, of South Carolina; Hon. EDWARD P. BOLAND, of Massachusetts; Hon. DON MAGNUSON, of Washington; Hon. BEN F. JENSEN, of Iowa; Hon. JOHN TABER, of New York; Hon. IVOR D. FENTON, of Pennsylvania; Hon. H. CARL ANDERSEN, of Minnesota; and Hon. JOHN R. PILLION, of New York.

The most significant thing about the national resource appropriations bill this year is the fact that at last the Budget Bureau and the administration have apparently realized that this is a national development program and that if it is to be effective and in the national interest it must be carried out on a coordinated, well-balanced, and continuing basis.

As we know, in the past few years the Budget Bureau and the administration have tried, shortsightedly in my view, to cut down this program of developing our water resources and particularly to eliminate the planning of future projects and the starting of projects already planned and scheduled. As we also know, this issue came to a head last year when the administration instituted its "no new starts policy." The Congress, taking the proper view that this is a program essential to our Nation's progress, refused to go along with the "no new starts policy" and, although it had to override a Presidential veto, the Congress did make it clear that this was in fact a continuing and orderly program for the development of our resources. It has been encouraging to note that in the budget presented this year the Budget Bureau and the administration has recognized

this fact and presented recommendations for continued construction of projects now under way and for 39 new starts.

Your committee has carefully studied the recommendations in the budget as well as recommendations made by Members of the Congress for projects throughout the Nation. In effect, the committee has accepted the recommendations in the budget for 32 of the starts, rejecting only 7 of them.

The committee also stopped two other projects which were not yet under actual construction. It added 5 additional unbudgeted construction starts and provided funds for initial planning on 15 new projects. It also provided a very small sum for the reevaluating of two other projects. The total amount recommended in this bill is approximately the same as the recommendation in the budget message.

The bill we are considering is a truly national bill. It provides funds for the development of our water resources in every section of the country—indeed in every State. The projects for which funds are provided will provide a good foundation for the future growth and progress of our Nation and will give every region and every section a fair opportunity to share in that progress and growth. The bill provides funds for continuing our water resource development program on schedule in an orderly and continuing program. Construction of projects already under way is being continued at an efficient rate; funds are provided for the start of new projects as others are completed; and funds are also provided for planning additional projects for future construction.

Included in the bill this year also are the funds for programs of the Atomic Energy Commission.

These include, among others, the production of raw materials, the special nuclear programs, weapons and reactor development, research, biology and medicine, education and information and other programs of the AEC. Our subcommittee and the full committee has given a great deal of time and attention to the proposed nuclear powered airplane. Certainly, a great deal of money has been expended on this program to date. A sum of $75 million is carried in the defense appropriations bill for the nuclear-powered airplane and our committee is recommending a limitation of $58 million in the amount of funds carried in this bill which may be used for the airplane propulsion reactor program. Thus a total of $133 million is to be used for this purpose.

Mr. Chairman, America was first in the development of atomic energy, the A-bomb, the H-bomb, atomic weapons for war and atomic energy for peaceful purposes.

Admiral Rickover and those associated with him have developed the atomic submarine and there is no reason why America should not be first in the development of atomic powered airplanes. We could have had such a plane in the air by 1956 if our Air Force standards had not been so rigid and specific as to require the highest speed and altitude standards. In other words, Mr. Chairman, our course has been set so high—let us say like a precision Elgin watch that we have delayed completing and putting into flight the first atomic airplane. Let us develop the plane now and perfect the refinements later as time may indicate. I believe there will be both a civil and military application for the atomic powered airplane and that our experts and scientists both in the AEC and the Department of Defense should get on with the job. Personally, I have been disappointed in the delays, slowdowns, and indirection of this program. I am supporting the committee on this instance because I believe our agency concerned with this program should reevaluate it and give the program new purpose and direction and emphasis. Also, Mr. Chairman, as indicated, there is $75 million in the Defense bill for this purpose and a carryover by reappropriations so that the program for next year will have a minimum of $100 million—a limit of $133 million in funds.

The committee is not stopping the program, it is rather directing that proper action should be given to this national effort. We have been assured that these funds will be sufficient for the present. By next year the AEC and the Defense Department will be able to tell us what they have decided to do in reorganizing the project and how much they will need to keep it going. We will be in a far better position to assess the practicability of this entire project and the funds we devote to it will be utilized more effectively.

In summary, Mr. Chairman, the atomic energy program, the work of the TVA, the Bonneville Power Administration and our other great power agencies, and the work of the Corps of Engineers are all important and must go forward.

This is a great bill and a very important measure—and although it is difficult and impossible to satisfy everyone on such a bill, the measure is worthy of approval as recommended by the Committee on Appropriations and I urge its passage.

Mr. JOHNSON of Maryland. Mr. Chairman, will the gentleman yield?

Mr. EVINS. I yield.

Mr. JOHNSON of Maryland. Mr. Chairman, as a Representative of the First Congressional District of Maryland, I would like to present my views on H.R. 12326. First, I wish to commend the Committee on Appropriations for their labors on the Public Works appropriation bill for 1961. With the great need for public works improvements in our country, I am aware of the difficult task that confronts this committee in drafting a bill that would meet the needs of the many meritorious projects necessary to our public welfare.

In my district, there are several approved resolutions for surveys. And I am sure many other Members of Congress have proposed projects in their districts in which they are vitally interested. The First Congressional District of Maryland and, I may add, the State of Maryland, is perhaps confronted with as many navigational problems as any State in the Union. Many of our people and a great segment of our economy are dependent upon our innumerable waterways.

I endeavored to call the attention of the House Committee on Public Works to the needs of various areas in my district, and I was gratified when the committee passed resolutions authorizing the study of five proposed projects. I am painfully aware that it is a long step from a resolution to survey to the appropriation of funds to proceed with same, but I do feel that there exist certain proposed projects presently in need of serious consideration.

For example, there is a greatly needed improvement in the existing facilities at Rock Hall, Kent County, Md. Some years ago the Federal Government spent a considerable sum of money to provide Rock Hall with channels 8 and 10 feet deep and 100 feet wide, anchorage areas of the same depths, and twin breakwaters at the harbor entrance. Now, apparently the breakwaters have either sunken or the water level has raised, rendering the Federal project there ineffectual and the expenditure of money in vain.

On May 8, 1959, Gen. J. L. Person, Assistant Chief of Engineers for Civil Works, stated:

> A study is warranted to determine if modifications of the project would result in a fuller utilization of the potential benefits.

The neglect of navigational improvements at Insley Cove, Wells Cove, Farm Creek, the Chester River, the Choptank River, St. Peters Creek, the North East River, and in the Smith Island area should be terminated and improvements made commensurate to their needs.

I am afraid that the amount appropriated for general investigations in H.R. 12326 falls short in providing the needs of a district so dependent upon its waterways for its economic livelihood.

Mr. CANNON. Mr. Chairman, I yield such time as he may require to the gentleman from Missouri [Mr. CARNAHAN].

Mr. CARNAHAN. Mr. Chairman, I rise to support the public works appropriation bill for 1961. I thank the committee for providing a sum of $50,000 for a general investigation and restudy of the Meramec River Basin. This Meramec Basin comprises a part of the Eighth Congressional District in my State of Missouri.

Meramec Basin Dams have long been under discussion and some studies have been made. However, it is felt necessary to update these studies and this sum is required by the Corps of Engineers in order to bring the study up to present-day requirements.

This Meramec Basin project has a long history. The construction of reservoirs in the Meramec River Basin was authorized in the Flood Control Act of June 28, 1938. It is a part of the general comprehensive plan for flood control and other purposes in the Upper Mississippi River Basin.

Based on studies completed in 1949, a plan for flood control and other purposes in the Meramec River Basin was developed. This provides for three reservoirs: The Meramec Park Reservoir with dam site about 4 miles east of Sullivan, Mo.; Cedar Hill Reservoir on the Big River which is a tributary of the Meramec, with dam site about 2½ miles above Cedar Hill, Mo.; and Union Reservoir, with dam site on the Bourbeuse River, another tributary of the Meramec, about 6 miles upstream from Union, Mo.

This request for funds to up-date the studies previously made is necessary if the Corps of Engineers is to cooperate with the State of Missouri in planning further development in the basin. If this program, after an up-dating study, meets basic requirements, together with the approval of the appropriate Missouri State authorities and is desired by local interests, then the project can be restored to the active list and become eligible for future funding and completion.

By holding back disastrous floods on the Bourbeuse, Big and Meramec Rivers, this system of reservoirs would reduce flood stages in the basin and also on the Mississippi River. These reservoirs would eliminate crop damage on over 40,000 acres of downstream bottom land, as well as extensive damage to beaches, communities and to private and public clubhouses and recreational facilities.

I am advised that about three-fourths of the 1957 flood damage could have been prevented if these proposed projects had been operational. Another long-range benefit of this proposal is the fact that controlled releases from these reservoirs would aid Mississippi River navigation during critical low-flow periods. Proponents of these projects point out other advantages that might well result: the reservoirs would provide for conservation storage of water supply, pollution abatement and fish and wildlife propagation in addition to creating large new areas for much needed recreational facilities.

I urge approval of this appropriation to up-date this study so that a decision can be made as to further definite plan or plans required to best serve the interests of the Meramec Basin.

Mr. CANNON. Mr. Chairman, I yield such time as he may require to the gentleman from Minnesota [Mr. KARTH].

Mr. KARTH. Mr. Chairman, I rise in support of the legislation now before the body. First, let me commend the Subcommittee on Public Works for their diligent efforts, the many long hours of hard work necessitated by extensive and intensive hearings. Then may I commend the full committee and in both instances the able leadership of the chairman, the distinguished gentleman from Missouri [Mr. CANNON]. He is one who I am sure we can all agree, is capable of getting committee members from both sides of the aisle working harmoniously together for constructive legislation. I thank the distinguished gentlemen from Minnesota, Mr. ANDERSON and Mr. MARSHALL, for their personal interest and help on my project affecting St. Paul and South St. Paul, Minn.

For the inclusion of that project, all Minnesotans, I know, joint in thanking the committee. Specifically I know this is true of the St. Paul, South St. Paul people. The workers, the chamber of commerce, the St. Paul Port Authority, and particularly those people in the flood area, are most grateful.

Mr. Chairman this is a bill that on an overall basis means much to millions of Americans. That is why it is good for America.

Undoubtedly, there are many projects of great merit that are not in the bill. However, it was the good judgment of the committee to be sure, that all projects, just could not be included.

However, I confidently predict that all will agree the bill is of great variety and magnitude, and because of this serves well all of our Nation.

Mr. CANNON. Mr. Chairman, I yield such time as he may require to the gentleman from Colorado [Mr. ASPINALL].

Mr. ASPINALL. Mr. Chairman, I rise to commend the Subcommittee on Public Works Appropriations and the Appropriations Committee for bringing to the floor today a bill which I believe provides adequate programs for continued development and control of our Nation's water resources. I am particularly interested in title II which includes the Federal reclamation program. As chairman of the committee which authorizes the reclamation projects, I have appeared before the Public Works Subcommittee for the past several years in behalf of the overall reclamation program.

While I believe that an increase in our annual level of spending for reclamation is justified to keep this program in line with our overall Government spending, I recognize that this must be considered as a long-range goal. I am satisfied that the funds included in this bill are adequate to permit the efficient continuation of the projects that are now under way. I particularly congratulate the committee for again including several new starts for I believe that a few new starts each year are necessary for an orderly and progressive long-range program.

I want to personally thank the chairman of the subcommittee, who is also chairman of the full committee, and the members of the whole committee and subcommittee, for the courtesies extended me and for his and their cooperation and the cooperation of the staffs for their understanding of reclamation matters which are of mutual interest to all of us.

Mr. CANNON. Mr. Chairman, I yield such time as he may require to the gentleman from California [Mr. HAGEN].

Mr. HAGEN. Mr. Chairman, I am grateful for the opportunity to appear to urge appropriations for multipurpose irrigation and reclamation projects located in my congressional district in California.

I sincerely appreciate the cooperation which has been accorded me by the Appropriations Committee in past years and I appreciate the action taken by them this year.

The purpose of my appearance is to urge favorable House action on the following appropriations:

Terminus Dam on the Kaweah River, Tulare County, Calif.	$6,300,000
Success Dam on the Tule River, Tulare County, Calif.	2,588,000
Stone Corral Irrigation District	1,045,181
Teapot Dome Water District distribution system	925,427
East side unit, proposed extension of the Central Valley project, continued planning	566,257
Caliente Creek stream group, Kern County, Calif., completion of planning	15,000
Pine Flat Reservoir, Kings River	500,000

All of the above mentioned items are recommended in the President's budget in the amount which I have specified except the Caliente Creek stream group and this also has received the approval of Mr. CANNON's splendid committee.

I am sure that the Members of this Congress are well acquainted with the Terminus and Success projects and the urgency which dictated the appropriation of funds which have been expended thus far. The two dams are imperative to impound runoff waters from the Sierra Nevada Mountains which have caused an inestimable amount of damage in floods most recently in 1952, 1955, and 1956.

Both of these projects are currently under construction and, in fact, are rapidly nearing completion. The $2,588,000 recommended for Success Dam would be the final increment toward completion of the complete works at a total cost of $14,200,000. The appropriation of the recommended amount would permit this dam to be finished on the scheduled date of June 30, 1961.

The $6,300,000 contained in the bill for Terminus Dam would bring the project to a point of more than 80 percent completed and would leave $3,782,000 still to be appropriated.

I respectfully urge this House to appropriate adequate funds to permit these flood control projects to be completed as scheduled.

I will now comment on the request for funds for the Stone Corral Irrigation District and the Teapot Dome Water District, both located in Tulare County. In both instances irrigation distribution systems are in the process of construction by the Bureau of Reclamation under repayment contracts.

The estimated total cost of each project is $1,888,000. The $1,045,181 for Stone Corral would leave an additional $450,000 to be funded.

The $925,427 for Teapot Dome would complete the appropriations for this project.

With respect to the proposed east side project, feasibility studies have been under way for several years to ascertain ways and means of developing an additional water supply for the east side of the Southern San Joaquin Valley. The plans involve a proposed canal which would convey water from northern California along the east side of the valley into the water-deficient areas of Kern County and Tulare County.

I can assure you that there is a dire need for water in this area and that the situation worsens each year. The $566,257 which would be expended for planning surveys would be a continuation to extensive prior planning. Failure to continue such planning would nullify previous expenditures for this useful purpose.

Regarding the Caliente Creek Stream Group request, it is my understanding that estimates by the Corps of Army Engineers place the total cost of the remaining survey work at $30,000. I further understand that the Engineers have a capability of performing half of this work during fiscal year 1961 and the remainder during fiscal year 1962.

In view of this fact, I would respectfully urge concurrence in the committee's approving the sum of $15,000 for this undertaking.

Now I turn my attention to the $500,000 appropriation recommended for Pine Flat Dam and Reservoir on the Kings River. As the Committee is aware, the physical features of this dam have been completed for several years. Since that time, the construction of downstream channel and levee improvements has been delayed pending observation of changes in the streamflow as a result of the impoundment.

The channel clearance and levee work was authorized as a part of the project and I urge that the appropriation be approved in order that the work may be completed by 1962, as scheduled by the Corps of Army Engineers.

Mr. JENSEN. Mr. Chairman, I yield 10 minutes to the gentleman from New York [Mr. GOODELL].

Mr. GOODELL. Mr. Chairman, at the proper time I will offer an amendment to eliminate $4,500,000 in this bill, which is scheduled to be spent for Kinzua Dam, the reservoir coming partially into my district in western New York. In the course of the discussions, you will hear a great deal of reference to Dr. Arthur Morgan. Let me give you a little bit of the background and the history of how this project developed. For some time there have been discussions of a project and actual authorizations by the Congress for a project in the Allegheny Valley in western New York and in western Pennsylvania to protect the downstream communities. These projects were actually designed to protect not only from flood, but from low water. The unfortunate thing was that the Kinzua project involved taking 9,077 acres right out of the best land of the Seneca Indians in western New York, and in essence destroying that nation and this in violation of the oldest treaty that this country has. I placed in the RECORD yesterday, and it is to be found on page 10849, a comparison of the Kinzua plan and the Conewango plan. I recommend it to you for your reading and to note particularly the language of Dr. Morgan in pointing out the advantages of the Conewango plan which would take no significant amount of Indian land as compared with the Kinzua plan, which would take an essential area right out of the middle of the Seneca land. Dr. Morgan is not a lightweight. He is a competent engineer of the highest professional standing. He was the chief engineer in the Miami Conservancy in 1913, working for the prevention of the recurrence of the Dayton, Ohio, flood. He was the chief engineer of the Pueblo Conservancy in Colorado. He has been the planner and supervisor of over 75 water control projects in this country. He was president of Antioch College for 16 years and was Chairman of the Tennessee Valley Authority from 1933 to 1938. I am told that he has worked in water control projects twice as long as the Army Corps of Engineers. In discussing Dr. Morgan's findings, let me say that he started 3 years ago to see if there was a way to protect Pittsburgh and the downstream communities and still save the Indian lands. In doing so, he made this comment as to his project. This is Dr. Morgan speaking:

> The oldest existing treaty of our Government should be treated seriously and with great respect, but so should other human interests be treated. If the health and safety of the great city of Pittsburgh can be protected in no other way then by taking the land of the Seneca Indians, then, it seems to me, the United States Government and the Seneca Nation should cooperate in protecting Pittsburgh.

Then he went on to say that he had witnessed at various times in his own experience, mistakes made by the Army Engineers in this field, and so he undertook the project. In doing so he found some very interesting situations that existed.

On page 10849 of yesterday's RECORD I inserted a full statement by Dr. Morgan including the following paragraph:

> The Conewango-Cattaraugus site is a rare occurrence in nature. Being out of the ordinary and unexpected, it is not surprising that the possibility was overlooked. Before the last glacial period the Allegheny River flowed north into Lake Erie. The ice of the glacial period dug a big hole, in the same way that it dug the Finger Lakes in New York State, and pushed the earth and rock ahead of it, making a dike which turned the Allegheny River away from Lake Erie and to the Ohio River. If we cut through this dike, and use this glacial hole to store water, we have a reservoir with about three times the capacity of Kinzua. The old Allegheny River channel and South Cattaraugus Creek provide a rock gorge, for much of its distance hundreds of feet deep, to carry away the excess floodwater to Lake Erie.

There are two major purposes for an undertaking like this. One is flood control and the other is augmentation of low water. The Conewango will store more than three times the amount of water. It will, in addition, protect against what is called "the maximum probable flood" in the Ohio River Basin.

The Army Engineers concede that the Kinzua will protect only 43 percent of the "maximum probable floods," but Kinzua cannot be expanded. If they try to expand it any further they will eliminate the city of Salamanca, in my district. There will be arguments made that prior studies have already been made, because when Dr. Morgan came into this, he began to raise questions that needed answering. This committee ordered that a private study be made and a study was made 2 years ago. The result of that study was to confirm the feasibility of Dr. Morgan's Conewango plan. The main question they raised with his plan was that they feared it would cost more than Kinzua. In this connection I want to quote Dr. Morgan:

> The earlier field work and calculations for this study were largely made by my longtime friend and associate, Barton M. Jones. On his sudden death I located such of his papers as I could and have continued the study. He commented frequently that the project has such a variety of promising alternatives that when the possibilities and economies are fully worked out the plans may have little resemblance to the ones he has prepared. * * * It is hoped that as Tippetts-Abbett-McCarthy-Stratton make their study with more adequate resources they will not simply determine the feasibility of the elements we propose, but will be alert to see further possibilities and economies, as well as any weak spots in our proposals.

Mr. PILLION. Mr. Chairman, will the gentleman yield?

Mr. GOODELL. I yield.

Mr. PILLION. The gentleman agrees that the greatest benefit we can obtain from these projects is the low water benefits, the use of water for human consumption; for industrial uses, for pollution along these rivers, down the Pittsburgh and down the Ohio Valley.

The Conewango will furnish three times the amount of water for these very essential needs that can possibly be furnished by the Kinzua.

Mr. GOODELL. I agree. I not only agree, but I am told that the Chief of Engineers in an address last October—speaking of this river basin said that by 1980 the demand for water will be 13 times greater than the dependable discharge into the lower Ohio River. This Conewango project, according to Dr. Morgan, and conceded by everyone now—would store three times more water than the Kinzua.

Quoting Dr. Morgan further. When he started these studies he said:

> I have only begun to look into the many possibilities of the Conewango. I continued my inquiry, and turned up other possibilities so superior as to make my earlier suggestions obsolete. When I asked the Tippetts engineers to look into other possibilities I had found, they replied that they did not have time to do so. They never made a general study of the situation, and never qualified themselves to pass on all the major alternatives.

Now, Dr. Morgan is a man over 80 years of age walking around the hills there making the surveys and explorations which are necessary to come up with a plan which would be feasible. He said he continued his inquiries and studies and the conclusions he came up with were so superior as to make his earlier observations obsolete.

When asked about the Tippetts study of the alternative Conewango, Dr. Morgan outlined and documented in detail the places where money could be cut out of what the Tippetts firm says is necessary to develop the Conewango program.

The Corps of Army Engineers, in replying to a question as to what would be

the benefit-cost ratio for this Conewango project in detail replied on last Friday, and I quote:

> Basic data are not available to the Corps of Engineers to support a reasonable estimate of cost for the Conewango-Cattaraugus alternative proposed by Dr. Morgan; and, accordingly, it has not been possible to determine the firm benefit-cost ratio for that plan. To develop accurate cost estimates for such a complex scheme, many explorations, tests, and surveys would be necessary.

In this connection the corps added that they considered no further refinement of costs necessary because the costs seemed obviously too high.

Mr. Chairman, this is a former Chairman of the Tennessee Valley Authority who has done these studies. I think the observations and recommendations he makes with regard to the Conewango project deserve a fair and impartial study, and so do the alternative proposals, before we appropriate $120 million of the taxpayers' money.

Dr. Morgan has claimed that this project would store three times as much water and would give full protection by an overflow outlet into Lake Erie against any possible floods, while the Kinzua would only protect against 40 percent of the "maximum probable flood" in this river basin.

Dr. Morgan has, in addition, contended that the Conewango would cost $105 million, while the Kinzua was estimated to cost $113 million and now it has grown to $119 million.

I am very much in favor of breaking down and analyzing all phases of these projects to determine which will be best for water augmentation and flood control, and to protect the people in the area. Remember, I have to sell this project to the people where this reservoir will be located. People are going to be severely injured as well as benefited by a project of this immensity. They deserve the assurance that all facts are known and evaluated impartially before they are asked to give up their lands. This applies equally to Indians and white residents of the Conewango Valley.

I ask your support of my amendment when presented.

Mr. JENSEN. Mr. Chairman, I yield 1 minute to the gentleman from Minnesota [Mr. JUDD].

Mr. JUDD. Mr. Chairman, I ask unanimous consent to speak out of order.

The CHAIRMAN. Is there objection to the request of the gentleman from Minnesota?

There was no objection.

Mr. JUDD. Mr. Chairman, I take this time to call the attention of the House to the fact that it was just 1 year ago today that Mr. John Foster Dulles lost his valiant fight against cancer, and our country and the world lost a valiant fighter for freedom for all men.

During his 6 years of service as Secretary of State there was strong disagreement with some of the firm policies and positions he advocated with respect to the never-changing drive of the Communists for world domination.

I, myself, think that history will vindicate those policies and positions and that the long shadow of Mr. Dulles will grow even longer with the passage of time. But I am perfectly willing to leave that to history.

Today we want to pay tribute to him as a great and noble man, a tireless and dedicated patriot, an intelligent and heroic crusader for justice and human liberty in the world as the only possible conditions upon which can be built a true and lasting, not an illusory peace.

America does not and will not forget Mr. Dulles and his services to our country and to mankind.

Mr. QUIE. Mr. Chairman, I ask unanimous consent that the gentlewoman from Ohio [Mrs. BOLTON] may extend her remarks at this point in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from Minnesota?

There was no objection.

Mrs. BOLTON. Mr. Chairman, a year ago today the United States lost one of its most consecrated public servants. I rise to add my little word of respect, my appreciation of a loyal servant of the country—he and I were not always in agreement, but we respected each other and worked as best we knew how for the fundamental principles upon which this great free land of ours was built.

Mr. JENSEN. Mr. Chairman, I yield 5 minutes to the gentleman from Pennsylvania [Mr. FENTON], a member of the committee.

Mr. FENTON. Mr. Chairman, H.R. 12326, known as the public works appropriation bill for 1961, is a good bill. It has had thorough and complete hearings, and I hope the House will adopt it as presented.

Here we go again. It has been stated here that an amendment will be offered to make a further study of an alternative plan. I do not know how many more studies they want to make of the proposed Allegheny Dam.

I do not by any means pose as an expert on engineering, but I have listened to all of those who have spoken against the proposal of the engineers. Every Member of this body who has a project in his district must depend on the decisions of the Army Engineers and, certainly, on their truthfulness.

This Allegheny River Reservoir project is a part of the overall plan for water control in the Ohio River Basin. As I understand the project, it will reduce flood damages in important residential and industrial areas downstream, including the highly industrialized Pittsburgh area, and will maintain adequate flow during an extended drought period. It is a key project in the control plan for the Ohio. The plan for construction is the result of many studies, some prior to and others subsequent to the authorization.

Opposition has arisen to this project based on flooding of Indian land in the Seneca Reservation and the possibility of diversion of the floodflows on the Allegheny River to Lake Erie. The latter feature appears to have been offered particularly to eliminate the first.

In regard to the first objection, the President of the Seneca Nation of Indians stated in testimony before the subcommittee that—

> My people have steadily maintained the position that if the construction of this proposed Kinzua Dam was the only economic and engineering solution for the prevention of floods to downstream Allegheny, we would not oppose the taking of our lands.

Now, the Corps of Engineers have maintained that the construction as proposed is the most economical means of providing the benefits to accrue to the downstream area through flood protection and low waterflow augmentation.

I am informed that the Corps of Engineers consider the diversion of floodflows to Lake Erie as a feasible solution to the flood protection of the downstream Allegheny area, but that it is not the most economical. They have studied this approach to the flood problem as early as 1928 and have again recently considered the plan as proposed by the proponents of the diversion idea. Their recent conclusions are that the plan of diverting the floodflows to Lake Erie will cost the Federal Government about $200 million as compared to the $118 million which is the estimated cost of the Allegheny River Reservoir project.

Based on the testimony and information furnished me by the Corps of Engineers I am convinced that they have thoroughly investigated all alternative means of providing the control found to be necessary, and I am confident that their studies gave just appraisal to these alternative plans. I am therefore of the opinion that the recommended plan of the Army Engineers represents the most economical and desirable approach to meet the overall needs for development of water resources in this area.

Now, the chief reason for opposition to the Allegheny River Reservoir is that they have a treaty dating back to 1794 with the United States. Since the Supreme Court has decided in favor of the Army Engineers, this argument cannot prevail.

The following precedences are ample proof that the United States has treated the Indians fairly.

I had the Legislative Reference Service gather for me a list of the Indian tribes who have benefited from dam construction:

Flathead Indians of Montana. They received compensation from a private company for use of damsite and flooding of reservation land.

Warm Springs Indians of Oregon. They received compensation from a private company for use of damsite.

Fort Berthold Indians of North Dakota. They receive compensation from the Federal Government for flooding and other items, connected with dam construction.

Nez Perce Indians of Idaho, Warm Springs Indians of Oregon, Umatilla Indians of Oregon, Yakima Indians of Washington receive compensation from Federal Government for flooding of fishing sites at Celilo Falls on the Columbia and construction of Dalles Dam.

Wind River Indians of Wyoming receive compensation from Federal Government for inundation of reservation land, in connection with Boysen Dam.

Standing Rock Indians and Cheyenne River Indians of South Dakota receive compensation for Oahe Dam on the Missouri River.

Lower Brule and Crow Creek Indians of South Dakota receive compensation for Randall Dam on Missouri River.

Fort Peck Indians of Montana. Compensation for Fort Peck Dam on Missouri River.

Crow Indians of Montana. Projected Yellowtail Dam to carry compensation.

So, Mr. Chairman, without taking any more time at this particular moment, I want to say that I think the Army Engineers have given us a very fine evaluation of the various projects that they have looked into. When the amendment is offered, I certainly will oppose it, and I hope the House will stand back of the committee.

Mr. JENSEN. Mr. Chairman, I yield 10 minutes to the gentleman from New York [Mr. TABER].

Mr. TABER. Mr. Chairman, this bill calls for $1,238 million overall for the budget estimates that were considered, and a bill which the committee has considered calling over all for $1,685,500,000 for civil functions of the War Department and reclamation. It calls for about $28 million for Bonneville Power, most of which is for operation and maintenance. It calls for over $2 billion of funds for the Atomic Energy Commission.

The projects included in this bill are enormous. Along with those that have already been started they will call for from $8 to $10 billion of expenditures. To my mind the worst part of it is that instead of its being something that will maintain the resources of America, the bill contains many projects which do not maintain the resources of America but sap them. In other words, they are projects without a benefit-cost ratio. If they are figured on the basis of the present money market, there is hardly a project in the whole bill that would qualify. In other words, there are 19 projects in the bill which call for large amounts of funds where the benefit-cost ratio is less than 1.1 to 1, figured on a 2½ percent interest rate.

Mr. BECKER. Mr. Chairman, will the gentleman yield?

Mr. TABER. I yield to the gentleman.

Mr. BECKER. Is it not also the fact, that while this bill amounts to about $1 billion, we are actually committing the country to an expenditure of several billions of dollars, because many of these projects are only starts? The Kinzua Dam calls for an expenditure in the bill of $4,500,000, but actually the cost will be about $120 million, if it is started; is not that true?

Mr. TABER. There is no question about it. On top of that the benefit-cost ratio figured on a 2½ percent interest rate is only 1.3 to 1; and if it is figured on a 3½ percent to a 4 percent rate, it is a minus quantity—there is no benefit-cost ratio.

Mr. BECKER. Heretofore under policies of public works we have always disapproved that type of project, have we not?

Mr. TABER. That is what we used to do. The worst part about the Kinzua Dam is that it is not presented primarily as a flood control project but as a scheme to store up water to flush the sewage out of the Ohio River in the dry season.

Mr. BECKER. I agree with my colleague.

Mr. TABER. That represents the main cost of it, and with that kind of picture it ought to have a local contribution of a very substantial character; but it does not have it.

Mr. BECKER. I agree with the gentleman.

Mr. TABER. On top of that, if you want to go up a couple of points, there are 51 projects, most of them new, in this bill without even a budget estimate, where the benefit-cost ratio on a 2½-percent interest rate is not better than 1.2 to 1 and where the benefit-cost ratio is a minus quantity if figured on an interest rate of 3½ to 4 percent.

I appreciate that a bill of this size could not come before the Congress because so many of the Members are getting the jitters and being ready to spend money that we do not have for a lot of projects that really cannot be justified at all. They are not projects to benefit and to maintain the status of the United States of America; they are projects put in to satisfy the greed of certain people in connection with so-called flood control.

For my own part I cannot go along with the bill. I cannot vote for it. I hope that when the time comes there will be a rollcall vote, so that I can go on record against it, even if I am the only one. I appreciate that mine is a voice crying in the wilderness, but it is a voice crying for something that the American people need, and that is, to put a brake on our expenditures where it is not absolutely necessary that we spend the money. I would feel that I was not doing my duty by the people of the United States if I did not say just what I have said. I have been very charitable in my approach to this bill. Maybe sometime we will wake up before it is too late and before the country is in such shape that we cannot withstand the deluge.

Mr. JENSEN. Mr. Chairman, I yield 2 minutes to the gentlewoman from Washington [Mrs. MAY].

Mrs. MAY. Mr. Chairman, may I ask if the chairman of the Committee on Appropriations or another member of the committee will yield for a question? I see the gentleman from Michigan [Mr. RABAUT] has risen. May I ask a question of him?

On page 19 of the committee report it is noted with some concern on my part that the budget estimate for the John Day Lock and Dam on the Columbia River in the States of Washington and Oregon has been reduced by $3,655,700, part of a budgeted item, of course.

It is further noted in the report, correctly, that this reduction is the amount by which the Columbia Basin monetary authorization will be deficient in the fiscal year 1961 unless it is increased by the pending public works authorization bill which, as the gentleman knows, passed the House last July.

Inasmuch as the Senate Public Works Committee anticipates reporting this legislation in several days, my question is, Why could not the committee have included the full $37 million for this important project, budgeted, of course, contingent upon the raising of the Columbia Basin monetary authorization?

Mr. RABAUT. We could have, but we did not, because it has been committee policy to withhold funds until the monetary authorization was available.

Mrs. MAY. There was nothing that said you could not do this?

Mr. RABAUT. There was not.

Mrs. MAY. So the decision here was made on the basis that the monetary authorization had been reached.

Mr. RABAUT. That is right.

Mrs. MAY. It is my understanding that the members of the committee would look favorably upon the restoration of these funds for the John Day Lock and Dam and the raising of the monetary authorization by the other body; is that correct?

Mr. RABAUT. The gentlewoman is correct, the members of the committee would look favorably upon that.

Mrs. MAY. I thank the gentleman very much.

Mr. JENSEN. Mr. Chairman, I yield myself 1 minute.

Mr. Chairman, this bill is often spoken of as the bill which contains items that are not necessary. But we have a responsibility here as representatives of the people to do the best we can to see that life and property are not endangered. On all these Federal streams over which the Federal Government has jurisdiction, no State, no municipality, and no person dare under the law to stick a spade in that Federal stream or to try in any way to divert that Federal stream regardless of how small the stream might be. So in this great, huge country of ours, the Federal Government and this Congress has this responsibility to all the people. Our committee insists, however, that local people contribute their share of such expenses. This bill is a bill for America so far as all public works for all 50 States is concerned. The funds requested in this bill for all public works in America is less than 1.5 percent of the Federal budget for the fiscal year 1961.

Mr. CANNON. Mr. Chairman, I yield such time as he may require to the gentleman from Alaska [Mr. RIVERS].

Mr. RIVERS of Alaska. Mr. Chairman, I speak of the item of $542,000 contained in the budget request for a small boat harbor at Homer on the Kenai Peninsula, Alaska. This harbor would provide safe moorage for fishing boats and other small vessels for this fast-growing community and constitute a constructive step toward the growth and development of Alaska. Fishing is an important segment of the economy of

Homer, Alaska, but boating for tourists in this scenic wonderland is also a promising potential.

On page 233 of the hearings before the subcommittee the justification for this project under the head of local cooperation shows that there has been some discussion as to the exact location of this harbor. On page 234 Gen. Allen Clark of the Corps of Engineers stated that the corps had recommended a location on the north side of the peninsula, and local people feel it should be on the south side. In speaking of the "peninsula," General Clark was referring to the Homer Spit, a long narrow finger of land which projects a mile or more out toward the center of Katchemak Bay. Although the discussions mentioned had to do with the question of which side of the spit to utilize for the harbor, some members of the committee apparently thought that the word peninsula referred to the whole Kenai Peninsula, so in all good conscience declined to go along with the project until the site was determined. They also thought there was a substantial controversy which there is not. In a wire received today from the Homer Chamber of Commerce I am told that there is now 100 percent backing of the Corps of Engineers in regard to location of the harbor. Since the people of Homer are extremely disturbed about the deletion of the item for their long desired and needed harbor, they are sending a petition for reinstatement of the Homer boat harbor funds. I am also advised that in the very near future the Corps of Engineers will receive a field report from a representative at Homer confirming the complete accord which now exists in accordance with the above referenced telegram. By the time said petition and field report arrive H.R. 12326 will be in the hands of the Senate, and upon the strength of said documents I would expect the Homer boat harbor item to be restored by the other body. Likewise, I would surmise that the objections of our own committee would by then have been met and the cloud removed from the justification for this project. It is my ardent hope that the expected restoration will prove acceptable to our House conferees at the ensuing conference, and prove acceptable to all of my other colleagues when the time comes to act upon the conference report.

Mr. CANNON. Mr. Chairman, I yield such time as he may require to the gentleman from California [Mr. Moss].

Mr. MOSS. Mr. Chairman, I ask unanimous consent to extend my remarks at this point in the RECORD and to include extraneous matter.

The CHAIRMAN. Is there objection to the request of the gentleman from California?

There was no objection.

Mr. MOSS. Mr. Chairman, I was shocked to discover in the public works appropriations bill that our Committee on Appropriations had reduced the budget estimate for continuation of construction on the Sacramento River deepwater ship channel project in my district from $8 million to $5 million. This is the second year in a row that the committee has pared the administration's minimal recommendations for this project. Last year it cut $1 million from the budget estimate of $7.5 million.

On page 16 of its report—House Report No. 1634—the committee made the following statement with respect to its action:

> Sacramento deepwater ship channel, California: The budget estimate of $8 million for this project has been reduced to $5 million. Estimates of the total direct Federal cost have increased approximately $5 million in the last 4 years. The total estimated project cost is now $47,255,000, of which the direct contribution by the local beneficiaries is only $3,515,000. The committee continues to hold the opinion on projects such as this where a very high percentage of the total benefits are obviously local in nature, that there should be a higher local contribution to the direct cost. No effort has been made to increase the local beneficiaries' share of the increased direct project costs. As stated last year in its report, the committee feels that it would be wholly appropriate for the local interests to increase their contribution if they wish to achieve the advantages of a speedup in the construction schedule.
>
> The committee notes that the effect of its $1 million reduction in this item last year was completely nullified by transfer of funds to the project from other projects under the 15 percent transfer latitude which the committee has granted to the Corps of Engineers. The latitude in the transfer of funds between projects is not for the purpose of offsetting positive actions taken by the committee on specific projects. No funds, over and above the amount being provided, are to be transferred to this project during the fiscal year 1961.

Thus it appears the committee's action was aimed at the local interests and the Corps of Engineers. To the former it said, in effect, that their share in the cost of the project is insufficient; that if the project is to proceed at an economic and timely rate of construction a higher local contribution to direct costs will have to be made. To the Corps of Engineers the committee levels the accusation that it thwarted the will of the committee by transferring $962,000 to the project after the budget estimate had been reduced by $1 million.

I should like to examine the two grounds set forth as the basis for the committee's action. Before doing so I will set forth some background information on the project.

DESCRIPTION

Mr. Chairman, the Sacramento River deepwater ship channel projects consist of a ship channel from deep water in Suisun Bay, near San Francisco, to Lake Washington on the outskirts of California's State capitol at Sacramento, a harbor and turning basin at Lake Washington, and a 1½-mile shallow draft barge canal connecting the harbor and the Sacramento River. The project will open a tributary area embracing 24 California counties, 4 southern Oregon counties, and 13 northern Nevada counties to worldwide markets.

The project was authorized in the Rivers and Harbors Act of 1946, and received its first appropriation in the bill covering the fiscal year 1949. Appropriations followed in the 2 ensuing years. Along with many other public works projects, work was suspended on the channel in 1951 because of the Korean war. It was resumed in 1956 and construction has continued uninterrupted since. At the time of authorization the corps estimated a reasonable construction period of 3 years. The project has now been under way for nearly 11 years.

COMMITTEE ACTION UNFAIR

Mr. Chairman, I feel very strongly that, first, the committee action in conditioning a timely construction schedule on increased local contribution constitutes a complete repudiation of an agreement with the local people covering division of costs; and second, that the Corps of Engineers was completely justified in transferring funds to the project during the current fiscal year under the 15 percent transfer allowance. I will discuss these two points in order:

1. LOCAL CONTRIBUTION AGREEMENT

The act which authorized this project required that responsible local interests provide satisfactory assurance to the Secretary of the Army that they would:

> 1. Furnish without cost to the United States, all lands, easements, rights-of-way, and spoil disposal areas for the initial work and subsequent maintenance when and as required and make all essential utility changes necessary for the construction of the project.
>
> 2. Construct, operate, and maintain at the Lake Washington Basin an adequate public terminal with necessary utilities and rail and highway connections open to all on equal terms.
>
> 3. Hold and save the United States free from any damages which may arise from construction, operation, and maintenance of the improvement.

Mr. Chairman, immediately upon approval of the authorizing act, the local people established the Sacramento-Yolo Port District as the responsible local agency. Under date of December 24, 1947, the district executed "Agreement of Assurance to the Secretary of the Army" in the exact terms of the requirements as set forth in the preceding paragraph. On February 3, 1948, the Secretary of the Army approved the agreement of assurance.

I think that there can be no doubt that the establishment of conditions by the United States and their acceptance without any qualifications or reservations by the local people constitutes a solemn agreement. If the agreement was not a firm one at that point in the relationship, it certainly was when the local interests undertook to comply with the promises they made to the United States. At any rate, the people of my district felt and still feel that they had entered into a binding agreement. Based on the commitment they made they formulated their fiscal plans.

Almost immediately the voters of my district approved a $3,750,000 bond issue for local financing. The State of California approved the project and appropriated $750,000 to the port district for use in the acquisition of rights-of-way, easements, and so forth. In addition, the port district collected annual taxes from the property owners which collections to date have aggregated over $2 million.

The extent of local interests' compliance with the agreement with the United States is nowhere better documented than in the capital account of the port district. Among the items listed therein are the following:

Rights-of-way and real estate	$2,458,547.93
Channels (includes $75,000 construction advancement to Corps of Engineers)	336,751.00
Belt railroad	226,847.67
Highway pavement	58,690.25
Domestic water system	6,192.56
Fire protection system	26,611.43
Engineering and design	36,078.83
Sanitary sewer	40,513.20
Automotive and general office equipment	24,078.53
Port district capital investment	3,214,311.40

Not only has the port district proceeded in good faith to meet its responsibilities, but the State of California has diligently aided the project in every possible way. Already mentioned was the $750,000 it appropriated for rights-of-way acquisitions. The California Division of Highways provided an overpass across a recently constructed east-west freeway, thereby providing direct truck access to the port terminal area. The cost of this improvement was $288,000. In constructing this freeway the division of highways removed approximately 500,000 cubic yards of material from the channel at a savings to the United States of $150,000. The State is currently expending over $3 million in rebuilding its bridge across the channel at Rio Vista in order to permit free passage of deep-draft water carriers serving the port.

Thus, it is clear that any comparison of the requirements of local interests with their accomplishments shows that they have met and exceeded every obligation they assumed.

Mr. Chairman, I am disturbed also by the clear implication in the committee report that the local interest costs have remained static while the Federal costs have increased. The fact is that the local interest costs have increased at approximately the same rate as those of the Federal Government. The report mentions only the cost of rights-of-way borne by the local interests. Pursuant to the agreement of assurance the local people are required to furnish various terminal facilities such as wharves, transit sheds, and so forth. Had this project been completed in accordance with the initial plans, these terminal facilities plus the rights-of-way, easements, and utility relocations could have been completed by the port district for slightly over $4 million. Because of the delay in completion of the project, these facilities and easements, and so forth, will cost over $13 million. Thus, had the project been prosecuted to completion on a timely schedule the initial bond issue plus the amount appropriated to the port district by the State of California would have been sufficient to cover all local costs. Because of this situation the port district must go before the voters in a few months for approval of a new bond issue of between $10 and $11 million. I might add parenthetically that these same voters will be called upon to approve a State water bond issue of $1.75 billion, plus other bonds for local financing for schools, improvements, and so forth.

Needless to say, the delay in the completion of the port project, with the consequent increase in the Federal and local costs, was in no way caused by the people of my district. Time after time they have begged to have the project placed on an economic and realistic construction schedule. They have been more than diligent in supplying everything required of them well in advance of the corps' need. As a result of the stretchout of this project they have been forced to bear a heavy burden of taxation to meet the costs of bond servicing, operation and maintenance, and other expenses. After 11 years they still have not realized any of the benefits of a deep-water port.

Not only would a revision of the apportionment of costs be unfair at this late date, but it would cause fiscal havoc. I know of no way in which the people could make an additional contribution. Neither do I know how the United States could accept an additional contribution even if it could be made.

Lastly, the requirements of local contribution established for this project are no different than those on any other navigation project of the same kind. If the Congress wishes to establish new standards of local contribution, it should do so at the outset instead of waiting until a particular project is nearing completion, and long after the fiscal patterns have been established.

TRANSFER BY THE CORPS OF ENGINEERS

Mr. Chairman, I feel just as strongly that censure of the corps for transferring $962,000 to the project during the current fiscal year was not justified.

I am convinced that the corps officials would have been remiss in their duties if they failed to make the transfer. The transfer was necessary to keep two extremely advantageous contracts under way. To curtail or shut down either of these contracts would not only have meant a dollar loss to the United States, but would also have made it difficult for the corps to secure favorable bids on future work. One of these contracts covered a 9-mile stretch of the channel. I doubt that the engineers have secured a dredging contract anywhere in the United States on as favorable terms, as may be seen from the following:

Corps of Engineers estimate	$5,896,700
Highest bid	8,530,500
Lowest bid	4,145,800

The low bid was, of course, accepted. It represented a saving of $1,750,900 to the United States. The cost per cubic yard of material under the agreement is 16 cents per cubic yard as compared to 27¼ cents as had obtained previously. Can there be any doubt that the corps acted prudently in transferring funds in order to save this contract?

CONCLUSION

Mr. Chairman, it would grieve me if my remarks today were to be construed as a criticism of the Committee on Appropriations, or of any of its able and conscientious members. I have always found them to be fair and reasonable men. Certainly, they have been most understanding in treating with the problems of our growing State of California.

I do feel, however, that it is unfair to call upon the people of my district to make an additional contribution to this project when they have already exceeded every possible part of their agreement. There can be no doubt that the costs to the United States have increased because of the unreasonably long construction period. But my people, although they were in no way responsible for that delay, have likewise paid dearly because of it. What they originally thought would cost them $4 million will, in fact, cost them over $13 million.

For the reasons I have stated, Mr. Chairman, I take strong exception to the language in the committee report calling on the people of my district to make a greater contribution to the port project.

Further, I feel that the Corps of Engineers should be commended rather than chastized for employing the 15 percent transfer allowance when by so doing they served the economic interest of the United States.

Mr. JENSEN. Mr. Chairman, I yield 5 minutes to the gentleman from Iowa [Mr. GROSS].

Mr. GROSS. Mr. Chairman, I thank the gentleman from Iowa for yielding me this time.

I should like to ask the chairman of the committee for an interpretation of the language on page 4, beginning in line 16, as follows:

Provided, That no part of this appropriation shall be used for projects not authorized by law or which are authorized by a law limiting the amount to be appropriated therefor, except as may be within the limits of the amount now or hereafter authorized to be appropriated.

What is the meaning of that language?

Mr. RABAUT. This language goes to the basic mandatory limitation.

Mr. GROSS. Is this language designed to provide appropriations for projects not authorized?

Mr. RABAUT. No.

Mr. GROSS. Are there any projects in this bill not authorized by law?

Mr. RABAUT. There are some.

Mr. GROSS. Could the gentleman tell me what they are?

Mr. RABAUT. I would have to look them up. I would have to make a survey of the several projects.

Mr. GROSS. I would like to know what they are so that perhaps I could lodge a point of order against them.

Mr. RABAUT. The language says the money cannot be spent until——

Mr. GROSS. What language?

Mr. RABAUT. This language.

Mr. GROSS. I do not find that kind of limitation.

Mr. RABAUT. Let me give you a different interpretation.

Mr. GROSS. This language could be subject to a lot of interpretations. I do

not know that I ever saw more confusing language in an appropriation bill in my time here.

Mr. TABER. Mr. Chairman, will the gentleman yield?

Mr. GROSS. I yield to the distinguished gentleman from New York who has had so many years of service on the Appropriations Committee.

Mr. TABER. This language was not used in the old rivers and harbors and flood control bills, but it has been used lately. It is a subterfuge to get around the limitation that the appropriation must be authorized by law. It provides that if it is subsequently authorized by law they can go ahead and spend the money.

Mr. GROSS. In other words, what the gentleman is saying—and I appreciate his fair and frank statement—is that this is a subterfuge to get around the provision which requires that projects must be authorized by law before appropriations are made for such projects.

Mr. RABAUT. And the money cannot be spent until they are authorized. So what is wrong about it?

Mr. GROSS. But the rules of the House prohibit an appropriation until the project is authorized by law.

Mr. PILLION. Mr. Chairman, will the gentleman yield?

Mr. GROSS. I yield.

Mr. PILLION. I believe the language is intended to take care of a number of projects that are in an authorization bill that passed the House and is now pending in the Senate.

Mr. GROSS. And the rules of the House strictly prohibit that procedure.

Mr. PILLION. I appreciate that very much, but I wanted to explain the situation.

Mr. GROSS. I would still like to know how many unauthorized projects there are in this bill, the purpose of these projects and their cost.

Mr. RABAUT. Without getting too personal in the matter, would you want to strike this language out so that the money could be spent for unauthorized projects?

Mr. GROSS. No; but I will say to the gentleman that on the basis of the statement by the gentleman from New York [Mr. TABER] I intend to offer an amendment to strike out the language beginning with "which are authorized by a law limiting the amount to be appropriated for, except as may be within the limits of the amount now or hereafter authorized to be appropriated."

I would leave in the language:

No part of this appropriation may be used for projects not authorized by law.

That is the fair way to legislate, and the right way to legislate.

Mr. METCALF. Mr. Chairman, I need not express my great pleasure at the House approval of $2,500,000 to begin work on Yellowtail Dam. I am sure it is very evident. It has been a long uphill fight and I am confident that the Senate will concur in the appropriation of these funds.

While actual construction of any proportions will not be noticeable for about a year, I know that it will mean a great deal to the employment situation in eastern Montana. Yellowtail Dam will need a large laboring force during construction and the new industries, which we believe will follow the installation of the hydroelectric generating plants, will contribute to a stabilized employment situation.

Large projects financed with Federal funds often are governed by policies which protect the local market. Federal agencies have found it desirable to make local purchases and use local products whenever practicable. They also prefer to make use of the local labor market.

Montana has an abundance of skilled and unskilled laborers and I am hopeful that the contractors who will be constructing this multipurpose project will make use of this labor market. There are two Indian reservations close to Billings—the Crow and the Northern Cheyennes. These people are constantly plagued with unemployment. These people need work. I am sure that they can do the job if the opportunity is made available to them.

At the appropriate time I intend to propose to the Secretary of the Interior that he issue a policy statement setting forth preferential status for Indians from these two reservations whenever they can fulfill the qualifications of the individual jobs.

The Indians have received such treatment in other projects, both private and Federal, and I feel that I would be remiss if I did not endeavor to see that the Crow and Northern Cheyenne Indians got a break in this instance.

Mr. CANNON. Mr. Chairman, I ask that the bill be read.

The CHAIRMAN. Does the gentleman from Iowa have any further requests for time?

Mr. JENSEN. No further requests for time, Mr. Chairman.

The Clerk read as follows:

GENERAL INVESTIGATIONS

For expenses necessary for the collection and study of basic information pertaining to river and harbor, flood control, shore protection, and related projects, and when authorized by law, surveys, and studies (including cooperative beach erosion studies as authorized in Public Law 520, approved July 3, 1930, as amended and supplemented), of projects prior to authorization for construction, $10,895,800, to remain available until expended: *Provided*, That $50,000 of this appropriation shall be transferred to the United States Fish and Wildlife Service for studies, investigations, and reports thereon as required by the Fish and Wildlife Coordination Act of 1958 (72 Stat. 563–565) to provide that wildlife conservation shall receive equal consideration and be coordinated with other features of water-resource development programs of the Department of the Army.

Mr. JOHNSON of Maryland. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. JOHNSON of Maryland: On page 3, lines 20 and 21, strike out "$10,895,800" and insert in lieu thereof "$10,913,000."

Mr. JOHNSON of Maryland. Mr. Chairman, I hope I may have the attention of the Members of the House as I present my views concerning the amendment I have offered to H.R. 12326.

While I wish to commend the committee for adding funds for 33 surveys, of which 26 are unbudgeted, I am deeply concerned by their failure to include for survey what I consider to be one of the most needed and most worthy projects in my district. One has only to study the map of the State of Maryland and the First Congressional District of our State to know that we are confronted by innumerable navigational problems. One only has to study the reports to Congress over the past few years to ascertain the fact that our harbor and channel improvements in the district have been seriously neglected.

In the amendment I have offered, the sum of $18,000 is added for a survey of the project known as the Honga River and Tar Bay project. Approximately 1,000 people dwelling in this immediate area, commonly known as Hoopers Island in my district, derive their livelihood from the two tributaries mentioned, which flow into the Chesapeake Bay. These residents own hundreds of boats valued at several hundred thousand dollars. Engaged in the seafood industry, these industrious, seafaring groups pour approximately one and a third million dollars annually into the economy of Dorchester County.

Gen. J. L. Person, Assistant Chief of Engineers for Civil Works, in his report to the chairman of the Committee on Public Works, stated, and, I quote:

This region is one of the most highly productive hard-crab areas in the Chesapeake Bay. * * * Water-borne commerce statistics for 1957 show that 21,640 vessel-trips were made over the Honga River and Tar Bay. * * * This is a 50-percent increase in traffic within the last 10 years. * * * It is considered that a review to determine the advisability of improvements for navigation on the Honga River is advisable at this time. * * * The estimated cost of this survey is $18,000.

Last year, I personally visited the proposed project with Col. Stanley T. B. Johnson, district engineer. Colonel Johnson concurred with me that it was deplorable that this area, which possesses such a large number of boats and does so much for the economy of our district, does not have one decent anchorage basin.

The colonel agreed that an adequate basin facility was sorely needed and that the dredge material from the harbor area could be used to build up the tenuous land strip connecting the two islands—a needy protection against possible human suffering and loss of lives. These residents have been extremely patient to obtain this essential improvement. Their patience over the years has been rewarded by damaged boats and the constant threat of inundation by the Honga and Tar Bay Rivers. Gentlemen, the health and welfare of these people are paramount. It is obvious to me that the growth of this area will not only be impeded by the reluctance of this Congress to grant the sum needed to initiate this project, but their very lives may be at stake as well, without prompt action.

Mr. RABAUT. Mr. Chairman, I rise in opposition to the amendment.

Mr. Chairman, the committee had very, very many of these requests for unbudgeted investigations and surveys. The committee selected the 26 which in their mind were the most warranted at this time, of which this was not one.

The request of the gentleman from Maryland is for $18,000. However, the total estimate of cost set forth by the Corps of Engineers is only $10,000.

It is in the category of the type of surveys that are authorized in the districts of many of the Members of this House. There is no reason why it should have been placed in any different category than it is in. There is a limit to the number of projects which the committee can make provision for and it has done its best to select those which appeared most justified at this time.

Mr. Chairman, I ask that the amendment be defeated.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Maryland [Mr. JOHNSON].

The amendment was rejected.

Mr. PERKINS. Mr. Chairman, I move to strike the last word.

Mr. Chairman, I intend to support this bill because I personally feel it is a good one. The committee is to be complimented on a magnificent job in its report on an appropriation bill which is extremely complex, and the effect on millions of Americans will be tremendous. However, I do believe there are a few instances where the actual need is greater than is provided for by the bill as reported. Fishtrap Dam, I firmly believe, is one such instance.

Each year the good citizens of the Big Sandy River Basin, at great personal sacrifice, come to Washington to plead with the Congress for relief. Only in the most recent years has there been any progress. A review survey of the Big Sandy was completed last year which gave final recommendation for a system of flood control dams providing complete protection to the basin. This included the John W. Flanagan, Fishtrap, and Haysi Dams.

We have in this bill sufficient funds to complete the planning of Fishtrap Reservoir in the amount of $349,000. This was the amount that was in the budget. We do not have any construction funds in the budget, but the Army Engineers state they can efficiently utilize the sum of $301,000 for construction during the next fiscal year.

In different sections of the country, of course, everyone thinks their reservoir perhaps is the most important one and, naturally, the committee has to weigh the feasibility, the economic advantages, and so forth. But in this particular area I want to state to the committee that there is not a section in the United States of America, and the records of the Army Engineers will bear out this statement, that has suffered to the extent that the Big Sandy region in eastern Kentucky has suffered from lack of flood control. The 1957 flood alone caused property damages to this area in excess of $40 million.

When I came to Congress 11 years ago I had in excess of 25,000 coal miners mining in excess of 25 million tons of coal annually. Today, instead of having 25,000 coal miners I have about 9,000 or less mining approximately 19 million tons annually, 6 million tons less than 11 years ago.

In this same area we have the highest insured unemployment rate in the Nation, and have had one of the highest unemployment rates in the Nation since 1952, particularly in Floyd and Pike Counties. Unless we do something to protect these people from floods, we are going to just prolong this high rate of unemployment that we have in the eastern coalfields today.

Now, not only did the 1957 flood cause considerable damage, but we have had these recurring floods that take place practically every year that do millions and millions of dollars worth of damage in this particular section. We cannot hope to ever diversify the economy of this area, until we do get some flood control in eastern Kentucky.

Mr. Chairman, I felt that I would be derelict in my duty if I failed to call the importance of early construction of this particular reservoir to the attention of the committee on this occasion. At the present time, much of a highly flood-prone area has no protection at all. Freedom from floods and a conserved, dependable water supply are vital to the security and economy of the basin.

In February 1958 we had a schoolbus accident in Floyd County, Ky., where a schoolbus carrying 50 youngsters left Highway 23 near Prestonsburg, Ky., and plunged into the stream swollen by floodwaters. The Levisa Fork of the Big Sandy was a raging torrent, in some places 30 feet or more deep. The schoolbus was traveling in the direction of Prestonsburg, Ky., and when the accident occurred the bus went over an embankment without turning over. On the edge of the river, several of the schoolchildren escaped through the rear door, catching onto some willow bushes and wading through the water up the bank onto the road. Shortly the entire bus went under and the remaining 26 children were unable to escape. This accident happened on Friday morning when the children were being driven to school in Prestonsburg. The bus was not found until Sunday at noon and had only floated down the river a short distance, but was completely on the other side of the river next to the bank when discovered.

The true tragedy of this disaster is that few, if any, lives need have been lost. Let me explain this. After the 1937 flood, to be exact, a comprehensive survey of the Ohio River Basin was made and four reservoirs were authorized to give the people in the Big Sandy section flood control protection.

I refer to the Dewey Reservoir which gives the city of Paintsville and downstream communities some flood control protection, but gives no flood control protection to the cities of Prestonsburg and Pikeville, Ky., and communities in between. At the same time, Fishtrap and Pound Reservoirs were authorized. If the Fishtrap Reservoir, along with the other reservoirs on the Big Sandy had been constructed before the accident took place, no doubt the river at this point at the scene of the accident would have been much lower. This is an area with between 40 and 50 inches of precipitation annually, much of which falls in severe showers and storms in the winter and early spring, similar to that in late February 1958, the time of the schoolbus disaster, which caused serious and severely damaging floods almost every year. Year after year our people drearily rouse themselves from the mud and wreckage, only to suffer the pangs of drought during the summer and fall.

In the event the Senate was to approve much needed construction funds in the amount of $301,000, I want to take this opportunity to request the conferees to go along. Not only do I believe this project has tremendous support in the Senate, but I feel this worthwhile project has much support among the membership of the House Public Works Subcommittee. Initiation of construction of Fishtrap Dam this year would be a fitting memorial to the unfortunate victims of the bus disaster of 2 years ago.

The Clerk read as follows:

CONSTRUCTION, GENERAL

For the prosecution of river and harbor, flood control, shore protection, and related projects authorized by law; detailed studies, and plans and specifications, of projects (including those for development with participation or under consideration for participation by States, local governments, or private groups) authorized or made eligible for selection by law (but such studies shall not constitute a commitment of the Government to construction); and not to exceed $1,400,000 for transfer to the Secretary of the Interior for conservation of fish and wildlife as authorized by law; $662,622,300, to remain available until expended: *Provided*, That no part of this appropriation shall be used for projects not authorized by law or which are authorized by a law limiting the amount to be appropriated therefor, except as may be within the limits of the amount now or hereafter authorized to be appropriated: *Provided further*, That none of the funds appropriated for "Construction, General", in this Act shall be used on the project "Missouri River, Kansas City to mouth", for any purpose other than bank stabilization work: *Provided further*, That $500,000 of this appropriation shall be transferred to the United States Fish and Wildlife Service for studies, investigations, and reports thereon as required by the Fish and Wildlife Coordination Act of 1958 (72 Stat. 563–565) to provide that wildlife conservation shall receive equal consideration and be coordinated with other features of water-resource development programs of the Department of the Army.

Mr. WAMPLER. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. WAMPLER: On page 4, line 16, strike the amount "$662,622,300" and insert in lieu thereof the amount "$662,807,300".

Mr. GROSS. Mr. Chairman, a parliamentary inquiry.

The CHAIRMAN. The gentleman will state it.

Mr. GROSS. I have a point of order against the language to be found on this

page. Will the discussion of this amendment abrogate my right to make a point of order?

The CHAIRMAN. The gentleman is correct, it would. If the gentleman has a point of order, it would have to be urged at this point.

Mr. GROSS. The gentleman is trying to obtain recognition from the Chair to make a point of order.

The CHAIRMAN. The Chair recognizes the gentleman to make the point of order.

Mr. GROSS. Mr. Chairman, I make the point of order against the language to be found on page 4, beginning on line 18 and into line 21, "or which are authorized by a law limiting the amount to be appropriated therefor, except as may be within the limits of the amount now or hereafter authorized to be appropriated."

Mr. Chairman, I make the point of order against that language on the ground that it is legislation on an appropriation bill. I make the further point of order that this is authorizing appropriations for projects not authorized by law.

Mr. Chairman, I would like to quote briefly from "Cannon's Precedents," page 63:

> As a general proposition whenever a limitation is accompanied by the words "unless," "except," "until," "if," "however," there is ground to view the so-called limitation with suspicion, and in case of doubt as to its ultimate effect the doubt should be resolved on the conservative side. By doing so appropriation bills will be relieved of much of the legislation which is being constantly grafted upon them and a check given a practice which seems to the Chair both unwise and in violation of the spirit, as well as the substance, of our rules.

The CHAIRMAN. Does the gentleman from Michigan [Mr. RABAUT] care to be heard on the point of order?

Mr. RABAUT. Mr. Chairman, I wish to explain the language. The legislative committee has placed outside limits on the amount of money which can be spent in a given river basin. Such basin may have a number of dams or projects in it. Without the language these monetary limits could be exceeded by action on an appropriation bill, thus setting aside the action of the legislative committee.

This is strictly a limitation.

Mr. GROSS. Mr. Chairman, may I be heard further?

The CHAIRMAN. The Chair will hear the gentleman.

Mr. GROSS. Mr. Chairman, I should like to point out to the Chair that more than one member of the committee has admitted that there are appropriations not authorized by law, that this is a subterfuge, and I say, Mr. Chairman, designed to controvert the rule of the House.

The CHAIRMAN. Does the gentleman from Iowa care to be heard on the point of order?

Mr. JENSEN. I do, Mr. Chairman.

Mr. Chairman, I have been on the Committee on Appropriations for the past 18 years. I cannot recall when a point of order has ever been raised against similar language in an appropriation bill. The language is simply limiting an appropriation expenditure, providing that the expenditure shall not be made until such project is authorized by law. I fail to see, Mr. Chairman, where a point of order could lie against this language because it is purely a simple limitation of expenditure on an appropriation bill; nothing more, nothing less.

The CHAIRMAN (Mr. BOGGS). The Chair is prepared to rule.

It so happens that almost an identical point of order to an identical paragraph was raised on June 18, 1958, by the gentleman from New York [Mr. TABER]. It also happens that the present occupant of the chair was in the chair at that time. The Chair ruled then that the language was specific, that there was no question about its referring to the controlling phrase "authorized by law," and none of the appropriation can be expended unless authorized by law.

The Chair overrules the point of order and sustains the ruling made on June 18, 1958.

Mr. WAMPLER. Mr. Chairman, I speak to this body at a time when the lives of many are in danger and the agricultural farmlands in the heart of the Wabash Valley are constantly being destroyed.

Mr. Chairman, the purpose of my amendment is quite clear, and I might add quite clearly needed.

In essence, the amendment would provide an additional $85,000, during fiscal year 1961, to begin construction on the Sugar Creek, Ind., levee. The amendment also would provide for the appropriation of $100,000 for the construction start of the West Terre Haute, Ind., local protection project.

I have been assured, Mr. Chairman, by the U.S. Army Corps of Engineers that the corps has the engineering capability to utilize, during fiscal year 1961, the sum of $85,000 for the Sugar Creek, Ind., levee and $100,000 for the West Terre Haute local protection project which my amendment seeks to have included in the appropriations measure presently before the committee.

There is included in this bill $15,000 which has been budgeted for the completion of advanced planning and design on the Sugar Creek levee.

Mr. Chairman, last year, that is, for fiscal year 1960, the Congress appropriated and thereby invested approximately $45,000 in preconstruction and advanced planning and design for the Sugar Creek and West Terre Haute flood control projects. Approximately $15,000 was invested in the Sugar Creek levee and approximately $30,000 in the West Terre Haute levee.

It would be, I think, Mr. Chairman, only wise and judicious financial procedure to appropriate the additional $185,000 which my amendment would provide for these two vitally necessary flood control units, thereby insuring that last year's appropriation of $45,000 for the two units would not be wasted or, in other words, unsoundly invested.

Although last year there was some doubt that the necessary local cooperation arrangements could be obtained by the Army Corps of Engineers for construction start on the Sugar Creek and the West Terre Haute units, that potential obstacle has now been thoroughly removed.

With the legally constituted formation of the West Vigo Levee Association, the Army Corps of Engineers has received full assurances of local cooperation for the Sugar Creek levee as of January 27, 1960, and for the West Terre Haute projects as of March 3, 1960. The association and the city of Terre Haute is ready, willing and able to fulfill all local cooperation requirements including the assignment to the Army Engineer Corps, without cost, of all necessary lands, easements and rights of way necessary for project construction.

Preliminary studies of the West Terre Haute local protection project were begun in November 1959 and will be continued now that the Federal Government has received full local cooperation assurances.

Project study of the Sugar Creek levee was begun in November 1959, and field mapping commenced in January 1960.

The Sugar Creek levee is located on the right bank of the Wabash River, south and east of the town of West Terre Haute in Vigo County, Ind. The project would consist of the enlargement and improvement of earth levee and the provision of necessary drainage structures.

The Sugar Creek levee, authorized by the 1938 Flood Control Act, would provide protection for about 1,500 acres of agricultural land, of which approximately 1,330 acres in the Sugar Creek area were inundated by the flood of February 1959.

The West Terre Haute local protection flood control project is located along the northern, eastern, and southern edges of the town of West Terre Haute in Vigo County, Ind., and would consist of approximately 2.6 miles of earth levee and the necessary interior drainage facilities. The West Terre Haute local protection project, also authorized by the 1938 Flood Control Act, would provide protection to the town of West Terre Haute which was totally inundated to the depth of 4 feet in the flood which occurred in 1913. The amount of $100,000, provided for in my amendment, would be used to initiate construction.

The Army Corps of Engineers advises me that upon project completion the West Terre Haute levee unit would be approximately 8 feet high and that the Sugar Creek unit would be about 12 feet high; however, because of the higher elevation of the Sugar Creek levee the West Terre Haute unit would be slightly lower than the Sugar Creek project and contained within the Sugar Creek project, thereby affording protection both to the town of West Terre Haute and the area agricultural acreage.

Mr. Chairman, agricultural, private property damage and loss of life due to the consistently flooding Wabash River is now a matter of such common knowledge that I hesitate to restate many of the recorded statistics which would portray such widespread and lamentable devastation.

However, for purposes of the record I would recall to the Committee that the town of West Terre Haute has been flooded out for 3 consecutive years. Flood crestings are so frequent and so severe that Terre Haute no longer records flood levels at the 14-foot mark; the 20-foot mark now is the only recorded level. In February of last year floods along the Wabash caused 60 Indiana major highways to become literally impassable thereby totally isolating entire communities.

During the February 1959 flood, expenses and losses both in agriculture and property cost the people of the State of Indiana a computed total of approximately $1,663,000; a total of more than one-half million dollars was spent and lost in the immediate area in and around West Terre Haute, Ind.

Mr. Chairman, this rather staggering tally of expenses and losses describes only those incurred during the February 1959 flood. The 1959 flood has been preceded by 22 major Wabash River floodings, 9 within the last 13 years.

As I stated before the distinguished Subcommittee on Public Works of the House Committee on Appropriations on April 6, 1960, the spring floods have already begun and presumably Indiana again will be visited, as it has so many times in the past, by a wave of uncontrollable water waste, filth, disease, destruction, and loss of life. An interesting, although tragic fact, Mr. Chairman, is that losses in Hoosier property, agriculture, commerce, transportation, and other economic segments have amounted to over $65 million, over the years, just along the lower reaches of the Wabash.

Mr. Chairman, I urge in the strongest possible terms that the Members of the Committee adopt this amendment for the benefit of that vast number of people who live and work along the lower reaches of the Wabash River and for the benefit of the entire State of Indiana.

Mr. RABAUT. Mr. Chairman, I ask unanimous consent that all debate on this amendment close in 5 minutes.

The CHAIRMAN. Is there objection to the request of the gentleman from Michigan?

There was no objection.

Mr. RABAUT. Mr. Chairman, on the Sugar Creek levee, I would say to the gentleman from Indiana, we allowed the request of the engineers for $15,000 for advanced planning. The West Terre Haute project, which by the way was given priority No. 12 by the State flood control land water resources commission, was not budgeted. Indiana has done pretty well in this bill. We allowed 19 budgeted projects in Indiana for a total of about $14 million. We added the Whitewater River study and planning for the Cannelton lock and dam, both of which were unbudgeted and were higher on the State's priority list. So, Mr. Chairman, I rest my case and ask for a vote on the gentleman's amendment.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Indiana [Mr. WAMPLER].

The question was taken, and on a division (demanded by Mr. WAMPLER), there were—ayes 17, noes 50.

So the amendment was rejected.

Mr. GOODELL. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. GOODELL: On page 4, line 16, strike out "$662,622,300" and insert in lieu thereof "$658,092,300" and on page 5, line 8, insert *"Provided further,* That none of the funds in this paragraph appropriated shall be used for the construction of the Allegheny River Reservoir in Pennsylvania and New York."

Mr. GOODELL. Mr. Chairman, I ask unanimous consent to proceed for 5 additional minutes.

The CHAIRMAN. Is there objection to the request of the gentleman from New York?

There was no objection.

Mr. MOORHEAD. Mr. Chairman, I make a point of order against the amendment on the ground that it is legislation on an appropriation bill.

The CHAIRMAN (Mr. BOGGS). The Chair has looked at the amendment offered by the gentleman from New York, which reads as follows:

On page 4, line 16, strike out "$662,622,300" and insert in lieu thereof "$658,092,300" and on page 5, line 8, insert *"Provided further,* "That none of the funds in this paragraph appropriated shall be used for the construction of the Allegheny River Reservoir in Pennsylvania and New York.

The proviso is, obviously, a limitation on an appropriation bill. The point of order, therefore, is overruled.

Mr. GOODELL. Mr. Chairman, at the outset let me make clear that I am not opposed to a flood control project on the Allegheny River. That issue is not involved in this controversy. This issue has revolved for a long time between the Kinzua Dam being constructed here or nothing at all.

Three years ago Dr. Arthur Morgan, former TVA chairman, and former chief engineer of the Pueblo project in Colorado, and of the Miami Ohio conservancy project, began a study of this area because the Kinzua project would confiscate the heartland of the Seneca Nation. His objective was to determine if there was another feasible way of doing this for the same or less money. As he progressed in his studies the Congress became interested. They ultimately became so interested and he had so many good points to present that they ordered that there be a study to see if his proposal was feasible. This is the study that these gentleman talk about when they say that this project has been studied to death. The result of that study confirmed that the Conewango project was feasible; that it was a good project as far as the program of flood control was concerned and water augmentation. There are two main purposes of this project. One is flood control in seasons of high water. In that respect Dr. Morgan contends that his program would do a complete job. It would protect against any floodwaters 100 percent of the maximum probable floods. The other objective is low water augmentation. Conewango would clearly store three times as much water for this purpose as Kinzua.

Mr. BROWN of Ohio. Mr. Chairman, will the gentleman yield?

Mr. GOODELL. I yield.

Mr. BROWN of Ohio. I appreciate very much the remarks the gentleman has made on this situation, because Dr. Morgan, to whom he refers, is one of the outstanding and distinguished citizens of my district. The gentleman made reference to the fine work he did as engineer in what has been recognized as the most effective flood control project in existence; that is, the Miami conservancy, which protected the great Miami Valley from floods. The doctor originated those plans. We have great respect for him, and I have great respect for the gentleman in backing up his position and I shall vote for the gentleman's proposition.

Mr. GOODELL. I thank the gentleman and I might say that I was told by a prominent authority in the flood control field, with reference to the project the gentleman mentioned, the Miami project, that when Dr. Morgan planned it the Army engineer in charge of the Ohio River division issued a special publication condemning flood control reservoirs in general and the Miami system in particular.

Dr. Morgan's plan was adopted eventually and it is, I understand, a model system for the entire country today. I thank the gentleman for his support.

The main purposes are flood control and low water augmentation. The study made by TAMS confirmed that Dr. Morgan's program was feasible. It would guarantee 100 percent flood control. The Army Engineers' plan would protect only 43 percent. The study confirmed Dr. Morgan's contention that Conewango would store three times the amount of water. They contend that this whole TAMS report has condemned the Conewango project. In fact, the report confirms the feasibility of the project. I am not an expert. I do not know whether what Dr. Morgan says is correct or not, but to say that his contentions have been studied is false. I quote Dr. Morgan when he was told by TAMS that they would not look into his particular project to run water through the Cattaraugus Creek. He stated:

I continued my inquiry and turned up other possibilities so much superior to make my earlier studies obsolete. When I asked fhe Tippetts engineers to look into it further, they replied that they did not have time to do so. They never made a general study of the situation, never qualified themselves to pass on the major limitation.

In connection with this water storage, the Chief of Army Engineers last fall himself said that there was going to be a critical water shortage in this Ohio River Basin by 1980, but we are choosing at this time to construct a project which will store only one-third what the Conewango project would store if what Dr. Morgan says is true. And Dr. Morgan has documented his conviction that the Conewango would cost $105 million as compared to Kinzua's more than $120 million.

It is not my contention to say that Dr. Morgan is right and the Corps is wrong; I simply say that with the public interest that is involved here Dr. Morgan deserves to have his claims studied; the residents of the Conewango Valley deserve an impartial study; and the Seneca Indians deserve such a study. The Congress should order such a study. Last year the House of Representatives and this great committee ordered such a study. It was the feeling after looking over these reports, that it was necessary, that there should be a further study; and the committee prevailed in that respect. Then the Senate eliminated that particular proviso. The project continued, but the project is in its very infancy, its preliminary stages; it has not gotten into any construction which cannot be essentially reversed for a small amount of money.

Mr. GAVIN. Mr. Chairman, will the gentleman yield?

Mr. GOODELL. The gentleman can get time in his own right. I cannot yield at the moment.

With reference to the Indian question, and this is critical: We owe it to these Indians to make a fair, a full study before we take the heart out of their land. It is bad enough in this age of materialism for our people to lose faith to the degree that they put a price tag on honor, that because it costs a little more or because it is a little more expedient we will not do it to save the honor of George Washington, to save our own honor in our commitments to these Indians. Are we now to mortify the memory of the Father of our Country with a dark deed, born not of dollars but of impatience? We ought to study this alternative proposal. A competent professional engineer tells us there is a better and cheaper way than Kinzua to protect our people from floods. The Corps of Engineers has confirmed that there is a feasible way and that it does do more than the Kinzua; they contend only that it will cost more and the increased cost is not worth it. In this connection, the Chief of the Corps of Army Engineers sent to me in writing last Friday a full comment which, among other things, answered my question about the benefit-cost ratio of Conewango, as follows:

> Basic data are not available to the Corps of Engineers to support a reasonable estimate of costs for the Conewango alternative proposed by Dr. Morgan, and it has not been possible to determine a firm benefit-cost ratio.

They said last Friday there is no sufficient data to say precisely how much the Conewango will cost.

To proceed with the Kinzua project will destroy the whole heartland of the Seneca Indians. It will, I am told, destroy their nation.

Listen to the words of George Washington spoken directly to the Senecas in 1790:

> Your great object seems to be the security of your remaining lands; and I have, therefore, upon this point, meant to be sufficiently strong and clear, that, in future, you cannot be defrauded of your lands; that you possess the right to sell, and the right of refusing to sell, your lands; that, therefore the sale of your lands, in future, will depend entirely upon yourselves.
>
> Remember my words, Senecas.

This is George Washington speaking as President of the United States:

> Continue to be strong in your friendship with the United States and you may rely upon their kindness and protection. If any man bring you evil reports of the intentions of the United States, mark that man as your enemy; for he will deceive you and lead you into trouble. The United States will be true and faithful to their agreement.

Now, there is no contention here that we should refuse to construct a flood control project because of the Indians; if it is necessary and if it is most economical, why, yes, build. But today the decision is in your hands as to whether we should order a study which will give the Indians and the residents of the Conewango Valley a fair deal on the matter. The contention that there has been a previous study which covers the matter is not true.

We today are the sovereign representatives of George Washington in 1960.

We cannot at this stage salve our consciences by saying that it is necessary to break a treaty to protect our own people from floods. In the face of such clear, clean words of honor, spoken by our first President to the proud and stalwart Senecas 170 years ago, can any of us wash our hands and hearts, like Pontius Pilate, with easy rationalizations?

I ask for a favorable vote on my amendment.

Mr. FENTON. Mr. Chairman, I rise in opposition to the amendment offered by the gentleman from New York [Mr. GOODELL], and ask unanimous consent to proceed for 5 additional minutes.

The CHAIRMAN. Is there objection to the request of the gentleman from Pennsylvania?

There was no objection.

Mr. GAVIN. Mr. Chairman, will the gentleman yield?

Mr. FENTON. I yield to the gentleman from Pennsylvania.

Mr. GAVIN. Mr. Chairman, I want to call the attention of the Members of the House that this case has gone to the U.S. district court on January 11, 1957, the U.S. Court of Appeals on January 21, 1957, the U.S. district court on April 14, 1958, the U.S. Court of Appeals on November 25, 1958, and the Supreme Court of the United States on June 15, 1959. The Supreme Court refused to hear the case. So let us have the record clear as far as whether or not the Seneca Indians have had their opportunity in court.

Mr. FENTON. Mr. Chairman, I regret, more than you can possibly know, that it becomes necessary for me to oppose this proposed amendment. However, I must do so because of the preponderance of testimony developed in our hearings in favor of this reservoir.

I have attended all of the hearings on this particular project.

I listened to many hundreds of witnesses on this bill. I, therefore, believe I am fair in stating that the testimony of the proponents for the Allegheny River Reservoir greatly outweighs the evidence of those opposed.

Now, the chief reasons for opposition to this reservoir is because the Seneca Indians have a treaty dating back to, I believe, 1794, with the United States, and they felt that this treaty should not be broken.

As a matter of fact they have resisted for years the construction of this dam and would not grant the Engineers permission to make a survey. So much so that the Engineers had to go to the Federal court for a decision in the matter.

Now I am sure that no one who is familiar with me will accuse me of not being willing to help our Indians.

Those of you who have served with me on the Interior Subcommittee will attest to what I have at least tried to accomplish for them in their health programs and particularly in tuberculosis.

So I was not one of those who was determined to break a treaty.

Many treaties with Indians from all sections of our country have been changed, some of them having more at stake, if that were possible, than the Seneca Tribe in this instance.

I have already given you a résumé of a study I have had prepared by the Library of Congress.

I had the Library of Congress check on this for me and this is what they say:

INDIAN TRIBES WHO HAVE BENEFITED FROM DAM CONSTRUCTION

Flathead Indians of Montana: Receive compensation from a private company for use of damsite and flooding of reservation land.

Warmsprings Indians of Oregon: Receive compensation from a private company for use of damsite.

Fort Berthold Indians of North Dakota: Receive compensation from the Federal Government for flooding and other items connected with dam construction.

Nez Perce Indians of Idaho, Warm Spring Indians of Oregon, Umatilla Indians of Oregon, Yakima Indians of Washington: Receive compensation from Federal Government for flooding of fishing sites at Celilo Falls on the Columbia and construction of Dalles Dam.

Wind River Indians of Wyoming: Receive compensation from Federal Government for inundation of reservation land, in connection with Boysen Dam.

Standing Rock Indians and Cheyenne River Indians of South Dakota: Compensation for Oahe Dam on Missouri River.

Lower Brule and Crow Creek Indians of South Dakota: Compensation for Randall Dam on Missouri River.

Fort Peck Indians of Montana: Compensation of Fort Peck Dam on Missouri River.

Crow Indians of Montana: Projected Yellowtail Dam to carry compensation.

The source of the information given by the Library of Congress is taken from the Office of Indian Affairs, Federal Power Commission, and Army Engineers.

I am interested in saving life and preventing property damage.

The people of Pennsylvania towns below the proposed site of the Allegheny Reservoir have had many experiences from recurrent floods.

Surely we must recognize the rights of other Americans in those localities especially when our Indian friends can be recompensed by our Government.

This reservoir project is a unit of the comprehensive plan for flood control and other purposes in the Ohio River Basin and is the key unit in the reservoir system for the protection of the Allegheny Valley, the metropolitan area of Pittsburgh and the upper Ohio Valley.

Now my interest stems from the fact that this comprehensive plan was authorized by Congress in the Flood Control Act of June 22, 1936, again in June 1938, and modified by the Flood Control Act of August 18, 1941.

Over 20 years of recurrent floods has seen, according to the testimony given us, the loss of 36 lives in 1936 and damages of $231,492,000 based on values at the time of flood occurrences—that is 1936 through 1956.

These damages and deaths occurred in the Allegheny Valley below the Allegheny Dam and in the Ohio Valley to the vicinity of Wheeling, W. Va. At least $25 million damage occurred from the last flood. So that over $250 million damages have occurred from 1936 to 1960.

It is estimated that on a basis of present day values the damages would exceed $750 million.

With the construction of this reservoir it is estimated that the city of Warren would have a 100-percent protection. In the 1956 flood Warren had a $4.5 million damage. It would also give substantial protection to Oil City and Franklin because it would control the upstream drainage from those towns.

This is one of a series of dams, to prevent a repetition of the 1936 disaster in the Allegheny and Ohio Valleys, of which 10 have already been constructed and which no opposition was encountered.

Every phase of this project has been explored and studied and its economic justification has been proven.

For over 20 years the Corps of Engineers have been studying this project and alternative plans.

Every one of us concerned with projects in our own districts have to depend upon the Army Engineers recommendations for those projects. They are the ones who, in my opinion, are best qualified to pass on the merits or demerits of a plan. Who are we to pass on a technical problem of engineering?

The opposition would have us believe that the witnesses they brought forth during our hearings in favor of diverting the waters of the Allegheny into Lake Erie were original and the best method. Why bless your hearts that was proposed in 1928—almost 32 years ago—and was considered by the Army Engineers in their early studies of the Allegheny Basin and was discussed in an unpublished report prepared by the Pittsburgh district at that time.

The findings of that report and subsequent reports may be briefed as follows: Diversion for flood-control purposes only is not economically justified; diversion for water power development would be of marginal justification; a major reservoir on the Allegheny River would be required in connection with any effective plan of diversion for flood control or power development; and the Allegheny Reservoir would not preclude the later development of water power by diversion.

So you can see that the diversion to Lake Erie proposition was given a great deal of study 32 years ago and many times since.

Now what other plan was considered? The Army Engineers in their studies of this reservoir considered the construction of smaller reservoirs at the selected site and smaller alternative tributary reservoirs. Comparison of the cost of developing a large volume of storage capacity in the Allegheny Reservoir with smaller volumes located in several tributary reservoirs is illustrated by the present-day costs of existing projects such as Tionesta Creek and East Branch Clarion River Reservoirs, constructed by the Corps of Engineers on tributaries of the Allegheny River. Based on an analysis made last year, storage capacity for the Allegheny Reservoir was indicated to cost $87 per acre-foot, as compared with $106 and $115 for the Tionesta Creek and East Branch Clarion, respectively. To substitute storage capacity equivalent to that in the Allegheny Reservoir in a number of small reservoirs would be more costly and result in substantially less effective control of the floods.

The analyses I just gave you were given me by Gen. J. L. Person, the former Assistant Chief of Engineers for Civil Works, now retired.

General Person is very well qualified to give us his opinion on this reservoir. Before being promoted to Assistant Chief of Engineers he was Chief Engineer for the Ohio Basin and is intimately familiar with all phases of flood protection in that area.

As far as I am concerned I shall take the advice of this fine engineer.

General Person said in summary:

Based on our studies of possible alternative measures, it appears that the Allegheny Reservoir as now planned provides the most practical solution of the flood problem in the Allegheny Basin. You may be assured that we are attempting to work closely with the Indians in order to arrive at mutually acceptable arrangements.

Mr. Chairman, I sincerely hope that this amendment will be defeated.

Mr. RABAUT. Mr. Chairman, I ask unanimous consent that all debate on this amendment close in 5 minutes, and I ask for recognition.

The CHAIRMAN (Mr. ALBERT). Is there objection to the request of the gentleman from Michigan?

There was no objection.

Mr. JOHNSON of Colorado. Mr. Chairman, will the gentleman yield?

Mr. RABAUT. I yield to the gentleman from Colorado.

Mr. JOHNSON of Colorado. Mr. Chairman, I take this time simply to indicate my support of the amendment. It seems to me that a matter of honor involving a treaty of the U.S. Government entered into in 1790 should not be set aside for reasons that are primarily matters of financial consideration. The honor of the United States is, indeed, at stake. More than that, I think the problem of flood control can be met by other means. I am advised—I am not able to evaluate this with precision—that at least one of the defenses of this is that it provides a device for flushing industrial sewage down the rivers. We are involved in a larger program of attempting to clean up the rivers of the Nation. I think we should attack those problems frontally and not defend dams which are located with that in mind, rather than with the larger issues of the public health and safety in mind. Most especially I think the question of honoring a treaty with another nation should be observed at all costs.

Mr. RABAUT. Mr. Chairman, in closing debate on this amendment, I want to refer to page 822 of the hearings, part IV, where we pay tribute to Dr. Morgan. Everybody realizes what a great man he is, what a fine engineer, and what wonderful work he did in the Tennessee Valley. But after all, we must be guided by the Corps of Engineers that are assigned to us in connection with these works. It is from them we gain the knowledge on which we make our decisions.

As late as the 18th of this month we had an official statement from the Chief of Engineers on the testimony of Dr. Morgan. It reads as follows:

STATEMENT BY CHIEF OF ENGINEERS ON STATEMENT AND TESTIMONY BY DR. ARTHUR E. MORGAN CONCERNING ALLEGHENY RESERVOIR AND ALTERNATE PROPOSALS

In a statement, published in the fiscal year 1960 hearings on the public works appropriation bill, I presented to this committee an analysis of the major factors involved in my determination that the Allegheny Reservoir should be built in preference to the alternate proposals advanced by Dr. Morgan. The fact that I did not reply point by point to Dr. Morgan's voluminous argumentative statements, many of which are matters of judgment or opinions, which cannot be positively proven or disproven without expenditure of time and money far in excess of that necessary to arrive at a valid determination in this matter, seems to be taken by Dr. Morgan as verification that his arguments are sound and factual. I cannot, however, agree with his conclusions.

Let me say at the outset that every one of the points raised by Dr. Morgan has been carefully analyzed by members of my staff, and by me personally, and that I have conscientiously weighed all the arguments, both pro and con, before arriving at my decision. I respect Dr. Morgan's professional prestige and, of course, his right to express his opinions. The charges he has made on the competence and integrity of the Corps of Engineers, as well as the engineering firm employed by us to study alternate plans, are without foundation.

The record is so clouded by charges and countercharges, many of which are of small moment, that I would like to clarify the situation by citing a few basic principles that are followed by engineers in arriving at a solution to an engineering problem. The judgment factor is basic in such determinations.

(1) First, it is essential to establish what the project is intended to accomplish. In the case at hand, the primary objectives of the project are to provide flood protection to cities and towns along the lower Allegheny River, and to augment low flows on the river during dry periods. Design requirements are then tentatively established on the basis of examination of all available records, as well as hypothetical determinations of possible storm intensities.

(2) The next step is the examination of available sites which are capable of meeting the design requirements. The various possible sites are only studied to the extent necessary to determine which will accomplish the established objectives at the least cost. It does not follow that every possible site and various combinations thereof must be studied in complete detail to arrive at this determination. For a basin the size of the Allegheny, it would be a most time-consuming, costly, and wasteful procedure. It is in this area that the judgment factor must govern.

(3) Once the relative advantage of a site is established, further efforts are devoted to finalizing design requirements and to extensive investigation of the site selected to develop fully the engineering plans for the project, its estimated cost, and economic justification.

The general principles I have enumerated were followed in our studies of the Allegheny Basin and our initial selection of the Kinzua site. I might add that as early as 1928 the corps considered a plan involving diversion of water into the Conewango Basin and into Lake Erie but found the plan to be of marginal justification. Because of the intensive interest that was generated when Dr. Morgan revived the diversion proposal in 1957, I decided to have an independent appraisal of the relative merits of various possible diversion plans and the authorized Allegheny Reservoir. The firm of Tippetts-Abbett-McCarthy-Stratton was engaged to make the necessary studies. The engineering firm consulted freely with Dr. Morgan during the course of their studies, and studied five plans which they considered would cover the principal possibilities for storage in the Conewango Basin and for diversion into Lake Erie. The results of those studies have been furnished to this committee. In brief, the alternative plans were estimated by the engineering firm to cost from 25 to 38 percent more than the authorized project, would require the taking of from 51 to 108 percent more land, and require the dislocation of from 150 to 180 percent more people.

In my opinion, those studies were accomplished in sufficient detail to establish reasonable estimates of cost for the various plans considered and an adequate basis for comparing their relative merits. This does not mean that these plans were developed with the same degree of detail that is available for the Allegheny Reservoir. For Allegheny Reservoir, complete field investigations and surveys have been made, and essentially all major elements of the project are designed. The cost of developing the project to this stage is in the order of $1.3 million. Obviously five alternate plans, covering a much larger area and involving several major structures, diversion channels necessary to handle vast quantities of water, and many many more dislocations, could not be developed to the same degree of detail that was already available for the authorized project. Such was not possible within the limits of time and money. However, the engineering firm made subsurface investigations to the extent considered necessary for the design of structures and channels and for estimating unit costs, established highway relocations as determined necessary in consultation with State and county highway officials, reviewed land sales in the Conewango Valley as a basis for establishing land costs, and with those data on hand, developed five workable engineering plans.

After this study was completed, Dr. Morgan wrote me a letter in which he stated that in his opinion the cost estimates for the alternate plans were overstated, particularly with respect to highway relocations and unit costs for excavation. I met with Dr. Morgan in the office of the Assistant Secretary of the Army, Mr. Dewey Short, in July 1958 and at that time asked him to give me any facts he might have to support his opinions, which he agreed to do. In October 1958, some 6 months after the engineering firm completed its report, Dr. Morgan came to my office and gave me copies of a memorandum in which he advanced still another proposal, which he called plan 6. This was the first time Dr. Morgan proposed the Conewango-Cattaraugus plan.

In his own words, this was the same plan as the engineering firm's plan 1, except for the outlet into Lake Erie. In effect, he took the engineering design for plan 1, deducted items pertaining to the Silver Creek outlet, and substituted the Cattaraugus Creek outlet which he claimed was superior in all respects. He also deducted certain highway relocation items, which by his standards were not necessary. He then reestimated this combination plan by applying unit costs which were materially lower than those developed by the engineering firm to arrive at his estimated cost for plan 6.

I might add that apparently all this was done on the basis of Dr. Morgan's observations, without the benefit of detailed field investigations and surveys, and even more importantly, without developing a fully coordinated engineering plan. For example, Dr. Morgan established the maximum capacity of the outlet works and the channel from the reservoir to Cattaraugus Creek at 60,000 cubic feet per second and indicated that such a flow or an even greater flow could be carried down that valley with little difficulty. Our studies of Cattaraugus Creek in 1946 showed that the maximum flood of record at Gowanda, N.Y., was 35,900 cubic feet per second on March 17, 1942, when flood damages were experienced at Irving, Sunset Bay, Gowanda, and in the Zoar Valley. Lesser floods also caused damages at these locations in 1956 and 1957. It seems obvious, therefore, that the 60,000 cubic feet per second discharge from the Conewango Reservoir as proposed by Dr. Morgan, combined with postflood flows on Cattaraugus Creek would create a serious flood problem in the Cattaraugus Valley.

After careful review of all of Dr. Morgan's arguments, I could only conclude that his plan 6 could not be constructed at a materially less cost than the engineering firm's plan 1, which was estimated to cost about $142.3 million, or over $31 million more than the authorized project. Accordingly, I see no purpose in spending time and a substantial amount of money to study that proposal in detail as has been suggested by Dr. Morgan.

I have gone to considerable lengths to explain why I have taken my position with respect to Dr. Morgan's plan 6. Unless sufficient additional benefits can be uncovered to justifiy the added cost involved, it is obvious that the cheapest plan which will accomplish the desired objectives should be built. In my opinion, the authorized Allegheny Reservoir is the most economic solution by a wide margin.

On the matter of benefits, Dr. Morgan tells about protecting Pittsburgh from a flood three times as great as would Allegheny (Kinzua) Reservoir and storing three times as much water for flow regulation. However, his plan makes no provision for storing or discharging that amount of water. In my statement to this committee last year, I discussed fully the adequacy of Allegheny Reservoir for flood control and flow regulation. The small amount of annual benefits that can be evaluated by increasing storage capacities for flood control and flow regulation would not justify the added cost involved.

In conclusion, I consider that the matter of alternative plans has been adequately studied, and that the results obtained conclusively established the desirability of proceeding with the authorized project, on which construction has been initiated. I recommend that it be allowed to continue. No useful purpose could be served by further study of Dr. Morgan's plan.

With that I rest my case, Mr. Chairman, and ask for a vote.

The CHAIRMAN. The question is on the amendment offered by the gentleman from New York [Mr. GOODELL].

The question was taken; and on a division (demanded by Mr. GOODELL) there were—ayes 48, noes 74.

So the amendment was rejected.

Mr. HENDERSON. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, the inclusion of funds in this bill for the Dillon Reservoir project is a great personal satisfaction to me, but, more importantly, it is a demonstration on the part of the Appropriations Committee and the President of their interest in this project to provide flood protection in southeastern Ohio. The bill includes the full $4,223,000 recommended by the President for the completion of this $30 million project during the next fiscal year.

For more than 20 years, the Dillon project has been anxiously awaited by the people of Zanesville and the Muskingum River Valley. Each year, as floods have occurred or threatened this populous area, the hope for the completion of the dam has been renewed. At such ominous times, the specter of an uncompleted dam has seemed ironic to families who have witnessed the destruction of their homes and possessions by the raging waters of the uncontrolled Licking River. The recommendation for these funds this year can best be translated into terms which, in fact, recommend the future alleviation of fear, misery, and destruction. These funds will assure the completion of the dam and vast human benefits which it will bring to southeastern Ohio. Our action here today also is a major step in assuring the last project in the flood control envisioned many years ago for the Muskingum Conservancy District, a system of protective dams that has become an internationally admired model for flood control and its byproducts of human betterment through effective land conservation and recreation uses.

I wish to express today the gratitude of the people of southeastern Ohio to the Congress and the President as well as to the many others whose continuing faith in this project over the past two decades has brought it to the verge of reality.

I wish, too, to urge the House to approve this bill containing, in addition to appropriations for the Dillon Reservoir, $15,000 in funds for the initiation of a review by the Corps of Engineers of flood control estimates in the Licking River Valley. In view of the new protection the Dillon Dam offers, previous estimates for this valley are obsolete. The review, estimated to cost $40,000 to complete during the next several years, is, in my opinion, a proper expenditure which will consider the need for long-contemplated local protection plans and other flood control measures.

This bill also contains a recommendation for $250,000 in additional planning funds for the Belleville locks and dam

on the Ohio River. The modernization of the navigation dams on the Ohio is important to the maintenance of progress of the Nation's industry and commerce. This proposed replacement structure at Belleville is part of that vital process and, I believe, fully justifies the expenditure which this bill recommends.

Mr. GROSS. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. GROSS: On page 4, line 18, after the word "law" strike the remainder of the line and all of lines 19 and 20 and strike the following language in line 21 "hereafter authorized to be appropriated."

Mr. GROSS. Mr. Chairman, I must respectfully dissent and vigorously dissent from the ruling of the Chair that this language which I sought to have stricken on a point of order, is not as the Chair ruled legislation on an appropriation bill. I insist that it is legislation on an appropriation bill, and the words very clearly show that it is legislation. It is language which authorizes appropriations not previously authorized by law. I ask you to read this language again, which is found on page 4, lines 18 to 21. I will reread it; "which are authorized by a law limiting the amount to be appropriated therefor, except as may be within the limits of the amount now or hereafter"—note the word "hereafter"—and the language continues, "authorized to be appropriated."

Mr. TABER. Mr. Chairman, will the gentleman yield for a question?

Mr. GROSS. I am delighted to yield to my friend, the gentleman from New York.

Mr. TABER. Does not that language mean that somebody can come in 25 years from now and proceed to use money out of this fund?

Mr. GROSS. The gentleman is eminently correct.

Mr. TABER. That is what it says.

Mr. HOFFMAN of Michigan. Mr. Chairman, will the gentleman yield?

Mr. GROSS. I yield to the gentleman from Michigan.

Mr. HOFFMAN of Michigan. Does the gentleman from New York or the gentleman from Iowa believe that any money that is appropriated now would not be spent before 20 years? More likely it would be spent in 20 days.

Mr. GROSS. As I was pointing out, the language reads, "hereafter authorized to be appropriated." In other words, somebody at some later time is going to have to determine how the money is to be spent and where it is to be spent. Who is going to make the decision? This is strictly legislation on an appropriation bill and it ought to be stricken. Let me say in closing, Mr. Chairman, if the Members sustain this kind of language in this appropriation bill, they can be prepared for the worst when other appropriation bills come along.

Mr. RABAUT. Mr. Chairman, as previously explained on the gentleman's point of order, the legislative committees in Public Works authorization bills set a monetary limitation on certain river basins within which a number of projects are individually authorized. The purpose of the language in question is to prevent the possibility of appropriating in such a fashion as to set aside these monetary limitations established by the legislative committees. I, therefore, recommend that the amendment be defeated as retention of this language is a desirable control in the appropriations process.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Iowa [Mr. GROSS].

The question was taken; and on a division (demanded by Mr. GROSS) there were—ayes 21, noes 76.

So the amendment was rejected.

The Clerk read as follows:

OPERATION AND MAINTENANCE, GENERAL

For expenses necessary for the preservation, operation, maintenance, and care of existing river and harbor, flood control, and related works, including such sums as may be necessary for the maintenance of harbor channels provided by a State, municipality, or other public agency, outside of harbor lines, and serving essential needs of general commerce and navigation; financing the United States share of the cost of operation and maintenance of remedial works in the Niagara River; activities of the California Debris Commission; administration of laws pertaining to preservation of navigable waters; surveys and charting of northern and northwestern lakes and connecting waters; clearing and straightening channels; removal of obstructions to navigation; rescue work, and repair, or restoration of flood control projects threatened or destroyed by flood; and not to exceed $1,915,000 for transfer to the Secretary of the Interior for conservation of fish and wildlife as authorized by law; $126,420,000, to remain available until expended.

Mr. GRIFFIN. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, it is apparent that the Members are not of a mind to approve amendments offered on the floor to add projects to the bill under consideration. I recognize that there is all but an unwritten rule to that effect with respect to the public works appropriation bill.

However, I feel compelled at least to call the Members' attention to a project in my district which has particular merit and which, I hope, will be added to the bill when it is considered by the appropriate committees in the other body.

I speak of the Manistee River and Harbor project. In a report dated December 15, 1959, the Corps of Engineers recommended the following improvements: First, dredging to a depth of 25 feet over the full width of the entrance channel in Lake Michigan, and to a depth of 23 feet in the Manistee River channel; and second, Federal participation in the cost of replacing the Maple Street Bridge over the Manistee River, with local participation.

The Corps of Engineers recommended that local interests participate in the cost of replacing the bridge—under section 6, Public Law 647, 76th Congress, as amended—to the extent of $154,100.

Mr. Chairman, I am glad to say that the people of Manistee have already evidenced their determination and willingness to bear their share of the cost by voting, on April 4, 1960, to authorize the issuance of bonds for that purpose.

Although this project has been recommended by the Corps of Engineers and approved for authorization by the Bureau of the Budget, unfortunately, it has not yet been authorized by the Congress. There is good reason to hope and expect, however, that the project will be included in the authorization bill soon to be reported from the Public Works Committee of the other body.

Mr. Chairman, the improvements recommended in connection with the Manistee River and Harbor project are urgently needed and are already long overdue. Request has been made for planning funds for the project in the amount of $75,000.

I express the hope that appropriate action will be taken in the other body to fulfill that request before the end of this session of Congress.

Mr. CRAMER. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, H.R. 12326, the bill pending before the House today, includes a number of projects of considerable importance to the first district, as well as the central west-coast areas of Florida.

A number of these projects have been worked on diligently by local public officials as well as interested citizens and by myself, as Representatives of the First District embracing the counties of Pinellas, Hillsborough, Pasco, and Hernando.

I call attention of the House to those proposed appropriations at this time, which include:

CONSTRUCTION PROJECTS

Tampa Harbor project, $117,000.

Construction of the Intracoastal Waterway, Caloosahatchee to Anclote River, Fla.—continuing, $2 million.

SURVEY FUNDS

Little Manatee River—restudy survey, $12,000.

Ybor and Port Sutton Channels, $6,700—improvements to Tampa Harbor.

Flood control survey, Four-River Basin study—Hillsborough, Withlacoochee, Oklawaha, and Peace River Basins, $100,000.

TAMPA HARBOR PROJECT

The Tampa Harbor project has already been physically completed as of February of this year, and the $117,000 item referred to above is for reimbursement for funds advanced to complete the project, bringing the total Federal appropriation for the Tampa Harbor project, including the $334,000 for the Hillsborough River clearance project to $14,530,000. This means that approximately 50 miles of channel from the Gulf of Mexico to Tampa and Port Tampa involved in this project has been completed to the authorized depth of 34 feet, and width of 400 feet, together with improved turning basins and channel bends. Already the tremendous benefits to the community are being realized in that the 1959 tonnage will approximate 14 million tons with 3,500 vessels entering the port and with anticipated further study growth foreseen. In the last 5 years since the project started, since 1954, the volume of port tonnage has increased over 4 million tons—an increase of approximately 40 percent. In this connection, I am happy to report also that the Examiner for the Interstate Commerce Commission, in his report on the

Tampa import-export rate case recommended that the railroad rate for import-export commodities to the port of Tampa should be reduced and should be at a rate comparable to other gulf ports and we are hoping for favorable action on this matter.

In 1959 the House Public Works Committee, of which I am a member, adopted an appropriate resolution directing the Board of Engineers to review the reports of the Chief Engineer on the Tampa Harbor project with the view of determining the feasibility of modifying the existing project to include Ybor and Port Sutton Channels improvement. Congress appropriated the sum of $27,000 for this survey report and a request of $6,700 was made this year to complete these surveys. Industrial development already resulting from harbor improvements, in that the industries require the availability of adequate shipping facilities, is estimated at over $160 million during the last 5½ years.

There is also under way, as the result of authorization by the Public Works Committee, a survey study on the McKay Bay, Tampa Harbor expansion proposal which would have the effect of doubling the port facilities and survey funds in the amount of some $70,000 which was appropriated for this purpose in fiscal year 1960. This survey is expected to be completed in the near future. Thus, Tampa Harbor promises to be one of the largest and finest ports on the gulf coast.

INTRACOASTAL WATERWAY

The $2 million appropriations for the Intracoastal Waterway, Caloosahatchee to Anclote, Fla., provides for a channel 9 feet deep and 100 feet wide and about 150 miles long, starting south at Ft. Myers and going to the Anclote River at Tarpon Springs, along a series of protected inside waters, bordering on the gulf coast of Florida. The total estimated Federal cost of the project is $8,800,000 for which appropriation was made in the amount of $389,000 for completion of engineering studies in 1959 and $546,000 in 1960 for commencement of construction. This year's appropriation recommended by the President of $2 million will complete four additional segments of this important waterway. The requested $2 million will be applied to the following:

Initiate dredging Alligator Creek to Dona Bay	$800,000
Initiate dredging Dona Bay to Tampa Bay	225,000
Continue dredging between Charlotte Harbor and Alligator Creek	740,000
Engineering and design	100,000
Supervision and administration	135,000
Total	2,000,000

FOUR-RIVER BASIN STUDY

Concerning the Four-River Basin study, Hillsborough, Withlacoochee, Oklawaha, and Peace Rivers, the Army Engineers recommended, in their supplemental budgetary requests, this survey based largely upon the 1959–60 flood disaster, the latter causing an estimated $40 million in damages.

The President, of course, declared the area involved as a national disaster relief area by proclamation on March 23, 1960, and all governing authorities are apparently unanimous in their support of this $100,000 Four-River Basin flood control survey approach.

This survey involves some 14 counties in Florida and my personal visitation of the area thoroughly convinces me of the necessity of proceeding with this matter expeditiously in order to establish a flood control plan to prevent such future disasters to the extent that it is possible.

The Hillsborough River survey resolution was passed on my request by the House Public Works Committee, dated August 14, 1959, and likewise, the Withlacoochee River resolution was passed on the same date, incorporating the 4 prior authorizations.

It is our understanding that the Oklawaha Authority, the Peace River Board, and the governing authorities in the Withlacoochee and Hillsborough areas are wholly in accord with this Four-River Basin study request and likewise have emphasized the absolute necessity for the commencement of this survey. Planning and programing by local, State, and Federal authorities for the control of overflowing water in the area is dependent upon the development of this comprehensive study.

I have requested that the flood control survey be all inclusive and in connection with this have asked that the Senate Public Works Committee include in the omnibus public works bill, which has passed the House, an authorization for inclusion of the following areas as a part of the Four-River Basin study to be included in the $100,000 appropriation made by this pending bill. Those areas include Brooksville, Masaryktown, Cote River, Anclote River, and Lake Tarpon, all of which suffered severe flooding conditions during the 1960 flood disaster.

LITTLE MANATEE

This project was authorized by the 1945 Rivers and Harbors Act and provides for a channel 6 feet deep and 100 feet wide from Tampa Bay to a point 2,700 feet above the railroad bridge at Ruskin, and 75 feet wide in the Marsh Branch with a turning basin 6 feet deep in the Little Manatee River at U.S. Highway 541 and Bridge Ruskin for a total length of 5.4 miles.

The Army Engineers report, as a result of my request that the matter be reconsidered in that the project had been put on the deferred list, that a restudy is justified due to the changes in prospective waterway movements and since the last study in 1952 found the project to lack economic justification. The corps further found that recent evidence of increased use and benefits to be realized from the improvement of the waterway justified the requested funds for this year in the amount of $12,000 to accomplish a restudy of the project to determine its current economic feasibility under present conditions. I am glad that this restudy has been included in this year's appropriations and am hopeful that the restudy will find the project economically feasible so it can be considered for construction money.

The Clerk read as follows:

FLOOD CONTROL, MISSISSIPPI RIVER AND TRIBUTARIES

For expenses necessary for prosecuting work of flood control, and rescue work, repair, restoration, or maintenance of flood control projects threatened or destroyed by flood, as authorized by law (33 U.S.C. 702a, 702g–1), $69,560,000, of which $171,300 shall be available for development of recreation facilities at existing reservoirs, to remain available until expended.

Mr. HOFFMAN of Michigan. Mr. Chairman, I offer an amendment, which I send to the desk.

The Clerk read as follows:

Amendment offered by Mr. HOFFMAN of Michigan: On page 6, line 16, strike out lines 16, 17 and 18.

Mr. WHITTEN. Mr. Chairman, I rise in opposition to the amendment.

Mr. Chairman, I know that the general membership of the House recognizes the value of flood control projects and the necessity for flood control projects in this county; certainly I do, for it was my motion which saved many projects last year. However, frequently the membership, I am afraid, overlooks the fact that when you build big dams you greatly help the territory below the dams. Those below get the benefit; the people and counties above the dams have their richest lands taken away and off the tax rolls. Without exception it is their richest lands they lose.

When I first came to Congress, four huge reservoirs had been authorized as one project, for construction in my area, with all the ill effects in my district and the benefits going to a small part of my district, but the major part to adjacent areas. Two of these dams had been built when I came here and of course, the Congress built the other two, against the wishes of the people above the dam.

Now when the Corps of Engineers got these authorizations through and when funds were appropriated, the people at the damsite and above the dams were assured that the Federal Government would help protect the watersheds and would develop the area around the dams, thus inviting use by the general public and partially offsetting the economic loss to the people and to the counties affected.

The dams were built in short order. The damage to areas above the dams was immediate; however, the other part, that which was promised to the people above the dams, has been slow indeed to come as the following statement from the testimony of the Corps of Engineers will show:

Status (Jan. 1, 1960)

	Percent	Completion schedule
Sardis Reservoir	94	June 1970.
Features for primary use	100	
Recreation facilities	37	Do.
Arkabutla Reservoir	90	Indefinite.
Features for primary use	100	
Relocations	77	Do.
Recreation facilities	17	June 1970.
Enid Reservoir	93	Do.
Features for primary use	100	
Recreation facilities	11	Do.
Grenada Reservoir	98	Do.
Features for primary use	100	
Recreation facilities	27	Do.

Now what was recommended this year by the Corps of Engineers and approved by the Bureau of the Budget is no great amount, nor is it for any fancy facilities.

Let us see what would be knocked out if this amendment were adopted.

Sardis Reservoir: Requested funds—$50,000—will be applied to:

Initiate and complete:	
Bituminous road surfacing (damsite)	$19,500
Roads, construction, and bituminous surfacing (damsite)	2,900
Parking areas, construction, and bituminous surfacing (damsite)	7,600
Comfort station (damsite)	12,000
Family camping facilities (various locations)	800
Engineering and design	3,000
Supervision and administration	4,200
Total	50,000

Visitation at Sardis Reservoir amounted to 922,500 visitor-days in 1958 which is an increase of 109,500 over 1957. Public use areas and facilities in vicinity of dam are extremely overcrowded and wholly inadequate, necessitating continued expansion. Requested funds are to continue the established program designed to meet demonstrated needs. Attendance for first 10 months of 1959 was 1,229,000. Total for fiscal year 1961 is expected to reach 1,500,000.

Arkabutla Reservoir: Requested funds—$70,000—will be applied to:

Initiate and complete:	
Parking areas and roads, bituminous surfacing (damsite)	$38,600
Parking area construction, and gravel surfacing (damsite)	600
Road construction and gravel surfacing (damsite)	600
Site preparation (various locations)	1,000
Guardrail (damsite)	1,000
Launching ramp (damsite)	11,400
Family camping facilities (various locations)	3,700
Comfort station (damsite)	3,100
Engineering and design	4,100
Supervision and administration	5,900
Total	70,000

Visitation at Arkabutla Reservoir amounted to 261,300 visitor-days in 1958, which is an increase of 7,300 over 1957. Public use areas and facilities in vicinity of dam are extremely overcrowded and wholly inadequate, necessitating continued expansion. Requested funds are to continue the established program designed to meet demonstrated needs. Attendance for first 10 months of 1959 was 276,000. Total for fiscal year 1961 is expected to reach 400,000.

Enid Reservoir: Requested funds will be applied to:

Initiate and complete:	
Bituminous road surfacing (Persimmon Hill)	$13,700
Comfort station (includes water and power) (damsite)	10,000
Tent and trailer campground (damsite)	5,000
Well (hand pump) (damsite)	500
Family camping facilities (various locations)	4,200
Ski ramp (damsite)	2,000
Parking areas, construction and gravel surfacing (damsite and Persimmon Hill)	1,600
Parking areas, bituminous surfacing (damsite and Persimmon Hill)	$1,200
Site preparation (various locations)	4,600
Engineering and design	3,000
Supervision and administration	4,200
Total	50,000

Visitation at Enid Reservoir amounted to 426,100 visitor-days in 1958. Public use areas and facilities in vicinity of dam are extremely overcrowded and wholly inadequate, necessitating continued expansion. Requested funds are to continue the established program designed to meet demonstrated needs. Attendance for first 10 months of 1959 was 379,000. Total for fiscal year 1961 is expected to reach 600,000.

Grenada Reservoir: Requested funds—$30,000—will be applied to:

Initiate and complete:	
Road construction and bituminous surfacing (damsite)	$15,900
Parking areas, construction and bituminous surfacing (damsite and Grenada Landing)	8,100
Family camping facilities (various locations)	1,700
Engineering and design	1,800
Supervision and administration	2,500
Total	30,000

Visitation at Grenada Reservoir amounted to 1,248,300 visitor-days in 1958, which is an increase of 146,300 over 1957. Public use areas and facilities in vicinity of dam are extremely overcrowded and wholly inadequate, necessitating continued expansion. Requested funds are to continue the established program designed to meet demonstrated needs. Attendance for first 10 months of 1959 was 1,241,000. Total for fiscal year 1961 expected to reach 1,375,000.

Now I have pointed out that this amendment would break faith with the people and counties in the area. Also may I add, we would be failing to provide a minimum of convenience to these 3½ million visitors, including protection of public health.

If this amendment were adopted it would not save a dollar. This amendment would merely make this money available for further flood projects or more expensive flood projects. Then we would have to make further expenditures to alleviate the conditions adjacent to the dams and above them.

What is involved here in this section of the country where you do not have park services like you have in other areas? Where you do not have forestry park service? Such national parks as exist in this area have to be provided by the Corps of Engineers. All that is here involved are merely short stretches of road and comfort stations for the people who visit the area. Last year we had some 3½ million people who visited this area. To not provide in this section the same type of comfort for American citizens who visit these areas would not be in keeping with what is done in other areas.

Again, if the amendment were accepted the Corps would have the money available for further flood control works. However, remember there is already $69-million plus for worthwhile flood control projects. It should be remembered that when these reservoirs were established the people in these areas were assured that the Government would try to make the project one with which we could live; that the Government would try to offset some of the ill effects. I remind you these items have had the approval of the Corps of Engineers, the President, Budget Bureau, and the committee.

Mr. ANDERSEN of Minnesota. Mr. Chairman, will the gentleman yield?

Mr. WHITTEN. I yield.

Mr. ANDERSEN of Minnesota. The gentleman from Mississippi is correct, as always. Years ago the people in these areas where these great lakes were established were assured they would be protected to some degree. I believe that the language we have in the bill is proper for it simply gives to the people in Mississippi an assurance by the Government of what was promised to them years back, and I certainly hope that the amendment offered by the gentleman from Michigan is not agreed to.

Mr. HOFFMAN of Michigan. Mr. Chairman, will the gentleman yield?

Mr. WHITTEN. I yield.

Mr. HOFFMAN of Michigan. There is a lot of logic to what the gentleman says, is there not? He says they were given assurances years ago they were going to be protected, and now we are going to dump 3 million visitors on them.

Mr. WHITTEN. They are there now.

Mr. HOFFMAN of Michigan. All well and good, but in my section of the country we like to let them be cared for by private enterprise.

Mr. WHITTEN. May I say that the attracting of private enterprise into these areas to ease the people's ills will largely depend on the very things we want to do here in affording these minimum facilities in these projects, and any commercial enterprise that might develop would pay the Government for use of Government land.

Mr. HOFFMAN of Michigan. Your people down there are enterprising, they are thrifty, they are forward looking; the gentleman knows they can make a mint of money out of the resort business.

Mr. WHITTEN. Well, it has been over 10 years, and the Government is still trying to lease most of the area. This development will help the Government to make money by lease.

Mr. HOFFMAN of Michigan. The Government has been monkeying with it, that is the reason. If you will let your own people do it you will get somewhere.

Mr. WHITTEN. Well, this is only a small part of what was originally promised.

Mr. JENSEN. Mr. Chairman, will the gentleman yield?

Mr. WHITTEN. I yield to the gentleman from Iowa.

Mr. JENSEN. I have looked into this matter and after quite some study I must say I agree with the gentleman from Mississippi [Mr. WHITTEN] who, as we all know, is not liberal with the taxpayers' money. He has asked very

little for his district, but he generally gets what he asks for because he is conservative.

Mr. WHITTEN. I thank my friend from Iowa. I trust the amendment will be defeated.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Michigan [Mr. HOFFMAN].

The amendment was rejected.

The Clerk read as follows:

GENERAL INVESTIGATIONS

For engineering and economic investigations of proposed Federal reclamation projects and studies of water conservation and development plans and activities preliminary to the reconstruction, rehabilitation and betterment, financial adjustment, or extension of existing projects, to remain available until expended, $4,575,000, of which $3,375,000 shall be derived from the reclamation fund and $500,000 shall be derived from the Colorado River development fund: *Provided,* That none of this appropriation shall be used for more than one-half of the cost of an investigation requested by a State, municipality, or other interest: *Provided further,* That $200,000 of this appropriation shall be transferred to the United States Fish and Wildlife Service for studies, investigations, and reports thereon as required by the Fish and Wildlife Coordination Act of 1958 (72 Stat. 563–565) to provide that wildlife conservation shall receive equal consideration and be coordinated with other features of water-resource development programs of the Bureau of Reclamation.

Mr. GUBSER. Mr. Chairman, I move to strike the last word.

Mr. Chairman, upon reading the report I gather the impression that no budgeted investigation project for the Bureau of Reclamation has been disallowed; the only cut has been the $50,000 in the foreign currency fund?

Mr. RABAUT. That is right.

Mr. GRAY. Mr. Chairman, I move to strike the last two words.

Mr. Chairman, as a member of the legislative committee which authorizes these public works projects, I have been studying the list of projects set forth in the report on this bill on which funds are appropriated. One of these projects is Decatur Bend cutoff, Iowa, and $155,000 is allocated in construction funds.

I understand that this project is not authorized, and furthermore, it has not been cleared through the regular channels. I also understand that the regular survey report, which is the normal method of submitting such a project to the Congress as in all other civil works projects, has never been made by the Corps of Engineers, which is the procedure other Members have to follow to secure appropriations.

To emphasize the inconsistency in this whole matter, I would like to call attention to remarks in the committee report—page 3—stating that the Appropriations Committee has consistently refused to appropriate "for purely recreational undertakings with no benefits to others than small boat users." The Decatur Bend project is in this category.

I want the RECORD to show, Mr. Chairman, that as a member of the Committee on Public Works, I strongly oppose appropriations for projects which have not been considered by our committee and on which no regular reports have been made by the Corps of Engineers. This committee refused to allow funds for the completion of Devils Kitchen Dam in the Crab Orchard National Wildlife Refuge although the Government has spent over $4 million to date. Over 1½ million persons visited the Crab Orchard Refuge last year and we need the facilities of Devils Kitchen very badly in order to accommodate the millions of visitors, yet we find this committee appropriating money for projects not even authorized by law and denying money for needed projects such as Devils Kitchen. I am calling this matter to the attention of the House in an effort to urge the committee to be a little more consistent and fair to all of us. Thank you very much.

The Clerk read as follows:

CONSTRUCTION AND REHABILITATION

For construction and rehabilitation of authorized reclamation projects or parts thereof (including power transmission facilities) and for other related activities, as authorized by law, to remain available until expended, $166,444,880, of which $90 million shall be derived from the reclamation fund: *Provided,* That no part of this appropriation shall be used to initiate the construction of transmission facilities within those areas covered by power wheeling service contracts which include provision for service to Federal establishments and preferred customers, except those transmission facilities for which construction funds have been heretofore appropriated, those facilities which are necessary to carry out the terms of such contracts or those facilities for which the Secretary of the Interior finds the wheeling agency is unable or unwilling to provide for the integration of Federal projects or for service to a Federal establishment or preferred customer.

Mrs. MAY. Mr. Chairman, I move to strike the last word.

Mr. Chairman, the Committee on Appropriations of the House has recommended a reduction of $1,494,000 in the Interior Department budget as proposed for the fiscal year 1961 in connection with the Columbia Basin project in Washington. On page 27 of the report it is stated that the reason for this action is that at the moment there is no alternative to bringing new construction work on this project to a close until satisfactory amended repayment contracts have been executed.

I had intended at this time to offer an amendment to restore this cut in budgeted funds, but I have been sitting here today watching the fate of similar amendments and, therefore, feel that such action is futile. My only hope is that when this bill goes to the other body it will see fit to make the necessary restoration of funds urgently needed for construction work on the Columbia Basin project and that if it does the House conferees will look favorably on their action for the reasons I would like to place before you at this time.

These reductions, as applied by the committee, and the report bears this out, would stop all work not now under way except for minor activities at Grand Coulee Dam.

The Columbia Basin project is in a critical stage of development. The proposed construction work is entirely within the $281 million expenditure ceiling established by the existing repayment contracts for construction of irrigation works. Certain work, although not at this time under way, is badly needed in order to complete significant facilities important to efficient operation of the project. In light of the irrigation expenditure ceiling and making maximum use of constructed facilities, the Bureau of Reclamation revised its fiscal year 1960 program to reduce the project area from an initially planned 1,029,000 to 479,000 acres. The work scheduled under the fiscal year 1961 budget proposal includes only that development which would utilize canal capacity already existing. A cut of $1.5 million now would further cripple project construction, reduce the project area below 479,000 acres and result in a needless waste of funds already invested.

Now, I believe it is important that these cuts be restored for the following reasons:

First. East High Canal studies: By the end of fiscal year 1960, a total of approximately $900,000 will already have been invested in this work. The necessary studies are nearly one-half completed. Therefore, to suspend activity there at the beginning of fiscal year 1961 would result in the loss of many of the accomplishments to date. Furthermore, a technical nucleus of 25 experienced and carefully trained staff members would be lost. It has taken years to prepare these people for the work they are now doing on East High Canal. Resumption of the work at a later date, even within a year after its cessation, would require expensive reorganization and reacquisition of personnel. In addition, data being developed in the East High studies are essential to completion of amendatory repayment contracts with the three Columbia Basin irrigation districts.

Second. Irrigation Block 23: Development of this block in the South Columbia Basin Irrigation District is covered by the existing repayment contracts with those already in existence. Basic water supply works to serve it are already constructed. Only the lateral system remains to be built. The block is an integral part of the project area and is favorably located with respect to the project's largest city and principal shipping center. This is the only irrigation block scheduled for start of construction in fiscal year 1961 and contains 8,800 acres.

The CHAIRMAN. The time of the gentlewoman from Washington [Mrs. MAY] has expired.

Mr. JENSEN. Mr. Chairman, I ask unanimous consent that the gentlewoman from Washington [Mrs. MAY] may proceed for 2 additional minutes.

The CHAIRMAN. Is there objection to the request of the gentleman from Iowa?

There was no objection.

Mrs. MAY. Mr. Chairman, I thank the distinguished gentleman from Iowa.

I was speaking on the enlargement of Potholes Canal.

Third. Enlargement of Potholes Canal: Provision for emergency wasteway facilities from Potholes Reservoir is urgent. The proposed work represents a continuation of that already begun. Return flows to the reservoir from project irrigation have been increasing each year with the result that the reservoir may have insufficient storage capacity in event of a major flood. This could result in extensive damage to improvements in or near Moses Lake and Westlake. Restoration of the funds deleted from the program would allow for an additional contract enabling enlargement of an important segment of Potholes Canal in order to provide for carriage of water to serve lands already under development.

Fourth. Operators' quarters, irrigation block 80: Construction of facilities to serve block 80 is now under way. Completion is scheduled for June 1961. Without these proposed dwellings, personnel needed to provide ditchrider service to the area and to insure maximum protection for the Hope Valley and Frenchman Hills pumping plants will not be able to operate.

Fifth. O'Sullivan Dam and Potholes Reservoir rights-of-way: In event of a major emergency, the entire flow of East Low Canal would be routed to Potholes Reservoir. This procedure would result in flooding beyond presently acquired rights-of-way. It is extremely critical that the proposed funds for this purpose be retained.

I urge appropriation of the entire amount of funds requested by the Bureau of Reclamation for the Columbia Basin project in fiscal year 1961.

I again emphasize that what has been cut out here is a budget request of the Department of the Interior.

Mr. CANFIELD. Mr. Chairman, will the gentlewoman yield?

Mrs. MAY. I yield to the gentleman.

Mr. CANFIELD. Mr. Chairman, may I state to the gentlewoman from Washington that I think her statement today is very impressive. She is a very able advocate.

Mrs. MAY. I thank the gentleman.

We have just completed excellent hearings on the Columbia Basin project contract dispute before the Committee on Interior and Insular Affairs under the able chairmanship of the gentleman from Colorado [Mr. ASPINALL]. As a result it is felt we are soon going to get some place in agreeing on an amendatory repayment contract. Therefore, I urge that you give consideration when the proper time comes to the restoration of this cut.

Mr. MAGNUSON. Mr. Chairman, I rise in support of the position of the gentlewoman from Washington.

Mr. Chairman, as a member of the subcommittee, I wish to point out that the crux of this situation is a tremendous miscalculation on the part of the Bureau of Reclamation in figuring the drainage costs when this project was set up. The project was set up on the assumption that the drainage cost would be a little more than $8 million. Now new estimates put the drainage cost at something more than $44 million. The reason this project is in trouble at this point and the money has been cut out is that new repayment contracts have not been signed. The Bureau of Reclamation is asking that the settlers absorb this additional $36 million in drainage costs. I think you can hardly blame the settlers for not accepting casually such an increase in the cost of their land. I share the hope of the gentlewoman from Washington that this money in the course of the legislative procedure here will be restored.

Mr. CANNON. Mr. Chairman, I ask unanimous consent that the further reading of the bill be dispensed with and that amendments and points of order to the remainder of the bill be now in order.

Mr. HOFFMAN of Michigan. Mr. Chairman, a parliamentary inquiry.

The CHAIRMAN. The gentleman will state it.

Mr. HOFFMAN of Michigan. Does that prevent us offering amendments?

Mr. CANNON. All amendments to the remainder of the bill or points of order to the remainder of the bill now will be in order.

Mr. HOFFMAN of Michigan. I have an amendment on page 20 and another one over on page 21.

The CHAIRMAN. The amendments will be in order.

Is there objection to the request of the gentleman from Missouri?

Mr. GROSS. Mr. Chairman, reserving the right to object, may I ask the chairman of the committee what is the hurry in passing this $4 billion bill?

Mr. CANNON. We are not in a hurry to pass it, but we are reaching the latter part of the afternoon. If we can pass it in a little less time without unnecessary delay, why not do so?

Mr. GROSS. I am not opposed to that, but I think there ought to be adequate time to discuss any phase of any $4 billion bill that comes into the House.

Mr. CANNON. There will be.

Mr. GROSS. Mr. Chairman, I withdraw my reservation of objection.

The CHAIRMAN. Is there objection to the request of the gentleman from Missouri [Mr. CANNON]?

There was no objection.

Mr. BREEDING. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, in the discussion of this public works appropriation measure, I cannot let this opportunity pass without calling to your attention the serious flood condition which exists at Great Bend, Kans., the largest city in the western half of the State, located near the point where Wet and Dry Walnut Creeks converge and empty into the Arkansas River. The city of Great Bend has suffered severe floods since the year 1915.

Great Bend has attempted to solve its own problem, and large sums of money have been expended to provide all the protection possible in the form of diking, channel cleaning, and straightening of these three systems. This protection has proven to be inadequate.

Mr. Chairman, authority is available for an investigation of the flood and related water problems along the Arkansas River in Kansas from Great Bend to the Colorado State line, though the President did not include an item in the budget which he presented to the Congress this year for this survey.

Only last fall, there was a most serious flood in the vicinity of Great Bend, leaving many families destitute. The city of Great Bend has been subjected to serious flooding from the Arkansas River and its tributaries for the past several years. I hope and pray that this same condition will not repeat itself in the immediate future.

I have urged that the sum of $30,000 be set aside to be utilized for this study. The Corps of Engineers has stated that from an engineering standpoint, considering this study by itself, without reference to an overall program, it could utilize this amount on this study in the fiscal year 1961.

I urge that this item of $30,000 be included in the public works appropriation measure as passed in the House in order that this work can proceed.

Mr. PRICE. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, as a member of the Joint Committee on Atomic Energy, I would like to compliment the Committee on Appropriations, and support H.R. 12326, which appropriates funds for the Atomic Energy Commission under title III, at pages 20–24 of the bill. The bill contains funds vitally necessary to keep our atomic energy program moving ahead.

However, as chairman of the Subcommittee on Research and Development of the Joint Committee, I would like to speak in favor of two important research projects added by our committee.

I understand that there are no funds in this bill for these two projects, but primarily because time did not permit them to be included in the budget after final action on the AEC Authorization Act.

Project 61–f–8, which was added to the AEC authorization bill by the Joint Committee, and included in Public Law 86–457 as approved by the President on May 13, 1960, authorizes $5,600,000 for construction of a materials research laboratory at the University of Illinois. This laboratory would make possible new research in the critical area of materials, which has been a roadblock in the atomic energy program. Special new materials and alloys are needed, capable of withstanding radiation, to meet special requirements in new atomic energy machines and equipment. The University of Illinois has been doing outstanding work in this field, but a new laboratory is needed in order to bring together the various scientists in different participating departments and make it possible for them to work together. The laboratory would permit increased materials research in the following areas: Solid state physics, theoretical studies, diffusion effects, solid state chemistry, magnetic resonance studies, theory of alloys, physical metallurgy, fundamental diffusion studies, and ceramics, and refractories.

The University of Illinois is eminently qualified to conduct additional work in

this field. The university has on its staff scientists who are leaders in the field of materials research, one of whom is a Nobel Prize winner. Scientists and engineers from a number of departments at the university are available to direct the theoretical and experimental work in this critical field.

The Research Division of the Atomic Energy Commission has repeatedly proposed the University of Illinois materials research facility. Each time the project was eliminated in the Commission's budget review process.

It is estimated that the laboratory would be able to double its output of Ph. D.'s in this critical area where more qualified scientists are urgently needed.

Project 61–f–9, also added by the Joint Committee, but not included in this bill because of shortage of time in the budget process, authorizes $2,200,000 for construction of a radiation laboratory at the University of Notre Dame.

This project has also been proposed several times by the Research Division of the Atomic Energy Commission. Each time it also was eliminated in the Commission's budget review process.

The group presently at Notre Dame has been engaged in basic research in the field of radiation chemistry for over 10 years. The radiation chemistry project at Notre Dame is the largest offsite chemistry project in the Commission's program. The laboratory is recognized as one of the most outstanding in the field, both as a research center and as a training center for graduate students.

The basic work conducted by the Notre Dame group on the effects of nuclear radiation on chemical reactions has had wide applications in many of the Commission's programs. The data developed already has been applied to the solution of problems in the field of power reactors. It has also been used in Commission studies of new applications of radioisotopes and nuclear radiation in the chemical engineering field. The basic research being conducted is also applicable to many fields in the biological sciences and in the study of radiation effects on biological systems.

In order to carry out this research, use will be made of a 2 million electron volt Van de Graaff electrical generator, two cobalt 60 irradiators consisting of 1,200 curies each, X-ray equipment, special research spectrometers, and many pieces of scientific and electronic equipment.

The construction of this laboratory would permit increased research efforts into the effects of radiation, including radioactive fallout, which has been of special concern to the Joint Committee on Atomic Energy, the Congress, and the public.

In summary, funds for these two projects would permit increased research in the critical areas of atomic materials and radiation effects. The Joint Committee believes them necessary and they have been approved in the Authorization Act, Public Law 86–457, approved by the President on May 13.

It is understandable that time did not permit these two worthy projects to be included in the budget after final action on the Authorization Act, but I am hopeful that funds may be added in the Senate, and agreed to in conference.

AIRCRAFT NUCLEAR PROPULSION PROJECT

I also wish to commend the Appropriations Committee for its decision to support the Atomic Energy Commission's nuclear-propelled-aircraft development program.

Since my last statement here on the atomic aircraft on May 5, 1960, international developments have accented the importance of proceeding with this project. The irascible Khrushchev made it quite clear to us last week that our competition with the Soviets is far from being on a peacetime basis. My conversation with Emelyanov, the man in charge of the Soviets' atomic energy program, during my visit to the Soviet Union last September, made it quite clear to me that one of the important fields of competition we are engaged in is the development of an atomic aircraft. Emelyanov was quite explicit in his statements to me on the importance the Soviets attach to the development of a nuclear aircraft engine.

I would like to invite your attention to some of the realities of the job of developing a nuclear aircraft engine. My purpose in doing this is to allay any thoughts that this job can be completed in a short time. The project is technically extremely difficult. It probably ranks in complexity with the most difficult technical problems we have ever attacked. An understanding of this is important and vital to the successful completion of this work. Accordingly, this work requires stability in the level of its support by the Congress and, foremost, a minimum of administrative interference of the type which has plagued this work in the past.

On May 5, 1960, the Research and Development Subcommittee of which I am chairman, of the Joint Committee on Atomic Energy, in executive session reviewed the progress of work on the atomic aircraft with the Atomic Energy Commission. Although many of the subjects covered were classified I can report to you that important progress has been made. Many problems remain to be solved but the work thus far performed has relegated most of them from the realm of basic feasibility questions to straightforward engineering problems amenable to direct attack.

As you know, the development of a nuclear aircraft engine is presently proceeding on two engine cycles. One is the direct air cycle which is being developed by General Electric. The other is the indirect cycle, which is based on the use of a liquid metal coolant to transfer the heat energy to the air and which is under development by Pratt & Whitney. The important thing to keep in mind relative to this two-pronged attack is the necessity of proceeding with both phases of the work until sound technical data based on real hardware is available to permit a choice between the two on a sound basis. This decision, I must also caution you, cannot be made on the basis of sound technical data in a matter of a few months. This decision, if it is to be sound, must wait the development of the technical data I referred to which may not be available for a couple of years.

All of these points bring out the importance of recognizing the magnitude of the problems involved in this project and the need for providing the support required for their solution.

Mr. PRICE. Mr. Chairman, I ask unanimous consent that the gentleman from California [Mr. HOLIFIELD] may extend his remarks at this point in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from Illinois?

There was no objection.

Mr. HOLIFIELD. Mr. Chairman, title III at pages 20 to 24 of H.R. 12326 appropriates the funds necessary to keep our atomic energy program in a position of world leadership, both with respect to military and peaceful uses of atomic energy. I would like to commend the distinguished chairman of the committee, Congressman CANNON, and the other members of the committee for their careful consideration and well balanced judgment in the appropriations for the AEC.

There are several projects which the Joint Committee included in the AEC Authorization Act for the coming fiscal year, approved by the President as Public Law 86–457 on May 13, 1960, which are not funded in this bill. I believe the primary reason for the omissions was the short time interval between final approval of the Authorization Act and the consideration of this appropriations bill. But I would like to describe briefly two of the projects considered worthwhile by the Joint Committee and obtain the comments of the Appropriations Committee chairman as to his position on these projects.

The principal project added by the Joint Committee to Public Law 86–457 was project 61–d–10, $13 million for power reactor plants for the Antarctic. During the hearings before the Joint Committee, representatives of the Navy and AEC testified that replacement and supplemental heat and power sources will be needed at our scientific bases in the Antarctic in the near future. Statistics furnished the committee indicated the extremely high costs of transporting diesel fuel to our bases at McMurdo Sound, Byrd, and Pole stations. In addition, the Navy stated that 17 lives, and equipment valued at $10,500,000, including planes, have been lost in logistic operations in support of these sites in the past 3 years.

AEC has had under development for several years compact and reliable atomic powerplants which could be ready for shipment to the Antarctic by November 1961, the beginning of the short construction season in the Antarctic. Data furnished the committee indicated that the capital costs of the atomic powerplants would be higher, but that the operating costs would be substantially lower, so that total expenditures would be equalized after 1 to 8

years, depending on the site, and thereafter savings would accrue to the Government.

Based on the data presented, the committee concluded that three to five plants, depending on operational requirements, are needed in the immediate future to support our Antarctic operations. The committee believed that the actual number and location of reactors to be constructed under the authorization of Public Law 86–457 should be left to the determination of the Commission, based upon the technical aspects of the reactor plants selected, procurement economics and, in consultation with the Department of Defense, the requirements schedule. Three reactors are contemplated, but more may be possible under the $13 million authorization.

As a result of the hearings, the Joint Committee concluded that construction of atomic powerplants in the Antarctic would result in an immediate savings in lives and equipment, a saving in spending after several years, and would enhance our national prestige by developing the peaceful uses of atomic energy in the Antarctic, where the United States is participating in scientific work with 11 other nations.

Since the hearings by the Joint Committee on Atomic Energy on the subject of atomic powerplants for Antarctica, the Joint Committee has received a letter from Mr. Stans, Director of the Bureau of the Budget. This letter indicates that the Bureau has reaffirmed its belief that the Department of Defense should fund these atomic powerplants and has requested the Secretary of Defense to undertake a review of the advantages, economic and otherwise, of atomic powerplants in the Antarctic.

I believe that the Secretary of Defense can readily determine these advantages by reviewing the record of the hearings before the Joint Committee, and by means of technical data from his own staff responsible for support of the Antarctic projects, including Captain Coxe of the Navy, and Dr. Mooney, Deputy Director of the Special Office of Antarctic Projects.

If necessary, I think it should be possible to work out some method of transferring the funds between the two agencies. Since this bill is now before the Congress, I would hope, when it reaches the Senate, that the $13 million recommended by the Joint Committee for the Antarctic atomic powerplants might be added, and later agreed to in conference.

I would like to say a few words also about project 61–h–1, which the committee increased from $4 million to $5 million, a net increase of $1 million for installations for support of biomedical research in atomic energy. In 1957, and again in 1959, the Special Subcommittee on Radiation, of which I am chairman, held full and detailed hearings on the nature of radioactive fallout and its effect on man. These hearings demonstrated that more effort was needed in the biology and medicine program of the AEC to investigate fully and to understand the nature and biological effects of fallout.

For these reason, the Joint Committee recommended adding $1 million additional construction authority for facilities in the biomedical research field. Included in this project are such items as a nuclear reactor to furnish bursts of radiation for the study of the effects of radiation on animals, radio-biological laboratory facilities, animal quarters to study the effects of chronic radiation, and modification of existing facilities in this field.

Because of the short interval of time, it was not possible to include these items in the budget after the action of the Joint Committee, but I hope that this modest increase of $1 million in this important field of vital interest to the public can be added in the Senate and agreed to in conference.

As I stated at the outset, Mr. Chairman, I believe that the Appropriations Committee has fulfilled its duties conscientiously and I support the bill. I hope that these two minor additions can be made in the Senate, as well as the two which Congressman PRICE will discuss, and which I support. If made in the Senate, I hope that these additional construction projects, considered very important by the Joint Committee, may subsequently be agreed to in conference.

Mr. HOFFMAN of Michigan. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. HOFFMAN of Michigan: On page 20, line 14, strike out "official entertainment expenses (not to exceed $30,000)".

The CHAIRMAN. The question is on the amendment offered by the gentleman from Michigan.

The amendment was rejected.

Mr. HOFFMAN of Michigan. Mr. Chairman, I offer a further amendment.

The Clerk read as follows:

Amendment offered by Mr. HOFFMAN of Michigan: On page 20, line 20, strike out "$4,000 each" and insert "$3,000 each".

Mr. RABAUT. Mr. Chairman, I rise in opposition to the amendment.

The amendment proposes to reduce the amount that may be paid for two automobiles from $4,000 to $3,000. All other automobiles will be purchased within the regular limitation of $1,500. These two cars are not additions but for necessary replacement of two of the automobiles furnished the Commissioners.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Michigan [Mr. HOFFMAN].

The amendment was rejected.

Mr. THOMPSON of Texas. Mr. Chairman, I would like to invite the attention of the Committee to the report accompanying bill, H.R. 12326, the public works appropriations bill for 1961. On page 19, under the heading: "Freeport Harbor, Tex.," I note that the Appropriations Committee recommended deletion of $899,000 budgeted for improvement of that harbor. The report states that the benefits from it are uniquely local in character and the Corps of Engineers has testified that it is likely that the beneficiaries would dredge the harbor themselves if the Federal Government does not do it.

I invite the attention of the Appropriations Committee to the seriously crippling effect of this deletion. The project is not uniquely local any more than are the ports of Texas City, Galveston, Houston, Port Arthur, Brownsville, or Corpus Christi; and to require the citizens of that community to pay for improvements which traditionally have been made by the Federal Government is exceedingly unfair.

I have read the testimony before the committee, and I can understand the committee's conclusion that perhaps local interests would furnish the money if the Federal Government did not. However, I have checked with the witness who gave that impression and he has assured me that he intended no such conclusion to be drawn from his remarks. He points out that the Government has kept competing ports on a competitive basis. It has done so in the cases which I have just mentioned.

Traditionally, the Appropriations Committee has looked with favor on community enterprises in which the local interests do spend some of their own money. I invite to your attention the fact that the navigation district which is concerned with the Freeport Harbor has, in recent years, invested $4 million in dredging the turning basin and in constructing two large docks and transit sheds and in purchasing the necessary equipment to operate them. They did not ask for one cent of Federal aid and now they ask only that they not be penalized in their relationship to competing ports.

This port, incidentally, handled in 1959, 88 foreign and 41 American large cargo ships. Just as is the case in the port of Houston, or Texas City, or Port Arthur, there is a considerable tonnage of oil which is moved in tankers. These vessels have, in recent years, been built larger and with greater draft.

Should the other body see fit to include this budgeted item in the Senate version of the bill now under consideration, I trust that the conference committee will take a careful look at facts which can be furnished to refute the committee's previous conclusions as evidenced by the paragraph on Freeport Harbor in the report.

Mr. MAHON. Mr. Chairman, I want to commend members of the committee for directing in their report that up to $2,100 of the funds recommended in the bill for cemeterial expenses be allocated for maintenance of the Federal graves in the Congressional Cemetery, which is located in Southeast Washington, D.C. The budget recommended allocation of only $750 for fiscal year 1961 for the maintenance of the 806 Government burial sites which are scattered throughout nine burial sections in the cemetery.

The Congressional Cemetery was established on April 4, 1807. The cemetery is under the ownership and control of the Washington Parish, Christ Church. From the beginning it was intended that this cemetery would be used in part as a burial ground for Members of Congress

and other officials of the U.S. Government. At the beginning of the 19th century, it was, of course, not feasible to transport human remains long distances for burial. Thus, it was essential that there be a burial ground in the Federal Capital which would be appropriate to receive the remains of Government officials.

The church made a gift of a large number of burial sites to the Federal Government. Three Presidents—John Quincy Adams, William Henry Harrison, and Zachary Taylor—all died in Washington and their remains were taken to, and briefly interred in the Congressional Cemetery pending removal to their home cemeteries. Most of the Senators and Representatives and other high-ranking Government officials who died in Washington prior to the establishment of the Arlington National Cemetery were buried in the Congressional Cemetery. Many of these were later removed to their home cemeteries. There are now in the Congressional Cemetery the remains of about 14 Senators and 42 Members of the House of Representatives.

The establishment of Arlington National Cemetery in 1864 and the development of improved methods to ship remains over long distances terminated the necessity for Government burials to be made at the Congressional Cemetery. No interments have been made in any of the Government-owned lots since 1902. As a result of this situation Congress has tended to lose interest in the Congressional Cemetery. For a time, the Army Memorial Division sent its own personnel into Congressional Cemetery to care for the Government-owned graves. The transportation of these men to and from the Congressional Cemetery obviously made this work expensive, and several years ago, the Army contracted with the superintendent of the Congressional Cemetery for the cutting and trimming of the grass on the Government-owned lots and the filling of any sunken graves. The superintendent of the Alexandria National Cemetery was delegated to straighten and clean and replace headstones when such work was necessary and will continue to do so.

I feel that we are taking appropriate action in making better provisions for the upkeep of the historic Congressional Cemetery and I have inserted the foregoing information with the thought that many Members would be interested in it.

Mr. CONTE. Mr. Speaker, recent events have made it more evident than ever before that we cannot rely on diplomacy alone to maintain our position of eminence as a world power. It has become more obvious than ever that the only way to negotiate with the Kremlin is from a position of unquestioned strength. The President has stressed the fact time and again that our defenses are based on the maintenance of a balanced military potential. One of the integral factors in such a balanced military system, we have been told by the experts, is the existence of a strong manned aircraft program, and it is becoming ever clearer that the need for such a program will be with us for years to come. We have heard convincing arguments made for the advantages of manned planes which can be projected far into the future—antisubmarine patrol, airborne alert, super high level reconnaissance are only a few.

Our decision must be whether or not to continue in full force a program which will have a direct and important bearing on the future success of our manned aircraft arm and which may well have a tremendous significance in areas of military technology not yet even imaginable. Only last week Deputy Chief of Staff, Lt. Gen. Mark E. Bradley, told an Armed Forces Day audience in Hartford, Conn.:

> The primary reason for the continued use of the bomber is, of course, their capability for launch and recall, as well as their capability for airborne alert.

Noting that he was not directing his remarks to any specific type of aircraft, he said:

> It could be a nuclear type of plane, a mark III type such as the B–70 or something else—if something else is feasible. But whatever its shape and performance, the case for the next generation-manned bomber is obvious. This Nation simply cannot abandon the development of military aircraft.

For Congress to take a chance on anything less than a wholehearted effort in the direction of operational nuclear powered aircraft would have been unthinkable.

I have no doubt that those who opposed continuation of this project were convinced that their action to strike these funds was in the best interests of the Nation's taxpayers. I feel that we have a strong responsibility to look hard at this program to evaluate its efficiency, but I also feel we have been unrealistic in our insistence on demanding to know exactly where and in exactly what fashion the nuclear plane will be used.

General Bradley, you will notice, admittedly said:

> A nuclear type of plane—or something else.

It may be the something else will be more feasible. But if the nuclear type of plane does prove to be the one on which we must depend I would not dare to be on record as having held up the program to develop that plane for one day.

The record shows that this program has been one of starts and stops, of concentrations and cancellations, and Congress has not been blameless in this regard. This may have been unavoidable, but it also seems unavoidable to me now that we must maintain this project. It has been said often before, but it seems to me to have never been more appropriate, that if we must err, at least let us err on the side of strength.

In closing I would like to cite statements made by three eminent authorities on the subject of the nuclear powered aircraft.

Gen. Thomas D. White in a recent issue of the Air University Quarterly stated:

> The military exploitation of airborne nuclear propulsion will provide a significant increase in our future deterrent capability, an increase which must be realized if this capability is to remain effective.

In the same issue of the Air University Quarterly, Lt. Gen. Roscoe C. Wilson, Deputy Chief of Staff, Development, USAF, in writing on aircraft nuclear propulsion, stated:

> The possibility of missions of several days duration permits the effective utilization of as high as 50 percent of the force on air alert. The use of the manned nuclear bomber in a high-endurance weapons system on air alert permits flexible and positive timing, control and target assignment.

Lt. Gen. Robert M. Lee, vice commander of the Air Defense Command, in a speech before the American Ordnance Association on December 2, 1959, in New York City stated:

> Long-range aircraft with great endurance are a needed element of our diversified aerospace force. Many continuing and new roles for manned aircraft can be foreseen. They may be based on airborne missile launching techniques; attack against previously unlocated, hard to locate and movable targets, reconnaissance requirements, and possible participation in local wars.

From an address from General Thomas D. White, before the Institutional USAF Conference on Air Force ROTC Affairs at Maxwell Air Force Base December 9, 1959. Speaking on the Hound Dog and other modern air-launched missiles, General White stated:

> Perhaps of more importance, such weapons when carried by our present bombers and someday by nuclear-powered aircraft of practically unlimited range and endurance will provide our country with the highest degree of flexible and mobile striking power ever achieved. Far-ranging aircraft armed with these weapons will be able to conduct patrols at hundreds of miles per hour. They would be comparable in air coverage to that of a police squad car as measured against a cop on the beat. Such forces would be virtually invulnerable to surprise attack.

From remarks by Lt. Gen. Roscoe C. Wilson, Deputy Chief of Staff, Development, USAF, before the American Ordnance Association meeting in New York City, December 2, 1959. In speaking of the atomic-powered aircraft, General Wilson stated:

> This airplane is still some years in the future, but the promise of unlimited range and resulting operational flexibility keeps us extremely interested in obtaining a capability with this type of propulsion.

General Wilson in a speech before the Aviation Writers Association convention in Washington, D.C., on May 15, 1959, stated:

> Nuclear power will enable us to penetrate enemy territory at low altitudes and high speeds undetected by long-range radars and thus relatively secure from interception by enemy fighters.

Mr. CANNON. Mr. Chairman, I move that the Committee do now rise and report the bill back to the House with the recommendation that the bill do pass.

The motion was agreed to.

Accordingly, the Committee rose; and the Speaker having resumed the chair Mr. BOGGS, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the bill (H.R. 12326) making appropriations for civil functions administered by the Department of the Army, certain agencies

of the Department of the Interior, the Atomic Energy Commission, the Tennessee Valley Authority and certain study commissions, for the fiscal year ending June 30, 1961, and for other purposes, had directed him to report the bill back to the House with the recommendation that the bill do pass.

Mr. CANNON. Mr. Speaker, I move the previous question.

The previous question was ordered.

The SPEAKER. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time, and was read the third time.

The SPEAKER. The question is on the passage of the bill.

Mr. GOODELL. Mr. Speaker, I offer a motion to recommit.

The SPEAKER. Is the gentleman opposed to the bill?

Mr. GOODELL. I am, Mr. Speaker.

The SPEAKER. The Clerk will report the motion to recommit.

The Clerk read as follows:

Mr. GOODELL moves to recommit the bill to the Committee on Appropriations with instructions to report the same back with the following amendment: On page 4, line 16, strike out "$662,622,300" and insert in lieu thereof "$658,092,300"; and on page 5, line 8, insert *"Provided, further,* That none of the funds in this paragraph appropriated shall be used for the construction of the Allegheny River Reservoir in Pennsylvania and New York."

Mr. CANNON. Mr. Speaker, I move the previous question on the motion to recommit.

The previous question was ordered.

The SPEAKER. The question is on the motion to recommit.

Mr. PILLION. Mr. Speaker, I ask for the yeas and nays.

The SPEAKER. We cannot have the yeas and nays today.

Mr. PILLION. I am sorry, Mr. Speaker. I withdraw the request.

The SPEAKER. The question is on the motion to recommit.

The question was taken; and on a division (demanded by Mr. RABAUT) there were ayes 22, noes 90.

Mr. GOODELL. Mr. Speaker, I object to the vote on the ground that there is no quorum present, and I make the point of order that there is no quorum present.

The SPEAKER. By unanimous consent, the vote will go over then until tomorrow.

Does the gentleman withdraw his point of order of no quorum?

Mr. GOODELL. Yes, Mr. Speaker, I withdraw the point of order of no quorum.

GENERAL LEAVE TO EXTEND REMARKS

Mr. CANNON. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to extend their remarks on the bill.

The SPEAKER. Is there objection?

There was no objection.

Mr. BREWSTER. Mr. Speaker, the House of Representatives has passed the 1961 public works appropriation bill. The bill includes a $1,500,000 appropriation to begin work on the widening and deepening of the Baltimore channel. It also contains the sum of $103,000 for additional studies and planning for improving the Chesapeake and Delaware Canal. Both of these sums are grossly inadequate, if we consider the importance of the projects to which they are assigned.

The urgent necessity for deepening and widening the Baltimore channel and the Chesapeake and Delaware Canal has long been recognized. The increased use of large, deep-draft vessels in world trade makes the improvement of these two vital arteries imperative. The depth of the present Baltimore channel is 39 feet, with a general width of some 600 feet. The Chesapeake and Delaware Canal is presently 27 feet deep, with an average width of 250 feet. The volume of traffic in the canal exceeds the safe capacity of that waterway, and there has been an unfortunate record of long delays, groundings, and collisions.

The U.S. Corps of Engineers, after extensive studies and surveys, has strongly recommended that Baltimore's channel be deepened to 42 feet and widened to 800 feet. The Corps of Engineers has also recommended that the Chesapeake and Delaware Canal be widened to 450 feet and deepened to 35 feet. These improvements would mean tremendous savings to ship operators, and would benefit not only the port of Baltimore, but also the port of Philadelphia, and all others using these waterways.

Congress recognized the need for the improvement of the Chesapeake and Delaware Canal in 1954, when it authorized the deepening of the canal from its present 27-foot depth to a depth of 35 feet, and its widening from 250 to 450 feet. In 1958, Congress also authorized the deepening of the main channel in the Chesapeake Bay and Baltimore Harbor proper from 39 to 42 feet, and the widening of the channels from 600 to 800 feet.

Sufficient funds, however, have never been appropriated for these projects. The Baltimore Harbor project has the highest benefit-to-cost ratio, almost five to one, of any such project in the United States. In addition, the Maryland Port Authority and Maryland industries are spending millions of dollars to improve the facilities of the port. This tremendous expenditure of money and effort will be of limited benefit unless the channel is improved to allow the full range of modern vessels to enter the port and use its facilities.

The world seaport of Baltimore is the largest bulk cargo port in the United States. It is the second largest seaport in the United States in terms of total tonnage of shipping using the port. Baltimore Harbor has the largest combined deep-draft ore carrier and tanker traffic in the United States.

Baltimore's facilities for the handling of bulk cargoes is unequaled in any other port in the United States. The port area contains four huge modern ore piers, three large coalbins, three waterfront grain elevators with more than a 13-million-bushel total capacity and extensive modern facilities for the handling of fertilizer, chemicals, produce, and similar commodities.

The Locust Point Marine Terminal of the Baltimore & Ohio Railroad is the largest privately operated marine terminal in the United States. The terminal yard has a capacity of 3,500 freight cars. There are 10 piers, a grain elevator with storage capacity of 3,800,000 bushels, a latex storage and receiving plant with a capacity of 1,750,000 gallons, and many other facilities. The Sparrows Point plant of the Bethlehem Steel Co. is the largest steel plant in America and the largest tidewater steel plant in the world. This huge plant requires over 30,000 tons of iron ore per day in order to fulfill its annual capacity of over 8 million tons of steel ingots. The list of similar and related port facilities and industrial plants is almost endless. In addition, Baltimore offers the finest facility on the east coast for the repair and servicing of merchant ships. The plants of the Maryland Shipbuilding & Drydock Co. and the Bethlehem Sparrows Point Shipyard make Baltimore one of the major shipbuilding and ship repair centers of the world.

Baltimore's port is unique among North American seaports in that it has two deepwater routes to the sea. The northernmost route is through the upper Chesapeake Bay and thence through the Chesapeake and Delaware Canal to the Delaware Bay. The other route is the southerly course down the Chesapeake Bay to the open ocean at Hampton Roads, Va.

The port of Baltimore, with its maritime and related commercial activities, is the dominant factor in the economy of the entire State of Maryland. The maintenance and expansion of the port is vitally important to the job security of some 600,000 persons employed in the Baltimore metropolitan area. Over one-third of Baltimore's industrial employment of 200,000 is direct port-connected employment. These waterfront industries employ over 65,000 persons who annually earn over $350 million in wages and salaries. Less directly, Baltimore's harbor is responsible for the employment of thousands upon thousands of people in inland areas of our country who work for freight forwarding and handling concerns and the countless industries who depend upon Baltimore as a source of vitally needed raw material.

In the 250 years of its existence, well over a billion tons of cargo from all over the world have flowed through this port in a constant stream, feeding the insatiable raw-material appetite of America's industrial complex. Each year some 6,000 ships carrying over 30 million tons of export-import cargoes serve this inland port. Baltimore has achieved worldwide recognition for its use of modern methods and facilities in cargo handling and its impressive record for safe and speedy servicing of vessels at its piers. The port of Baltimore can berth over 90 cargo-carrying vessels at the same time.

Baltimore offers special handling for specialized cargoes. The bulk sugar pier of the American Sugar Refining Co. has made possible the import of bulk sugar

where previously all sugar had to be shipped in in bags. The new $4 million fruit pier, owned by the Maryland Port Authority, can accommodate 50 freight cars and handle over 4 million bunches of bananas a year. All areas of the port offer integrated rail-to-ship and truck-to-ship piers for fast, efficient handling of cargo.

Maryland's congressional delegation has vigorously urged the adequate financing of port improvements. Last year the needed appropriation was denied because of the President's announced policy of opposing any "new starts" in public works projects.

This year the President's budget recommended $1,500,000 for the Baltimore Channel project, and $103,000 for the C. & D. Canal project. These requests are shortsighted, unrealistic, and woefully inadequate. Experts agree that at least $7 million is needed this year to even begin to ease the Baltimore Channel problem.

The administration's request for $103,000 for the C. & D. Canal project makes even less sense. This amount will only be for some additional planning studies; no construction work will be begun this year. The time has come to stop studying the problem and come to grips with it. The district engineer has stated that $1,200,000 can be effectively used at once to start work on improving the canal.

In addition to their tremendous economic importance, both the canal and the harbor project have particular significance from the standpoint of national defense. Use of the canal saves 286 nautical miles on the trip from Baltimore to Philadelphia. It also provides a protected inland route between the naval bases at Philadelphia and Hampton Roads, Va.

During World War II and the Korean conflict the port of Baltimore was extensively used for the shipment of equipment and munitions to our troops overseas. Our country becomes increasingly more dependent on foreign sources for strategic raw materials—particularly iron ore and petroleum. It is surely in the interest of national security that these materials continue to flow freely through this port.

In 1958, the Public Works Committee authorized $28,161,000 for improvement of the Baltimore Harbor channel. To date not one penny of this money has been spent. It we proceed at the snail's pace indicated by the President's request, it will take 18 years to complete the work.

In April of this year, the Maryland delegation, the chairman of the Maryland Port Authority, and representatives of Maryland industrial and maritime interests, appeared before the Appropriation Committee's Subcommittee on Public Works and testified in detail as to the value and vital importance of these projects, and the need for increased funds.

In spite of the longstanding support of the Corps of Engineers and the overwhelming evidence in support of the request for increased appropriations, the committee did not see fit to grant the increases so earnestly sought. I am sure the committee's decision was strongly influenced by the impending threat of another "no progress is allowed" veto. This opinion is borne out by the fact that the bill, as passed, contains no increases over Presidential recommendations for construction work.

Last year this Congress overrode the President's veto of the 1960 public works appropriation bill. My State received almost nothing from that bill, but I voted to override because I was convinced that the country's best interest would be served by a passage of the bill.

I intend to ask Maryland's Senators to urge their Senate colleagues to increase the appropriation for the port of Baltimore. If they are successful, I believe my colleagues in the House will recognize our need and approve the increased appropriation.

PEACE IS TOO IMPORTANT TO BE LEFT TO THE PRESIDENT AND THE DEPARTMENT OF STATE

Mr. PORTER. Mr. SPEAKER, I ask unanimous consent to extend my remarks at this point in the body of the RECORD and to include extraneous matter.

The SPEAKER. Is there objection to the request of the gentleman from Oregon?

There was no objection.

Mr. PORTER. Mr. Speaker, Otto von Bismarck said war was too important to be left to the generals. We in the non-Communist world are presently painfully aware that peace is too important to be left to the generals.

Under the Constitution the conduct of foreign affairs is assigned the President. Peace, however, includes more than foreign affairs. It is an ever-changing totality of relationships, an atmosphere, a climate, and always with a direction. Peace is too important to be left to the President and the Department of State.

Adlai Stevenson said last week that it was "the duty of all thoughtful concerned citizens to help retrieve the situation and to face the hard, inescapable facts."

Last week on the floor of the other body three Members of the minority party expressed their displeasure at the activities of a thoughtful concerned citizen of Cleveland, Ohio, Cyrus Eaton.

Mr. Eaton had just conferred with Khrushchev in Paris following the breakdown of the summit conference. He was accused of meddling in the conduct of American foreign policy through personal meetings with officials of foreign governments.

One member of the other body directed the attention of the Attorney General to Mr. Eaton's activities for possible prosecution under the Logan Act.

I have never met Cyrus Eaton but I wish there were more citizens like him. His five famous Pugwash conferences have brought together scientists and scholars from all over the world. Of lesser magnitude but of more personal importance, Mr. Eaton paid my expenses to an unofficial foothills disarmament conference of parliamentarians from 15 nations in London last February—see CONGRESSIONAL RECORD, February 10, 1960, page 2382.

On June 4 and 5 in Stockholm I shall attend another such conference, also at his expense. Mr. Eaton attaches no strings. He wants to help the cause of peace. So do I as best I can. I am not sure that my presence at these conferences will make much difference but I believe, as does Mr. Eaton, that every citizen ought to do whatever he can to prevent the war nobody wants and everybody has reason to fear.

ONE-THIRD OF MY TIME FOR PEACE

When I first campaigned for Congress, I made but one promise. I said I would spend at least one-third of my time doing whatever I could, however little, in the interests of peace. I have kept this pledge and I intend to renew it to my constituents in the campaign this fall.

For the minority members in the other body to suggest prosecution of Cyrus Eaton under the Logan Act is preposterous. Nobody has ever been prosecuted under that legislation since it was enacted in 1799.

The Logan Act provides that any U.S. citizen who, without authority, directly or indirectly has any intercourse with a foreign government or any officer or agent thereof, with intent to influence the conduct of the foreign government in relation to any disputes or controversies with the United States, shall be fined up to $5,000 and/or imprisoned for not more than 3 years.

The only constitutional application, in my opinion, would be where an unauthorized citizen attempted to negotiate with a foreign government with respect to a particular dispute or controversy. It is difficult to conceive of circumstances where any foreign government would undertake to negotiate with an unauthorized citizen with respect to such matters.

The gentlemen in the other body raising this issue, I suspect, are looking to the Logan Act as a means of restricting the efforts of citizens like Cyrus Eaton who believe that peace is too important to be left to the President, the State Department, the generals or anybody else.

The gentlemen in the other body, of course, have a right to differ with the opinions of Cyrus Eaton and to criticize his conduct. I do object, however, to their invoking the Logan Act as a reason for denying Mr. Eaton the right to express his opinions and to meet with whomever he likes.

HOW FAR DOES THE LOGAN ACT GO?

Perhaps these gentlemen would also contend that Adlai Stevenson and several of their colleagues on both sides of the Capitol have violated the Logan Act by meeting with heads of various nations.

Is it their hope that no private citizen and no public officer except from the executive branch will meet with the leaders of other nations and discuss common problems, especially those relating to freedom and peace? If this is their hope, and it seems to be, they should recognize their dream for the fatuous fantasy it is.

Because these gentlemen showed a lack of factual knowledge about Cyrus Eaton,

his opinions, and his career, I am appending to these remarks certain articles about Mr. Eaton. I also refer them to the CONGRESSIONAL RECORD, volume 105, part 3, page 3014, where the late Senator Langer inserted an article from the Nation of January 31, 1959, about Cyrus Eaton and entitled "Cyrus Eaton: Merchant of Peace."

Communication among nations must increase, not decrease, if we are to attain peace and avoid war. We can disagree profitably. We should not seek a legal pretext for denying others the right to speak and act. In our crusade for peace we need all the help we can get. We have too few thoughtful and concerned citizens like Cyrus Eaton spending their talents, time, and money for world peace.

The following articles make it clear why we should encourage, not discourage, a man like Cyrus Eaton:

[From the Cleveland Plain Dealer, Mar. 6, 1960]

THE EATONS APPRAISE THEIR PEACE CRUSADE—WILL HISTORY NOTE THEIR MISSION?

(By Ted Princiotto)

Cyrus Eaton has been rich at least two or three times in his life but never richer than today.

His personal fortune, running into many millions of dollars, is the largest accumulated in a lifetime of assembling empires of corporate wealth.

He is married to a young, talented and vivacious woman half his age. She has given him zest for the most peculiar of the many controversial roles he has undertaken in his career.

His health is remarkable for a man of 76. He still enjoys horseback riding and skiing and romps through the woods. Not even his multitude of financial activities seems slowed.

With Anne Eaton, the attractive bride he took December 20, 1957, shortly before he became 74, Eaton has still another rich prize—the easing somewhat of world tensions in recent months.

Both he and his wife, who has become a full partner in his peace crusade, believe that the cold war is a little colder and that, to some degree, their crusade for friendlier relations with Soviet Russia has begun to pay off in world dividends.

What will history say of the self-proclaimed mission of the rich man and his pretty, young wife confined to a wheelchair who, like him, is engaged in sweeping intellectual debate?

Will it take note of the efforts of the philosophers of Acadia Farms, the Eaton farm estate in Northfield, Ohio, where, steeped in books and fireside reflections, they concern themselves with world problems?

Will history credit the Eatons as influential patrons of world peace?

Contemporary critics can only speculate.

In the last few years the slowly emerging image of Eaton, the capitalist, embracing the Russian bear, confused many Americans, not to mention the bear.

Eaton's pronouncements, widely publicized, were bound also to stir up dissent. He had two generally unpopular tenets: (1) Russia meant well and could be trusted; (2) the United States was the aggressor in the cold war.

He also praised Communist Russia, its leaders and the people and sharply criticized such popular American institutions as the FBI. Singled out for special attacks was John Foster Dulles, the late Secretary of State.

Such high officials as FBI Director J. Edgar Hoover and former U.S. Attorney General Herbert Brownell were among officials who, in turn, criticized Eaton, House un-American activities probers nipped at his heels with a subpena, which never was served.

A great volume of letters to the editor kept the controversy stirred up in public print.

Then, after returning from their trip to Russia in 1958, both Eaton and his wife took to the stump, making speeches in this country before clubs—controversial speeches.

If little else, this intellectual onslaught from Acadia Farms had many Americans talking about the Eatons and about Russia, world relations, and the danger of war.

Within more recent months some background events of history seem also to have been made. There is meat for history, no doubt, in the largest single enterprise Eaton has undertaken, the world-famous gathering of nuclear scientists in Pugwash, Nova Scotia, the fishing village where Eaton was born.

And it would be difficult to disassociate from the Eaton controversy the visit to the United States last summer by Soviet Premier Nikita S. Khrushchev and the visit President Eisenhower will make to Russia in June.

FAMILIAR SETTING

At snowscaped Acadia Farms, where visits from a bold little chipmunk outside the library window these winter days delight the Eatons and their household staff, the Eatons were asked in an interview to appraise their work to date.

The setting was, the same as when such famous personages as Sir Charles Darwin, grandson of the British naturalist, and Anastas I. Mikoyan, the Deputy Soviet Premier, chatted with the Eatons on visits to Acadia—a comfortable library where, among Eaton's treasures, is a shelf of Darwin won by Eaton as a prize in his youth.

"President Eisenhower's visit to Russia," said Eaton, sitting near the fireplace, "will be a crowning event for our efforts. It will be the great climax.

"He will receive a warm welcome and will be impressed, I am sure, by their great progress."

Eaton first suggested that the American and Soviet leaders exchange visits in an interview with Khrushchev in Moscow on September 1, 1958, on the Eatons' Russian trip. Khrushchev had cut short a vacation to return to Moscow to see the Eatons.

Eaton said he believed the interview and his suggestion to the Soviet Premier were a large factor in events that led to Khrushchev's visit.

"You ought to see the United States," Eaton said he told the Premier. "And he said, 'I would like to see it.' "

Was his suggestion, so far as he knew, the first ever made for Khrushchev to come to this country?

"Yes, I think so—the very first time," Eaton replied.

Correspondents in Moscow cabled back stories of the interview, with mention of Eaton's suggestion. Both the New York Times and the Plain Dealer commented editorially on the Khrushchev-Eaton talks, but neither thought enough of the visit suggestion to explore it in print then.

On other aspects of the interview, the Times commented editorially: "To most of us it will seem a hopeless task that Mr. Eaton attempted in Moscow; to convince the Soviet leader that capitalists really do not want war."

Eaton himself believes he not only planted the seed for the visit but also had succeeded in doing what the Times considered his hopeless task.

"I believe I persuaded him it was untrue that the American economy was geared solely to expenditures for armament," Eaton related in the Plain Dealer interview at his home. "I told him what a tremendous burden in taxes it meant and that Americans do not like taxes."

On one aspect there is no dispute: President Eisenhower, himself, at his August 3, 1959, news conference made it plain it was his own idea to invite the Russian leader.

But the President noted that the idea was not entirely or uniquely his own.

ON ONE POINT CONFIDENT

But on another point the Eatons were confident of results. The nuclear scientists who gathered at Pugwash, they believe, made great contributions to the cause of nuclear disarmament and the temporary ban on nuclear tests.

"The Pugwash conferences for the first time assembled world nuclear scientists and led to world realization of the great destruction that a nuclear war could bring," Eaton said.

It was on December 27, 1954, his 71st birthday, that Eaton announced he was turning his ancestral home at Pugwash into a "Thinkers' Lodge," where at his expense scholars and other thinking men could gather to meditate in rustic quiet.

Pugwash, a hamlet of 500 inhabitants, is a tiny lobster and lumber-shipping village at the mouth of the Pugwash River. The white, frame lodge overlooks the Northumberland Strait. Eaton has made it quite famous. For a number of years it has been a gathering place for business, education and other leading men.

It was in 1957 that the first group of nuclear scientists, from both sides of the Iron and Bamboo Curtains, first met there.

"For several years before," Eaton explained, "we had been host to Pugwash gatherings of scholars."

FIRST INVITATION

He recalled that when the Russians were invited to send a scholar to a 1956 meeting "they sent a very distinguished metallurgist."

He was Alexander M. Samarin, a member of the Academy of Sciences of the U.S.S.R. and assistant director of the academy's institute of metallurgy.

(Jokingly, the Russian advised Americans trying to pronounce his name to say "Submarine.")

"For a Communist," Mrs. Eaton said, "he was a revelation to the rest of us. He didn't have the slightest interest in political ideology. The Russians apparently thought we were going to talk about steel."

Eaton denies the Soviets had anything to do with starting the nuclear conferences, although it was believed by many that Russian propaganda had most to gain by such a gathering.

"Einstein was responsible," Eaton said. "Einstein and Bertrand Russell, the British mathematician and philosopher."

A brief London news item in the New York Times, July 10, 1955, gave Eaton the idea of sponsoring such a conference.

The story told of an appeal by nine eminent scientists, including the late Albert Einstein, calling on nations to forswear was because the hydrogen bomb threatened the existence of mankind.

RUSSELL WAS LEADER

Russell, a Nobel Prize winner, was the leader of the group. Einstein's letter joining in the appeal reached London the day he died in this country in 1955.

The appeal called on scientists from the Communist and free world to join together to drive home to the average man the very real danger of extermination of the human race.

Eaton promptly wrote to Russell, offering to finance such a gathering at Pugwash.

"We couldn't hold it in the United States because they wouldn't permit the Soviets to come," Eaton said. "India, too, had been suggested."

Eaton won out on his suggestion of Pugwash, where on July 6, 1957, the first Pugwash Conference of Nuclear Scientists was assembled with a score of leading scientists present.

The Canadian Government, according to Eaton, had agreed to allow the meetings with the understanding that it relied on me not to have the meeting turn into a platform for anti-West propaganda.

FOUR RUSSIANS IN GROUP

There were four Russians in the group. Among the American physicists was Dr. Leo Szilard, of the University of Chicago, who worked with the late Dr. Enrico Fermi in producing the first nuclear reaction at the university on December 2, 1942.

Communists and non-Communists were a little ill at ease to begin with. The Russians, said Eaton, seemed suspicious.

"They apparently felt, 'Here is a capitalist,' and seemed reluctant," Eaton recalled. "They seemed very wary.

"But Anne, who was there that year," he recounted with a grin, "broke the Iron Curtain."

"Before dinner," Mrs. Eaton related, "one of the Russians offered to wheel me down to the lodge. Later Mr. Eaton and I played croquet with two of them, although neither of them spoke English and at the time neither of us spoke any Russian.

"By the time we were through trying to explain croquet, being helpful to each other, the ice was broken."

UNFORGETTABLE EXPERIENCE

For her the meeting was an unforgettable experience, Mrs. Eaton said.

"Here were many of the men who had to do with the creation of the bomb, sitting together to prevent its use," she observed.

In a formal statement, given worldwide publicity, the scientists said they came to the "unquestioned conclusion" that unrestricted nuclear war would be a disaster of "unprecedented magnitude."

They also held the time had come for scientists to consider "the implications of their own work," in creating the bomb and new nuclear weapons.

Inspired to rhetoric, Eaton said of the first conference: "The moral chain reaction touched off hopefully may affect the future of mankind as profoundly as that first nuclear chain reaction of 15 years ago in the laboratories of the University of Chicago."

The second Eaton-sponsored conference of the scientists was held at Lac Beauport, a ski resort near Quebec City, because the Pugwash lodge lacked central heating. The session was held from March 31 through April 11, 1958.

ANOTHER WARNING

Out of it came another warning of the consequences of a nuclear conflict and agreement that fallout from nuclear tests, in which the United States and Russia had been engaged for 6 years would be responsible for an increase of about 1 percent over the natural incidence of leukemia and bone cancer in the next few decades.

In a period of 30 years, they computed, there would be 100,000 additional cases of these diseases.

In a general war, the group held, "hundreds of millions of people would be killed outright by the blast of heat and by the ionizing radiation at the instant of explosion," whether clean or dirty bombs were used.

Pointed out also was the danger that intervention by a nuclear power into a small war might lead to use of nuclear weapons.

"It was before and after the 1958 conference," Mrs. Eaton said, "that all the good things began to happen."

REDS STOPPED TESTS

"Just before it was when the Russians stopped nuclear testing. Then, later the same year at the Geneva conferences, there was a general understanding on the reliability of methods to detect atomic explosions, a step forward in the negotiations to end tests."

The third Pugwash conference was held in Vienna in September 1958, under the auspices of the Austrian Government. Eaton a cosponsor, on his way home from his Russian trip, addressed the group of 82 men from 22 nations. The fourth conference, still retaining the Pugwash tag, also was held in Austria.

For the fifth, held last August, the scientists, their memberships not always the same, met at Pugwash to begin to point a new finger of danger.

This session assessed the dangers of chemical and biological warfare. The world was told:

"In agreement with the third Pugwash conference in Vienna, we repeat that, in the end, only the absolute prevention of war will preserve human life and civilization in the face of the chemical and biological as well as nuclear weapons.

"No ban on a single type of weapon, no agreement that leaves the general threat of war in existence, can protect mankind sufficiently. We therefore must look forward to a day when the preservation of peace will transcend the ambitions of individual nations."

HISTORY WILL JUDGE

History, too, will assess the value of these warnings.

The Eatons believe their peace mission possibly has been more impressive upon Russians than Americans. They spoke to millions while in Moscow via television.

"I'm sure the Russian people loved her," Eaton said of his wife.

In his native Canada, Eaton long has appeared to be a man of great influence, although he many years ago became an American citizen.

In the volumes of data accumulated by Eaton's aids on the peace program, one of the most recent is gratifying to Eaton.

It is a clipping from the New York Herald Tribune of February 21, headed: "Canada for Red-Style Test Ban." The subhead ran: "Ignores Controls Sought by West."

The story quoted a House of Commons speech by External Affairs Secretary Howard C. Green, in which he said the Canadian Government was opposed to further nuclear tests, period.

The implication was strong that Canada had broken with the U.S. position that, before any test ban, acceptable inspection systems must be agreed upon.

WHY CONTROVERSY?

With the comforts and pleasures of millionaires that are theirs, why have the Eatons troubled to invite controversy by their peace moves?

"I was active in business in both wars," Eaton said. "My only brother, a Canadian, died of wounds in World War I. My son, Cyrus, was a prisoner of war in the last war.

"I saw we did not accomplish what we thought we were accomplishing. I saw the terrible waste."

Another factor, he went on, has been his long association with the University of Chicago, which his benefactor as a youth, John D. Rockefeller, founded with gifts of some $75 million. As a trustee since 1930, Eaton indicated he was close to the university's work in development of the first atomic reaction and also came to know well Dr. Fermi and the other scientists.

His interest in Russia also backtracks to the university and to Samuel N. Harper, son of the university's first president. The son studied Russia and the Russians for 40 years and was a leading scholar on their modern history.

MRS. EATON'S INTEREST

For her part, Mrs. Eaton said her interest stemmed from the writings of Russell and other philosophers and, later, from reading the "Bulletin of Atomic Scientists," circulated among leading men in the field.

From 1948 to 1952, because of an attack of polio, she lived at Warm Springs, Ga. On her return to Cleveland, she resumed an acquaintance with Eaton, whom she had known as a small girl—"the only grownup I knew who was interested in poetry."

Out of their renewed friendship came the marriage that has made a world-famous team of the Eatons.

"Anne and I have been—shall I say, fellow students?—since she was 8 or 9 years old," Eaton said. "We have a great deal in common in books. She is a writer of poetry and possesses literary talent. She was interested in the meetings we were having."

Mrs. Eaton added: "I finally asked him how much of a thinker you had to be to be invited to one of the scholars' meetings at Pugwash. I was invited."

At these meetings she makes people feel at home, Eaton said.

Together, they keep busy in the continuing battle for changes in American policies.

NO BRIDGE, MOVIES, TV

"We have no time for bridge, movies, or television," Eaton said.

Eaton arrives home from his Terminal Tower office with the newspapers of the day early in the evening. By the time they chat, and perhaps have tea, have a late dinner and have read "everything we want to read for the night," it is 11 p.m. and time to retire.

During the day Mrs. Eaton keeps busy answering peace correspondence, with a secretary, and with household affairs. In recent months she has also been speechmaking.

"Both of us, fortunately, enjoy fighting for a cause. Too often, though, only the bad things we say about this country are printed. Mr. Eaton believes in our country and our system, and so do I."

At Acadia Farms, at least, there are two minds of one accord.

[From Current Biography, 1948]

EATON, CYRUS STEPHEN, DECEMBER 27, 1883– ——, FINANCIER

Address: Business, Terminal Tower, Cleveland, Ohio; home, Acadia Farm, Northfield, Ohio.

As one of the partners in the Cleveland (Ohio) investment banking firm of Otis & Co., Cyrus S. Eaton has been a prime mover in the efforts of midwestern financiers to divert U.S. financial power from Wall Street. A holder of utilities, coal, steel, and ore interests, Eaton was among the country's outstanding financial operators until the depression, when he lost most of his assets. Gradually he reintegrated his holdings, and by 1947 was again known as sponsor of the Steep Rock Mines in Ontario, organizer of the compromise which formed the Cleveland Cliffs Corp. Eaton was one of the principals in the SEC investigation of the breach-of-contract suit brought in 1948 by Kaiser-Frazer against Otis & Co., following the withdrawal of the latter from sponsoring a new Kaiser-Frazer stock issue.

Cyrus Eaton's ancestry can be traced to a John Eaton who came from Wiltshire, England, to Salisbury, Mass., about 1640. In 1760, David Eaton, of the fifth generation, left New England to settle in Nova Scotia, there to found the Canadian branch of a family which includes many well-known individuals in the United States and Canada.

Cyrus Stephen Eaton was born in Pugwash, Cumberland County, Nova Scotia, on December 27, 1883, to Joseph Howe and Mary Adelle (MacPherson) Eaton. Originally planning to enter the Baptist ministry, young Eaton studied at Amherst Academy and Woodstock College. When he was 17, he visited his uncle, the Reverend Charles A. Eaton (subsequently, a U.S. Congressman and a U.N. delegate to the San Francisco Conference in 1945), in Cleveland, Ohio. The Reverend Eaton obtained a clerical job for his nephew on the estate of a parishioner, John D. Rockefeller. Eaton later returned to Canada to study and to receive a B.A. degree from McMaster University, Toronto (1905).

The following year Eaton was back in Ohio, where he started to work as an adjuster for the East Ohio Gas Co., "pacifying citizens who objected to having their lawns torn up for gas mains." Later, while he was buying up franchises in the Canadian Northwest for a utilities company, the panic of 1907 wiped out his employers' holdings. Young Eaton, taking up one of the canceled franchises, raised capital and built a powerplant. This marked his entry into the utilities field. In 1912 he began extensive consolidation activities among electric and gas companies in the United States and Canada, eventually amalgamating them into the Continental Gas & Electric Co. He was admitted to partnership in Otis & Co., the Cleveland investment bank, in 1916.

The consolidation of the Lake Shore and Garfield banks with the Cleveland Trust Co. in 1919 was accomplished by Eaton. A subsequent merger of four utilities firms (including the Continental Gas & Electric, of which Eaton was chairman of the board of directors) resulted in the formation of the United Light & Power Co. in 1923, a corporation registered in Maryland, serving 12 Midwestern States, and attaining, by 1929, assets of more than $557 million. The 13 subsidiaries of United Light & Power, as well as various rubber and steel interests of Eaton's, came into the orbit of Continental Shares, Inc., in 1926, when Eaton organized the latter corporation for the issuance of shares. Continental Shares, under the leadership of Eaton as chairman of the board of directors, held assets of more than a hundred million dollars 3 years later.

Against the opposition of eastern steel interests, Eaton gained a toehold in the steel industry in 1925 when he invested $18 million in the financially weakened Trumbull Steel Co. and was gradually able to expand his control. With this firm and other affiliates, such as United Alloy, Corrigan McKinney, and Youngstown Sheet & Tube, Eaton was instrumental in forming the Republic Steel Corp. (later the third largest steel company in the United States) having assets which amounted to $331 million in 1930, the year of its establishment. In the meantime, in 1929, he and W. G. Mather, another Cleveland financier, formed the Cliffs Iron Corp., which had controlling interests in six iron and steel companies. The following year Eaton also acquired important interests in the Goodyear Tire & Rubber Co., as well as large interests in the Firestone and the U.S. Rubber companies. Eaton's original interest, utilities, was not neglected at this time, as he entered into a series of negotiations with Samuel Insull which resulted in the sale of Eaton's shares in Insull's utilities to the latter, who was anxious to hold control of his organization.

An attempt by the Bethlehem Steel Co. to merge with Youngstown Sheet & Tube was bitterly contested by Eaton and his associates, but the moral victory attained when the courts, in 1931, declared the merger illegal, cost Eaton his private fortune, then estimated at a figure between $80 and $100 million. The collateral pledged by Eaton to the Chase National Bank was auctioned off in 1933, with the result that Eaton was left (in Time's words) with "little except his Cleveland securities house, Otis & Co." Through Otis, Eaton began, in the next few years, to reestablish his financial equilibrium.

By 1942 Eaton was able to purchase the Steep Rock Iron Mines, Ltd., in Ontario, the proven ore of which lay under a deep lake, for $20,000. With iron needed for war purposes, Eaton successfully negotiated a $5 million loan through the RFC, while the Canadian Government contributed an equivalent amount for docks, roads, and a railway spur line. Steep Rock ore was marketed by the Cliffs Corp., with the Premium Iron Co., Ltd. (organized by Eaton) acting as middleman and agreeing to purchase all Steep Rock ore for a 10-year period. Under Eaton's direction, a compromise was worked out early in 1947, when the representative of Robert R. Young's Pittston Co. on the board of directors of Cliffs Corp. challenged the management of the latter corporation. The Eaton solution resulted in the Otis banking firm buying Pittston's 34,500 shares in the Cliffs Corp., while the lawsuits challenging the valuation on Cleveland-Cliffs common stock were dropped. The Cliffs Corp., holding about $25 million worth of steel stocks, and the Cleveland-Cliffs Iron Co., with its shipping, ore, and coal interests, were merged to form Cleveland Cliffs Corp., an operating and holding company organized with assets of about $90 million. Eaton was also associated with Young in an attempt to buy the Pullman Co.'s sleeping-car interests in 1945, but their bid was rejected.

Shortly afterward, Otis & Co. sponsored most of the $17 million worth of common stock for the Kaiser-Frazer Automobile Co., and, in 1946, underwrote more than a million shares of the Portsmouth Steel Corp., set up by Eaton to supply Kaiser-Frazer with part of the steel requirements for their automobile production. Eaton, however, withdrew Otis & Co. from further financing of a subsequent Kaiser-Frazer stock issue in February 1948, several hours after a suit had been instituted against the automobile company by one of its stockholders, James F. Masterson. The brief characterized the stock offering as likely to impair the equity of the existent common stock, to remit overly high profits to the underwriters (Otis), and to "dilute" the corporation's capital by the process of stabilizing the market. (The latter statement was in reference to K-F's purchase of more than $10 million worth of the issue on the day before it was placed on the open market.) When a breach of contract suit was entered against Otis & Co. by Kaiser-Frazer, the SEC began an investigation of the entire negotiation. Charges by the various companies involved brought in other firms concerned with the deal, as well as the role of the SEC. Kaiser's assertion that the Masterson suit had been arranged by Eaton was denied by the Cleveland financier. By June the matter had been drawn to the attention of the Senate Banking Committee, which voiced its intention of investigating the conduct of the SEC. "When a chief participant in a transaction (namely the SEC) is pushed into the position of chief investigator of that transaction," said Eaton in reference to the SEC official conducting the inquiry, "it is time for Congress to act."

When a Federal district court ruled in October that the lawyers representing Otis & Co. and its underwriting partners were not obliged to testify in the case, the SEC abandoned its plan to bring proceedings against Eaton. The agency, however, continued its investigation of the stock transaction. Early in November the Eaton firm requested the Federal district court to enjoin the SEC from continuing these hearings, which Otis & Co. contended would be prejudicial to its case in the pending damage suits brought by Kaiser-Frazer.
